This work is an attempt to construct a natural history—or science—of human nature by tracing behavior of mind or body to impulses which actuate more or less definitely all living creatures, and may be regarded as life's manifestations of itself. It is, however, a review of man's material, social, economic, and political development and illustrates the effects of these impulses as modified by race and environment, and influenced by the will and habits of mind and body which are the foundations of culture.

American Citizen Series

Edited by ALBERT BUSHNELL HART

Principles of Economics. With Special Reference to American Conditions

By Edwin R. A. Seligman, LL.D., McVickar Professor of Political Economy, Columbia University. *Sixth Edition*, revised and rewritten. With 33 maps and diagrams. 8vo. Pp. lvi+711. $2.50.

In the present edition the introductory matter has been rewritten. In the body of the book chapters have been added on the Control of Trusts, Labor Legislation and Labor Insurance. In other respects the discussion and references have been brought down to date.

Public Opinion and Popular Government

By A. Lawrence Lowell, President of Harvard University. Crown 8vo. Pp. xiv+415. $2.25 *net.* (Weight, 26 oz.)

Lowell and Bryce are, in short, for the whole English-speaking world, the leading constitutionalists of the day. . . . It shows that Dr. Lowell may be placed nearly on a level—and no greater praise can be given to any man—with Bagehot. . . . A highly interesting book."—*A. V. Dicey in the Nation.*

DEUTSCHLAND UND DIE DEUTSCHEN

By W. C. DECKER, A.M., Pd.B., Department of German, New York State Normal College, Albany, N. Y., and ROBERT MÄRKISCH, Oberlehrer at the Royal Victoria Gymnasium, Potsdam, Germany.

Price 64 cents.

THIS book aims to make American students acquainted with the country, the manners, and the customs of Germany, as seen from the German standpoint. The text does not contain merely a series of perfunctory chapters on various phases of German life, but makes use of the actual experiences of one of the authors during his residence in Germany as an exchange teacher. The amount of space devoted to each topic is largely determined by the extent to which it enters into the life of the German people. Many illustrations add to the value of the book as a reader in second-year German classes.

Readings in Greek History

Edited by IDA CARLETON THALLON, Assistant Professor of History in Vassar College.

THIS collection of extracts from the primary sources of Greek history, covering the period from the time of Homer through the battle of Chæronea, places in the student's hands material hitherto not available for those unacquainted with Greek.

In addition to familiar passages from the historians, it includes historical inscriptions and selections from the orators, especially Lysias and Andocides, translated expressly for this book. Material from the writings of Pausanias is also presented, as well as from those dramatists and lyric and elegiac poets whose work was correlative with the history of the period. $2.00

DUTTON'S NEW PUBLICATIONS

Germany and England

By PROF. J. A. CRAMB.

Cloth, net $1.00

Field-Marshal EARL ROBERTS writes: "I hope that every one who wishes to understand the present crisis will read this book; . . . nowhere else are the forces which led to war so clearly set forth."

The London *Times* says: "A book of warning and enlightenment, written with all a man's strength and sincerity, for which we must be profoundly grateful. It is a thrilling book."

The *Spectator* says: "Let our readers buy this little book and see for themselves what the nature of the inspiration is at the back of the German Imperialism . . . what Germany is fighting for, and what Britain is resisting."

The German Enigma

By GEORGES BORDON.

Cloth, net $1.25

A Frenchman's search for the causes of race bitterness leads him to feel that France and Germany should normally be allied against the Slav. *Ready Shortly.*

Modern Germany

By J. ELLIS BARKER.

Cloth, 8vo, net $3.00

The new (4th) edition of this excellent study of the political and economic problems of Germany, of her policy and ambitions, and of the causes of her successes and failures, is practically a new work, since some 250 new pages replace about 100 in the earlier editions.

A History of Russia

By V. O. KLUCHEVSKY, Late Professor of Russian History in the University of Moscow. Translated by C. J. HOGARTH.

3 8vo vols., $7.50

This brilliant, masterly work is everywhere accepted as the most authoritative and comprehensive account of Russia's economic, political, and social history development up to the fifth, or modern, period of her history. It is admirably supplemented by Professor Mavor's great work, described in another column.

The Russian Opera

By ROSA NEWMARCH.

Cloth, net $1.75

"Mrs. Newmarch is the leading English authority on Russian music, on which subject she contributed all the important articles to the new edition of Grove's monumental dictionary."—*Henry T. Finck.*

AN ECONOMIC HISTORY OF RUSSIA

By Professor JAMES MAVOR, Ph.D. ***In two vols, net $10.00***

In any circumstances and under any conditions it is likely to stand for many years as the best economic and political history of the Russian Empire that is accessible to Englsh readers.—*The Outlook.*

THE ENGLISH DRAMA By FELIX SCHELLING.

An important addition by Professor Schelling, of the University of Pennsylvania, to the "Channels of English Literature" Series. The special interest of the series lies in the way each volume traces a literary form from its origins to the present. ***Cloth, 8vo, net $1.50***

POVERTY AND WASTE By HARTLEY WITHERS.

The author of "The Meaning of Money" sees the absurdity of low wages in the midst of abounding wealth, and feels that the responsibility is less with the capitalist and employer than with the consumer, the waster. Capital and labor spent in the production of luxuries is so much taken from the production of necessaries; individual extravagance is not a private matter, but affects the common good. A strong, penetrating book. ***Cloth, net $1.25***

THE EGO BOOK By VANCE THOMPSON.

A clever study of the personality which is the birthright of every child, but which is torn from him by the successive attacks of family, teachers, and business associates. ***Cloth, 16mo, net $1.00***

MEATLESS COOKERY By MARIA McILVAINE GILLMORE.

Introduction by Louis Faugeres Bishop, M.D. Illustrated with charts, etc. A book for those who wish to secure the full nutritive value of foods, without using meat dishes; or to arrange a diet for those who have heart disease, blood pressure, or auto-intoxication. ***8vo, net $2.50***

TALES OF THE TRAIL By JAMES W. FOLEY.

A book of Western verses by the author whose verses in "Boys and Girls" have a country-wide popularity rivalled only by that of Riley or Field.

Cloth, net $1.35

IN DEFENCE OF WHAT MIGHT BE

By EDMOND G. A. HOLMES.

A fuller, deeper, more illuminative exposition of those fruitful ideas on the subject of elementary education expressed in "What Is and What Might Be," now in its seventh edition. ***Cloth, 8vo, net $1.50***

The Nation.

NEW YORK, THURSDAY, OCTOBER 8, 1914.

Summary of the News

The battle of the Aisne, now in its fourth week, has continued without decisive result, the French left flank and the German right spreading in a northerly direction towards the Belgian frontier. In the eastern sphere of operations a severe battle has been fought on the River Niemen, and in Galicia the Russian troops have continued their progress.

Italy's attitude of neutrality has become slightly more defined during the past week, and prospects of her being able to avoid entrance to the quarrel are perhaps better than at any time during the course of the war. On September 30 meetings were held of the various Italian Parliamentary groups to discuss the situation, and at all of them resolutions were passed substantially approving the attitude of the Government, provided that the protection of Italian interests should be assured. In reply to the Italian note to Austria protesting against the laying of mines in the Adriatic, and the consequent destruction of Italian shipping, the Austrian Government has answered in conciliatory terms. The matter of the indemnity to be paid to the families of the victims, it is understood, will be referred by Italy to the Hague Tribunal.

The assumption that the Italian note of protest was intended to serve as a provocation to war is belied by the moderate terms in which it was couched—in contrast with the ultimatum which originally started the war. Furthermore, the impression has gained ground that Italian participation is not now desired by the Allies themselves. Italy, it is felt, would devote her chief attention to Austria, which is already sufficiently engaged with Russia and Servia, and complications between the latter country and Italy as to the division of the spoils might ensue at the end of the war. As we have pointed out previously, simply as the reward of benevolent neutrality, in the event of the Allies' success, Italy will no doubt recover Trieste and the Trentine.

Despite rumors of differences of opinion between King Charles of Rumania and his Cabinet, culminating in reports of a fictitious illness on the part of the monarch, in order to avoid a meeting with his advisers, it is probable that Rumania will be guided in the matter of neutrality by the attitude of Italy. A report from Rome was published on Monday stating that the President of the Rumanian Senate had arrived in Berlin on a political mission, and that, in an interview with him, published in the *Vossische Zeitung*, he was quoted as declaring that the last Privy Council presided over by King Charles had decided in favor of the preservation of neutrality.

There have been rumors that Italy had occupied or was about to occupy Avlona, the key to the Adriatic, and, while such action might, strictly speaking, involve no breach of neutrality, it would bring about a highly delicate situation. Up to the time of writing, however, none of these rumors have been confirmed, and it seems improbable that the Italian Government seriously contemplates such an action, more especially as its protégé, Essad Pasha, appears for the moment at least to be in the ascendant in Albania. According to dispatches from Rome on Monday, he has carried out his threat, which we recorded last week, and has entered Durazzo in triumph at the head of 12,000 men. The dispatch adds that he was cordially welcomed by the inhabitants and by the Italian colony.

The Rivers and Harbors Appropriation bill, carrying a general fund of $20,000,000 for continuing present projects in the discretion of army engineers, which was approved by the House on September 30, was signed by the President on Friday of last week.

According to dispatches from Washington published on Tuesday, the President has informed the responsible leaders of the House and Senate that it will be agreeable to him for Congress to adjourn by October 15, providing that the War Revenue bill has been enacted by that time.

The Senate on Monday, by a vote of 35 to 24, adopted the conference report on the Clayton measure supplementing the Sherman Anti-Trust act. In the House on Tuesday consideration of the conference report was put over until the following day (Wednesday), when it was agreed that a vote should be taken before night.

Revision of the War Revenue bill was completed by the Finance Committee of the Senate on Monday. The proposed taxes on life insurance and on casualty insurance have been eliminated, and as completed the measure provides for the tax of $1.50 per barrel on beer, twenty cents a gallon on sweet wines, eight cents on dry wines, one cent a gallon on gasolene, fifty cents per horsepower on automobile sales, $2 per thousand on bank capital and surplus, the special taxes on brokers, tobacco manufacturers, and dealers, and the old Spanish War stamp taxes. It was decided that caucus action should be taken to expedite the passage of the bill.

The situation in Mexico does not appear to grow less complicated, and the status of affairs is not illumined by the rigid censorship that is imposed on news. Nevertheless, officials at Washington are understood to entertain hopes that the differences between Villa and Carranza may be composed at the conference of generals at Aguascalientes, which is to meet on October 10. According to the Constitutionalist agency in Washington, Gen. Carranza at the conference of Constitutionalist leaders, which assembled at Mexico City on October 1, submitted his resignation on the night of October 3, but the convention refused to accept it at the present time. On the same day Gen. Carranza was reported as having declared in his statement to the convention that it was his duty to "fix the responsibility of the rebellion of Gen. Villa, which is nothing but a plot instigated by the so-called cientificos and by all of our conquered enemies who have not received public offices, on account of incompetence and cowardice." In the meanwhile, fighting has been resumed at Naco, where forces under Gov. Maytorena have attacked those of Gen. Benjamin Hill.

The British statement of revenue and expenditure for the first half of the financial year, ending on September 30, tells a significant tale. The national revenue in that period amounted to $380,000,000, a decrease of $13,500,000, as compared with last year, while the expenditures aggregated $670,000,000, showing an increase of nearly $230,000,000 due to the war.

As a counter-stroke to the policy adopted by Germany the British official information bureau announced on October 2 that the Government had decided to lay mines in certain areas. For the protection of non-combatants the Admiralty announced that it would be dangerous henceforward for ships to cross the area between latitude 51.15 north and 51.40 north, and longitude 1.35 east and 3 east.

The question that arose between Great Britain and the United States over the importation of foodstuffs to Holland has been adjusted without difficulty. On October 1 the British Ambassador, Sir Cecil Spring-Rice, notified the State Department that Great Britain would not interfere with the shipment of foodstuffs from this country to Holland, and would release all cargoes as soon as it is established that their destination is Holland. The Dutch Government similarly has given assurances to Great Britain that it will prohibit the exportation of foodstuffs to Germany or to other countries now at war.

Undeterred by the protests of the Powers, the Ottoman Government appears to be carrying out its programme for the abrogation of the capitulations. It was announced on Monday that the new and increased custom rates proposed to replace the low arbitrary rates fixed in the capitulations were being put into effect. Washington officials are understood to have no apprehensions as to the security of Americans in Turkey, and Secretary Daniels announced last week that the Administration had no intention of sending more warships to the Mediterranean. The North Carolina is already off Alexandria, and the Tennessee is under orders to proceed to Brindisi.

As a result of negotiations between the Governments of Japan and China the Chinese authorities have informed the Japanese that they will not oppose the military occupation of the Shan-tung Railway, which the Japanese are using in connection with their operations against the German territory of Kiao-chau. The Japanese, in turn, undertake as soon as possible to replace the military by a civil administration of the line.

The deaths of the week include: Col. Horace A. Hutchins, September 30; Charles A. Schermerhorn, the Rev. James L. Goodknight, Earl of Clarendon, October 2; Gardiner M. Lane, Rear-Admiral Thomas Holdup Stevens, 3d, October 3; William P. Brown, October 5; Count Albert de Mun, October 6.

The Week

After all the hurling back and forth of charges of atrocities in Belgium, it is gratifying to note that one accusation by the Germans has now been definitely withdrawn—namely, that Catholic priests were guilty, with other Belgians, of outrages upon wounded soldiers, doctors, and nurses. It will be remembered that this charge was fathered by the Emperor William himself, in his protest to President Wilson. In it he referred to the "enormities" committed "even by women and clergymen." As it happens, this accusation was challenged by Germans themselves. The *Kölnische Volkszeitung* of September 13 printed letters from correspondents lamenting the Kaiser's too hasty acceptance of what he had been told by army officers. One of the communications said that "the fearful charge against clergymen in the telegram of our Kaiser to President Wilson . . . cannot be received with indifference by the Catholics of Germany." The writer went on to admit that possibly some Belgian priests, "out of wrong-headed patriotism," had stirred up their parishioners to armed resistance; "but that a Catholic priest should have been guilty personally of horrible deeds committed upon poor wounded men and even nurses, that I regard as impossible. An error must have slipped into the report." This is plainly now the sober second thought of the General Staff and the Kaiser. At the time, however, the German authorities suspended the publication of the *Volkszeitung* for one day, as a punishment for having dared to print the criticisms of the Kaiser's telegram.

Dispatches from Washington indicate very clearly that the delicate questions which come up in every war concerning the attitude of belligerents towards the transportation of contraband, or "conditional contraband," goods in neutral vessels are not at all likely to make trouble between this country and Great Britain. The particular matter that carried with it serious possibilities of friction was that of the shipment of foodstuffs to Holland from this country, in neutral ships—the point being that this might be made a means of provisioning the German army, *via* Holland. The State Department last week issued an official statement declaring that there was no foundation for the report, which appeared in certain papers recently, that "the British Ambassador had advised officials of the State Department that Great Britain intended to seize goods listed as conditional contraband, which were destined for Germany or Austria, even if they were carried in neutral ships, and consigned to neutral ports." Mr. Lansing, Counsellor for the State Department, added that he had no doubt that an arrangement could be reached concerning the shipment of conditional contraband, which would be "satisfactory to all parties concerned," and later we are glad to learn that agreements were reached between Washington and the British Government and between the latter and the Dutch Government that justify Mr. Lansing's expectations.

Incidentally, the country rejoices that Wilson is President, not Roosevelt, whose recently expressed attitude towards disarmament confirms this judgment. The accumulating and increasing horrors of the European wars are creating a great tidal wave of public opinion that sweeps aside all specious reasoning and admits of but one simple, common-sense, humane conclusion—a demand for peace and disarmament among civilized nations.

The author of this just and proper sentiment is Robert M. La Follette, not so long ago a hero of Roosevelt's showered with praise by that dispenser of blame and of rewards. Mr. La Follette is nothing if not a keen observer of political currents and popular opinion, and in his *Weekly* he declares that President Wilson "to-day holds a supreme place in the confidence of the people of the United States," which is summed up in the simple phrase, "He is keeping us out of war." The praise Senator La Follette bestows upon him and Mr. Bryan is unreserved. Those who, like Mr. Roosevelt, mocked at Mr. Wilson's Mexican policy now offer up "prayers of thanksgiving" that we were spared a war in Mexico. As for the peace treaties, negotiated by Mr. Bryan, which Mr. Roosevelt scorns, the Wisconsin Senator declares that they constitute a "great service to the human race." From our observation of press and public, we believe that Senator La Follette is correct in his estimate of what the public is thinking. We cannot but feel that Mr. Roosevelt's re-hashing of his mistaken militaristic theories just at this time is as grave a political mistake as any of the many that he has recently made and that have caused his friends to wonder what has become of his once great political skill and intuitive knowledge of public opinion.

Not only do we believe that the public, suffering as it is indirectly because of the reversion to savagery in Europe, is in no mood to listen to such counsels as Mr. Roosevelt is now giving us, but we think that next winter there will be a strong demand that we begin to retrench in our naval armaments. Any attempt to add two or three battleships to our fleet next winter is certain to meet the stoutest resistance, thanks to the illumination which has come from the European struggle. If, when the hour for peace strikes, we are to use the great influence which is to be ours towards universal disarmament, we must at least be willing to set an example ourselves. It cannot be denied that we, too, have played an unhappy part in the general game of egging the other fellow on to build more ships. In the Reichstag, as in the Parliament at London, the growth of our fleet has been cited as a reason why the strength of England's and Germany's should be increased. Our own naval experts have insisted that we must not yield second place in capital-warship tonnage to Germany, and in Germany it has been demanded that she should be second only to England. It is time that we led the way towards sense and sanity and stopped the craze for warships which in about thirty years sent our navy appropriations up from $7,000,000 to $140,718,000.

It is highly satisfactory to learn that the President has given up the expectation of putting through any legislation for Presidential-preference primaries in the present Congress, either at the session now drawing to a close or at the short session ending March 4, 1915. The reason assigned for the postponement of this project is that it has been found, upon investigation, that the varied election and primary laws of the States have made it incumbent upon the framers of a Presidential-primary law to find some method of avoiding confusion and unnecessary expense. This has not yet been satisfactorily worked out. The reason is doubtless sufficient; but if it did not exist there would still be very strong ground for hesitation in the matter. It is very far from certain whether any machinery that could be devised would insure a choice of Presidential candidates, through the automatic process of the primary, which would reflect either the need of the country or the real will of the people as well as does the convention system. That is a rough and in many ways faulty piece of mechanism, to be sure; but it has the supreme advantage of bringing public sentiment to a focus at the critical moment, and of making possible alignments of kindred elements which, in the scattered movements of a nation-wide primary, would be working at random and without substantial result.

A resolution has been introduced into the House, calling on Secretary McAdoo to explain his deposit of $400,000 Government surplus with a New York bank, in return for that bank's consent to take up $1,400,000 one-year 6 per cent. notes of the State of Tennessee. The resolution unfortunately misses the real point to which inquiry ought to be directed; which is, the question whether the Treasury maintains the policy of using Government money in this way, in order to favor any single borrower. We have no doubt that the State of Tennessee had a right to immediate consideration. But if the Treasury is to pass on the merits of applicants, and to finance them, directly or indirectly, through use of the public moneys, we shall have created functions for that office whose scope may be dangerously wide. Operations of this nature are, in our opinion, wholly outside of the Treasury's proper powers. They have no relation even to deposit of public funds conditioned on their use to move the crops. In that expedient there was at least recognition of a national requirement. But precedent for dictating the precise destination of public money placed in banks will not easily be found, short of the period of unhappy experiments in Jackson's day.

The Treasury's revenue from customs for the month of September shows a decline of $9,000,000 as compared with the same month last year. It was on the probable falling off in this source of revenue, chiefly as a consequence of the war, that Mr. Wilson based his recommendation of an emergency tax measure. There is unfortunately only too much reason to expect that the showing for September in this regard will be repeated, month by month, for a considerable period. Accordingly, it can hardly be that the opposition set up by the Republicans to the passing of the emergency tax bill will show any great strength or persistence. There seems to be no serious difference of opinion as to the desirability of providing by taxation for whatever deficiency is in prospect; and as to the contention that if the Democrats had managed better there would have been no deficiency, this may be interesting, and even important, but has no practical bearing on the question of what ought to be done. However, the saying that there is no use in crying over spilt milk does not apply to campaign speeches—provided it was the other side that spilled it; and this particular milk will be cried over a good deal by the Republican spellbinders.

The "special memorandum of caution and warning" issued by John Barrett regarding the Latin-American commercial situation, and based upon cabled information from nearly three dozen cities in the twenty countries to the south of us, puts into official shape the conclusions already reached by those best informed. The idea that we could march into the markets of these countries as easily as Germany imagined she was going to march into Paris took no account of conditions that are becoming more and more evident. "What is needed at this hour in Latin America," in Mr. Barrett's words, "is not so much a supply of the manufactured products of the United States, although required in considerable quantities, but money, loans, and advances, credits on purchases, and markets at reasonable rates for raw products which usually go to Europe." The very catastrophe that has cut off sources of Latin-American imports and outlets for Latin-American exports has also crippled Latin-American financial resources and commercial machinery. Months will be required before conditions can be readjusted. The opportunity potentially offered may be judged from the fact that the Latin-American foreign trade amounted last year to three billions of dollars, of which two-thirds represented transactions with Europe. The encouraging feature is that our trade with the twenty nations has risen from an annual value of $450,000,000 to one of $850,000,000 in the past seven years.

The state of Mexican finances is disheartening enough; but no more so than our own outlook during the Revolution, when it required $40 in Continental paper to purchase one gold dollar. The economists and bankers who are studying the matter, moreover, can recall the uniform success with which Mexico has emerged from her financial difficulties in the past—she was on a fairly sound basis when the Madero revolution began. The country is at present flooded with counterfeit money; the issues of various chieftains are still in local circulation; and as the authorized paper money is worth about one-fifth of American money, while Mexican silver is worth about one-half, all metallic currency is being hoarded. But an article by Dean Fuller in the *Mexican Herald*, supported by editorial comment, still takes a hopeful view. Already efforts are on foot to rehabilitate the monetary system, and wild-cat banking is being curbed. It is generally agreed that the enforced liquidation of insolvent banks is to be avoided where they can be helped to their feet; while there is also general opposition to arbitrary attempts to call metal into circulation. The great goal from every point of view in Mexico is the resumption of industry, which, by giving the country a credit to meet foreign obligations, will bring about a readjustment of rates of exchange and call forth the silver. Like ourselves 125 years ago, Mexico's main need is of some one to smite the rock of her natural resources.

Now that President Wilson has made peace with Col. Harvey, and there seems a prospect that arbitration will yet reconcile the White House and Henry Watterson, no one need despair of the early conclusion of hostilities in Europe. No feud was apparently more destined to be lasting than this one between Col. Harvey and the President. That it has been ended is another striking sign of the steadily growing harmony of the Democratic party under the schoolmaster's leadership. Senator Chilton's change from an opponent to an enthusiastic admirer of Mr. Wilson is notable. But there is an even more striking recognition of the fact that the people are behind the President than this. No less a boss than Nugent of New Jersey has declared that the people must stand by Mr. Wilson and give him unwavering support in the policies he has adopted. When one considers the malignant hatred of Nugent for Wilson in the past, and the character of the punishment Mr. Wilson has repeatedly inflicted on Nugent, this transformation is of great significance. Mr. Nugent's motives are open to suspicion; he has read the handwriting on the wall and acted promptly to save his skin once more. The outlook for an enthusiastic Democratic campaign in New Jersey is now of the best.

Compared with expenditures of millions daily for war, the annual budget of $450,000 for the Carnegie Endowment for International Peace is puny enough; but it maintains a varied work. A sum that would hardly pay for a good torpedo boat has made possible during one year assistance and coöperation for 511 international associations; the subvention of several American and four European periodicals; the arrangement of such speaking tours as that of Mr. Robert Bacon to South America, Mr. Hamilton Mabie to Japan, and Professor Sato to the United States; the distribution of thousands of copies each of pamphlets on the Panama controversy, and of books like "L'Enigme Allemande," Dr. Eliot's "Roads Towards Peace," and Baron de Constant's "Les Etats

Unis d'Amérique"; the collection and publication of treaties, the holding of international conventions of students, and the undertaking of a history of international law. The hard-headed American citizenship, not completely a citizenship of pacifists, and quite aware that the millennium is not yet, can only approve the spirit in which Drs. Eliot, Butler, John Bates Clark, and others declare in their report that they have approached their work. They have wished to lay "little stress upon those aspects of peace propaganda that are rhetorical and fleeting in character," but to organize throughout the world permanent "centres of influence and constructive policy." The aim is the upbuilding of "a sound international opinion that will rest upon permanent conviction," not the mere "denunciation of war and of armaments, however sincere."

"About this time look out for a deluge of mail bearing the Congressional frank." Thus would doubtless run a warning in a really candid political almanac, at the top of the October page. The old parties have become fairly expert at the process of getting leave to print, and then using the privilege to disseminate campaign speeches, but their best efforts must be surpassed by that of a Pennsylvania Representative who is sending out this letter:

> I am enclosing you copy of speech which I made in the House of Representatives several days ago, entitled, "A Great New Party." This speech contains a history of the Progressive party in State and nation; the platform of the Republican State Convention of 1912; the Progressive Convention, together with names of committee comprising Eastern, Middle, and Western divisions; history of the legislation of 1913, with measures that were promised, but not enacted into law; town meetings and conferences for organization for the future; the Washington platform; Gifford Pinchot's platform, and under paragraph entitled "A Patriotic Act," the withdrawal of William Draper Lewis and endorsement of Vance C. McCormick for Governor; and under paragraph "Mobilization," the united efforts of all candidates to clean the State of Penrose and Penroseism.

And he adds: "If you can send it out, I can have it printed for you at the rate of three dollars a thousand, and I will furnish franked envelopes so that it can go out under my frank." Why Congress should listen to platforms, lists of names, and other information more suitable for a campaign handbook is clear only when we reflect that probably the "speech" was never delivered, being merely printed, and that this is one of the cheapest ways of getting out such a handbook—if the cost to the Government is not reckoned.

The virtual blockade on cotton is raising once more the question of diversifying crops in the South. The *Florida Times-Union* recalls: "In 1860 the South was as much of a cotton plantation as it is in 1914, but at the call of necessity she made a quick change that amounted to transformation; she fed her armies, and from the fields untouched by the enemy she took a great surplus in 1865." In that same year "the herds and flocks of the South were notable for both numbers and good condition," but old habit and phenomenal cotton prices were too much for development in new directions. To-day "the land is cheap and the climate is more favorable than that which threatened the Western pastures with the necessity of feeding during the winter and the possibility of blizzard weather for weeks." The cotton fields, now suddenly become unprofitable, "can again be transformed into profitable pastures, and the old plantation become once more a stock farm, provided due care and knowledge be enlisted in the change." What prevents one from being very hopeful about this idea is that the wildest fluctuations in the cotton market have not led to any large abandonment of cotton-growing for other crops.

Congressman Mann has fairly outdone Hobson in his vision of war between the Orient and us. Where the Alabama Representative sees Japan menacing our peace, the Chicagoan catches sight of a still more horrible giant, "lying like a sleeping monster" now, but destined to awake and engage us in a tussle, at first commercial, but later military, for "a fight for commercial supremacy leads in the end to a fight with arms." According to this reasoning, the foe ought to be England. What strikes one, however, is not so much the substance of Mr. Mann's warning—it is not very novel—as its timeliness. He chooses for his prophecy of armed conflict the moment when we are doing our utmost to preserve our neutrality, real as well as formal, among the combatants of the greatest contest in history. The fine taste of this procedure is apparent. And yet perhaps he has in reality chosen better than he intended. To talk of war at a time when the very word is revolting, to drag out once more the notion of "inevitable conflict" between peoples and races at the hour when the whole world is feeling that in some way peace must be made the inevitable condition hereafter—this is scarcely an effective method of arousing suspicions concerning our neighbors across the Pacific.

There can be no denying the impressiveness of the registration figures of Columbia University. Twelve thousand students constitute a scholastic body whose numbers are unapproached by those of any other university in this country, or by many abroad. At the same time, certain qualifications must be made in any comparison of this number with that of even a few decades ago at Columbia or any other American university. No one will suppose that all of these twelve thousand are looking forward to a bachelor's degree in either arts or science. But how many persons realize that half of this twelve thousand are only Summer School students, who would not have figured at all a few years ago? Some of these are doubtless men and women who go to Summer School year after year, until they reach the goal at which others arrive more rapidly, but this can hardly be said of the great mass of them. Just as the Ph.D. is a fetich in some quarters, so is even the briefest attendance at a university in others. A teacher who feels the competition of younger and better-prepared rivals, circumvents them by spending six weeks at some well-known summer school.

This aspect of university registration is emphasized when we look at the departments at Columbia which show the greatest increase over last year. Excepting the Summer School, these are Teachers College and the Extension Teaching Department—divisions, that is, which did not exist until recently, and are still regarded as lacking the authority of the older departments. Other universities which follow the same policy of making a special appeal to teachers would show the same phenomena. The regular undergraduate department of arts and sciences has almost everywhere exhibited a continual shrinking in comparison with the other departments. Some of our universities, such as Yale and Princeton, have been inclined to shake their heads at this "popularization" of learning, and undoubtedly a danger exists in it. Chautauqua has become a synonym for superficiality. But it is well to recognize that there is another side to this policy of extending university opportunities as widely as possible, a side that can hardly be appreciated by persons who went to college as naturally and as easily as they went to public school. "University extension," whether undertaken by a new institution like Chicago, or by older ones such as Columbia and New York University, has demonstrated benefits that mark it as being worthy of a permanent place in the curriculum.

PATRIOTISM IN WAR AND PEACE.

That the German people, during the past two months, have made a wonderful display of unity, devotion, and exalted national feeling, no one can any longer question. The evidence is overwhelming. Some of the most striking parts of it come from Americans who were in Munich or Frankfort or Berlin throughout mobilization and the first days of the war. These foreign observers on the spot were impressed not so much by the precision and power of the military preparations as by the spirit among all classes of Germans. The fighting men went to the front enthusiastically, but those who stayed behind showed even a deeper loyalty and readiness to sacrifice all, if need be. One American lady who saw the drawing together of the whole population of one German city, and especially the great uplifting of soul on the part of German women in the presence of the awful losses and suffering which they knew they were facing, cannot to this day speak of the spectacle which she witnessed, without tears in her eyes.

Similar accounts of the marvellous effects of the war in uniting a whole people, and in quickening their patriotic impulses, have been given as to England and France. We dare say that the same thing has been seen in Austria, and on an even greater scale in Russia. The transformation which came over the French nation in the first days of August is notably testified to in the last number, pitifully shrunken by the war, of the *Revue des Deux Mondes*. It contains a report of his military experiences, by Charles Nordmann, formerly a scientific contributor to its pages, but now signing himself merely "soldat de 2e classe." With restraint, yet with a vivid pen, Mr. Nordmann describes the swell of soul which he observed, not alone among the soldiers, but everywhere in the villages and cities through which he passed. We give a few sentences from his article:

> How that last sight of Paris calmed my spirit! I felt that a common peril had knit together hearts that we thought separated. It was a question of saving France: of giving the whole world liberty to breathe, to think, to progress. That was what everybody felt, more or less clearly, from the most lowly workingman to the most cultivated scholar; and it was for this reason that we saw all Frenchmen carried away by the same emotion, and made one, as it were, with the great hours of the Revolution. What a joy to have seen this miracle!

Such outbursts of national sentiment and of pride of country are, as we say, common to all the combatants in the European war. Each nation believes earnestly that it is in the right; that the war was forced upon it; that it is battling for righteousness and for civilization itself. Of course, these manifestations of the patriotic spirit in war prove nothing as to the ultimate responsibility for the awful conflict. That is to be fixed on far different grounds. But all that we are remarking upon to-day is the fact that the terrible emergency has called out, in a very extraordinary way, the resources of patriotic heroism, the sense of the true meaning of national life, and the willingness to do and suffer everything for the sake of country. No one can be so dull, no champion of international peace can be so indifferent, as not to be profoundly touched by these moving exhibitions of the grandeur of human nature under mighty stress. If only this universal and compelling rush of the souls of men to dare and meet any fate had been called out by some high appeal of humanity, instead of by the trumpet summoning to battle!

In a lecture on reform which he delivered in 1887, James Russell Lowell referred to the same kindling of the nation's soul which this country had gone through in 1861—"that great national passion, obliterating all lines of party division and levelling all the landmarks of habitual politics. Who that saw it will ever forget that enthusiasm of loyalty for the flag and for what the flag symbolized which twenty-six years ago swept all the country's forces of thought and sentiment, of memory and hope, into the grasp of its overmastering torrent?" But Lowell was too clear-eyed not to see that these "ecstasies of emotion" are necessarily "transient." Ennobling they may be for the time, but they pass. And Lowell pleaded for "a sedater kind of patriotism," less inspiring, but more serviceable, year in and year out. Anticipating William James, he hoped that ways might be found of calling out the unflagging zeal of patriots in the constant fight against ignorance and corruption, with an exaltation of spirit comparable to that with which we gazed upon the "image of our Country with the flame of battle in her eyes."

In the United States we are at peace; yet upon us, too, the war has made patriotic demands. And they have been met in fine ways. The wise and splendid stand of President Wilson has been heartily recognized and supported. Financial exigencies have been faced by bankers and others in the truest public spirit: we need but mention the way in which the New York banks came unselfishly to the aid of the city in meeting its maturing obligations held abroad. And the display of the humane spirit of America has been most gratifying. Flowing abroad, it can be counted upon if the problems of unemployment and the need of large plans of temporary relief become pressing at home this winter. The demonstration is complete that there are vast reserves of patriotic energy to be depended upon in this country. If only they could be enlisted, to-day and always, in the causes of education and human betterment! In them the noblest souls hear a clarion more urgent than that of war, so that in their devoted service, also, they feel that whatever their land and age ask of them they dare not refuse.

DESOLATED BELGIUM.

It did not require the graphic, yet sober, account of the condition of Belgium given by Mr. Whitehouse to establish the awful truth about the state of that ravaged country. Nobody denies it; nobody even pretends that the tale of woe, to which fresh chapters have been added day after day for two months, is exaggerated. We say nothing about causes; we say nothing about guilt; what we are speaking of is the fearful desolation and ruin, the heartrending distress, the unspeakable agony of hundreds of thousands of noncombatants who, a few short weeks ago, were dwellers in quiet and happy homes, and who are now wanderers on the face of the earth—fatherless, perhaps, or widowed; homeless and forlorn and almost hopeless, surely. Concerning their state, there is unfortunately no room for doubt or controversy; with cities and towns and villages given to the flames, and the whole countryside ravaged by the countless hosts of the invaders, no voice can be lifted up to say that the thing is not fully as appalling as it is imagined.

No, the trouble is all the other way. Imagination is all too feeble to body forth the truth. The mere extent of the misery defies realization; the individual horrors of the scene are too infinitely varied to permit of any attempt to grasp them; and over and above all this stand those effects of the paralysis of all the activities of the tiny country which we are not apt to think of, but which weigh down the population with a steady pressure of misery. Let a single passage from Mr. Whitehouse's statement speak to this point:

> The whole life of the nation has been arrested. Food supplies which would ordinarily reach the civilian population are being taken by the German troops for their own support. The peasants and poor are without the necessities of life, and conditions of starvation grow more acute every day. Even where there is a supply of wheat available, the peasants are

not allowed to use their windmills, owing to the German fear that they will send signals to the Belgian army.

We are, therefore, face to face with a fact which has rarely, if ever, occurred in the history of the world—an entire nation is in a state of famine, and that within half a day's journey of our own shores.

And unfortunately we must remember that if, as now seems probable, the vast German army is to effect its retreat through Belgium, the agony of her people will inevitably be made still more terrible in the process.

We are not saying these things for the mere purpose of harrowing up the souls of our readers. We are saying them because we feel that such a condition of distress, suffered by a nation like Belgium, lays upon the people of a country like the United States a clear and imperative duty. There are, in this terrible war, many just claims upon our help; there are suffering non-combatants in Germany and France as well as in Belgium, and there is the call of distress from the battlefields. None of these calls should remain unheeded; but in the case of Belgium something more should be done than the mere piling up of a modest contribution of one or two hundred thousand dollars.

It must be remembered that in the bigger countries there remains, and is bound to remain throughout the war, a very large part not directly affected by the military operations; that to the sufferers, many as they may be, hands will be stretched out to help by a vastly larger number of fellow-countrymen who have been left comparatively unharmed. The terrible thing about Belgium is that almost the whole of the little country has been prostrated or laid waste. Madame Vandervelde was not wrong in saying that she felt as though she could not go home without taking a million dollars from America for the succor of her helpless countrymen. We ought to send a million and much more. Not to do it would be for this rich country, the only great nation in the Western world which now enjoys the blessing of assured peace, to fail to rise to the level of a high occasion and of a plain duty.

There is no doubt that the peculiar and paramount claim of the Belgians for help in their affliction is realized by many of our people. The Belgian Relief Fund has been growing rapidly—as such things are usually reckoned—regard being had to the fact that Belgium has but a slight representation among our population, and that the contributors to the fund are evidently, nearly all of them, simply Americans to whom the call of her suffering appeals. This is due, of course, not only to the extraordinary extent of that suffering, but also to the sympathy that is felt towards a people whose land has been desolated without any fault of theirs, unless it be a fault for a people to defend their native soil from invasion. It has been pleasing to see that in a short time nearly $100,000 has been raised here in New York, every day showing a list of scores of contributors. But this should be regarded only as a beginning. Let the Belgian Relief Committee organize a campaign aimed at the procuring of a sum large enough to make something of an impression upon the mass of misery it is designed to alleviate. Let the work be pushed not only here in New York, but in every large city in the United States. Let the people of this great country have their imagination aroused to the extraordinary and appalling nature of the calamity that they are called upon in some small measure to mitigate. We feel confident that if this is brought home to them, as it can be, the country will respond in a manner worthy of its traditions of humanity and commensurate in some degree with its vast resources.

WAR EXPENDITURE AND THE MARKETS.

The estimate cabled last week from Berlin, that the cost to the German Government of conducting its campaign is averaging $5,000,000 per day, agrees closely with previous estimates of probable cost. Exactly that figure was named in a well-known Austrian calculation, so long ago as 1896, and was concurred in by the French statistician, Jules Roche, at the time of the Manchurian War. Those same estimates fixed $5,100,000 per day as the cost of its part in a European war to France, though Finance Minister Ribot last Saturday named $7,000,000 as the figure. Russia's daily outlay was scheduled in the estimate referred to as $5,600,000; it may easily be much larger.

Curiously enough, as it happens, the only fighting Government concerning whose actual war outlay we have official data is the one which earlier estimates seldom dealt with. The British Exchequer publishes weekly classified statements of public revenue and expenditure, and the item "supply services," covering army and navy expenditure, gives the necessary information. The statement latest at hand is for the week ending September 12. It shows an expenditure larger by £4,200,000, or $21,000,000, than in the same week of 1913, when army and navy were on a peace footing. This difference would average $3,000,000 daily.

That approximate estimate of cost of war to England is borne out by the total figures from August 1 to September 12; during which six-week period the Exchequer paid out for "supply services" £30,200,000 more than in 1913, indicating an average daily expenditure, for purposes of this European war, of some $3,600,000. Taking the above-mentioned estimates for Germany, France, and Russia, and assuming (as the 1904 calculation did) a daily outlay of $2,600,000 for Austria, the total per diem war expenditure of the five chief belligerents must be reaching the respectable figure of $21,800,000. From the declaration of war to the present date, the total would have considerably exceeded a billion dollars; and that, it will be observed, makes no account of the military expenditure of Belgium and Japan. Nor does it allow for the very considerable cost of protective mobilization, on the part of such neutral states as Italy, Switzerland, and Holland. If the war were to continue actively during only four months more, the apparent total outlay would run between four and five thousand million dollars.

It is not yet clear in precisely what way the five belligerents will finance this huge expenditure, or what interest rate they will have to pay, or how the absorption of capital on such a scale will affect the general investment market—as regards both securities already outstanding and securities of corporations, cities, or neutral governments yet to be issued. Thus far, the British Government has borrowed £51,000,000 on Treasury bills with six or twelve months to run. These were placed in Lombard Street at rates ranging from 2⅞ to 3¾ per cent.; but that is obviously no criterion of the eventual rate, which will have to be determined when these short loans are funded into consols or a permanent war loan.

The German Government's operations are not easy to understand. Cables from Berlin have reported an offer of a thousand million marks of Exchequer bonds (presumably short-term issues) and of three thousand million marks in regular Imperial bonds. It was stated that both had been promptly taken and the Exchequer bonds 25 per cent. oversubscribed. The net rate of interest paid is said to be slightly under 6 per cent.; but it is somewhat difficult to understand how, in any market, a loan of $1,000,000,000 could at any time be so instantaneously disposed of, unless unusual concessions were granted as to price, or interest rate, or time for paying subscriptions, or all three.

As to Germany's ability, however, to raise

enormous sums of capital at home, there can be little doubt. Even the Japanese people subscribed for upwards of $150,000,000 in its Government's loans during the Manchurian War. How Russia will finance its needs is not so clear; it had to raise more than half of the requisite capital in France to pursue its war with Japan. For France itself, experience teaches that it can rely on its own thrifty investors, who paid the billion-dollar Prussian indemnity of 1871, and who have now been hoarding money for three years, with an instinctive view to exactly the situation which has arisen. Austria is in a far more serious quandary; it was meeting great difficulty in its public borrowings, even before the war began.

What, then, will be the effect on the general investment market of these enormous impending war loans? This is a question of high perplexity. With all stock exchanges closed, it is not even possible to get the judgment of the investing community, expressed through the action of the market for older bonds. On the face of things, it would seem that the sudden creation of peremptory demands upon capital, on such a scale, must necessarily raise the price of investment capital substantially.

That conclusion would be emphasized by three other considerations—the fact that, unlike any other war in our time, this one has drawn nearly all the great lending nations into the struggle; the fact that accumulation of new capital in continental Europe has largely ceased, and the fact that needs for reconstruction purposes, even when war is over, will be exceptionally great. Against this may be placed the well-known fact that the existing capital of all the world has been hoarded, so to speak, during several years with perhaps this very state of affairs in sight. The question how long this costly contest is to be continued will also necessarily affect all inferences in the matter.

GERMAN CULTURE.

The question as to the peculiar distinction of German culture, which is frequently raised just now, is most interesting. We assume that the reference is, in a general way, to Germany's achievements in science and literature; even as to these, no categorical answer is possible. It is, however, safe to say that the really great minds of Germany have never made any professions for their country that seem to bear out what is so frequently asserted by chauvinist writers, and certain politicians and militarists. Great minds in Germany, as in other countries, have an international outlook, and to a Goethe, a Kant, a Lessing, and a Herder, any pretension to intellectual superiority based on national or racial grounds was unthinkable. It may, however, be admitted that certain characteristics have always been popularly associated with German culture, as distinguished from that of other countries, and it is this conception that has given German universities and other educational institutions the rank they hold in the estimation of the world.

Perhaps the chief trait of the typical German scholar is the union of a minute knowledge of his subject with a broad comprehension of general principles. This characteristic has stamped itself upon many German achievements. There are entire fields of intellectual activity in which some outstanding German name at once calls up a new era in scientific or literary research. The names of Winckelmann, Bopp, Karl Ritter, Johannes Müller, Virchow—to take only a few at random—suggest themselves as those of the founders of the sciences of classical archæology, comparative philology, physical geography, modern physiology, and cellular pathology. Niebuhr and Ranke established a new historical school, which Mommsen broadened still further; Ehrenberg's treatises on infusoria were epoch-making; Ewald and other German Orientalists blazed new paths in Bible criticism; Kirchhoff and Bunsen discovered spectrum analysis; Liebig and Wöhler conquered for chemistry a vast new domain; Savigny placed jurisprudence on a new historical basis. The bacteriological discoveries of Koch and Ehrlich are of supreme and world-wide importance. No country has produced a scholar like Helmholtz, who cultivated the most divergent fields of science, and was equally distinguished in physiology and in experimental and mathematical physics. Humboldt's grasp of the universe remains unrivalled to this day. Nevertheless, to name Pasteur, and Darwin, and Faraday is sufficient reminder how far Germany is from any claim to supremacy in all the highest achievements of science. Germany's preëminence in music is undisputed, and German translators and expounders have made Homer and Shakespeare live in another tongue than theirs. Kulturgeschichte—there is no precise name for it in English—may be said to be a German creation.

All this, and more, the world has always recognized, but it has long been felt—perhaps by none so much as by those who know the value of German teaching and can appreciate the charm of German life—that Germany has often been unfortunate in her public spokesmen—those injudicious patriots who have asserted for her an absolute superiority in every form of intellectual and moral endeavor. Literary historians and critics, in particular, have assigned to German writers a rank which, in the opinion of the most competent international critics, is not due them. German scholarship shows in this respect a certain inability—or is it unwillingness?—to conform to international standards, to evaluate German literature as a Sainte-Beuve or, let us say, a John Morley would have done. Goethe, Schiller, and Heine are indeed poets of the very highest order, but not every pleasing German lyrist is a Burns or a Shelley; not every Klopstock a Milton, nor—turning to prose—every Rabener a Rabelais or a Swift, every Spielhagen a Dickens. The fame of a Goethe surely needs no exaggeration, and no great writer, perhaps, had a saner view of his limitations than the greatest of Germans himself. Goethe thought Shakespeare as much above him as he believed himself to be above Tieck; yet so eminent a man of letters as Hermann Grimm could speak of "Faust" as "the greatest work of the greatest poet of all times and all nations."

It is curious to contrast the self-effacing modesty of the great scientists and men of learning who have made Germany illustrious, with the vociferous insistence of those literary critics who know so pitifully little of the difficulty of determining the relative rank of any man of real distinction. Rare indeed are the discrimination and the candor of a Huxley, who, immediately after the death of Darwin, carefully guarded himself against an overestimate of the great man whose life-long admirer and expounder he had been. "I am not likely," he wrote to Romanes, "to take a low view of Darwin's position in the history of science, but I am disposed to think that Buffon and Lamarck would run him hard in both genius and fertility. In breadth of view and in extent of knowledge these two men were giants, though we are apt to forget their services. Von Baer was another man of the same stamp; Cuvier, in a somewhat lower rank, another; and J. Müller another." Here is, indeed, an impressive lesson in international perspective, which critics of every nationality may well take to heart.

Germany is rich enough in literary treasures to dispense with idle self-glorification. Her achievements are *of* the highest, but they are not *the* highest. She has neither a Voltaire nor a Rousseau, neither a Montesquieu nor a Bossuet, neither a Molière

nor a Balzac. Can she do better than profit by the example of wise Sainte-Beuve, who, addressing himself to lecturers on French literature, said, warningly: "I should wish the lecturer dwelling on the beauties and the grandeur of our literature and national history to guard against repeating what is so constantly said, in colleges and even in academies, on solemn occasions—that the French are the greatest and most sensible of all nations, and our literature the greatest of all literatures. I should wish him to content himself with saying that it is one of the finest, and that the world did not begin and does not end with us"?

There is another aspect of German culture which it is well to bear in mind in these days. What is best in German thought and German life was all there before the days of Germany's military glory and political might. Goethe and Schiller wrote their masterworks in one of the smallest of German States, at a time when German unity was a dream. And even when that dream was realized, there arose, as we now recall, the warning voice of a Gervinus against the overshadowing influence of Prussia. He and others —not the least loyal of Germany's sons—feared that the civilizing influence of the individual centres of German culture, the smaller capitals, would be weakened in the new era that was about to dawn. Have their misgivings proved wholly groundless? German civilization, in its broadest sense, is now being tried as it was never tried before. Who will be the successors, one asks, of the great that made German culture the admiration of the world? Goethe, interested in all nature and all mankind and incapable, as he said, of hating any nation; Kant, who on his deathbed whispered: "I have not yet lost my feeling for humanity"—are they Germany's greatest glory, or is it the Bismarcks and Moltkes?

GOLF AND NEURASTHENIA.

The erstwhile complacent golfer has had to receive many rude buffets in recent months, but he must think that an assault is now being made upon the last bastion of his creed. We refer to late efforts to show that golf is bad for its middle-aged and older devotees. Some sufferers are dragged forward to tell of their sad experience, and certain medical authorities are cited to prove that the game is neither wholesome nor safe for those past forty. Such is the new Oslerism! The most specific statement of the case that we have seen is in the *English Review*, in which an apparently veracious writer affirms:

My doctor declares neurasthenia to be the pathological symptom of the game. The vexations, the constant irritations, the disappointments, the concentration demanded, the eye strain exacted, the nervous tension involved, the mental stress and "draw" necessitated by this battle between the imperfections of humanity and the mechanical perfection aimed at, the moral energy dissipated, the artificial passivity of temperament which is essential, the sheer egocentricity, egoism, egomania, set up automatically by a game dependent solely upon one's own skill, and the retroactive depression caused inevitably by failure at it—these things, my doctor asserts, conduce to a peculiar morbid action upon the nervous system, resulting in a more or less chronic condition of sub-acute melancholia—the idiosyncrasy of the week-end golfer. I have been nearer to an outburst of hysterical weeping on the links than at any other time in life's calvary.

Wanken auch die Berge? Must we give up the most deep-rooted convictions about the benefits of golf for those in advancing years? Has Rockefeller played and preached the game a deluded man? If we are to credit these new assailants of the game, then President Taft and President Wilson have been pitifully deceived, and their predecessor in office is vindicated who said contemptuously: "Golf is no game for a full-grown man!" It will be hard to give up fondly cherished beliefs, but neurasthenia is mighty and will prevail. We are to conclude, then, that all the rosy accounts of having discovered the fountain of youth on the links are vain imaginings. The whole army of gray-haired golfers who have been boasting of vigor renewed and spirit enlivened by their favorite pastime, are to be classed with the self-deceived cripples who throw away their crutches at Lourdes or Ste. Anne de Beaupré. In reality, though they have known it not, they have been rashly exposing themselves to nervous strain, egomania, and melancholia.

It looks like a desperate case, but a little consolation and possibly hope may be left the golfer who has come to forty year—and further—if he will stop and do a little discriminating. He will notice that the nervously wrecked player of the *English Review* holds to the intense and somewhat old-fashioned view of the way in which alone success is to be had at the game. This was the theory of tremendous concentration. You were to stand over your ball the world forgetting by the world forgot. Every thought, desire, and even instinct was to be shut out of your consciousness, except the one fell determination to remember all the rules and to hit that stroke perfectly. That way, it must be admitted, madness has often seemed to lie. Egocentrics of that sort yielding to melancholy have been seen on every links. But a new school of golf-teachers has risen. Their motto is relax. Instead of the old terrible gripping of your club and yourself, you are to cultivate a care-free air, to act upon the rules rather than ceaselessly repeat them to yourself, and to be calm and blithe instead of absorbed and intense. We do not allege that the children of this theory justify its wisdom any better than those of the older, but they have a much more comfortable time endeavoring to live up to it, and are certainly not in the way of becoming neurasthenic.

Another thing. This alarmist of the *English Review* is plainly a low-handicap man. Though getting on in years, he is evidently one who is bitterly disappointed if he cannot give his son three bisques and beat him. Of such a player we can well believe that failure to improve his game would plunge him into gloomy depression. If his handicap were one higher this year than last, he would think that the end of all things was at hand. For him golf is not a recreation, a diversion, a pretty device for cheating yourself into a five-mile walk in the open air, but the serious business of life. Not to succeed brilliantly in it is to write yourself down a miserable makeshift of a man.

But not such, we are glad to say, is the animating motive of the increasing numbers of middle-aged golfers. They like to play well, but if they must play ill, never mind: they play, and that is enough for them. There is always a glorious shot or two in the round to look back upon with joy. The eighteen holes may be done in shockingly high figures, but anyhow there was the wonderful eleventh miraculously made in one under par. Then there are the mischances and the freaks of the round; the "hard-luck" stories to tell, and the miraculous pieces of good luck so easily translated into terms of exceptional skill. And as for their handicaps, these light-hearted old men are unblushing in making them as high as possible. All the better chance that they may some day win something in a medal-score competition. To the new golfing gospel of relaxation, these veterans of the links take eagerly. Some of them carry their relaxed attention so far that they don't notice how many strokes they have made! But they are no prey to neurasthenia. Let the occasional nervously broken-down golfer say what he will, and let the medical faculty find new names and causes for what it does not understand, a great cloud of witnesses will hold them in derision. Golf bad for the nerves? What game do you play, the enthusiasts will demand, that gives you the nerve to utter such nonsense?

Chronicle of the War

The curious report, published simultaneously on Tuesday from Amsterdam and Paris, that Gen. von Moltke has been superseded as Chief of the German General Staff by Major-Gen. von Voights-Rhetz has not, as we write, been confirmed. It must be regarded with considerable suspicion, but, if true, it is an interesting piece of intelligence which may be interpreted according to the hopes and fears of those who read it. On the face of it, as English military critics have not been slow to point out, it would appear an extremely dangerous experiment to "swap horses in the middle of the stream," and in the English view there looms up immediately the sinister figure of the Kaiser with his detestation of Britain and a crazy desire for vengeance on perfidious Albion. According to this view the explanation of the change in leadership is ingenuously simple: the Kaiser has been anxious to invade England forthwith, and von Moltke, having resisted his imperial master's plans, and not having been overwhelmingly successful with his own, is in disgrace. The improbability of such an explanation is apparent. It is not necessary to regard the Kaiser as a heaven-sent strategist—which there is every indication that he is not—to give him credit for the possession of rather more intelligence than to consider seriously the withdrawal of a number of troops from France, where they are already sorely pressed, in order to dispatch them on an enterprise which baffled even Napoleon at the height of his success.

The whole progress of the battle of the Aisne, now in its fourth week, has tended to confirm the impression, early expressed in these columns, that this war will be a long one. The battle of the Aisne has resolved itself, as did the battle of Mukden in the Russo-Japanese war, into a siege of intrenched positions, and future battles are likely to follow this precedent. If the Allies are ultimately successful in the present battle, their success is likely only to repeat that on the Marne. When the time comes, the German forces may be expected to retreat, defeated, but unbroken, to a previously selected line on the Belgian frontier, at least as strong as their present position, and, still assuming the gradual progress of the Allies, the heart-breaking period of the struggle will come as the Germans are gradually forced back on their own frontier defences. We have stated before that the decisive episodes in a campaign are the capture of large bodies of troops, but it becomes increasingly evident that on the huge scale on which modern battles are fought a Metz or a Sedan is not to be looked for, and that victory is to be decided rather by a weary process of attrition. That the Allies will ever fight their way to Berlin from the west seems even more improbable than that the Germans will now fight their way back to Paris. Even if the Russian offensive could be supposed as remaining stationary, the point of exhaustion must be reached long before Berlin is in sight. But Berlin is the objective of the Russians, and the task of the Allies is to continue to keep a huge army engaged in the west, while their allies on the east are slowly forging ahead towards the capital.

The developments in the situation in the western area of conflict that call for comment are the determined German attack on Antwerp and the extension of the Allies' left in a northerly direction towards the Belgian frontier. It now seems evident that these are not to be regarded as isolated operations, but are to be considered in their relation to one another. When we wrote last week the extreme northerly point of the French flanking movement was some ten miles north of the Somme River in the neighborhood of Albert and Combles. As we write now there is reason to suppose that the line has been advanced to a point between Arras and Lille —a distance of some forty miles. The German forces, however, have kept pace with those of the Allies; the army of Gen. von Kluck is apparently in less danger of being outflanked than was the case a week ago; the most desperate attempts of the Allies to cut the German lines of communications into Belgium have so far been repulsed. Meanwhile, at the bend of the allied line, around Roye and Noyon, dispatches from Paris and Berlin on Monday agreed that ground had been given. That need imply no reverse to the allied forces. Obviously, as the line stretches out, it must become attenuated, and sudden attacks at different points by superior numbers (and the Germans, forming the inner circle, have the advantage in rapid concentration of reinforcements) necessitate a retreat on prepared defences until counter-reinforcements can be brought up. The line bends, but does not break.

Lille is close to the Belgian frontier and but eighty miles from Antwerp, and, bearing that in mind, the suggestion immediately offers itself that the allied movement which started as a flanking operation designed to envelop the German right has now developed into a deliberate attempt to join hands with the Belgian army in Antwerp. Then the sudden German determination to effect the capture of Antwerp and the rapid advance northward of the Allies are mutually explanatory. Confirmation is lent to this supposition by dispatches on Monday which revealed the fact that British artillery is co-operating with the Belgians in the defence of Antwerp. The advantage to the Allies of effecting a juncture with the Belgian army is evident, if that can be carried out without seriously weakening their line elsewhere. An army of 100,000 men (the figure at which we may safely estimate the present Belgian forces) acting as an isolated unit may be useful in harrying the enemy's lines of communication and keeping troops engaged that could advantageously be employed elsewhere, but evidently, acting on the left wing of the allied forces as an integral part of the whole army, its usefulness would be doubled. It would mean the reinforcement of the allied troops by the equivalent of between two and three army corps.

Another competitor, then, has entered the race of which we spoke last week as in progress between the attack of the German left-centre on the Verdun-Toul line of fortifications and the flanking movement of the allied left. The object of the Germans now appears to be to take Antwerp (when the majority of its defenders would probably be compelled to cross the Scheldt into Holland, where they would be interned) before the Allies, penetrating to Mons and Brussels, can relieve the pressure on Antwerp and liberate the Belgian army. The prospect of German success appears to be doubtful. In spite of Belgian denials, we may accept the official statements from Berlin that the forts of Lierre, Waelhem, and Koningschoyckt have fallen before the redoubtable siege guns mounted on their concrete bases, and the Belgian statement that the defending forces occupy a strong line between the Rupel and the Nethe lends confirmation to the German assertion; but before those same guns can be utilized to batter down the inner circle of forts they must be moved across marshy ground, and bases of reinforced concrete must be prepared for them. Furthermore, although previous theories as to the impregnability of fortifications have been somewhat upset by the Krupp siege guns, the experience of this war has demonstrated the strength of intrenched positions capably defended. If, furthermore, as seems a probable conjecture, the defences of Antwerp have been reinforced by British naval guns the task of the Germans should not prove an easy one.

In the eastern field of operations the Russian strategical plan, which appears to have been singularly deliberate and well considered, is gradually maturing. The original demonstration in East Prussia at the beginning of the war, which served its purpose admirably in drawing off troops from the west, has resulted after severe fighting in leaving the situation pretty much as it was six weeks ago. The counter-demonstration, which swept the Russian forces from East Prussia, and carried the army of Gen. von Hindenburg into Poland, had its culmination in the week-long battle of the Niemen. Here, although dispatches from Petrograd have not always in the past proved to be credible, and although on Tuesday Berlin put forth an assertion of sweeping success at Augustowo, there appears to be no doubt that the Russian forces gained a decisive victory. There is no reason to discredit the success at Augustowo, but it seems to have been a rear-guard action, forming only part of the battle as a general result of which Gen. von Hindenburg's army was defeated. The probability is, therefore, that the German forces in this field have retired from the Niemen to a fortified line on the frontier.

In Galicia nothing of great importance has occurred during the past week. We may place the Russian centre as near Tarnow, its left skirmishing in the Carpathians, its right running from Tarnow northwest across the Vistula into Poland. The Austro-German forces are concentrated before Cracow, and here we may shortly expect what may prove to be one of the decisive battles of the war. Meanwhile, we hear for the first time of the great central Russian army which, it was assumed at the beginning of the war, would undertake the main invasion of Germany by way of Posen. This army is apparently advancing on the Posen-Kaliscz line, and between it and the German frontier, judging from a mysterious dispatch in which Petrograd casually speaks of "the present fighting near Warsaw," we must assume the presence of that German army which, according to an official announcement from Berlin a month ago, had occupied Lodz, and thereafter vanished from human ken.

Foreign Correspondence

A TRIO OF GREAT SPEECHES—IRELAND AND SOUTH AFRICA—SONG IN THE HOUSE OF COMMONS.

By SIR HENRY LUCY.

WESTMINSTER, September 26.

At a time when England, civil, naval, and military, is splendidly facing peril unparalleled since the day of Napoleon, it is a crowning advantage that we have at the head of affairs men who by natural gifts of oratory can give adequate expression to the national feeling. In the front rank stand three of varied style, each marked by strong personality. The speech of Sir Edward Grey, delivered in the House of Commons on the eve of the declaration of war, was epoch-making. Since Crimean days this country has never embarked on a warlike expedition without creating a more or less powerful opposition. Sir Edward Grey's speech, promptly followed by publication of the White Paper containing diplomatic conversation and correspondence with the Kaiser's agents, not only united the British and Irish people as one man, but enlisted the sympathy and approval of neutrals in both hemispheres.

Mr. Asquith's speech, delivered in the historic Guildhall, through which Pitt's trumpet-call still echoes, carried matters a long step further. When he spoke, war had been fiercely raging for some weeks. "The Angel of Death was abroad in the land." There had been a series of disappointments, deepening to grave anxiety at the slow but steady retreat of the Allied forces, driven back by the German horde elate on the familiar road to Paris. The Prime Minister's speech, invincible in spirit, lofty in eloquence, struck the right note at a critical moment. It lifted up the heart of the people to a pitch from which it has not since shown sign of falling.

Then comes Mr. Lloyd George, facing an enthusiastic crowd in the vastness of Queen's Hall, with a speech differing in style and texture from the other two, but worthy of the proud championship. Its burning eloquence, its flaming indignation against the resuscitation of vandalism and barbarity, its withering scorn of the man responsible for these woful things, who daily "takes by the arm the shuddering Lord of Hosts," roused afresh the enthusiasm of the people and deepened the determination to make an end of the Kaiser and all his works. Tennyson wrote a verse extolling the singer. It is easily adaptable and equally appropriate to the orator:

> And here the speaker for his Art
> Not all in vain may plead.
> The Speech that nerves the Nation's heart
> Is in itself a deed.

The spontaneous singing of "God Save the King" in the House of Commons on the eve of prorogation is one of those incidents that attract perhaps excessive attention on the part of the public. Another incident following a few minutes later was of supremer interest. As the House was breaking up a voice from the Liberal benches cried, "God Save Ireland!" In the deep voice of the Irish Nationalist leader came back in swift response, "God Save England!" A little thing, but how much it means! Ten years ago it would have been impossible. Even twelve months ago the fervent utterance would have been almost as much as Mr. Redmond's position in Ireland was worth. But he had on this day just returned from the House of Lords, where he had witnessed the enactment of the Home Rule bill, conclusion of a fight that goes back forty years, when—the happy phrase "Home Rule" has just been invented by way of distinction from Separation—Isaac Butt opened the campaign. That its finish should be coincidental with the peril of Great Britain making opportunity for armed Ireland to come to her sister's aid is one of the striking events of history.

It is one of two splendid results of the policy inaugurated upon the downfall of the Balfour Ministry in 1905. One affected South Africa, the other Ireland. I have vivid recollection of seeing Mr. Balfour standing at the table of the House of Commons nervously wringing his hands, almost literally washing them of participation in, or responsibility for, Campbell-Bannerman's proclaimed resolution to admit the Boers to a full share of the government of their country. As to Home Rule for Ireland, bitter animosity towards it found final issue in attempt to utilize the war with Germany as an expedient for indefinitely shelving the bill even as it stood awaiting enactment. Among the cards in his hand upon which the Kaiser confidently counted in playing the game that to-day desolates the fair fields of France and the once prosperous cities and towns of Belgium, was revolt in Ireland, and an attempt on the part of the Boers to regain their independence. In South Africa, as in Ireland, it has been found possible to withdraw the British garrisons, England's ancient enemies undertaking to answer for safety and order. It is a pity that C.-B. did not live long enough to see this fruition of his bold and generous statesmanship on either side of the Equator.

Precedent to the prorogation, the only other time I have heard the voice of song break forth in the House of Commons dates back thirteen years. The circumstances strikingly indicate all that has happened in the interval. The Unionist party was in power, Mr. Balfour and his colleagues in office. The Irish members, recognizing that they were as far off as ever from realization of their dream of Home Rule, lapsed into their familiar tactics of obstruction. Late on a night in the spring of the session 1901, the Education Vote was dealt with, the Irish members attacking it on innumerable details. Obstruction carried to its furthest limit, the chairman ordered the House to be cleared in preparation for a division. The Irish members refused to budge from their seats. To-day, by operation of a new standing order, members not desiring to take part in a division may, if they please, retain their seats. A dozen years ago such procedure was a gross breach of order.

The Speaker (Mr. Gully) was sent for, and on taking the chair repeated the chairman of committee's direction to clear the House. The Irish members being unyielding, the police were summoned, and under the direction of the sergeant-at-arms led the recalcitrant members forth. The main body went quietly enough. Mr. Flavin, firmly clasping the rail of the bench, declined to go. The police accordingly literally "took him up," and carried him forth shoulder high, he in stentorian voice chanting the refrain of the national battlesong, "God Save Ireland." On Friday Mr. Flavin's voice was plainly heard, doubtless for the first time in his life, singing "God Save the King."

A French Kipling

By J. W. CUNLIFFE.

THE WORK OF PIERRE MILLE, WHOSE BARNAVAUX IS FIRST COUSIN TO MULVANEY.

M. Pierre Mille has so often expressed his admiration for Kipling and acknowledged his indebtedness to him that he would probably take the above heading as a compliment, though it is far from an adequate description of his qualities. One cannot imagine Rudyard Kipling as a Frenchman, and it may be premised at once that Pierre Mille is something more (and less) than his first inspiration and model. Nowadays he writes sometimes like Kipling, and sometimes like Anatole France; into the gulf between these two one could drop most of the living writers of prose who are worth reading.

I.

As Pierre Mille, in spite of his enormous popularity in France, is little known outside of his own country, a few particulars of his career may be of interest. Born at Choisy-le-Roi in 1865, young Mille plunged into journalism, and was sent by the *Journal des Débats* as its correspondent to the Greco-Turkish War of 1897. His dispatches, and some articles he wrote for the *Revue des Deux Mondes*, attracted attention, and formed the basis for his first book, "De Thessalie en Crète" (1898). He had already made his journalistic début in the French colonies at Madagascar in 1896, and he afterwards visited Senegal and the Congo. His descriptive sketch, "Au Congo Belge" (1899) was "crowned" by the Academy, and was followed by two other books on the Congo question, which was already exciting a great deal of public interest. But it was not till 1905 that he established his reputation as a story-teller in the volume, "Sur la Vaste Terre." The very title seems to smack of Kipling, whose name figures at the head of one of the stories, and whose influence is plainly discernible in others. The hero of the book, Barnavaux, is first cousin to Terence Mulvaney; an outline of "Barnavaux, Général" will be enough to make the relationship clear. The story is told by Barnavaux, a marine serving in Madagascar, to a friend of higher social station (apparently a war correspondent) in the interval of some military operations. Barnavaux and his comrade, Razowski, were the sole garrison of the outpost of Vouhilène, and Razo fell ill from homesickness and reading the books of the Protestant missionary Stewart—the doctor called it tropical anæmia. Sister Ludine, of the Catholic dispensary, tried to cheer him up and save his soul, but he said he was a free-thinker and would die like a man. Rakoutoumangue, the old chief whom Barnavaux had supplanted, came on a pretext to spy out the land, and found as "Commander of the garrison, chief of staff, colonel, captain, lieutenant, artillery, cavalry, infantry—Barnavaux. The rest of the garrison—in

hospital." A few days later, the insurgents were heard attacking Stewart in his school. Barnavaux took his rifle to go to the rescue. Razo tried to get up, but could not lift his head from the pillow. Then Sister Ludine took up Razo's rifle, and said to Barnavaux, "I am coming with you"—the idea that the poor little children would be burnt to death in the school filled her with horror and turned her head. "But I could not see Sister Ludine transformed into a heroic warrior—it would be ridiculous," recounted Barnavaux, who may now be allowed to tell his own story:

"Do not dishonor your cap," I said to her. "People don't bear arms in that costume. What we need is the prestige of the uniform. The outpost defended by a woman—it is the best way to show that all is lost."

"Do you think so? Well, it won't take long."

She undid Razo's bundle, took out a pair of trousers and a tunic, and ran without another word into the kitchen, which was a little hut at the other end of the terrace.

Three minutes later she came back dressed as a marine—yes, a marine in full uniform, which did not embarrass her in the least—she was so excited. Her little old woman's body made her look like a child, except for her face, which was haggard, wrinkled, shrivelled—but all shining with enthusiasm. Razo choked with emotion and I did not think of laughing or of protesting—I had tears in my eyes. I said:

"Sister Ludine, you are out of your mind. Sister Ludine, I love you with all my heart. By all the powers, go and crack their heads."

At that moment I could have destroyed an army of a hundred thousand men all alone. Everything seemed to me cheerful, touching, easy, and sublime. It was not air I had in my lungs, but a kind of clear flame that ran hot in my blood. I was mad, I was happy, I was beyond myself. I wished to break out into exclamations, into songs, into all kinds of foolishness for my own pleasure—for a joke. I am telling you exactly how I felt.

Things were pressing. Five or six houses were already on fire. Three or four corpses already stained the reddened soil. The insurgents were blazing away their ammunition, perhaps to show that they had plenty of it. Their yells, from afar, sounded like a litany in church—rising, swelling, falling, beginning again. The door of the school was shut, and Stewart was firing through a loophole; this solitary sound from the defence, thin and, as it were, trembling, froze me to the soul. It was five o'clock, and the setting sun cast long rays across the rice fields, which separated the outpost from the village. A rice field is a river in which there is mud instead of water, and green shoots above the mud. You can only cross it by the dikes.

I said to Sister Ludine:

"We must produce a grandiose and unexpected effect. You are the second division of the army. Go down behind the outpost, turn to the right, and cross the rice field by the third dike. Don't weaken your formation by delay on the march; you might lose stragglers! Once you are on the dike, the enemy will see you; then fire. By all the saints of Paradise, don't trouble to aim, but fire all the cartridges in the magazine, recharge, and begin again. Your business is to make plenty of noise—that's all."

The sister laughed heartily.

"That's what I'm here for," she said. "But how do you do it?"

She held out her Lebel rifle with the look of a nigger who has received a money order and does not know what to do with it.

"Ah, just so," I replied.

I showed her the mechanism of the dear little thing. She understood it at once.

"Comme ça, et puis comme ça, et puis comme ça? C'est bon. Au revoir."

And she was going off when I recalled her with a shout:

"I've forgotten to tell you the direction in which you're to march."

"Holy Virgin!" she answered. "It's the school. You've no need to tell me that."

I never saw more conscientious work. She marched, fired all the balls from the magazine, made a few steps, stopped to recharge, began again—and did in every way just as I did, for I was advancing on my dike like a veritable Napoleon at the Bridge of Arcole.

It is over a mile from the outpost of Vouhilène to the village; but we had opened fire all the same. The brutes who were attacking the school turned round in astonishment. They all believed—because they had been told so—that there was only one Frenchman on his feet at Vouhilène, and that he would not be mad enough to leave the outpost. My insolence impressed them, and the parallel demonstration of Sister Ludine was a surprise. The insurgents of Emyrne were poor devils who were dying of hunger; what gave them courage was the assurance that no one in the village would offer resistance—neither the guards of the outpost nor the inhabitants. But here was the garrison making a sortie.

The fever-stricken Razo completed the rout of the insurgents by letting off, from the top of the outpost, the fireworks intended for the 14th of July; and Rakoutoumangue, who had instigated the attack, when he saw the rebels giving way, came and helped to slaughter them. They tried to take refuge in the school, and the missionary, after imploring them to go away, killed one by throwing a block of granite on his head. His consternation at having "killed a man" recalls a similar incident in Kipling, though the circumstances are entirely different. "Well," said Sister Ludine, "I can take an oath that I have not killed anybody." "And it was absolutely true," Barnavaux comments. "If any one can boast to-day that she never hurt a hair of her neighbor's head, it is that old saint—which proves the importance of moral strength, as the newspapers say."

In the upshot, the part played by Stewart and Sister Ludine in crushing the insurrection was suppressed in the official report, and most of the credit given to Rakoutoumangue, who was in consequence restored by the French Government to his position as chief. Barnavaux was promoted to corporal. His interlocutor remarked that he no longer wore the stripes:

He blew away a cloud of smoke and replied: "The air of big cities is not good for me. Three months after the victory, I was recalled to Tananarivo, and there I was reduced to the ranks for unbecoming conduct. But that is another story."

II.

"Barnavaux et Quelques Femmes" (1908) continues the exploits of the soldier-hero in Madagascar, in the Sahara, on the Congo, in Tonkin; and the last story is dedicated to Rudyard Kipling, who wrote *the Finest Story in the World.* But apparently the author tired of this vein (though the public did not), and the stories that followed were turned in another direction. "Caillou et Tili" (1911) is an attempt to explain to adults the point of view of a little boy and a little girl. This difficult task is accomplished with much delicacy and subtlety, and with many profound observations of childish nature, of which the following may serve as examples:

Never tell stories before children of things that have happened to them; if they are inclined to vanity and affectation, you will make little mimics of them; if they are proud, delicate, and sensitive of soul, you will wound their susceptibilities. For in spite of all your efforts you will never tell the story as they have felt it; you are too different from them, and you will not do them justice. So they will think that you are making fun of their vexations and anxieties, that you do not take seriously either their personality—and there is no human being more solitary and therefore more proud than a child—or the universe they are constructing in mosaic—by sensations added one to the other—luminous fragments of things, precious gems they are perpetually amassing. . . .

Never quote children's sayings in their presence; if you yield to this inclination, they will quickly come to stringing phrases together at random, in the hope of exciting surprise and admiration.

These are perhaps counsels of perfection, but if parents would give heed to them, they would save their friends some unhappy hours and their children real suffering. Caillou and Tili are, of course, French children, and much that occurs to them would be strange to American youngsters; but there is no doubt of the insight and skill with which the author has revealed some of the secrets of the nursery, of universal interest and significance.

In his next book, "Louise et Barnavaux" (1912), Mille returned to the hero who had first won him fame, and had not ceased to be popular. In this volume we see Barnavaux attempting to settle down; he does not go so far as marriage, but he enters into a *union libre* with a respectable working girl, Louise, whose character is drawn with charming sympathy. The result is disastrous for Barnavaux; after making all kinds of good resolutions, he is sent to prison for four days because he has obtained leave to attend the funeral of his son, whose paternity he had not officially acknowledged. Barnavaux gives up Louise, and returns to his old habits and adventures.

Mille's last book, "Paraboles et Diversions" (1913), is again different from his previous work. The "Paraboles" are fresh versions of Scripture story, somewhat in the manner of Anatole France, but without his biting and malicious irony. Mille's hu-

mor is more gentle and sympathetic, and though readers brought up in the traditions of English Protestantism may find the atmosphere irreverent, the Latin peoples, accustomed to treating sacred personages with a certain affectionate familiarity, will see no cause of offence. The story of Creation is told so as to give more play for the part of Satan, who is identified with the first critic; Noah yields half of his honors to Deucalion; the birth and childhood of Jesus are treated with a delicate humor which has, rightly regarded, no touch of mockery. The legends of Œdipus and Don Juan are dealt with in the same spirit—the latter from the point of view taken by Bernard Shaw in "Man and Superman." The next division of the volume, "Quelques Bêtes et Gens," again reminds one of Anatole France, though the latter was, of course, not the first to enforce the warning against anthropomorphism by reminding us that the lower animals have a different point of view. It was an old Greek who said, "If the oxen made a god, they would make him in the likeness of an ox," and Mille's "Diary of a Fat Ox" is conceived in a delicious spirit of humorous gravity which is wholly original:

I am the Fat Ox. There is no more magnificent title. There is none more assured. I despise the other sovereigns. To what does William II, Emperor of Germany, owe his throne? To the fact that Frederic II, the only great man of the family, had no more children than I have. He reigns by virtue of the chances of a collateral succession. And the President of the Republic? He presides by virtue of the chances of a contested election. And for all the others, it is the same thing: inheritance, chance, lottery. But I—I have been weighed! And I weighed more than all the other oxen. I am the ox of oxen; no one can deny it. I have been elected by science and truth. Science and truth march with me—nothing can stop them; I shall go, with them, to the slaughter-house.

For I know that I shall go to the slaughter-house. That is what constitutes the superiority of oxen over man; we know how we shall die and what end our death will serve; to feed men. But what end is served by men who die? None at all. That is why they are accompanied to the tomb with melancholy hymns, black costumes, ugly withered flowers, and priests who are hidden in carts made like catafalques. My priests were fragrant with wine, like Silenus. They were clad in white, purple, and amaranth. Bacchantes accompanied them. Delirious trumpets sounded on my way. Men dressed like beasts danced before the beast I am. And they will slay me like a god.

The Fat Ox then tells of his birth and early education:

I was taught to ruminate. It is a real science. You must ruminate stretched on the ground, slowly, gently, with the lower teeth, and think only of ruminating. When you know how to ruminate, you know the foundation of things, you are happy, nothing can distress you. The moment comes when I shall die; but I am ruminating. That is why bulls are mad. They pass their time in running about, they attack terriers who ought to be respected, they ruminate ill. So they stay lean; they will never be fat oxen. I cannot conceive why they exist.

Every fortnight I was weighed in a great machine, and each weighing was a triumph. I became huge, fat, powerful, placid, and pacific like the earth, and of a white color lightly tinged with rose, like a plum blossom. When I was put to the plough, I accepted this gymnastic exercise without complaint, knowing that it would make my flesh firmer. I was rewarded by my victory at the Agricultural Show, where the Prefect himself paid homage to me.

I understood, from the speech of this high official, why I had lived. My existence and embonpoint glorified the Republic. Never, under the Empire, was there an ox like me; for oxen could not grow becomingly fat under the régime of tyranny. The Radical-Socialist Deputy made it known, in a very long address, that the protection he had always accorded to the ward in which I was born was not unconnected with the brilliance of my hide and the richness of my flanks. Then the trumpets played the Marseillaise, the Clairons de Sidi-Brahim, and the Internationale. Tired out, I sank to rest in my own dung. They put a crown of roses on my head, and I concluded that I had done all that was expected of me.

. . . . . .

Now I know that I shall die. It matters little—I have lived my life. My name will resound for the last time in a dark corridor, acclaimed by vigorous and sanguinary young men armed with heavy axes of steel. But even my corpse will be glorious. The butcher who bought me will decorate it for the last time with paper roses, after removing my hide. And the nations will defile before my gigantic body before it is cut in pieces. This is the lot of gods and of kings.

III.

The next story, "Jimmy and Wilkie," has a larger element of pathos. The heroes are two coal-mine ponies who are brought to the upper air because of a strike; their sensations on seeing the light of day, the meadows, the flowers, the birds, are described with the subtlest sympathy. The other stories and sketches are lighter in tone and of less permanent and universal appeal. Most of them hit off little peculiarities of French life, such as the anglers on the banks of the Seine, who are a perennial source of wonder to American visitors. The story of the restoration of the Mona Lisa to the Louvre is at the expense of the experts, as the "Courte Conversation avec un Grand Peintre" is at the expense of the latest fads in art, the "Great Painter" being no other than the donkey who with his tail painted a picture which was exhibited in one of the Paris salons, and was much admired—until its origin was made known. American readers will be interested in the story of the theoretical anarchist, Paul-Louis Durand, who was a passenger on the Titanic:

When Paul-Louis saw they were getting out the life-boats, he made haste. A young officer, correct and cool, in full uniform—it is worth while to dress well for death, it gives courage and generosity, the soul adjusts itself to the body—took him by the collar of his ulster, and said sharply:

"What are you doing?"

"You see for yourself," said Paul-Louis. "I am going to get into the boat."

"Women and children first," answered the officer. "Besides, I may tell you that there will only be room for them. There are not enough life-boats."

Durand's principles obliged him to consider his own life as more precious than those of all the rest of the world. He tried to free himself, and felt a revolver pressed against his temple. He was an intellectual; he had time to experience something like respect for this man who showed a determination equal to that of the enemies of society. Yet he protested:

"What have the women and children to do with me—and with you? This is no time for politeness."

"It's not politeness," said the officer. "I suppose—well, I suppose it is because children—children are the future—and women the possibility of replacing us. But—go to hell, sir. I've no time to talk."

As Paul-Louis Durand was asking himself with some astonishment if in reality there are sometimes interests which exceed those of the individual, the great ship dipped her nose into the dark water like a swan looking for a fish. But she did not raise her head again—ever. And while a fierce lamentation arose from the vessel, swelling and falling like a hymn, Paul-Louis, losing his balance, was thrown into the sea. It was so cold that he said to himself that he could not swim long. But as he had heard of the terrible suction made by a sinking ship, he made efforts to get away. In the cruel darkness that oppressed his eyes like some material, viscous substance, he suddenly felt something solid under his hand. It was a raft, which yielded beneath his feet; but this enabled him to climb on it. It was large and solid. He scrambled to the middle and stood up.

He was saved! But at that instant a mysterious, inexorable, overwhelming fear increased the shuddering of his miserable flesh. He was alone—all alone in the midst of the sea! He could not stay alone; he was more afraid, alone on this wreckage, than a moment before on the steamer among fifteen hundred men facing death with him. The iceberg drifted near, and in its sickly light he saw a man, sustained by a life-belt in the water a few feet away. He called to him:

"Here! Here! Do this with your hands!"

He made the movements of swimming, and almost in a frenzy, on all fours, helped the shipwrecked man to climb on the raft. Others came, and soon there were thirty of them. They were not acquaintances, and yet they were glad to recognize one another. They touched each other gently as if the feeling of comradeship gave them I know not what desperate hope.

Suddenly there was a change. Some one said:

"We can't take any one else. The raft is going down."

Yet from the depths of the darkness they saw other unfortunates coming and crying for help.

"There is no more room," Paul-Louis shouted with the rest. "There is no more room—keep off. This raft is ours. If you come on board, you will sink us."

Of these exiles, thrown back to death, some said with resignation:

"God help you! Good-by!"

But others tried to climb up. Then instinctively there was a guard, watchmen, leaders, who repulsed them without pity.

"It's ours, this raft. We want to live."

And thus Paul-Louis Durand, anarchist and individual, learned the meaning of patriotism.

IV.

It will be seen that M. Mille has decided opinions. He has not the detachment of Anatole France, to whom he ironically dedicated one of his earlier stories ("L'Aveugle") on the duty of military service. On the other hand, it would be no less a mistake to describe him as an imperialist, if by that we understand an imperialist after the fashion of Mr. Rudyard Kipling. He has too much irony for that, sees too much of both sides—that of the subjected people as well as that of the white man who is assuming a self-imposed burden. He has not Kipling's sublime confidence in himself and in the divine mission of his race. His is a subtler essence, less powerful, no doubt, but possessing its own delicate charm. Those who have read the passages quoted should find encouragement in them to make acquaintance with the original text; and it is to be wished that some competent translator might put a selection of M. Pierre Mille's work within reach of the English-reading public. They would enjoy it, and profit by it.

News for Bibliophiles

BYRON'S INDEBTEDNESS TO LA FONTAINE.

It is a curious fact that no student or editor should as yet have recognized Byron's indebtedness to the Fables of La Fontaine. It is easy to see that the author of "Don Juan" had at one time or another, or rather at different times, referred to the "Contes." The use made of La Fontaine's tales was usually an indirect and sometimes an unworthy one. So the bonhomme's "Joconde" was pressed into service to justify his own license in the first canto of "Juan" when Hobhouse remonstrated with him at the time that the first instalment of the poem was passing through the press.

Byron doubtless found comfort in La Fontaine's company, for he uses him again as a shield to shelter himself from another charge of grossness in a letter to Murray. That he did not confine himself to the "Joconde" is plain from the fact that he quotes, evidently with the book before him, six verses from "Le Roi Caudaule et le Maître en Droit" in a letter of July 13, 1820, this time to Moore, who was of a temperament better able to appreciate such pleasantries. Byron had evidently been reading the "Contes" during his stay at Ravenna, and, as usually happens, we catch these echoes in his correspondence. These, however, are the only references to the seventeenth-century master which have so far been noted, and no one of them occurs in Byron's poetry and no one of them is to the Fables.

The reference which I am about to cite will, I believe, prove beyond doubt that long before this, probably at the time when he was still struggling against what he was pleased humorously to call the "elements" of French, he had chosen the better part and read the Fables likewise. One of these, "L'Oiseau blessé d'une Flèche," was to provide him with what is probably the most striking and famous figure in "English Bards and Scotch Reviewers." The reference is unquestionable, though it has escaped the vigilance of careful editors. Byron's lines run:

> So the struck eagle, stretch'd upon the plain,
> No more through rolling clouds to soar again,
> View'd his own feather on the fatal dart,
> And wing'd the shaft that quiver'd in his heart:
> Keen were his pangs, but keener far to feel
> He nursed the pinion which impell'd the steel;
> While the same plumage that had warm'd his nest
> Drank the last life-drop of his bleeding breast.
> (II. 841-848.)

These lines were certainly inspired by the sixth Fable of the Second Book:

> Mortellement atteint d'une flèche empennée,
> Un oiseau déplorait sa triste destinée,
> Et disait, en souffrant un surcroît de douleur:
> "Faut-il contribuer à son propre malheur!
> Cruels humains! vous tirez de nos ailes
> De quoi faire voler ces machines mortelles!"

The fable itself was, of course, not original with La Fontaine, having come to him, like so many others, from Æsop. But in this case the matter certainly lost nothing in its further passage from La Fontaine to Byron. It is interesting to note that the bird who speaks in character in La Fontaine has become an eagle, and Byron's lines have acquired a certain *largeur*. His verses soar even if his stricken eagle does not. The "English Bards and Scotch Reviewers" had, of course, been suppressed long before Byron left England, but he was probably not altogether displeased when he learned that George Bankes had quoted these splendid lines at the opening of Parliament on January 23, 1821. We suspect that he was quite willing, in spite of his seemingly indignant protest, that all the world "should keep flinging" at least these lines of his poem in his face. They are an enduring monument to Byron's relation with La Fontaine the fabulist.

Correspondence

LOUVAIN.

To the Editor of The Nation:

Sir: Would it not be well for the universities of the entire civilized world to adopt the suggestion of Prof. Patrick Geddes and unite in a solemn protest against the destruction by the German troops of the University of Louvain, with its libraries, works of art, and scientific collections? I doubt if any military crime since the burning of the library of Alexandria can be compared to the destruction of this venerable university in its downright wickedness and lack of justification. Certainly no act of an invader since the Thirty Years War has filled a civilized world with a greater feeling of indignation. That this act should have been committed by the soldiers of a country which has so long been regarded as a leader of culture and in whose national life universities have played such a preponderant rôle seems all the more inconceivable. This ancient institution was regarded by the Belgians with somewhat the same feeling of pride as that which the English have for Oxford and Cambridge. It has a distinguished faculty, among whom are some of the best known scholars of Europe. Now it has been wiped out by the "torch of German culture," and can never be replaced.

Viewed in the most charitable light, its destruction was a crime against civilization, and no money indemnity can ever atone for the act. The act, moreover, was committed in flagrant violation of one of the conventions of the second Hague conference, to which Germany is a party, that educational institutions, libraries, works of art, and scientific collections shall be spared from destruction by military forces except where considerations of absolute military necessity require such destruction. No such necessity existed in the case of Louvain, and none was asserted, the only excuse being that the military forces were fired upon by certain civilians among the inhabitants of the town. Even granting that there was sufficient provocation to justify the Germans in punishing the inhabitants of Louvain, the burning of an ancient university with its priceless collections of books, manuscripts, and works of art was a form of revenge wholly without justification and one without precedent. Even the hordes of Attila refrained from such acts.

If the voice of the civilized world is not raised against this outrageous violation of the universally recognized laws and customs of war, the Sorbonne and the Louvre and Oxford and Canterbury may suffer the same fate that has befallen Louvain. Is it not time for the other signatories of the Hague convention regarding the laws and customs of war to protest against so wanton a violation of its provisions? This convention is not a mere scrap of paper to be observed or disregarded by one of the parties as its own military interests may require; it is a solemn agreement among practically all the nations of the world to observe in their military operations certain rules of conduct and to refrain from certain acts in the interest of humanity and the preservation of a common civilization, and no single party to it should be permitted to violate one of its most important provisions—at least not without solemn protest. In the meantime, would it not be well for the universities of America, by appropriate resolutions, to protest in the name of civilization and humanity against the atrocious act by which the world has been deprived of one of its oldest, if not one of its greatest, universities? Such a protest would not be without effect, and it might be the means of saving other universities from Louvain's unhappy fate.

JAMES W. GARNER,
[Professor of Political Science, University of Illinois.]

Oxford, Eng., September 3.

THE DESTRUCTION OF THE RHEIMS CATHEDRAL.

To the Editor of The Nation:

Sir: We in Holland have silently accepted the enormous burden which has been flung upon our shoulders by mobilization and the heavy losses to our trade and industry caused by the war. Resolved to guard our neutrality in word and deed at all costs, our people and our press looked on with the utmost self-restraint when the German legions marched up along our frontiers and began devastating the prosperous land of our southern brethren. But at the barbarous work now done at Rheims popular indignation burst forth. Public opinion is alarmed and shocked. It would not have deemed it possible that the most perfect work

of art of the Middle Ages could have been spared for seven hundred years only to be put to the test of a modern bombardment a year after the opening of Carnegie's Peace Palace and a year before the peace conference should have assembled again. It sounds like a nightmare. There is only one impression—that of horror; there is only one opinion: "This is worse than Louvain."

The press here calls the destruction of the splendid building at Rheims a blow in the face of civilization, observing that the French, who, moreover, saw in the cathedral the monument of their national unity, must now feel what Holland would undergo if a bomb were thrown on the national museum at Amsterdam, with the deliberate purpose of destroying Rembrandt's Nightwatch, the Hobbemas, Ruysdaels, and Steens.

However, so far as I can see, the Germans spared the cathedral as long as they could, and the calamity which now overtakes civilization must be chiefly ascribed to a terrible Fate, which put this pearl of architectural art right in the way of two great rival armies. H. S. M. van W. Crommelin.

Amsterdam, September 22.

ARGUMENT FROM GERMANY.

To the Editor of The Nation:

Sir: Perhaps by this time the avalanche of lies—I beg pardon, of English fabrications and French misrepresentations—has subsided, and you are getting some truthful intelligence not only regarding German victories, but also as to the spirit and temper of the German people.

Apropos of England's declaration of war, which in my humble opinion was not only a great crime, but a great blunder as well, I should be obliged if you would print some views concerning that country and its people possessing peculiar significance in these dreadful days.

Let us begin with John Ruskin, with these extracts from "The Crown of Wild Olives":

"The first of all English games is making money."

"And take also your English vice—the vice of jealousy which brings competition into your commerce, treachery into your councils, and dishonor into your wars."

"This national shame and dastardliness of heart."

And it is Matthew Arnold who says of his countrymen: "An upper class materialized, a middle class vulgarized, a lower class brutalized."

Heinrich Heine was so bitter a critic of Germany that even to-day his patriotism is not regarded by many as genuine. His comments upon the English character may therefore be looked upon as impartial.

In his "French Affairs" he says: "The English possess much of that brutal energy with which Rome oppressed the world; but they unite to the wolfish greed of the Romans the snake-like cunning of the Carthaginians. Against the former we possess good and even tried weapons, but against the treacherous intrigues of those Punians of the North Sea we are defenceless. And at present England is more dangerous than ever, as its mercantile interests are declining. In all creation there's no such hard-hearted creature as a trader whose business is stagnating, whose customers are deserting him, and whose goods no longer find purchasers."

And in the "Book Le Grand" he exclaims: "Britannia, to thee belongs the ocean! But the sea does not contain sufficient water to wash away thy shame. . . . But once upon a time this song will be heard across the Channel, and Britain will cease to exist, and hurled to the ground will be the proud nation, Westminster's graves will be destroyed, and forgotten the royal dust which they enclosed."

I might add in this connection the more recent opinions of Haeckel, Morley, Eucken, Wundt, Trevelyan, but that would be an unreasonable demand upon your space. However, you will not deny that we poor deluded "German sympathizers" find ourselves in mighty good company. Jacques Mayer.

Munich, September 13.

THE DOWNFALL OF WESTERN CIVILIZATION.

To the Editor of The Nation:

Sir: What does the present European war mean to us Orientals? It means the saddest downfall of the so-called Western civilization; our belief that it was builded on a higher and sounder footing than ours was at once knocked down and killed; we are sorry that we somehow overestimated its happy possibility, and were deceived and cheated by its superficial glory. We now see that it was merely a mirage or optical illusion of a thing which, in its truest sense, never existed; or if it ever existed, it was simply a changed form or crafty masquerading of an avaricious instinct of primitive barbarism. The Western people, with all sorts of colleges and institutions in their most advanced order, are, after all, like their naked friends in far-away Asia or Africa, as it proves now, only a hungry piece of flesh, who, to use a Japanese saying, has just three more hairs than a monkey; certainly we inhuman beings (who says human beings?) were made, not by the sure intentions, but by the caprice of God. How can you believe, when you see them throwing a cannon ball, trampling on the killed people, that they are the human beings who could love trees and birds, and say, as Browning once said:

> God's in His Heaven—
> All's right with the world?

During the last forty long years, the Western poets, preachers, and philosophers have been singing and writing on the general peace and brotherhood, and every church striking its holy bell on every Sunday and Christmas Eve, whose heavenly music was, to use Robert Bridges's graceful lines,

> Angels' song comforting as the comfort of Christ
> When he spake tenderly to his sorrowful flock.

And what is the result of their forty years' toil? We see only the rivers colored by blood, and a huge mountain made in a single night with human corpses. Where's the peace and brotherhood dreamed by their innocent minds? Who can deny when I say that the Western people, when they are so strong and savage, are the sure believers in Machiavellism? When they preached peace, it was only at the time when they could not practice that barbarous policy; those forty years of peace were only a sort of truce. It was never a peace for peace's sake, but the time of preparation or suspension of hostilities in the interim from one war to another.

We Japanese fought two wars in the last twenty years in the East; and we were given the unwelcome name of warlike nation, and often placed, as a result, in many international difficulties. We have been looked upon as a dangerous element, particularly by the Americans, who sent us peace envoys on several occasions; it was their stupidity not to think that their own West, as I said before, with all sorts of advanced colleges and institutions, was still more dangerous than the East where Confucius's analects are not a dead language. Confucius's teaching is that we should recompense injury with justice, kindness with kindness; and his doctrine is, the book says, to be true to the principles of our nature and the benevolent exercise of them to others. Even when we, as a people or nation, could not strictly observe his teaching, we believe that we never acted aggressively. It was the German Emperor who drew a picture calling us Yellow Peril, when we won a fight from China; if we had been a yellow peril, as he said, it meant only against the white race of the West. But what that German Emperor is doing now is, certainly, a mighty peril against all the humanities of the whole world. We have a proverb saying that what the superior person loves would be loved more by the inferior people; what result will come from the example shown by the so-called most advanced first-class nation or nations of the West? What would happen if many second-rate or third-rate countries in Asia or anywhere else might imitate the Western example? The present downfall of the Western civilization means more than you and I suppose. It is not too much to say that the present European war is the beginning of the dark age of the whole world. We Orientals will insist in future not to believe whatever high philosophy on love or peace or humanity the Western scholars and theologians might write. We Japanese are glad at least to have a country in a far-away East, not in the West. I have been losing for some long while my own respect towards the West and her own civilization.

My recent Western journey, which was concluded only a few weeks ago, confirmed me that the so-called dynamic European civilization was all against the Asiatic belief, that is to say, Confucius's teaching that we "should have no foregone conclusion, no arbitrary predeterminations, no obstinacy, and no egoism." Confucius says: "He who aims to be a man of complete virtue, in his food does not seek to gratify his appetite, nor in his dwelling-place does he seek the appliances of ease; he is earnest in what he is doing, and careful in his speech; he frequents the company of men of principle that he may be rectified." When I knew that the Western civilization was more or less founded on individualism and often egoism and self-satisfaction, I thought that the social community of the West was less harmonious and loving; and when one does not respect the others, there will be only one thing to come, that is fight, in action or silence. I have seen enough proof that the Western life was not a kind to lead one to soul's content and peacefulness, but always to disturbance and pain. Having much dissatisfaction with the Western life, I returned to a country whose immediate, most important determination should be a refusal to the Western invasion; I believe I know too much to be surprised by the present European war. Yone Noguchi.

Keio University, Tokio, September 7.

THE RIGHT OF EMINENT DOMAIN AMONG NATIONS.

To the Editor of The Nation:

Sir: After the roar of the cannon is over, the toll counted and paid, and history has fixed the responsibility for the wars of the twentieth century, perhaps one fact will have become plain to a majority of the people who inhabit this planet, viz., that there can be no permanent peace until the right of eminent domain shall have become recognized among nations.

In other words, nations must be willing to submit, as do individuals, to the doctrine of the greatest good for the greatest number. For just as the individual land-owner must be prepared to surrender his ownership when his property stands in the path of a new highway or railway, or is wanted by the community for a park or a playground, so must nations adapt themselves to the needs of nations whenever changes are demanded which injure few and benefit many.

When the right of eminent domain shall have become recognized among nations, the world will produce some legislative machinery acting under the authority of all nations. This body will have power to permit one nation to take territory from another when shown that the largeness of the necessity demands that it should be taken, and to fix the limitations under which it may be taken and developed.

Acting under such a decree, it ought not to be difficult for our friends at The Hague to determine how much one nation should pay to another for the damage it has done, and to enforce the laws of eminent domain in a manner that is equitable.

John Alden Lee.

Cohasset, Mass., September 24.

THE BACK-DOOR TO LITERARY FAME.

To the Editor of The Nation:

Sir: At not infrequent intervals printers are wont to pause in conversation to remind one, not without conscious pride, that many of the leading names in American literature are closely connected with the history of "the art preservative." The roll of American authors who first sought success as compositors is so long, and the names on it are so bright, as to suggest that a logical preparation for literary work be an apprenticeship of a few years at the type-case.

Though no attempt is made to supply a complete list, Benjamin Franklin, Bayard Taylor, Mark Twain, Bret Harte, Artemus Ward, Henry George, Lafcadio Hearn, William Dean Howells, and Joel Chandler Harris may be mentioned as being especially prominent among the graduates of the composing-room. Edgar Allan Poe, Opie Read, O. Henry, Bill Nye, and others, if not compositors, certainly were initiated into some of the intricacies of the craft—certain passages from their works indicate as much.

That so many men have been able to advance themselves from the lowly print-shop to the heights of literary success is to be accounted for by facts which are easily discoverable. One of these is introduced by Mark Twain's biographer, Albert Bigelow Paine, who, describing Clemens's early experience in the printing office of the Hannibal *Courier*, says: "He cared little for reading, himself, beyond a few exciting fairy tales, though the putting into type of a good deal of miscellaneous matter had beyond doubt developed in him a taste for general knowledge." It is certainly true that the continuous and careful reading required of a compositor (especially is this true in a newspaper office) tends to awaken his interest in a great variety of subjects. Everything in print has been read carefully by at least one person—the typesetter.

In this connection it should be explained that the compositor usually works on edited copy. Consequently he sees before him both the original and the corrected manuscript. Thus he learns what mistakes to avoid in his own attempts at writing. This fact doubtless accounts for the approximate technical accuracy noticeable in the early work of many printer-authors. Henry George, jr., son of the celebrated writer on economics, says of his father's early typesetting experience in Philadelphia: "This learning to set type marked another distinct step in the education of Henry George for his life work. Not that it lay so much in the typesetting itself, or in correcting his spelling; but rather in bringing him into familiar contact with another field of human activity—among typesetters, who, as a class, possess, as a rule, much correct general information and are given to habits of intelligent thought."

It is interesting to speculate whether the revolutionizing of methods in the composing-room in recent years will to any extent hinder the development of authors in the future. With the advent of the linotype and the virtual disappearance of the old-time hand compositor, the type-case school for writers may be said to have closed its doors forever. The question arises whether the black, white, and blue keyboard and the rattling matrices will supplant the type-case and the clicking type as an agency for the development of literary genius.

If the foregoing statements are true, *i. e.*, that reading and associates account for the inspiration of the compositor, there need be no apprehension on this score. The linotype operator sees nearly as much copy in a day as the plodding hand man saw in a week. Not only that, but the "takes" are longer, and the operator is better able to understand the full meaning of the numerous articles that come his way. Moreover, he reads under an electric or mercury light, where the old-timer had only a candle or at best an oil lamp, and consequently is less liable to the eye strain which forbids reading after working hours.

Certainly the machine compositors of to-day are not behind their type-stick predecessors in intelligence, and, despite statements to the contrary, "tramping" is not a lost art among compositors. They still travel unrestrained over a tremendous territory, though—as a result of better organization of the trade, the installation of the slip-board in many offices, and a growing respect for sobriety—the stains of travel are less noticeable. The machine compositor is, as a rule, more widely travelled, better read, and better behaved than the roadster of a generation ago. He is less of a Bohemian, perhaps, but his interests are broader and his sympathies are as deep. May we not, then, look in the future, as we have in the past, to the ranks of the "typos" for recruits to the army of authors—unless, perchance, the "strings" demanded are so long as to poison those restless minds that seek a call beyond "thirty"?

Harry W. Frantz.

Stanford University, September 23.

"REPUBLICANISM IN EUROPE."

To the Editor of The Nation:

Sir: A recent editorial of the *Nation* entitled "Republicanism in Europe" contains at least one sentence which needs modification. I refer to this one: "It was the feeling that the family relations of rulers made for peace that mainly induced Norway to elect a king, while Björnson pleaded for a republic."

I always felt that Björnstjerne Björnson should have pleaded for a republic in the summer and autumn of 1905, when it was within his country's grasp. But the fact is he did not do so. It is quite true that in the early summer, when he passed through Paris on his way home from Rome, Björnson did speak openly for the republican solution. But when he reached Christiania, he gradually took sides with the little group of leaders who favored a monarchical outcome for the situation, and he finally advocated ardently the choice of a king. Thereupon I sent him my visiting-card with these words written upon it: "How are the mighty fallen!" and we never thereafter exchanged a line or a spoken word, though we passed each other one day under the trees of La Muette during his visit to Paris just before he was brought back here in 1910 to die. Björnstjerne Björnson was a good hater.

Nor should the first part of your sentence be left as it stands. It is only a half-truth to say that "it was the feeling that the family relations of rulers made for peace that mainly induced Norway to elect a king." I think you would be convinced of the accuracy of my assertion by a glance at a little pamphlet published here in Paris in the autumn of 1905 by M. Urbain Gohier from materials furnished him by me. The facts given in "La République escamotée en Norvège" are quite exact, though I do not wholly approve of the tone in which they are sometimes presented, M. Gohier, especially at that period of his career, often being rather acerbic. I may add that I could not then make known all the facts which would have rendered the case still stronger on the lines here indicated. Indeed, a new edition of this pamphlet should be brought out which might well bear the title "The Real Reasons why Norway Did Not Become a Republic in 1905."

By the way, may I in closing call attention to the very inadequate and misleading treatment of this Norwegian episode in Mr. H. A. L. Fisher's "The Republican Tradition in Europe"? If the Lowell Institute—this book is made up of a series of lectures delivered there two or three years ago—had invited a European republican, such as Senator Clemenceau, Judge Soldati, or Prime Minister Bernardino Machado, for instance, instead of a European monarchist, to speak to republican America about republican Europe, we should have had a very different and more correct presentation not only of this Norwegian incident, but of several other events related in a somewhat biassed manner in this rather unsatisfactory volume. What if Oxford were to call one year as lecturer on the history and institutions of the United States, say, a Fellow of McGill University? All this is as incongruous as it would be for a shipowner to put a general on the bridge of a merchantman.

Theodore Stanton.

DR. WU'S OBSERVATIONS.

America Through the Spectacles of an Oriental Diplomat. By Wu Ting Fang, LL.D. With illustrations. New York: Frederick A. Stokes Co. $1.60 net.

The former Minister of China to the United States made many friends in this country who will welcome the prospect of being entertained anew by his caustic but never captious humor. If the reader of these impressions is a little disappointed in the scope and comprehension of Dr. Wu's observations on American manners and institutions, he may be assured at least of finding enough good-natured comment and chaff to carry him through the book without weariness. To promise more to those who recall the tang of his *obiter dicta* while abroad would be in excess of the actual truth, for he has not written a really funny book. He shows a liking for Americans and admires many of their institutions, chief among which he would seem to place the Educated Woman. "To a stranger," he declares, "and especially to an Oriental, she is a puzzle. There is one fault I find with American women, if it can be so called, and that is their inquisitiveness; I know that this is a common fault with all women, but it is most conspicuous in the Americans. They have the knack of finding out things without your being aware of it, and if they should want to know your history they will learn about it after a few minutes' conversation. They are good detectives, and I think they should be employed in that line more than they are." The charge that education, and especially co-education, augments the number of unmarried women does not alarm him, though it elicits the delightful objection that it "has tended to produce that contempt of the much-vaunted superiority of man that as a rule is reserved for those post-nuptial discoveries which make marriage such an interesting venture."

While such sallies may be accepted by the magnanimous as justifying Dr. Wu's reputation as a wit, his observations on America will hardly impress the gentlest critic with much respect for his understanding of her ordinances or her problems as a World Power. The book is chiefly significant as revealing the mental type of politician that often climbs to great heights in the Eastern world. The type—shrewd, facile, and unsubstantial—remains the same in Young China as in Old, with this superficial difference: that, while the old-time mandarin aired the morality of his ancient books with no intention of putting their precepts into practice, the young republican appeals to new-fangled notions of liberty and reason, imported like his cigarettes from the West, and designed, like the cigarettes, to end in smoke. Every Asiatic country that inherits an ancient civilization is inhabited by multitudes of this sort. They assimilate knowledge easily, they give promise in youth of character and ability far beyond their years, they preach lofty ideals, but in conduct their political careers follow for the most part the modern slogan of "safety first." There are honorable exceptions to this rule in China, but they are not to be sought from among the henchmen of that arch-opportunist, Li Hung-Chang, in whose following Dr. Wu learned some rudimentary lessons in practical politics.

As one of the first to perceive the value of foreign sympathy in the Reform movement of 1911, Dr. Wu became the spokesman abroad of the Young China party in its uprising against the Manchus. From his safe residence in the international settlement of Shanghai he endorsed the revolutionary propaganda of Sun Yat-Sen and materially assisted in framing the provisional form of government under which the successful rebels achieved the downfall of a dissipated court and autocracy. When, however, we search the volume before us for evidence of the statecraft that furthered these great ends we are confronted with the amazing spectacle of a founder of the Chinese Republic whose idealism pretends to be perfectly satisfied with an endorsement of Mr. Carnegie's Peace Foundation and an ardent belief in vegetarianism. There is no visible connection in his person between the man who writes and the man who acts, no real comprehension of the principles of constitutional government or of the complex difficulties in the way of applying them to an Oriental community. He is so far from realizing the relations between principle and profession as to propose conferring upon the President of the United States the title of Emperor as a desirable addition to the dignity of the office. As to the social life of the West, about which he has much to say, while he is willing to admire many of its features, he remains a Confucianist at heart and prefers to take his chance of attaining happiness with his countrymen. We have no fault to find with his choice, but here is his reason for doubting the superiority of our much-vaunted civilization:

> Have people in the West succeeded in prolonging their lives? Are they happier than others? I should like to hear their answers. Is it not a fact that Americans are more liable to catch cold than Asiatics; with the least change of air and with the slightest appearance of an epidemic, are they not more easily infected than Asiatics? If so, why? With their genius for invention, why have they not discovered means to safeguard themselves so that they can live longer on earth?

This sort of trifling on the part of one with some claims to be called a statesman of modern China can hardly fail to disconcert the hopes of those who are anxious to see China regain an influence commensurate with her historical importance in the world. It would be unfair to consider so slight a book as this the political testament of a man of Wu Ting-Fang's experience and sagacity; but why, if he writes at all, should he be content with publishing platitudes that must diminish the reputation which he has so long enjoyed? The answer to this question is hard to seek, for, as has been said, his is not altogether a personal idiosyncrasy; it is symtomatic of educated China to spin phrases thin as air while the political machine continues to be run as in the past by those who plot for place and party. But while we should welcome something more creditable either as literature or philosophy from the pen of this amiable diplomatist, due recognition should be given to the tempered wisdom of his counsel furnished during the past half-dozen years to the hot-heads of revolution who have destroyed the old régime. He has managed by sheer urbanity, if not by nobler incentives, to retain an influence with all partisans through the perilous days of change; and upon the radicals who once called him leader he has exerted a control that if not yet a fulfilment of our great expectations for China has, so far at least, kept her from political shipwreck.

CURRENT FICTION.

To-day's Daughter. By Josephine Daskam Bacon. New York: D. Appleton & Co.

It cannot be said that Mrs. Bacon's art grows. Her best work is still to be found in those earlier short stories—"The Madness of Philip" and the rest—which, with their clever humor, reached a large audience. Since then cleverness has rather got the better of humor with her. This is especially apparent in her long stories. "Margarita's Soul," with its pseudonymous and hectic success, was a sad blow for those who had hoped for a steady ripening of product from this quarter. It is hardly too much to say that "To-day's Daughter" finally disposes of the possibility of any such hope.

Dr. Stanchon, whose "strange cases" have been set down in an earlier volume, again appears as the central male figure; but to Lucia, his daughter, belongs the place of honor under the spotlight. She is supposed to be not only a very modern but a very charming person; here the author and her reader are likely to disagree at the outset. This pert and conceited young woman, with her slang, her swagger, and her eternal cigarette, is to the middle-aged observer a sorry thing to look upon. She has not the excuse of Shaw's remonstrant heroines—that of extreme youth. Lutie Stanchon is thirty when we meet her. She is supposed to be keeping house for her father, but thinks the job beneath her—or rather finds it uninteresting, and sees no cause for sticking to it from a sense of duty. Prison reform is her hobby; she is ambitious and capable. At the opening of the scene she is about to desert her father and throw over her lover, in order to devote herself to a cause. She does neither, but her ensuing efforts as housekeeper, wife, and mother are feeble and ineffective, till finally the motive of "the child" effects a conversion: "Out of To-day's daughter the mother of To-morrow had been born." A happy ending does not take away the unpleasant taste of the story as a whole. These spade-speaking, assertive, charmless women, these prating, spineless men are, thank heaven, not representative children of

to-day. All ladies are not better business men than their husbands, some husbands are almost as virtuous as their wives. Somehow none of these figures quite justifies either our liking or our belief. And that is an unpardonable slip which represents old Dr. Stanchon breaking off from a moral lecture to a pretty and relatively young woman to suggest that if she must divorce, she divorce in order to become Mrs. Stanchon. Imagine Mrs. Deland making Dr. Lavendar philander with, say, Helena Richie!

The Folk of Furry Farm. By K. F. Purdon. New York: G. P. Putnam's Sons.

In his introduction to Miss Purdon's book, "George A. Birmingham" kindly offers to relieve the reviewer of any responsibility in the matter by telling him exactly what he ought to say, and in point of fact Canon Hannay has accomplished his self-imposed task extremely well. He rightly draws attention to the significance of the present volume as another indication that the literary revival which has become known as the "Irish Movement" has of late shown signs of following the path of destiny and turning for expression to fiction rather than to drama or to poetry. His critical labors he lightens by explaining that he does not "feel in the least inclined to point out the weaknesses" of Miss Purdon's writing, and we are tempted to adopt the same self-indulgent course. For this book has few faults, and of these perhaps the chief is a little lack of art in a tendency to moralize where the moralizing is merely platitudinous. But that is the worst we can say against it. The leisurely story of these Irish folk, whom Canon Hannay places for us "somewhere in the eastern part of Leinster, in Meath or Kildare, on the great plain which fattens cattle for the market," is full of charm, and Miss Purdon invests the English-Irish in which her tale is written with much distinction of style.

We have spoken of the book as though it were a continuous story, and the publishers describe it as a "romance of an Irish village." Romantic it is in its very essence, and shows that mingling of the mystic with the severely practical which is a distinguishing characteristic of the Irish; but it is a series of individual studies in the village of Ardenoo, loosely linked together by the character of one Mickey Heffernan and his adventures in search of a wife. The chapters are as a whole singularly even in merit, with the exception of the final one, Comrade Children at Furry Farm, which is inferior in quality to the rest, and we could wish that Miss Purdon had chosen to end her volume, where art demands that it should end, with that almost flawless little gem, Rosy at Furry Farm. People who describe a man who is so poor that his shoes are badly worn as having "his feet on the world"; who allude to the older sisters of a family who must be married first as "the ones that were next the door," and who say of a lonely place, "There wasn't a neighbor within the bawl of an ass of it"—these people are worth closer acquaintance.

The Hands of Esau. By Margaret Deland. New York: Harper & Bros.

Though this novel of eighty pages might well have been a short story of thirty, the reader is willing to accept its two very naïve characters against the broader background. It is written of the youthful and for the youthful; its fluency, its unambitious treatment of simple minds and a readily comprehensible situation, its open emphasis on ethical values, design it for hearts a long way from the sophisticated dryness of summer's dust. A rich girl falls in love with a young draughtsman who is not so sword-straight as to tell her the entire truth upon two heads: his discharge from a previous position for minor delinquency, and his father's imprisonment; and despite palliating circumstances, after a final test of his frankness, she renounces him. These protagonists, one conscientious and high-spirited, the other a youth estimable in every respect but that of his semi-insincerity, are not unconvincing. Because of its studied refusal to elaborate upon motives and reactions, the book naturally makes few demands upon the writer's deeper resources.

ECONOMICS AND ETHICS.

Poverty and Waste. By Hartley Withers. New York: E. P. Dutton & Co. $1.25 net.

Mr. Hartley Withers is our twentieth-century Nathan. He pictures a distressing situation, and when in our pity and indignation we ask who did this evil thing, he replies to each of us, "Thou art the man." We confess that he surprises us. Heretofore we have known him only as one of the soundest and most attractive students of the theory and method of finance; to-day we find him among the prophets, appealing as strongly to our moral as to our economic sense. In the past most persons have viewed the distinction between rich and poor too exclusively from one angle or another. As economists they have been cold and fatalistic; as altruists they have been sympathetic and impracticable. In Mr. Hartley Withers we discover something the world is always looking for and so seldom finding—a perfect conjunction of economics and ethics.

In the work before us he preaches an exceptionally fine lay sermon, from a text by Mr. Bonar Law, "The greatest of all possible social reforms would be to raise the standard of wages throughout the country." This is what we should all like to do, but what the world has been kept from doing, on the scale really desired, by an ethical fact which has been vitally overlooked. From the pulpit and the platform we are continually told that poverty is due to a hard economic law, the "iron law of wages." From Mr. Withers we learn that the fault is not in our economics, but in our ethics. The villain of the piece is not the capitalist, employer, manager, or middleman, but the final consumer. The blame is brought home to every one of us. Mr. Withers might just as well have chosen for his text, "He that is without sin among you, let him first cast a stone."

We catch Mr. Withers's spirit easily when we hear him say that it is incredible that at this stage of our alleged civilization any one should doubt that labor ought to, and must, have a bigger share of the good things of the world. The mere fact that the wonderful growth of material prosperity, of which we are all so proud, has left millions of people, who do the hardest, dreariest, and dirtiest of the work that has produced it, to live under conditions in which they have little chance of really living at all, ought to be enough. There should be no need to contend that this state of affairs should be improved off the face of the earth. Everybody ought to be asking how to do it best and quickest. These are the words of a moralist, and as we read farther we find that they are the words of a very stern moralist, though a kindly one.

But Mr. Withers knows that you cannot gather grapes of thorns or figs of thistles; he realizes that economic ills can only be cured by economic law. The relation between economics and ethics is, however, very close in this particular matter; though the cure must come from economic restraint, restraint is a moral quality. We can cure economic ills by a moral determination not to thwart the economic sense. In saying this we sum up the whole of the argument of this interesting and inspiring work. The volume before us is concerned with stating the economic facts of the case, and with showing repeatedly the moral interpretation to which they point. For example:

> A remedy would be found at once if those who have money would grasp and act on the very simple fact that since the producing power of mankind is limited, every superfluous and useless article that they buy, every extravagance that they commit, prevents the production of the necessaries of life for those who are at present in need of them. The man who cannot be comfortable without half a dozen motor cars and pursues his own comfort by buying them, thereby takes bread out of the mouths of the hungry.

Here we have the remorseless logic of the economist in the vestments of the moral reformer.

Every purchase of an article of luxury stiffens the price of articles of necessity, and makes the struggle of the poor still harder—that is Mr. Withers's message. In examining the claims of the various people who share in the produce of industry he does not find any one whom we can condemn to extinction in order to better the lot of the workers. Capitalist, employer, manager, middleman are found to be all essential to industry on its present basis. He shows us, too, that many people, who now live on the proceeds of industry without being themselves producers, nevertheless render services to the community without which it would have no security, and would live in a joyless and unenlightened world. In making all this clear he has produced a work that is most attractive in the reading and most convincing in the argument.

Yet the Golden Rule itself is convincing as an argument. We are almost afraid that the extinction of poverty would be nearer at

hand if the determining factor were less ethical than Mr. Withers makes it out to be. He has led us into a pleasant place, where we see "a stately palace, beautiful to behold." But only persons of "very stout countenance" go in there.

A. W. VERRALL.

Collected Literary Essays, Classical and Modern. By A. W. Verrall. Cambridge University Press (New York: G. P. Putnam's Sons; $3.50 net).

Collected Essays in Greek and Latin Scholarship. By A. W. Verrall. Cambridge University Press (New York: G. P. Putnam's Sons; $3.50 net).

These two stately tomes would have given great satisfaction to the author if he had lived to see them published. He himself made the selection of the various essays and articles shortly before his death; they have been seen through the press by two devoted friends, M. A. Bayfield and J. D. Duff; the former contributes a lengthy and enthusiastic Memoir of Verrall to the volume of "Literary Essays," and the same volume contains a commemorative address delivered before the academic committee of the Royal Society of Literature by Dr. Mackail. The address, though written by a friend of many years' standing, is an admirable example of Dr. Mackail's clear, critical acumen; it will be accepted as a just appraisement of Verrall's strength and weakness by those who took him seriously, as well as by those who were inclined to mock at him.

Verrall is best known by his book entitled "Euripides the Rationalist" and by his editions of the classics. All his work is marked by a quality which was his strength as well as his weakness; his extremely nimble intelligence and his reconstructive imagination led him to make new combinations which were sometimes brilliant and sometimes only far-fetched. He worked in a time when the emending of classical texts was much more fashionable among scholars than it is now. It was a *jeu d'esprit* of admirable point to apply to him the familiar phrase *splendide mendax*, only slightly emended in the form Spendid Emendax. One of the most distinguished of American classical scholars, now gone to his rest, was not satisfied, however, with the *double entente*, and insisted that Verrall belonged among "the wild asses of philology." The expression was too severe; Verrall himself best described himself when he wrote of "wit or subtlety on the part of the artist in the manipulation of meanings," and "the enjoyment of such subtlety for its own sake, and as the source of a distinct intellectual pleasure." As Dr. Mackail expresses it, "sagacity in its literal sense, the keen scent after things hidden, was the habit of his mind." If he paid the penalty for this quality in the estimation of readers of his work, he had compensation in the enthusiastic admiration of those who listened to his lectures, both academic and popular.

This is abundantly attested by many of his former pupils and by Dr. Mackail. With all he was a very human person and possessed of a merry spirit and a pretty wit, in the ordinary sense of the word. And above all, "letters were to him," as Dr. Mackail writes with his usual felicity, "a world crowdedly and intensely alive. He brought to the study of the classics—of those masterpieces which have been so thumbed and worn by long currency—the fresh mind at whose contact they sprang into fresh vitality. He brought the same fresh interest and enjoyment to English letters and the literary art of his own day. To hear him discourse on modern authors was to realize that they were not separated in his mind from the ancient authors among whom he worked professionally. To both alike he applied the same rapid intelligence, in both alike he felt the same living interest. And that was the interest neither of classicism nor of modernism; it was the interest of literature as a fine art." After such words, one can understand why, when Verrall was named by the Crown to be the first professor of English literature at Cambridge, the choice was recognized by those most competent to judge as not only justifiable, but singularly happy. One of his old pupils bears witness that "there was no one of his generation at Cambridge who meant so much as he did to us younger men." And Prof. Gilbert Murray wrote in the *Oxford Review:* "Verrall has left upon those who knew him well an impression of greatness and of nobility far outweighing the normal admiration due to a famous scholar."

The Literary Essays will appeal to layman and scholar; they well illustrate the wide range of Verrall's interests. "A Roman of Greater Rome," "An Old Love Story," "The Feast of Saturn," "A Tragi-Comedy and a Page of History" are ancient themes made very interesting; several essays bring together Dante and Statius and Virgil; "The Prose of Walter Scott" and "Diana of the Crossways" bring us to our own times. The most brilliant bit in the volume is "Aristophanes on Tennyson"; the author puts into modern form the famous judgment scene in "The Frogs," where Aristophanes entertains his audience by a comparison of the verse of Euripides and Æschylus. Verrall, as champion of Euripides, shows how easy it is to bring to ridicule any poet by the method of adding the same ridiculous tag of verse to cap resounding lines. Tennyson is selected as the unhappy victim. The result is an extremely brilliant bit of farce in true Aristophanic manner, and as good an example of parody as one may easily find.

The volume of studies in "Greek and Latin Scholarship" ranges from Tyrtæus to Statius; it contains emendations and new combination of old material, well illustrating Verrall's familiar methods of subtlety and audacity; some of his conclusions are to be accepted, some must be rejected, but all are characteristic of the brilliant man who wrote them.

THE EFFICACY OF THE GOLDEN RULE.

Christianity and the New Age. By George Preston Mains. New York: The Methodist Book Concern. $1.50 net.

This is a remarkable book, all the more remarkable as a deliverance of the intellectual and spiritual convictions of an eminent leader in the Methodist Church, which has not, in these later days, been commonly identified with progress in religious ideals. It is distinguished by mastery of its subject, wide scholarship, broad tolerance, clear vision, an earnest and fearless reverence for truth as the only sure foundation of faith, a disregard of mere dogma and tradition, and by a thoroughly devout, cheerful, and hopeful spirit. Logical in its arrangement of argument and facts, philosophical in its reasoning, and delightfully free from sectarian bias, dealing only with undisputed essentials of Christianity—its mission, its failures, its achievements, and its prospects—it is a fascinating and instructive volume, not only for churchmen, but for all workers for the betterment of mankind. In its recognition of Christ as the divine redeemer and ultimate saviour of the world, it is, of course, entirely orthodox—Dr. Mains is no skeptic—but the special significance of it is to be found in the subordination of creed to principle, the comprehensive survey of instant social problems, and the dispassionate, and therefore all the more severe, arraignment of the modern church.

The articles dealing with the churches in the city and the country are full of pregnant and suggestive matter. For the decline in the rural church the manifold changes and developments of modern life are held to be largely responsible; but the author relentlessly points out the mischief done by the impolitic rivalry of kindred denominations, the lack of common religious purpose, and the incompetency of a starved, disheartened, and imperfectly educated ministry. In the city he deplores the notorious estrangement that has grown up between the Protestant churches and the poor, and boldly enumerates some of the obvious causes of it, declaring that it will be a lasting reproach to them if they fail, under the standards of the gospel, to install themselves as leaders and inspirers of the armies of labor, now so sorely in need of wise guidance and instruction. Especially does he bewail the tendency of some of the clergy to bow the knee before Mammon. On the subject of the necessity for those rational readjustments in matters of dogma and practice, without which there can be no effective coöperation of religious forces, and no general public response to religious ministration, he is particularly sound and sane; as he is in his insistence upon the need of a highly educated clergy, versed not only in the tenets of their own denomination, but in all the varied departments of modern learning, in order that they may be able to hold their own in controversy and back their professions with knowledge. To Biblical criticism he would impose no limits, arguing that the one aim of scientific inquiry,

as of true religious zeal, is truth. No amount of investigation, he says, can do permanent harm to a divine record. All that the Bible needs is an unclouded opportunity to deliver its own message. If the critical movement gives us a Bible purged of priestly fables, mystifying interpretations, and false traditions, able to speak directly from the background of its own historical and grammatical setting, it must be accounted one of the most beneficent in the providential scheme. Secularized education he believes to be an unmitigated evil, but no life, he says, "needs more the enrichment, the stimulus, and the uplift furnished from the products of modern scientific thinking, than the ordinary rank and file life of the church."

In discussing the questions of Plutocracy and Socialism he displays an equal sanity. Everybody will not agree with all his views, but his general conclusions will commend themselves to most thinking persons. He speaks as one who knows, and gives authority for his assertions. He would put no bar to the accumulation of wealth by personal ability and legitimate enterprise, but draws a clear distinction between the tyrannical power exerted by wealth for purely selfish purposes—the grinding exactions of monopolies, and the benignant effect of wealth employed with a sense of moral responsibility. Capital, he maintains, is not only an inevitable phenomenon, inseparable from the existence of special capacities for its production, but one vital to human progress, and the development of art, science, culture, and philanthropy. It is an evil when amassed without reference to the rights of the community, and this is the sort of wealth that is constantly adding fuel to the fire of discontent which threatens to blaze into revolution. Socialism, in most of its aspects, he regards as an iridescent dream, chiefly because it fails to take into account the radical differences in human needs, desires, and capacities. With many of its professed objects, and its championship of the inherent rights of man, he is, of course, in hearty sympathy. But he recognizes the growing power and menace of it, which are independent of the essential fallacies that must preclude its final triumph. No policy, he argues, can succeed which is purely political and materialistic. The amelioration of the race can be brought about only with the aid of moral agencies.

In those chapters which deal with the work of Christianity and the church through the ages there is much able illustration and interesting argument, but even the briefest synopsis would take too much space, and do them injustice. They all tend to the support of Dr. Mains's central thesis, that, since Calvary, the Holy Spirit has been engaged actively on the work of regeneration and enlightenment in accordance with Christ's promise, and that it is to his influence, exerted through various circumstances and agencies, that the gradual progress of the world in civilization, spiritual discernment, and enlightenment must be attributed. Evolution, by divine ordination, has been and is the working system throughout the natural and spiritual world, and with the development of man's experience and faculties comes a clearer perception of his inheritance in a divine kingdom, the rights of brotherhood, and the celestial purpose. This is why there is the widespread distrust, or negligence, of ecclesiastical creeds and dogmas, bound in the fetters of mediæval traditionalism. This is why a new school of lay prophets, but none the less inspired, is arising everywhere, proclaiming the nobility and beauty of service, and illustrating, by example, their belief in the dictum of Paul that faith without works is dead. It is unfortunate that an utterance so inspiring and hopeful as is this whole book of Dr. Mains should be so apparently discredited by the war which is now making a hell of Europe. But even in this abomination, he might find a possible justification of his faith and his hope. Should it end in the annihilation of materialistic tyranny and the establishment of a world peace and larger national and individual liberty, the attribution of it to Divine contrivance might not appear altogether ridiculous. On one point there can be no doubt. All religious questions set aside, Dr. Mains has written a big book embodying a philosophy whose practice, if idealistic, is not impossible, and which indicates the one road, commonly known as the Golden Rule, affording approach to the long-desired Utopia.

THE DANCE.

The Dance. By Troy and Margaret West Kinney ("The Kinneys"). New York: Frederick A. Stokes Co. $3.50 net.

Modern Dancing. By Mr. and Mrs. Vernon Castle. New York: Harper & Bros. $1.25 net.

Social Dancing of To-day. By "The Kinneys." New York: Frederick A. Stokes Co. $1 net.

Æsthetic Dancing. By Emil Rath. New York: The A. S. Barnes Co. $1.50 net.

Even as Carlyle once cried for the men who sing at their work, so the modern employer has perforce found a virtue in employees who dance long after work is finished; the psychologist has at last intruded upon scientific management and prescribed dancing as exercise and relaxation. Thus we are passing through the throes of that mania for the dance that has periodically swept modern civilization, with the significant difference that our utilitarian age has coupled strenuous exercise with pleasure. The dance-rhythm of work, says Havelock Ellis, acts socializingly in a parallel line with the dance rhythms of the arts. Of the present-day invasion from South America and the thrall in which it has held us, the historian of the future must remark that never was dancing more spontaneous.

To look into the past is a sore temptation: so much of our social fabric is part of the measures dead and gone. Sang Henley in his "Ballade of Antique Dances":

> Ere Chloe and Strephon came to blows
> For Votes, degrees, and cigarettes,
> The world rejoiced to point its toes
> In Gigues, Gavottes, and Minuets.

Therefore it is interesting to find "The Kinneys" (as they prefer to be known), in their very readable history of the dance, making the significant prediction that there is now a tendency towards a revival of the old court dances. But, dearly as we could wish it, the statement that the one-step will revive the seventeenth-century Pavane, is hardly credible. The latter, we fear, is already in the limbo of lost dances. In every cycle of fashion it may be found that society has sentimentally hoped for a return of a *galante* period. Nowhere is this more evident than in the survival of the sedulous mummery of the fancy-dress dance. The age of sword, brocade, and buckles, once

> Of amber-lidded snuff-box justly vain,
> And the nice conduct of a clouded cane,

with all its elaborate, prosy mannerisms, has remained the prime favorite. Just as the dance had its origin with the expression of religious feelings, a function it still fulfils among primitive peoples, so our age of speed and commerce seeks to make it fulfil the task of dignifying and formalizing social contact between the sexes.

With this secret at heart Society has fought many a losing battle. The most honorable, perhaps, was against the waltz, which, though its origin was French, must in its latter phase be ascribed, together with its witching music, to the German. Shattering to the treasured memories of our mothers, and their devotion to "The Blue Danube" and "Dream Faces," must come the tradition that the first waltz tune was "Ach! du lieber Augustin." The waltz at its inception caused many a tea-pot storm. "Does thee think that this is proper?" demanded Whittier of a young Boston lady at the Isle of Shoals, and somewhat the same spirit animated the noble protest of an English dowager in the *Times* against our modern "negroid" abominations.

America has done her share with the "Washington Post" and her cake walks, which rivalled the tremendous vogue which the defunct polka, invented by a peasant girl, had when it came from Prague to storm America and Victorian England. But youth, given its fling, has not swung full-circle; and after another losing fight Society has summoned its Kinneys and Castles, as once eighteenth-century Bath called Beau Nash to its rescue. And while Society has invested these South American dances with a semi-formalism, yet another triumph must be recorded for the folk dances of a primitive race.

Their rôles as writers and artists bear out the painstaking observation and explanation "The Kinneys" have given in their history. Under debt to writers like Noverre, Castil-Blaze, and Vuillier, their volume contains abundant personal anecdote and first-hand experience with the various forms of the dance as still practiced in odd corners of the globe. The chapter on Social Dancing of To-day is issued in a separate volume for more strenuous enthusiasts. A bibliography

forms a useful appendix, but should have included Giraudet's "Traité de la danse." In their "Modern Dancing," since the title seems ambiguous, it must be explained that "The Castles" refer to the latest South American and other measures now in vogue. Their rôle to Society as moderators and adapters must not be denied, and the popularity of the "Castle Walk" is a tribute to their endeavor. Illustrated, as are all these books, by photographs of the exponents in action, together with diagrams of the various measures, this book of "The Castles" should settle many a destiny.

More in the region of physical exercise is Dr. Rath's "Æsthetic Dancing." He has succeeded in adapting many of the classical ballet steps for girls' and women's classes, and brought into coördination the sense of rhythm with that of all phases of muscular effort. His book should also prove valuable as a primer to interpretative dancing.

Notes

[Subscribers are reminded that notice of change of address should be sent to the Circulation Department, and that both the old and the new addresses should be clearly stated.—Ed. The Nation.]

Little, Brown & Company announce for publication on October 10: "The Lone Wolf," by Louis Joseph Vance; "The Things that Count," by Laurence Eyre; "The Charm of Scandinavia," by Francis E. Clark and Sydney A. Clark; "Ned Brewester's Caribou Hunt," by Chauncey J. Hawkins.

The Century Company announces for publication this month: "From the Log of the Velsa," by Arnold Bennett; "The Honest House," by Mrs. Ruby Ross Goodnow and Rayne Adams; "Soul-Spur," by Richard Wightman.

Among the reprints which have recently been received we may notice the following: Oliver Goldsmith's "The Bee and Other Essays," together with "The Life of Richard Nash"; "Legends and Lyrics, together with a Chaplet of Verses," by Adelaide Procter; "Poems of Charles Kingsley, containing the Saint's Tragedy, Andromeda, and Other Poems, 1848-1870"; "Poems of Emerson," and John Henry Newman's "The Dream of Gerontius and Other Poems"—all in the cheap edition published by the Oxford University Press. To these should be added William Morris's "Old French Romances" (Scribner) and a choice little volume issued by Mosher, entitled "Books and the Quiet Life, Being Some Pages from the Private Papers of Henry Ryecroft, by George Gissing." Though not a reprint, it is proper to mention here "Stories from Browning" (Houghton Mifflin; $1.50), by Harvey Carson Grumbine. It is possible that this retelling in prose of the plots of several of Browning's best-known poems may hearten the youthful to approach the poems themselves. Professor Grumbine does not aim, of course, to supplant Mrs. Orr's substantial Handbook to Browning.

Longmans, Green, & Co., whose excellent edition of "The Collected Works of William Morris" has been noticed in these columns, have further earned the gratitude of readers by including in their Pocket Edition twelve volumes of this author. These contain the following works—"The Sundering Flood," "The Roots of the Mountains," "A Dream of John Ball," "The Water of the Wondrous Isles," "Poems by the Way," "The Well at the World's End," "The House of the Wolfings," and "The Life and Death of Jason." The paper and type are satisfactory and the binding is neat, even handsome, as befits the dress of Morris's work. The price is seventy-five cents the volume.

Those to whom the reading of Dutch is not the easy matter which its many resemblances to German would seem to imply, will welcome the German translation of the Middle Dutch beast epic "Van den Vos Reynaerde," which has been published by Prof. Max Poll through the University of Cincinnati Press (75 cents). Dr. Poll's rendering is in prose, a discreet arrangement, for it is next to impossible to reproduce the simplicity of this Dutch work in the verse of another language, especially if rhyme is attempted. A short introduction sketches the trend of this good story from the days of "Willem die Madoc maecte" and the uncertain Arnout to Goethe's more sophisticated version. It is unfortunate that Dr. Poll, in dealing with anything so perfect in its way as "Reynaert," should have soiled his text with misprints.

A series of rambling disquisitions upon R. L. Stevenson as author and as lover of Scotland, with some of Stevenson's essays relating to the Pentland Hills, is comprised in L. McLean Watt's "The Hills of Home" (Scribner; $2). The romancer, it will be remembered, was carried by his father in 1867, when he was seventeen, to live at Swanston Cottage at the foot of these bulwarks of Edinburgh. Here he watched the sheep folded from the long slopes; here he met the countryside, from John Todd the shepherd and Robert Young the gardener to the military beggar who loved Keats; here he wandered among the graves of the martyred Covenanters; here saw the great trailing flight of crows "passing continually between the wintry leaden sky and the wintry cold-looking hills." In 1874, on returning from South Europe, he spent here a brief second term of study, writing and walking. It was a period in his life of considerable definiteness and importance, and might be treated with more biographical and critical detail than has hitherto been given it. Mr. Watt is saturated with his subject, and his work has undeniable charm of style; while he is able to produce a few interesting new sidelights, such as that seen in a schoolfellow's account of the general inattention to Stevenson's papers in the Speculative Society, and of some of his boyish pranks. He succeeds, too, in catching the atmosphere of Scottish scenes and the flavor of Scottish rural character. But the outstanding quality of his essays is their incoherence. Not a single division has outward or inward unity. He wanders from the Scotch love of home to the association of the Pentlands with Allan Ramsay and Dr. John Brown; from Stevenson's inability to portray women to the types of Scotch clerical libraries; from the indebtedness of Stevenson's verse to Robert Fergusson to the religious uprisings of 1666. The reader is prepared for informality, but not to this degree. An interfused literary criticism is well-put but commonplace. The papers of Stevenson which Mr. Watt has gathered together are "The Pentland Rising," privately published by Stevenson's father when the boy was sixteen; "An Old Scotch Gardener," written for the *Edinburgh University Magazine* in 1871, and revised for "Memories and Portraits"; and "A Pastoral" and "The Manse," which appeared in *Longmans'* and *Scribner's* respectively in 1887, and were later also included in "Memories and Portraits." Some of the "Picturesque Notes on Edinburgh" might well have been added. There are twelve attractive illustrations in color by Robert Hope.

"The Cecil Family," by G. Ravenscroft Dennis (Houghton Mifflin; $2.50 net), is chiefly devoted to the lives of three men: William Cecil, Lord Burghley; Robert Cecil, first Earl of Salisbury, and the third Marquess of Salisbury. Of Lord Burghley many lives have been written, and our author's original contribution is mainly in point of view. That Burghley's character has been generally felt to be unsympathetic seems to arise not so much from his "cold and calculating nature" as from a single-mindedness that found its chief expression in an almost blind loyalty to his sovereign. To this he somewhat pathetically gives utterance in the last words he wrote to his son Robert: "Serve God by serving the Queen; for all other service is, indeed, bondage to the Devil." That he at least did nothing to save his friend and patron, Somerset, need not be pressed too much, though we should hesitate to go so far in condonation as Sir Thomas Morrysine, who, congratulating him on his escape, wrote: "For it were a way to make an end of amity, if, when men fall, their friends should forthwith therefore be troubled." A Protestant by inclination, under Mary he "demeaned himself as a good Catholic." "He believed that the sovereign was the supreme head of the church," and that "that state could never be in safety where there was a toleration of two religions." In the first Earl of Salisbury we find much the same coldness of temperament, with the same single-eyed loyalty. It has been brought against him that, in the later years of Elizabeth, he was in secret correspondence with James, but by his action he "ensured a peaceful succession and saved the country from the dangers arising from rival claims." Raleigh, his friend, he made little effort to save, but extant letters show that he befriended him and his family to the end. For an authoritative life of the late Lord Salisbury we are still waiting for Lady Gwendolen Cecil's promised biography. In the meantime, our author's sketch of his political career is interesting, especially in the emphasis laid on many points of resemblance to Lord Burghley. There is a curious timeliness in the account of Lord Salisbury's foreign policy, his attitude towards Germany's colonial pretensions, his promotion of the Triple Alliance, and his furtherance of Austria's territorial ambitions in the Balkans. The Anglo-German agreement of 1890 is here held to be Salisbury's "greatest achievement in diplomacy." The British fleet to-day may well wish it had not included, *inter alia*, the cession of Heligoland.

The second volume of the "Deutsch-Amerikanische Geschichtsblätter" follows the plan

of the first in combining investigations on historical events with accounts of distinguished German personages who have figured more or less largely in American affairs. F. J. Herriott's article, "The Germans of Iowa and the 'Two-Year' Amendment of Massachusetts" is a well-written chapter on the history of local politics from the point of view of Federal relations. Julius Goebel contributes additional documents concerning German immigration in 1709. A comprehensive review of the life and works of Therese Robinson (Talvj), by Irma E. Voigt, is rather enthusiastic than critical, but reveals thorough and painstaking research. Albert J. W. Kern's oration on Jakob Leisler worthily commemorates an early martyr to the idea of popular sovereignty. From the diary of Dr. Enno Sander, Otto Heller publishes some rather confused but interesting passages bearing upon the revolution of 1848. It is possible that the whole diary will ultimately appear in print.

"The Essentials of Business English," by Porter Lander MacClintock (Chicago: La Salle Extension University; $1), has much more of the appearance of the conventional rhetoric or composition book than most "business English" texts. This fearlessness will commend it to the judicious, who will also like its insistence upon fundamentals. It is better than many of its rivals in the abundance and character of its illustrations and exercises, and it does not attempt to make a finished filing-clerk and salesman, but to supply directions and material for those who need training in grammar and every-day writing. Such persons will find it an intelligible and trustworthy guide.

We have received from Messrs. Longmans, Green & Co. two books of a popular character on Irish history, "The Romance of Irish History" ($1.50 net), by Mr. John G. Rowe, and "The Romance of Irish Heroines" ($1.25 net), by L. M. McCraith. Without attempting to write a full or consecutive narrative both authors deal with selected episodes of general interest. Mr. Rowe seeks to emphasize especially the romantic, as opposed to the melancholy or tragic, element which has usually been made prominent by writers on Ireland. He treats a great variety of men and events from the earliest legendary period down to the ministry of Mr. Asquith, and as a result of covering so much time he has had to reduce his account of many episodes to the merest superficial sketch. In the book on Irish heroines, on the other hand, a few figures are singled out and their stories rather more effectively told. The author's purpose seems to be to help create national ideals by presenting to the rising generation the best traditions of Irish womanhood. Neither work makes any pretence of being a learned or critical treatise or of adding anything to historical knowledge; and both would be better, especially in the early parts, if more careful distinction in statement had been made between facts and traditions.

The separately printed Supplement to the July number of the *American Journal of International Law* contains: The text of the Californian statute of May, 1913, the "Alien Land Tenure Law," to which Japan has made objection; regulations and ordinance of procedure of the Central American Court of Justice (international); notes exchanged between France and Germany (July 26, 1913), concerning aerial navigation; several treaties of commerce and navigation; convention between Russia and Germany of February 28, 1913, relating to the protection of literary and artistic works, and the new Act of 1914, complete, repealing the exemption, in the original Panama Canal act, of coastwise United States shipping from payment of tolls. In the *Journal* itself the Editorial Comment contains a very complete exposition of the controversy with Japan on the Californian law, with the most significant passages of the discussion between the two Governments, and also discusses the Mexican problem, justifying the position the present Administration had maintained. A connected narrative, embodying a considerable array of documents, is given of the origin and purpose of the Platt amendment affecting Cuban affairs, with Mr. Root's official statement of the conditions under which the United States could properly guarantee the independence of Cuban sovereignty. The proceedings of the annual meeting of the American Association of International Law are summarized, and the opening address of Mr. Root as president, on "The Real Monroe Doctrine," receives first place among the articles. A short paper by Charles Lyon Chandler contends that the Monroe Doctrine was wholly of American origin, not originated by George Canning, as some have asserted. Colby M. Chester presents a paper on the diplomacy of the quarterdeck; Richard W. Flournoy, jr., one on the new German law of nationality; Charles Cheney Hyde, one on our extradition treaties; and James Brown Scott concludes his elaborate study of the Declaration of London of February 26, 1909, arrived at by the conference of ten of the greatest naval Powers.

In the minute study of Thucydides to which Walter R. M. Lamb has given the somewhat fantastical name, borrowed from a phrase of Pindar, of "Clio Enthroned" (Putnam: Cambridge University Press, $3), there are two purposes, which, however, easily coalesce into one. Mr. Lamb chooses first to abolish the thesis set forth by F. M. Cornford in his "Thucydides Mythistoricus," to the effect that Thucydides, neglecting the real economic and commercial causes of the Peloponnesian war, wantonly distorted the facts of history into a great mythical drama in which Chance and Hope and Nemesis play such parts as Æschylus and the poetic imagination assigned to them in Athenian tragedy. Against these "modernist fallacies," or the "illusions of the present," as we should prefer to call them, Mr. Lamb has, we think, protested wisely and convincingly. Thucydides, after all, was a man of his time, and the very fact that he saw racial and otherwise emotional causes underlying the great duel of Hellas—though he by no means ignores economic causes so utterly as Mr. Cornford would have us believe—is evidence that the people of his day were influenced by the same motives.

With this justification of Thucydides as one alive to the actual powers that were compelling Athens to its dramatic ruin, Mr. Lamb joins an elaborate investigation of the historian's style. Just because he had a deeper philosophy of human nature than any of his predecessors, he "was clearly fixing, with all the strength and authority of his genius, an entirely new complexion upon historical prose." Into this long analysis of literary influences under which Thucydides wrote and of his own contributions to the new artistic prose, we cannot here enter. Though pedantic in a sense, Mr. Lamb's study is throughout instinct with sympathetic appreciation of the historian's psychological procedure. Nor is it lacking in literary insight. What light, for instance, is thrown upon the linguistic experiments of the Greek by this quotation from the Memoirs of the Duc de Sully?—

> The public is to expect in these Memoirs only descriptions of such events as are of consideration, and which I witnessed, or which befell the king himself. . . . With a view to refreshing my memory, I jotted down at the beginning some features which had struck me, and, in particular, those utterances which the king made to me, or which I had heard him make, upon the war or political matters. . . . His Majesty observed what I was at, . . . and he commanded me to set my work in some order, and extend it. *Here I found great difficulties; not the least of them was that which arose from my style.*

Mr. Lamb's work is for the Greek student alone, but to such it will be highly profitable.

"The Madras Presidency," by Edgar Thurston (Cambridge University Press), is the first of a series of Indian Provincial Geographies or Lexicons which will be of value to Americans as well as to Anglo-Indians. It is intended as a concise summary of almost every department of information from the physical geography and fauna to the natives, ancient and modern, their industries, and adaptation to the present British Government. An attempt has been made to obtain capable sub-editors, with very unequal results. The chief author is preëminent in the ethnological field, and this portion leaves little to be desired. For many reasons, brief summaries of wide fields are much more difficult of satisfactory achievement than more extended treatment, and this is well shown in the two major topics of fauna and flora. The latter is an exceedingly well-planned section, and in seventeen pages gives a good general review of the field. The faunal account in an equal amount of space has nothing to recommend it, being general, superficial, and uninteresting. The book is an excellent beginning, and with due cognizance of the shortcomings of this first volume, those soon to follow on Bengal and the Punjab should be models which the Governments of other nations might well copy, in a presentation of information about their colonies.

Prof. A. T. Robertson's "Grammar of the Greek New Testament in the Light of Historical Research" (Doran; $5) is a noteworthy contribution to the study of the New Testament. His "Short Grammar" (1908, 3d ed. 1912) was designed for younger students; the present work (of over 1,300 octavo pages) is meant for advanced students—it gives a sketch of the history of New Testament grammatical theory, with a full and critical statement of New Testament morphological and syntactical usage. The author holds, with the great body of recent scholars, that the language of the New Testament is not a hotchpotch or a hybrid (Hebraized Greek), but simply the *koinè*, the every-day speech, of the Græco-Roman world of the first and second centuries of our era, to be studied not mainly in classic Greek writings, but chiefly in the papyri and ostraka recently discovered and published. He adds an excellent account of the origin and growth of

the *koine*, its relation to the dialects, and the place of the New Testament Greek in the mass of the common speech. The historical method, on which he insists, leads him to take into account Greek usage from the earliest known time to the present day, but he does not lose sight of the fact that New Testament Greek was a living language, possessing the elasticity and power of adaptation that belong to all forms of speech in which intelligent men express themselves naturally, avoiding, on the one hand, popular crudeness, and, on the other, the attempt to imitate old models. In view of the fact that the *koine* was the general language of intercourse in the early Roman Empire, there is a good deal to say in favor of the opinion held by Professor Robertson and others that Jesus and his immediate Palestinian followers understood and spoke Greek as well as Aramaic; but in the present state of our knowledge this opinion cannot be regarded as more than probable.

The study of New Testament Greek syntax has been burdened both with the crude or mythical formulas of the older grammars and with the hesitations naturally connected with the conception of a sacred language. Professor Robertson has endeavored, not unsuccessfully, to relieve the study from these burdens. He adopts modern ideas and terminology, and in general treats constructions with logical strictness. He recognizes the fundamental identity of adverbs, prepositions, and conjunctions (all of them being in one sense "particles"). He discards such expressions as "prepositions govern cases of nouns" and "conjunctions govern moods," and properly regards a preposition or a conjunction as simply a relational word. Among the numerous examples of satisfactory treatment we may cite a clear discussion of the infinitive with accusative (p. 489 f). In so large a number of constructions as are considered in this volume there are, of course, individual cases that admit of different explanations. Thus, it may be regarded as doubtful whether an adverb (in the example given on p. 547) is ever used as a substantive; in such expressions as "I am from above" (ἐκ τῶν ἄνω) we may recognize a compressed phrase "from those things that are above," as in our "the above sentence," which means "the above-given sentence," or "the sentence written above." On p. 549, μόνον is not used in different senses but qualifies different words (a pronoun and a verb). When Jesus says (John xviii, 23), "If I have spoken evil, bear witness of the evil," the protasis does not treat the assumption as a fact true of Him (p. 1009), but only as a charge made by His accusers. But, though one may differ here and there with the author in his judgments, no one can fail to recognize his thoroughness and his general critical sanity. His volume approaches the character of an encyclopædia. There are few points of grammatical exegesis that the student will not find considered, there are few important writers on the subjects treated that are not cited and critically appraised. The bibliographical material is extensive, the proofreading is good, and the volume is provided with suitable indexes. It should be in the hands of all students of the Greek New Testament.

Few countries of Europe are so little known to the traveller as the charming little Duchy of Luxembourg. English sportsmen, fond of a picturesque boar hunt or a quiet trout stream, are occasionally to be found there, but so far as the rest of the world goes, Hugo and Goethe wasted their superlatives upon this *allerliebstes Ort*. George Renwick's delightful book, "Luxembourg, the Grand Duchy and Its People" (Scribner; $3 net), attempts to do it tardy justice. The book is written in an easy and engaging style. History, geography, government, customs, art, and archæology are brought up in turn, as they might be in the mind on a summer day's travel. "Une terre aimée du ciel et favorisée des dieux" denotes the land truly, and the author was wise to take the line as his motto. He was, however, at least a little careless when he attributed the sentiment to a vaguely mythical French poet, Ausone, for the pleasing verse is merely a translation from the Latin of Ausonius, who, though a native of Bordeaux, yet dared to celebrate the River Moselle. It is plain that one had to be born in Roman times to have the courage to do that; and the writer of this book might well have made some point of the fact that in those days Moselle meant not a wine but a river of Luxembourg, and one, furthermore, whose natural charm had not yet been forgotten for her vineyards. We are sure Mr. Renwick will bear us no grudge for trying to trip him up on his erudition, for it is not depth of learning that makes his book delightful, but the easy rambling way and the half-tramp spirit in which he presents this little-known enclave in the main-travelled lands of Europe.

When the casual reader first picks up Mrs. Aubrey Le Blond's translation of "The Autobiography of Charlotte Amélie, Princess of Aldenburg," he may be pardoned if he expects a "court memoir" with a touch of scandal, for the publishers (McBride, Nast; $4 net) have decked it out with a little of that sumptuousness which arouses suspicion. In this case, however, the editor has made accessible an historical document of considerable importance. It is the life story of a Protestant princess belonging to one of the most distinguished houses in France (De la Tremoïlle) in the days of the Revocation of the Edict of Nantes. It had appeared first in a German translation in 1892. It comes before us here somewhat reduced in bulk through judicious cutting. In the original French it still awaits an editor, for its so-called "Memoirs," published in Geneva in 1876, are neither accurate nor representative. Although the writer is a Princess de la Tremoïlle, the narrative shows little trace of what her countrymen call *race*, and still less of what we might call raciness. Her style is dull and sad and heavy, lacking any flavor of Gallic salt, any snap or crackle; a record of misfortunes, conscientiously accurate, by a thoroughly commonplace, assuredly pious, and possibly bigoted young woman, who, after spending her childhood and youth in France, becomes lady in waiting to the Queen of Denmark and then wife of Monsieur, the King's brother. The very defects of the narrative as such, however, make it a particularly interesting document on the moral temperature of this time. The Princess accepts without question the spirit of the courts in which she lived. Her story is amazingly matter-of-fact. Her naïve supineness before her husband might even supply incidents of comedy. So, on one occasion, when one of her lord's friends comes to visit her, she records, "Monsieur told me to condole with him, which I did." We are struck by the terrible rapidity with which childhood passes, by the caducity of life in this hothouse atmosphere. It will help the student to understand that prematurely aged expression, that pathetically outward joyousness, of Velasquez's infantas when he reads how a child of three, mortally sick, comes most formally to crave leave of her elder sister to retire and go to what in a few days was to be her deathbed. But even more interesting for students of history will be the picture of life at the court of Denmark, in Holland, and in various parts of the Empire in the last quarter of the seventeenth century. A book which throws so much light on the life and manners of the time should have been published with a view to its use by historians, to whom it will provide valuable collateral reading. It lacks dates and chapter heads. The annotation is scant, and the index incomplete. In this respect it marks no advance over the German translation of Dr. Mosen.

A useful sketch of pre-Justinian Roman law is contained in the Rev. M. Hyamson's edition of the "Mosaicarum et Romanarum Legum Collatio" (Oxford University Press; 21s.). He gives facsimile, transcription, and translation of the Berlin Codex of the Collatio, discusses its date, authorship, and purpose, and adds textual and exegetical notes. His conclusion is that the work was composed between the years 390 and 438, by a Christian, as an introduction to the study of Roman law for young clerics. The Hebrew laws compared are all taken from Exodus xx and xxi; and these are regarded as superior to the Roman in humanity. The Latin version used is not the Vulgate of Jerome, but an earlier one.

To present within moderate compass a general survey of the history and culture of ancient India is no easy task even with the help of the *Grundriss* and other aids. Yet this has been the task undertaken and admirably performed by Mr. Lionel D. Barnett, in his "Antiquities of India" (Putnam; $4). Beginning with an outline of historical changes the author sketches the varying conditions of society as revealed by literature and the monuments, also the administration of the state, religious rituals, scientific knowledge, and achievements in architecture and painting. Standard works have been consulted and copious illustrations show examples of ancient Hindu painting, sculpture, architecture, and coins. Especially valuable to the Sanskritist is the summary from the Kautilîya of economic conditions, and, from the later literature, of astronomical and medicinal details. The author might perhaps have made it a little clearer whether the imaginary astronomy of early India was set aside by the later science showing Greek influence, and the epic and Paranic periods are rather jumbled together; but conciseness does not permit much discussion and the scholar will be thankful for so handy a *vade mecum*, while the student of things Oriental, if not a Sanskritist, will find this excellent handbook to be a thoroughly trustworthy as well as readable manual.

We have received from Lippincott, Chambers's English Dictionary, edited by Rev. Thomas Davidson, which has now been enlarged by a supplement containing thirty-nine pages of additional words and phrases.

Science

THE AMHERST ECLIPSE EXPEDITION TO RUSSIA.

ST. PETERSBURG, July 29.

(Delayed in transmission.)

During a period of heat and drought unequalled here in one hundred and forty-nine years, the Amherst Eclipse Expedition, under the direction of Professor Todd, is having its first glimpse of Russia. This great imperial city of the north is stifled under clouds of hot dust. The heavily padded cab-drivers jounce blindly along the stupendous distances, dust shutting down over them from the shimmering sky. Here and there a pile of ultramarine, star-studded domes towers into the heat, or a cluster of domes of gold, or a massive monolith of Finland granite.

To astronomers it may not seem an exaggeration to say that the most interesting observatory in the world is that at Pulkowa, a small town a few miles south of St. Petersburg. The story goes that on the hill where the observatory now stands Nicholas I and some friends were once conversing. Looking along the great *chaussée* which leads towards St. Petersburg in a mathematically straight line, like all high-roads in Russia, some one remarked, "Does it mark the North?" "About 4' out of the way," replied his Majesty on a venture. "Well," said Friedrich Wilhelm Struve, who was of the party, "we ought to establish an observatory here to determine just how far out of the way it really is." "All right," said his Majesty, "go ahead. I'll give you two million rubles to start it with." And so, in 1835, the Imperial Observatory of Pulkowa was begun. It has really had but three directors, Friedrich Wilhelm Struve, born in 1793, its famous founder; Otto Struve, his son, who was the only director after his father's death, excepting a short intermission under the leadership of Dr. Bredichin, until Dr. Backlund became director in 1894. Pulkowa is the greatest school for astronomical novitiates in the world, Dr. Backlund among countless others having received much of his early training here. Born in Sweden of humble parentage, his unusual intelligence gained him a scholarship in Stockholm, where, at the expense of the state, he began his astronomical career under Hugo Gyldén. To visiting astronomers of all lands Pulkowa is the host of 1914. She expects to entertain the Astronomische Gesellschaft immediately after the eclipse. Founded in Germany many years ago, this august body now numbers among its members astronomers from all over the world. Papers of international importance are scheduled to be presented at these meetings in late August.

To reach Pulkowa from St. Petersburg we had a half hour's train-ride through sizzling country to Alexandrovskaya, a tiny hamlet whose wide streets are edged with log cabins falling into ruin under the dust. After being buttoned into a minute wagon by a wadded coachman, we galloped along a perfectly level turnpike until we finally reached an avenue of trees leading through an ancient park to the hilltop, where the yellow plaster buildings of the Observatory are embowered in gardens. When we were received in a lower hall by a be-medalled, bearded footman about four feet tall, we were led through wide corridors to Dr. Backlund's sanctum, a vaulted room filled with portraits of directors, ministers, and grand dukes. We found there the English astronomers from the Greenwich Royal Observatory, Mr. Davidson and Mr. Jones, also Mr. Hepburn, a volunteer-associate. They are to settle for observations of the eclipse in Minsk, about halfway between Riga and Kiev, as the eclipse track goes. Crossing the northern countries, Greenland, Norway, and Sweden, the island of Ösel in the Baltic, where the University of Helsingfors is to send an expedition, the moon's shadow, about seventy miles in width, reaches Russia nearly centrally over Riga, travels slightly to the east of Kiev, where totality will last 2 minutes 15 seconds, then across the Crimea over the Black Sea and Armenia, and finally trails off through Persia. Meteorologically, the outlook for successful observations on this eclipse is not especially encouraging, but Russia, between Riga and the Crimea, would seem to be most favorable.

La Société Astronomique Russe is sending three expeditions, one to Riga, one to Feodosia, and one to Armenia. This party is to be conveyed to Trebizond in a warship, and will then take a five days' caravan journey into the interior. Several parties are going from Pulkowa, one of which is to settle at Stavidly, near Kamenka, in the province of Kiev. Among the astronomers at Stavidly are M. Baiev, of Moscow; M. Gratchoff, of Kazan, and M. Tichoff, of Pulkowa. M. Tichoff is to make interesting experiments in photographing the corona in different regions of the spectrum. The wavelengths that affect the eye being mostly long, that is to say, in the red region of the spectrum, the photographic plate is sensitive to short wave-lengths, at the blue end of the spectrum, and beyond into the violet and ultra-violet. As the corona consists mostly of this light, photography supplements vision for research. M. Tichoff has four lenses corrected to different wave-lengths, *i. e.*, of different colors. Thus he will discover the shape of the corona as photographed through light of different degrees of frangibility, in the different parts of the spectrum. He will continue these experiments after the eclipse in the Caucasus, where, on the summit of El Bruz, he will try to photograph the sun's corona without an eclipse.

In addition to the party from the Royal Observatory of Greenwich, Major E. H. Hills, C.M.G., F.R.S., president of the Royal Astronomical Society, with Mr. W. E. Curtis and Mr. A. Fowler, of the Imperial College of Science and Technology at South Kensington, will be in the vicinity of Kiev. As to the Crimea, there will be upwards of forty parties there, mostly near Feodosia, including several French expeditions, notably M. Chrétien, of Nice, and M. de la Baume Pluvinel. Mr. Perrine, of Argentina, will be in the Crimea also. Besides the Amherst expedition there is but one other party from the United States, that of the Lick Observatory under the direction of Professor Campbell and Dr. Curtis. This party will also be in or near Kiev.

The instruments of Pulkowa are adjusted with amazing precision; the transit circle, for instance, measures the one hundredth of a second of time. This meridian circle, a classic old instrument built long ago and kept in constant use, shows the thoroughness with which the original designs and mountings were made. The fifteen-inch telescope, with which F. W. Struve made his historic observations of double stars, fundamental work dealing with the constitution of the stellar universe, still stands on a modern Repsold mounting. Most interesting is the laboratory of M. Bélopolsky, the widely known spectroscopist. On a small plate a star's spectrum is photographed. After development the position of various lines is measured, which indicates whether the star is receding from or advancing towards us, and at what speed. M. Bélopolsky showed us the instrument with which he is now investigating the variation of intensity of a line of europium in the star, Canum Venaticorum, whose wave-length is less than 1-10 mm. Near by is the laboratory where M. Kostinsky and others are measuring the parallaxes of stars, a most minute study.

Then, through a delicious garden, we were taken into the dome of the thirty-inch refractor, at the time when it was made by Alvan Clark, of Cambridgeport, Massachusetts, 1879-80, the finest in the world. A spectrograph is attached to its end with exactest possible adjustments; for instance, since spectrum-lines vary with temperature, the instrument is enclosed in a case in which a thermostat supplies an automatic control of the temperature to the one-tenth of a degree.

Beyond another garden and tennis courts on the edge of the park is the seismographic laboratory, established five years ago by the Imperial Academy of Sciences, and the most accurate in the world. The instruments, embedded in a series of dark chambers far underground, are so finely adjusted that the entrance of a single person to change the photographic sheet disturbs the equilibrium. Some instruments register disturbances east and west, some north and south, by means of a delicately balanced needle on a revolving blackened cylinder. Some, by the vibration of a ray of light constantly admitted and reflected by a mirror to a revolving film, make a photographic image of the earth's movements and by minute calculation indicate the exact second at which an earthquake takes place in Alaska or Patagonia, as well as the extent of its damage. As everywhere at Pulkowa, there is a house near by containing the offices and apartments of observers. At least twenty-five astronomers live at the observatory, not to

mention assistants and mechanics of every description.

Unique in popular interest is perhaps the library of this great institution. There are countless treasures, among them seventeen volumes of the MSS. of Kepler. Only two others are known to exist, one at Vienna and one at Prague. A prayer-book belonging to Copernicus has marginal notes by himself. The first book printed in Russia is also here, dating from 1472, and Ptolemys, dating from 1482. Another curiosity is a volume of the "Histoire de l'Académie Royale des Sciences," riddled with bullet holes made when the Observatory of Paris was bombarded by the Communists. Two specula, still in use, made by Sir William Herschel, were sent to Catherine II by George III of England.

In the rotunda of the timepieces, a great room filled with silence except for the ticking of the nine authoritative clocks, hang portraits of famous astronomers: Copernicus and Tycho Brahe, discolored with age; the Herschels and Struves, Laland, Leverrier, Bessel, and Schumacher. The only American portrait is that of Simon Newcomb, and the most recently added is that of Sir David Gill, who died only a few months since. No dates are attached to this frame, for Dr. Backlund refuses to consider his friend as among the dead. The air of this dim, high, cool place is sacred. The voices of visiting astronomers were hushed as they entered one by one. The finest of all the nine clocks, which was made by Riefler of Munich, is enclosed in a glass bottle five feet high, from which the air is exhausted to constant minimum tension, so that the swing of the pendulum is not affected by a barometric change. Three clocks under the floor are sealed up where the temperature never varies. By means of all this debauch of precision, time can be kept to the one-five-hundredth of a second. Even if the sky were clouded for eight days, time could still be found, correct to the one-hundredth of a second. The cannon fired at noon each day from the fortress of SS. Peter and Paul in St. Petersburg is prompted by an electric signal from the Pulkowa Observatory.

MILLICENT TODD.

For a genuinely barren scholasticism we must turn, not to mediæval philosophy, but to the latest developments of modern science as exemplified by L. M. Gilbreth in "The Psychology of Management" (Sturges & Walton; $2 net). The reader lays down the book with the feeling that he has been supplied with little evidence regarding the actual and concrete psychology of management—how the men most affected think and feel about it. Instead of this, he is offered 250 pages of *a priori* deduction of the obvious inferences, often too obvious to be convincing, to be derived from such abstractions as "functionalization," "measurement," and "standardization," in the course of which a desperate attempt is made to show that standardization must—not that it really does—develop individuality. Meanwhile, the beauty of standardization is illustrated in the form of the several chapters. The book itself does not increase our confidence that management will add to the joy of living.

Drama and Music

MODERN PLAYWRIGHTS.

Dramatic Portraits. By P. P. Howe. New York: Mitchell Kennerley. $1.50 net.

According to a prefatory note, this book is written from a particular point of view from which "the dramatic art is looked upon as a separate art from the literary, and from which especial attention is given to the manner of its practice." The specification, in itself somewhat vague and incomprehensible—the association of the two arts being exceedingly intimate—is not particularly apparent in the general character of the essays themselves, which discuss the literary form of the dramatists under review, just as fully as their constructive methods or their artistic and dramatic equipment. They do not differ in plan from ordinary dramatic criticism, but excel most of it in scholarship, in felicity of style, in aptness of quotation and illustration, in ingenuity of special pleading, and general consistency. Mr. Howe has the modern drama at his fingers' ends; he writes with the assurance of full knowledge and abundant cleverness, but he is not a sound critic, because his judgment is the slave of his personal preferences. He does not realize that art fulfils itself in many ways and that what is good, of its kind, is good even if it may not conform with the latest definitions. It is his weakness to take tithe of mint and cumin and neglect the weightier matters of the law. The true province of criticism is to discern merit, wherever it may lie, not to be meticulous in the detection of minor flaws.

There is much that is true, and obvious, in his criticism of Pinero, but the spirit of his estimate is, on the whole, ungenerous, paltry, and unjust, not because he does not allow him due credit as a theatrical artificer, but because he laboriously lays too much stress upon minor infelicities of verbal expression or technical execution which are not characteristic of this playwright's work in the mass. Of course, Pinero is not a great dramatist. It is undoubtedly true—it is a platitude—that his dominant anxiety has been to supply the commercial, not the artistic, theatre. Often he has shown himself tricky, insincere, and vulgar. But if he has never dared, or known how, to be a pioneer, to burst the shackles of convention, it should be admitted that he has the saving grace of trying to move with the times. That he is a genius no one would pretend, but he has proved that he can profit by example. His maturer work is marked by shrewd observation, efficient satire, veracious humor, logical and dramatic development, and considerable literary skill. These are substantial virtues which ought not to be slurred over or ignored in what professes to be a verdict based upon critical analysis. From his own point of view his parting fling at Sir Arthur that "he kept the theatre open" is not particularly happy. That might be said of Shakespeare or Hall Caine.

In his zeal for realism Mr. Howe is almost equally unfair in his dealing with Henry Arthur Jones. If by "realism," as he seems to imply, although he does not expressly say so, he means "actuality," his strictures are not without warrant, so far as the particular instances which he selects for his ridicule are concerned, but Mr. Jones never has pretended to be a realist in this restricted sense, and ought not to be judged by a standard whose validity he has always disputed. What Mr. Howe does not appear to recognize is the fact that there is no necessary conflict between realism and imagination; that a work of the most glorified fancy and idealism may be realistic so long as it respects the eternal verities. It is true enough that Mr. Jones, like many other dramatists of note—it might even be safe to say all dramatists—has availed himself of theatrical conventions, against whose absurdity he has protested, that he is often trivial, ultra-sentimental, verbose, and insincere, but it is none the less certain that he is a good dramatic craftsman, that he has written several of the best comedies and melodramas of his era, that he has emotional, humorous, satiric, and inventive power, and that in his depiction of character he is often both subtle and veracious.

It would be more surprising, were it not for the unjudicial attitude of mind betrayed in earlier chapters, to find this ardent advocate of truth and sincerity in the theatre, so impassioned an admirer of Oscar Wilde, one of the trickiest, shallowest, and most artificial, as he was undoubtedly one of the wittiest and most entertaining, of modern dramatists. That this wayward and deplorable genius was master of a brilliant style, was exceedingly apt in the use of equivoque and paradox and the invention of comic situation; had an intuitive perception of the possibilities of theatrical device and an impish dexterity in giving to callous cynicism a deceptive gloss, is generally admitted. In his lighter pieces his one aim, unscrupulously pursued, was the provocation of laughter, which he often triumphantly achieved; in his tragedies—to which literary grace and vigor need not be denied—the salient feature was a perverse, degraded, and grotesque imagination, inhuman and abominable. Whether he sought to amuse, startle, or horrify, the last thing he concerned himself about was the essential truth of nature. To lavish praise upon his artistry is to ignore the noblest principles of art.

The essay on J. M. Barrie is an appreciation rather than a criticism, but no one will find fault with it on that account or because it does not really supply any key to the solution of that author's fascinating mystery. But the attempt to explain his superiority as a dramatist by his recognition of the "visual possibilities" of the theatre is surely somewhat fantastic. The instances quoted in support of this theory do not indicate any extraordinary degree of discernment. He is happier when he describes Barrie's inventions as an artificial comedy that is disarmingly natural. It may be

that Barrie occupies a place in the dramatic Pantheon between Wilde and Shaw, as Mr. Howe asserts, but he has nothing in common with either of them.

There is genuine and acute criticism in the essay on Bernard Shaw, but Mr. Howe takes his subject too seriously. Even his final conclusion that Shaw is only "the most nearly major among the minor English dramatists," will not be accepted by those who hold that no play devoid of sincerity and veracity can have lasting value. He demolishes, pretty effectually, Shaw's claim to be considered a theatrical reformer or an artistic workman, by enumerating examples both of his lawlessness and his frequent conventionality, but that at this late day is largely a work of supererogation. It is a bubble that was pricked long ago. Unquestionably, by virtue of his extraordinary wit, his literary facility, his paradoxical humor, his serio-comic intellectual astigmatism, and his knack of comic exaggeration and misrepresentation, together with his proficiency in self-advertisement, he has won great notoriety. He has been a comet in the theatrical sky; but a comet, after all, is only volatile and vagrant gas.

In discussing the plays of St. John Hankin, Mr. Howe is, in the main, just, but his appreciation might well be more generous. Hankin excelled most of his contemporaries, including Shaw and Wilde, in the truthfulness and consistency of his studies of modern life and manners, and was scarcely inferior to any of them in wit. As for the felicity of his stage directions, that has little to do with his position as a dramatist. In discussing this phase of his talent, Mr. Howe overlooks the fact that the long comments in brackets, in which Mr. Shaw and other moderns delight, merely betray their inability to make their characters express themselves dramatically.

In his minute dissection of the literary and dramatic methods of Granville Barker, Mr. Howe does full justice to that writer's imaginative realism, his grasp of his subject, his ironic humor, and his sense of character and atmosphere, but he fails to perceive that the elaborate perfection of his workmanship—the laborious coördination of all his means to a predestined end—is often fatal to that essential truth of humanity which constitutes the most potent appeal of the born dramatist. Nothing is more fatal to illusion than the evidence of calculation. Mr. Howe's article on the plays of John Galsworthy is the least satisfactory of the series. Perhaps it would not be quite fair to say that it damns him with faint praise, for it is eulogistic in spots, but it exhibits scant appreciation of the distinctive merits of the work of the most purposeful and conscientious and certainly not the least capable of modern dramatists.

The executive committee of the Stage Society of New York announces definitely that Prof. Max Reinhardt is coming to New York to make two important productions on the regular evenings of the Society's season, for members and their guests exclusively.

"THE LAW OF THE LAND."

The ingenuity of Mr. George Broadhurst is not to be denied, but his new play, which he presents at the Forty-eighth Street Theatre, convicts him of cynicism. He is without illusions about his playwright's craft. He is apparently determined to show us how easy it all is if you happen to know how to do it, and with tongue in cheek he deliberately puts on exhibition the whole répertoire of trick and device by which an author may cajole an audience into accepting spurious dramatic coin. And not the least amusing thing about this melodramatic exposé is that it makes a remarkably good entertainment. At times, indeed, it comes so near to being the real thing that we are tempted to forget the elaborate unconcern with which Mr. Broadhurst assures us that it is not. It is like watching a conjurer explaining just how he does a trick, and then failing to follow all his movements.

To analyze the play in detail would be to treat it too seriously, but the initial situation affords a good illustration of the author's method. Mrs. Harding and Geoffrey Morton have been in love for some years, and a result of their indiscretion is the child that is accepted as his own by Robert Harding. The problem of the play is to bring Morton and Mrs. Harding together with the complete approbation of the audience. But before this can be done an instinctive prejudice on the part of the general public against adultery must be overcome. Nothing could be more simple. Robert Harding, the wronged husband, must be painted in lurid colors as an inhuman brute. Then not only is sympathy aroused for the indiscretion of the wife and her paramour, but the sympathy is still extended to her when she shoots her husband, for the shooting is done in defence of her child, and the fortunate fact that, with Harding, who has refused a divorce, safely out of the way, the author is at liberty to regulate the relations of his two principals is for the moment not emphasized.

Again, Mr. Broadhurst is very wise in his generation in introducing the "punch" in the first act. Harding, already suspicious, convinces himself of the paternity of the child by thrashing him brutally in the presence of Morton—a sight which no father can witness without betraying himself. So the recollection of a strong first act is sufficient to take the audience contentedly through a tedious second act. The penultimate act is boring in the extreme, and as the curtain goes down one is ready to vote the play a failure. But Mr. Broadhurst knows his business; he has reserved his humorous relief and another brand-new character of dominating importance in the scene for the fourth act. Here the tempo is rapid, the scenes are contrived with much ingenuity, and our ancient standby, the English butler, has a part that must be the envy of every character man on Broadway. The removal of the slight impediment to holy matrimony which still remains to cloud the happiness of Morton and Mrs. Harding, namely, the prospect of the latter's arrest on a charge of murder, is happily achieved by means of a sympathetic police inspector, whose rugged nature has been temporarily softened by the advent of twins in his family. Could anything be more plausible? At any rate, the audience goes away with a pleasant glow, remembering not the insufferable dulness of the two middle acts (which might well have been combined into one), but the "punch" of the first and the laughs of the last.

Much of the success which Mr. Broadhurst's melodramatic *jeu d'esprit* seems likely to achieve must be attributed to the admirably selected cast, which, besides Miss Julia Dean as Mrs. Harding, includes, among others, Mr. George Fawcett (Inspector Cochrane), Mr. Milton Sills (Geoffrey Morton), and Mr. Harry Lillford (the butler). Credit must also be given to Master Macomber for an excellent performance as the child, Bennie. The production is well staged. S. W.

"CONSEQUENCES."

The problems of marriage between Jew and Gentile form the subject of the farcical comedy which is presented at the Comedy Theatre by Miss Horniman's London company. "Consequences" is not another "Nathan the Wise," for the author, H. F. Rubinstein, holds no serious brief, being content to skim the surface of prejudices and to assume that deep-rooted feeling of the sort is too silly to notice. As a result, there is good-humored comparison of the hero's nose with the Cape of Good Hope; the Lipskis become most desirable, in Gentile eyes, when it is learned that they are rich; and similarly, the social position of the Collinses does not leave the Lipskis insensible. The one element which might have been treated with respect, religious creed, is avoided almost completely. On the whole, the author was perhaps wise in the distribution of the emphasis. In these days, where prejudice is felt between the races, it is usually labelled such, even by those who experience it, no attempt at justification being made.

The simple plot of "Consequences" leaves the author much time for practicing his nonsense. Rosalind Collins, the daughter of a prominent solicitor of London, a young girl of the new order, who has already been in prison for the Cause, has become infatuated with Benjamin Lipski, a Jew whom she has met through the act of offering him the shelter of her umbrella at a meeting in Hyde Park. When the fact becomes known to her parents that she is engaged to this fellow, there is the expected scene, which, however, is transformed into one of rejoicing at the mention of his surname. The next act shows the horror of the Lipskis at thought of Benjamin's marrying a Christian. But horror vanishes when the identity of Rosalind is established. Recounted briefly, the scenes thus far would seem to run the danger of mechanical monotony. But the author has varied them neatly by a diversity of characters, among whom the youngest Lipski, a student of Westminster School, affords much merriment. Surprises are plentiful, too, in the third and final act, when the two lovers, meeting with no opposition, discover that they are, after all, unsuited to each other. They have gone so far, however, as to appear before a registrar and to prepare a wedding party. Yet they have failed to attach their names to the legal document, and the whole business appears to have been in vain, until as the final climax it comes out that Gladys Lipski and a former Christian suitor of Rosalind's have taken advantage of this oversight to sign their own names. Hence Papa Lipski, who has provided an apartment for the prospective bride and groom, can still rejoice that he will get his money's worth.

Poorly acted, this play would suffer the same fate as a trifle of Barrie's in similar cir-

cumstances. It is a comedy of manners in which finesse of voice and expression means much. Fortunately, the cast is very well picked, Elliott Dexter, as Benjamin, deserving the highest praise. It is even possible that he has read between the lines with wiser discretion than the author could himself. At any rate, he gives a charming depth of idealism to this character. Mary Servoss's Rosalind is not improbably patterned after the heroine of "Fanny's First Play," but that rendering is not inconsistent with the part. The other rôles are also capitally filled, with the possible exception of Lipski's daughter, which seems overacted. F.

Regarding the personnel of the Boston Symphony Orchestra, Mr. Ellis writes that "no more changes have been made than usually take place at the beginning of a season. Dr. Muck has been able to secure musicians of distinguished standing to take the place of the few men who are serving in various armies in Europe."

Anna Pavlowa has opened her autumn season and is now touring the provinces of the British Isles. Her American tour will open at the Metropolitan Opera House on November 3.

Mrs. Edward MacDowell has virtually decided to allow an interim of one summer before having another music festival and pageant at Peterboro, N. H. The past festivals have done good in giving young American composers a chance to conduct, or to hear their own works. This advantage acts in two ways. Leonard Liebling, in the *Musical Courier*, cites Mrs. MacDowell as saying: "I remember one man whose composition we gave here. He previously had not heard anything of his done in public. After the performance, he tore up the manuscript, left Peterboro, and never composed again."

A week before the war began an open-air performance of Verdi's "Aïda" was given on the banks of the Tiber at Rome, the river being used to simulate the Nile. The performance lasted till after two o'clock in the morning. There was room for 60,000 spectators, and the production was pronounced a great success, musically as well as in the matter of realistic scenery. It was to have been repeated eight or ten times.

"More than 140 members of the personnel of the Royal Opera and Royal Playhouse have been called into service, and conditions are the same with all German stages," writes the Berlin correspondent of the *Musical Courier*. Nevertheless, the Royal Opera opened on September 1, and is receiving liberal support. "Those who know say that the winter of 1870-1871 was one of the most profitable theatrical and musical seasons ever experienced in Berlin. The Blüthner Orchestra, reduced to thirty-two men, announces that it intends to continue its folk concerts, and will be able to obtain substitutes for the absentees."

Scribners import a little manual entitled "The Organ, Viewed from Within," by John Broadhouse, who has also written on "How to Make a Violin." The mechanism of the organ is described clearly, and illustrated by some fifty drawings. The author deals with simple facts. "Why various qualities of tone are produced by various shapes of pipes need not trouble us," he says, "and the absence of that knowledge will not hinder us from knowing what the inside of an organ is like."

Art

GOYA AND HIS ART.

By FRANK JEWETT MATHER, JR.

Part One.

For violent spirits the painter is Goya, and also for wavering souls who seek consolation in the violence of others. Where other artists profess to be, he really is, sinister. In his most characteristic inventions it seems as if he deliberately preferred a contemptible subject-matter, the better to wreak his scorn. The horror with which he deals so vividly is never external. He must actually have seen the sordid and fearful visions of the "Caprichos" and the "Desastros de la Guerra." There is in the British Museum an early drawing which shows a young man, probably Goya himself, dazed and fascinated by obscene faces which come and go. It is a record of dreadful hallucinations gladly accepted. Such visions entirely accord with those mysterious illnesses and depressions which periodically beset the man. He craved the frightful. When in prosperous retirement he set up his own house near Madrid, he decorated it with nightmares—discarnate witches riding through the foul air, a demented Saturn gnawing at the mutilated body of his own child. Aside from these more intimate terrors, there is a smouldering quality even about his more normal work of decoration and portraiture. Recall those full-bosomed angels which from church vaults invite an assignation; in his portrait gallery, those proud, melancholy, and ineffectual men; those moody and ardent women.

To violent spirits he also commends himself because his horrors are never veiled by finesses of workmanship. The color strikes hot and brutal like a blow. There is a preference for murky reds and sulphurous yellows, true colors of the pit. Compare his Military Execution, May 3, 1808, in the Prado, with Delacroix's Massacre at Scio, in the Louvre. To the mind, the Frenchman's subject-matter, with its manifold suggestion of slaughter and rapine, is more terrible. We have a father closing dying eyes upon a dishonored family, young beauty dragged to shame, the war reek running through a paradisaical countryside. The Spaniard's subject-matter is simpler and in a way less horrible. A French firing squad aims point blank at half a dozen prisoners who totter above the sprawling bodies of those already shot; new victims are being pushed forward awaiting the discharge. Here is no wholesale disaster, but an ordinary incident of a military occupation. Yet the picture appals more than the reality would. One shrinks from that staring, staggering group and the levelled steel. Everything is brusque, intense, cramped. In comparison the Massacre of Delacroix is invested with beauty. Lovely workmanship, human pathos, a sense of persisting natural charm, give something of nobility to a theme in itself dreadful enough. With no lack of energy, the scene is meditative, has style and civilization. Goya's Execution, on the contrary, is completely unpondered and immediate, the execution as coarse as it is expressive, the whole thing as direct and barbaric as a painting in a neolithic cave. In one case we have the work of a man who felt strongly, but also thought much and reverenced tradition; in the other, of a man who felt acutely, though very narrowly, and reverenced nothing past or present.

Legend has been busily at work to construct a figure diabolical enough to justify the work. The earlier biographers, especially Matheron and Yriate, have drawn the figure of a malcontent revolutionist in the land of the Inquisition, a seducer, bullfighter, swashbuckler, full of violence, yet with the nobler velleities of the romantic superman. German criticism, especially represented by Valerian von Loga, has attacked the legend and drawn us the picture of an exemplary and hard-working artist, chiefly mindful of the main chance, and providing diabolisms for a public that was willing to pay for them. Goya's latest biographer, Hugh Stokes,* in a very entertaining but possibly too diffuse book, has followed the sensible middle course of presenting all the facts, while giving the legend for what it is worth. He also gives such an account of Goya's Spain as furnishes a background for the activities of his proud and wrathful spirit. To the springs of this spirit, the legend is the most interesting guide, and, I think, by no means an unfaithful one, but I will choose the more prosaic and gradual approach of the assured facts of Goya's life and of the inferences that may be drawn from his pictures.

I.

Goya's native soil, Aragon, goes far to account for him. The proud and independent realm that bore the brunt of the Moorish wars produced rather men of action than artists. Loyal to the kingship, Aragon was ever impatient of control. Against the formidable aggression of the Inquisition she maintained her traditional rights. An impatient, pragmatic, virtually democratic feeling radiated from the half-Moorish capital, Zaragoza. Yet the sentiment was hardheaded. Aragon wished to do as pleased her, and was little affected by abstract enthusiasms. A typical Aragonese is the great Prime Minister, Aranda, Goya's friend and patron. Aranda was tinged with the views of the French Enlightenment. He roused the stolid Charles III to curb the Inquisition and expel the Jesuits. With equal practicality, when his former French friends became the dethroners of kings and the fomenters of plebeian misrule, Aranda set his face resolutely against the Spanish liberalism he had formerly done much to foster.

Goya had much of the temperament of his great friend. He wanted to gratify the immediate need and to be let alone. He was

**Francisco Goya*, a Study of the Work and Personality of the Eighteenth Century Spanish Painter and Satirist. By Hugh Stokes. With 48 full page illustrations. London: Herbert Jenkins, Ltd.; New York: G. P. Putnam's Sons.

something of a skeptic, doubtless, but kept on terms with the church; he loved liberty, but hated disorder except of his own making; he was a good royalist, but naturally scornful of the debasement of an unspeakably corrupt court. These very simple reactions of a vehement and self-willed spirit perfectly explain Goya the satirist, and we have no reason to follow those critics who see in him a youthful Jacobin dwindling into a middle-aged hypocrite. Goya hailed King Joseph Bonaparte quite as sincerely as he loathed the vacillating Ferdinand VII. It was a chance for peace in Spain to change masters. Goya sketched Arthur Wellesley, the real redeemer of Spain, and tried to shoot him in the studio for an imaginary insult. The incident shows how personal were all the springs of Goya's doings, and how absurd it is to apply to him any sort of philosophico-political label.

Francisco Goya y Lucientes was born in the hamlet of Fuendetodos, near Zaragoza, on March 30, 1746. His father was a peasant risen to the estate of a small tradesman, his mother of gentle stock. When a boy, the legend has it, a benevolent priest found him drawing a pig, a truly prophetic theme for the future author of the "Caprichos," and had him put at painting. What is certain is that at a tender age, and presumably without much previous education, he was accepted in the free academy of the public-spirited Don José Luzan y Martinez at Zaragoza. Here he was trained in approved academic fashion, drawing scrupulously after engravings and from the antique. He is said to have remarked of a Madonna he did in the student years, "Yes, it is mine; but don't tell anybody." For an impetuous temperament he showed a singular lack of precocity. But this impetuosity was to drive the young provincial far afield. Periodically the partisans of the great miracle church of El Pilar had street fights with the rival parish of La Seo. In one of these brawls, which resulted, besides the usual contusions, in some deaths, young Francisco so prominently captained the champions of Our Lady of the Column that his case came before the Inquisition. His master, who was art censor for that formidable tribunal, doubtless gave the counsel to flee, and young Goya slipped away to Madrid. It was the first of several such flights.

How the nineteen-year-old youth struggled along in the capital we hardly know. His fellow-townsman Aranda surely helped him; another Zaragozan, Francisco Bayeu, was a successful court painter.

The great Tiepolo was decorating the ceilings of the palaces, but Goya was no Fragonard to know Tiepolo's worth. Instead he fell under influences which continued his pseudo-classical schooling. The Bohemian adventurer, Anton Rafael Mengs, took him up. Mengs was an excellent portrait painter in a somewhat stilted style, but a pedant, intellectually under the thumb of Winckelmann, and just about the worst exemplar Europe could have provided for a genius of Goya's impetuous type. As a matter of fact, Goya seems to have found his way chiefly by the aid of the old masters in the royal collections. The forthright power of Velasquez captivated him from the first. Doubtless the fantastic exaggerations of El Greco fostered his own dreams. I think he must also have admired the quietly severe naturalism of Zurburan. When the etchings of Rembrandt came his way is not known, but the effect was permanent. No artist of the true Renaissance tradition seems ever to have won his admiration. This was unfortunate, for he was, after all, absorbing the dregs of the tradition from Bayeu and Mengs. The random student days at Madrid were abruptly closed. One night they found him in an alley with a knife in his back. The brawl apparently was of a sort to interest the Inquisition, and once more Goya fled, this time to Rome. A letter of this time is signed "Francisco de los Toros," and it is pretty certain that, like many another high-spirited young Spaniard, Goya, now on his way to Rome, proved himself in the bull ring.

I doubt if the Eternal City has ever harbored a less reverent exile. The gayety of Clement XIV's early reign gave him subjects for *genre* pieces, by the sale of which he lived. These have disappeared, perhaps deservedly. By courtesy of the director, Bayeu, he was a student at the Spanish Academy of San Fernando on the Janiculum, but he was probably more interested in the dissipations and rude sports of the Trasteverini below. Certain reckless exploits of his have left their memory. At the risk of his neck he wrote his name higher on the lantern of St. Peter's than any previous artist. He must have evinced a certain talent, for the Russian Ambassador made overtures. Goya had the sense to decline the patronage of the great Catherine. Shortly after his enforced departure from Rome, he won a second prize in a competition held by the Parma Academy, the subject being the victor Hannibal surveying Italy from the Alps. To enter a nunnery on any pretext without permission was a capital offence at Rome, and when Goya was caught within convent walls, he had no better pretext than his desire for a young and charming nun. His neck was more in peril than it had been on the lantern of St. Peter's, but the intercession of the Spanish Ambassador gave the young libertine the option of prompt and perpetual exile, which he naturally accepted. So runs the tradition, and there seems no reason to doubt it. Goya had spent most of the years 1770 and 1771 at Rome. When he returned to Zaragoza, in his twenty-fifth year, it must have seemed that he had put in a ten years' apprenticeship to very little purpose.

II.

Yet Zaragoza did something for her wayward son. The chapter of El Pilar accepted an advantageous offer from him to fresco the vaults of the Chapel of the Sacrament. No further commission followed for many years, and Goya presumably made his way by uncongenial work for provincial churches and monasteries. What remains of this religious decoration is mediocre enough in design and garish in color. Some time in his twenty-ninth year, 1775, Goya married Josefa Bayeu, the sister of his old master. It was this new responsibility that forced a second move to Madrid and a more persistent wooing of fortune. One would wish to know something more of Doña Josefa than is told by her husband's rather unsympathetic portraiture. How did she take his moods? What was her attitude towards his frequent and notorious infidelities? She lived in Oriental detachment from the public and social life of her lord; she was kept pretty busy bearing twenty children, all of whom were of an ailing sort. Only one, the son Xavier, lived to grow up. After all, Doña Josefa may have had sufficient *Sturm und Drang* at home to ignore the havoc her gifted spouse was working outside amid aristocratic hearts. Or she may have had the sense to see that the heart was very little involved in these adventures. They lived together nearly thirty years, and the period saw virtually all the greatest work of the master.

His first substantial recognition came gradually and humbly in an appointment as one of several designers for the Royal Tapestry Works in 1776. Mengs had interested himself in that languishing enterprise. Classicist though he was, he was also shrewd enough to perceive the popular value of Goya's sprightly, realistic vein. Goya turned off first and last more than forty cartoons, most of which are preserved in the Prado. Without exception, these are illustrations of Spanish life—picnics, dances, fairs, peddlers, ball games, kite-flying, a pretty girl swinging, young gentlefolk in vintage time playing at pastoralism—these are some of the subjects. They are carried off with ability, shrewd observation, and gusto. The hackneyed comparison with Watteau and Fragonard does them injustice. They have little poetry, either elegiac or erotic. As pure design, they fall midway between narrative and decoration. The color is usually harsh—mere hints for development by the weavers. The cartoons are perhaps more interesting to the student of Spanish customs than to the art lover. At least, they tided Goya over while his slow maturing genius was forming.

Meanwhile he was building up a reputation as a portrait painter, working in the dry and cautious manner of Mengs and Bayeu, but with a drastic fidelity wholly Spanish. Sometimes it seems as if the Spaniards were the only race with sufficient self-esteem to endure sincere portraiture. There is in these early portraits of Goya an odd affinity to the juvenile work of the self-trained American, Copley. Society began to take up the free-living young artist. He was welcomed at the country seat of the Infante Don Luis, whose profligacy had banished him from the austere court of Charles III. From his fortieth year he was a welcome guest of the Duke and Duchess of Osuna. The Duke and he shot together. The country seat of Alameda came to own some

thirty Goyas, some of which presage the diabolical vein of the "Caprichos." He painted the Premier, Florida Blanca, and the portrait of the old King as a sportsman, reminiscent of and far inferior to a similar canvas by Velasquez, but his repeated petitions for an appointment as court painter were ignored. Goya's record had not commended him to a martinet sovereign. In these years he made sixteen etchings after the masterpieces of Velasquez, rather fumbling work, but valuable means of study and evidence of a fruitful admiration.

As yet he had done little of lasting worth, though the Fair of St. Isidro, painted for the Osunas and now in the Prado, is a marvel of panoramic observation and deft denotation. It was the demoralization of Madrid on the accession of the weak and vicious Charles IV, in 1788, that furnished the opportunity for a drastic portraitist and satirist. Goya was now forty-two years old, in the full energy of early middle life.

From his estimable sire, Charles IV inherited nothing except a marked tendency to neglect the business of the realm for shooting birds and hares. He had married the haughty and dissolute Princess of Parma, Maria Luisa. Her minion, the handsome guardsman, Manuel Godoy, ruled the land as he willed. The nobility followed the example of sensuality set by the royal pair. "Gallantry and intrigue are terms too refined for this period," wrote a shrewd English visitor to Madrid in the latter days of the old King. Already Goya had enjoyed recognition from his craft, in an election to the Academy of San Fernando in 1780, and in promotion to its presidency in 1785. After the coronation he was welcomed at the court, and on the first vacancy appointed Painter of the Chamber, with a pension. In ten years he painted a score of portraits of the royal family, including that appalling family group of 1800 in the Prado which is perhaps his best-known work. Upon the booby voluptuary Charles IV and his "Courtesan Queen" it is customary for critics of Goya to direct their most effective phrases. Since the Queen, however freely giving, never sold her favors, the term seems inappropriate, while, as to both, a single glance at a good photograph will tell more than pages of the most accomplished rhetoric. I refrain from following the time-honored precedent, and leave the precious royal pair virtually unberated. The famous family group must occupy us in its turn. Meanwhile, what the King and Queen looked like is told in many portraits, perhaps best in the pair painted about 1790. These full-length canvases are in the Prado, and I hardly know whether most to praise the skill with which the artist has caught the pompous futility of the King, yet reserving for him a certain stereotyped impressiveness, or the keener insight with which he has revealed the masterful woman haunted by the sense that what has burned so ardently is now burning out. Both portraits have the merit, which Goya seldom lacks, of powerful characterization, both have also the usual defect of regarding the spectator too much, neither is quite finely composed. The painting of the black lace of the Queen's gown and mantilla, of the colored sashes of the King, is crisp, yet easy. Goya has fully outgrown the rigidities of the Mengs formula. Where the pictures fall short is in a certain provincial emphasis and absence of style. The neighboring Moros, Velasquezes, and Titians in the Prado do not efface them, but leave them looking a little raw.

Goya's career as a Don Juan reached its height in his forty-sixth year, when he was already a bit lame and deaf, in the classic liaison with the pretty Duchess of Alba. I say pretty advisedly, for such is the record he who knew her best has left of her. It was not his first scandal in the high world. Omitting less credible gossip, there is an anecdote of an importunate husband who to secure a long-delayed portrait of his wife turned the studio key upon her and the painter. The portrait was achieved on the delighted husband's return, and a notable addition made to the long list of the painter's gallantries. In fact, the compliancy of the eighteenth century Spanish husband is one of the interesting by-products of the Goya legend. It came, so the tradition runs, to the ears of the much-betrayed Duke of Alba that Goya was painting his wife as the Nude Maya. The Duke threatened and effected an invasion of the studio. In defence of himself and his mistress, Goya started over night the diaphanous vision of the Clothed Maya, and the indignant Duke was baffled. The very summary execution of the Maya Vestida and the fact that its arrangement seems an improvement over that of the Maya Desnuda lend color to the legend, but first it is not certain that either Maya was done after the Duchess, and next it is hard to imagine the state of mind of a patrician husband who was placated at the sight of his wife as the Clothed Maya.

For many years after 1782 one will find the imprint of the Duchess of Alba in all the female portraiture of Goya. His sitters seem her sisters. Everybody knows the doll face, distinguished by magnificent black eyes and by its bordering cloud of flowing black hair, the slight arms, full bosom, and waist for which a lace handkerchief were adequate girdle. The simple frocks and falling locks tell that, with all the more sensitive souls of her half-century, the pretty Duchess, too, had returned to nature. Perhaps more characteristic after all is the little sketch in which, with fan, mantilla, and gracefully turned ankle, she pirouettes on a hilltop and points to a rising thundercloud. Goya, as a slender and elegant youth—he was then forty-seven—bends attentively towards her with extended arms and uncovered head. One wonders if such exposures confirmed his increasing deafness. No other work of art represents so well the eighteenth-century notion of a *grande passion*, conducted in the forms, and ennobling by its fervor an approving, circumambient nature. Before Goya there had been various notable bull-fighters, but his too open devotion scandalized even Maria Luisa. The Duchess was exiled to her estates in Andalusia in 1793 and took her painter along. Here, amid a nature no longer pictorial but actual, the grand passion soon sunk to mediocrity, at least on her side. Goya bore some grudge, for in certain etchings of the "Caprichos," which he was preparing in 1795, one may recognize the fickle Duchess, once with a double face and again with flickering bats' wings.

III.

The waning of a passion, deafness, weakened eyesight, years of nervous tension, were the conditions under which the "Caprichos" took form. To compare the set and sour profile which accompanied the famous album, with the little sketch of Goya and the pretty Duchess before the thundercloud, is instructive. A year or two at most lies between the gallant youth and the grim old man dreaming unhallowed dreams. In the years of discontent and illness following 1793, Goya tossed off scores of these sketches. Soon he began to work them over into etchings, using the new aquatint process to obtain powerful light and shade. Two hundred copies he printed off himself and issued in 1798. This edition comprised seventy-two plates, eight being added later. The French officers in Spain sent copies home, and Goya, till then unknown beyond the Pyrenees, became generally famous as a caricaturist.

In a rejected draft for a prospectus, he declares that he has "chosen subjects which afford opportunities to turn into ridicule and stigmatize those prejudices, impostures, and hypocrisies which have been consecrated by time." This programme only holds true of what we may call the bestiary portion. The ass is exalted in all his complacent moods, playing human parts; the ape remains the critic of the long-eared hero. A typical picture is the ape painting the portrait of a lolling crowned donkey, whose mask on the canvas is beginning to assume the lofty traits of the lion. Trenchant satire of the function of a court painter. Again a half-human monster with shaggy legs and hoofs reclines on the swinging globe and holds up by the ankles an elated man whose wild eyes fail to see the predecessors discarded and hurtling down through space. The bestial inconsequence of the awards of fortune is the meaning. It is interesting to compare the notion with the mediæval and wholly mechanical idea of Fortune's wheel. Dame Fortune was merely ruthless by higher necessity; Goya's satyr world-spirit is carelessly malevolent.

More than thirty plates are descriptive of the follies of Madrid life, with especial regard to the courtesans. The mood is generally too mild and tolerant to be called satirical. We have the frail creature pulling up a stocking over a slender leg, buffeted with much lifting of skirts by the blast from

the Sierra, spied on by the police, or led pitifully to execution. Usually Goya is on her side; yet the sense of the ineluctable war of sex was also strong in him, and has received its most drastic symbol in the plate representing a harpy on a tree-top with feathered men of all estates fluttering about her proud head. The second act is shown at the foot of the tree, where a beatific witch superintends the plucking of one of these male pigeons by two plump and comely wenches. One holds the stripped wing, while the other sets both hands to the tail feathers. The ignominy of sex obsession has never been put more strongly.

The witch and demon series of the "Caprichos" is the most original and baffling. Here we have fiends—bat-winged, bestial, howling down the wind, clipping each other's claws; witches clutching each other frantically as they fly, seated in council—the whole repertory of diabolical possession hit off with such gusto and power that one can hardly believe that Goya is merely turning the imposture of witchcraft to ridicule. The plate which leads the Walpurgisnacht series represents a young man with bent head haunted by foul and monstrous faces. The motto is, "When reason dreams monsters rise" (*El sueño de la razon monstruos*). Plainly we have Goya indulging hallucination. Indeed, the simplest and possibly the truest explanation of Goya's diabolism is that he was merely an inverted Blake, seeing foul where Blake saw fair; both hallucinated, and both more or less controlling and utilizing their hallucinations. Yet the witch series was no casual incident in Goya's work. In old age, when he set up his suburban home, he painted a flight of witches following one who ambiguously fingers a human embryo, and a witches' sabbath presided over by a goat-like Satan, with a distinguished lady in fascinated attention. The witch notion was deeply burnt into his mind. Possibly he believed more or less in witchcraft. Malign beliefs are stubborn and persist in skeptics who have renounced consoling faiths. When we recall Goya's eminently sensual life, and also that demonology in the eighteenth century had sunk to be the accessory of lust, it seems likely enough that a certain amount of experience may have aided nightmare. He was the sort of man who may have dabbled in such orgies as Jacques Casanova records. If so, fascination should mingle with scorn and loathing in these designs, and this is just about the impression they make. No inventions are more instinct with love of the grewsome for its own sake, and the grewsome here has generally a tinge of the filthy. The element of foulness in the "Caprichos," though implicit rather than overt, is unmistakable.

Whether the artist should stir certain turbid depths of consciousness, or rather whether he should be encouraged in so doing, is an interesting case in theoretical morals. It is hardly a practical case, for the kind of artist who wants this expression of his lower self cares little whether he be encouraged or not. As a matter of fact, Goya sold off his copies of the "Caprichos" promptly, nor is the fact merely significant of the depravity of Madrid at the end of the eighteenth century. If the turbid depths were to be stirred, at least it was done with masculine energy, with unfailing pith and variety. Personally, I do not think that any robust person is the worse for the peculiar tingling shudder of the "Caprichos," and I am still more certain that an unrobust person will take little harm from them, since such a person will be immediately revolted.

It was undoubtedly the moral reaction of Hamerton against these designs that made him declare Goya a poor etcher. In a narrow sense that is true. There is little refinement of workmanship in these plates. The line is brittle, the strokes sometimes feverishly overmultiplied, the contrasts extremely harsh, the aquatint hurriedly and rather crudely spread over the etched skeleton, the sense of form occasionally pretty weak—in such purely technical regards, the "Caprichos" may be regarded as merely so much bad etching. But bad etching after all only as applied to other designs than Goya's, say to such caprices as Hamerton would have permitted himself. In much the same sense, the style of Rabelais would be truly bad if imposed upon the thinking of Matthew Arnold, and vice versa. If to express meaning is the main thing, then the coarse and direct method of the "Caprichos" has peculiar merits. Its flashing of crude contrasts is sinister. If it recks little of form—and this not always—it gives the keenest impression of character and motion. Those artists who deal in the dynamic expression of character can find no more accomplished model. Delacroix and Daumier knew what they were about when they went to school with the albums upon which vehement caricaturists have been nurtured ever since. It was no merely foolish or depraved taste that carried the half-Gothic semi-obscenities of the "Caprichos" across Europe at the very moment when Louis David was clamping down upon the art of painting the rigid formulæ of pseudo-classicism. Goya's caricatures are hacked out, spat out, with hate and scorn and licking of chops. Whoever cannot stand this kind of art may as well once for all be warned away. Others will find value, and even a manner of instruction, in an uprush of temperament so blatantly self-sufficing, and as the course of events proved so wholly prophetic.

Warnings against too much built-in furniture are very properly included by Abbot McClure in his little book, "Making Built-In Furniture" (McBride; 50 cents net). This book is one of a series of handbooks for home-makers. Its influence will be salutary, especially since the author advises against regarding any of his plans as a "cheap, temporary makeshift to be hastily nailed together in a haphazard way by a handy man around the house."

Finance

PRECEDENT.

Perhaps the most frequent comment made nowadays by business men and bankers on the financial situation and their policy regarding it, is the remark that the situation is one in which we have no precedent to guide us. It needs a bit of reflection to understand just what and how much that means. A successful banker or business man acts on the basis of experience and precedent. He may do so unconsciously; in that case, people call it "business instinct." But he also does it consciously and deliberately. The above description of the present state of things could certainly be applied to no situation which has arisen during the past half-century.

It probably did apply, in both directions, to the outbreak of our own Civil War; for that event created a situation wholly unprecedented in every respect for this country and impossible to judge or measure by rebellions or civil conflicts in other countries. Therefore, it was quite natural that the Northern business community of 1861 should for some considerable time have been paralyzed with uncertainty. Treasury and markets and banks and merchants simply seemed to be standing still and groping—a comparison which could not unfairly be applied to the attitude of bankers and business men, at any rate, since the outbreak of this present war. The one central fact which the business community grasped in 1861 was exactly the kind of fact which it grasped last month. It was evident then, with the South in arms, that cotton was one of the most valuable of all commodities to possess, and the same fact was recognized last month with wheat. Only, the commodity of 1861 was favored because foreign markets could not get it; that of 1914, because they had to have it.

But when such obvious deductions as these were disposed of, the real difficulties in the way of applying precedent to the extraordinary political, military, and economic situation began. One principle, which at first seemed to have wide application in the light of precedent, was this—that impairment or failure of the export business of one country gives immediate opportunity for another exporting state. It was belief in this result which created something like a feeling of cheerfulness when the war began, and our people grew familiar with rather hasty predictions of this country's immediate "capture" of the export markets of South America and Asia, from which Germany was now shut off.

In case of a harvest failure in an agricultural exporting state which has hitherto competed with this country, the principle evidently operates. It doubtless will operate largely this time in the matter of manufactured goods, if time enough is allowed for the necessarily slow machinery to get in operation. But the precedent has thus far at least missed fire rather badly, through the opposing influence of the financial damage

caused by the war even to neutral importing states, and through the wholly unprecedented complications into which the market for international exchange was thrown, as a direct result of the European war.

Another matter of precedent, seemingly bearing on the extraordinary Stock Exchange situation, is the principle that prices and values, in a panic week, reach low level for the period. Even if the subsequent course of events in business and finance brings about a series of catastrophes, experience teaches that the low ebb of depression on the markets will have occurred on the day of panic, when the financial situation seemed desperate and no measures of relief were in sight. Application of such measures has always in the past caused a violent recovery in values, because absolute financial helplessness had been reflected, and the worst that could possibly happen had been "discounted" in the decline of panic.

Now July 30 was a panic day. July 31, if the Stock Exchanges had stayed open, might have been worse. But the relief measures were at once applied, and on a scale never before dreamed of, on every market of the world; therefore ordinary precedent would suggest that a very vigorous recovery should have ensued. With the Exchanges closed, we do not know whether that precedent would have prevailed or not. But the elements in the situation which in the eyes of the average man impair the analogy are, first, that never before have so many great markets been simultaneously struck with desperate panic; secondly, that never before have all great markets been cut off from communication with other markets owing them huge amounts of capital, and, finally, that one of the most effective expedients of relief was the moratorium, which may only have postponed the forced liquidation.

There are other cases of precedent which only partly fit. The unbroken rule, that a bumper grain harvest in face of a European shortage means great prosperity at home, is one. But no instance of the sort has ever occurred when another great crop, for which a large production was insured, seemed to have lost its export market, as cotton seems for the present to have done, in consequence of the very war which has raised wheat exports to such heights. Another familiar principle, that slackening trade means accumulation of idle capital and easy money, is offset by the obvious fact that certain great foreign nations have all but ceased to accumulate capital, and are heaping up prodigious war debts.

All of these problems will, in due course, reach solution. We shall find undoubtedly that in most of them old precedent has still applied, despite the seeming presence of absolutely destructive influence. We have not yet been cut off from the natural and habitual working of economic forces, any more than we were when Wall Street pretended to have discarded them, in April, 1901. But since the phenomena of the period have been so largely new, we shall probably also make some new and important economic precedents.

An Introduction to the Study of Language

By LEONARD BLOOMFIELD, Assistant Professor of Comparative Philology and German in the University of Illinois. 331 pp. 12mo. $1.75.

This book is intended to do for the student what Whitney's works did so admirably years ago; that is, to give in simple language a general summary of what is known about language. The great progress that has been made in linguistic science in the last half century is the excuse for the present book.

Teachers of foreign languages will be particularly interested in the chapter on the *teaching of languages*, in which methods of elementary teaching are discussed, with special reference to the claims of the so-called "direct" method.

Henry Holt and Co. 34 W. 33d St. New York

How to Live Quietly

A New Book

By ANNIE PAYSON CALL

Of even greater help to thoughtful people than her well-known "Power Through Repose."

San Francisco, Cal., Golden Gate News Co.
Savannah, Ga., J. Gardner.
Springfield, Mass., Hotel Kimball Newsstand.
Toronto, Canada, Prince George Hotel Newsstand
Washington, D. C., Newsstands at National, Willard and Shoreham Hotels.
Winnipeg, Canada, F. R. Morris.

HINDUISM IN EUROPE AND AMERICA

BY ELIZABETH A. REED, M.A.

Author of "Hindu Literature," "Primitive Buddhism," etc.

12mo. $1.25

The author has been prompted to write this book because of the active proselyting by Asiatics that is going on in Europe and America. Many converts are being made among Christian nations because of roseate misrepresentations, and not a few of the victims come too late to a realizing sense of the hideous beliefs to which they have pledged their allegiance. The author, for years a close student of the East, presents a repellent picture of the Hindu gods and their worship.

LIFE AND LAW

BY MAUDE GLASGOW, M.D.

12mo. $1.25

The author traces the natural history of sex from the lower animal forms through the more complex organisms to man.

New York G. P. Putnam's Sons London

Some Noteworthy Books

From Page's List

Authoritative Volumes on Countries Involved in the European War

JAPAN

THE SPELL OF JAPAN

By ISABEL ANDERSON
(Mrs. Larz Anderson)

"Mrs. Anderson's book cannot fail to serve as a new and important tie of friendship between the United States and Japan. It could not have breathed a more conciliatory and friendly spirit, and its simple and engaging style cannot fail to win golden opinions for its talented author."—Nathan Haskell Dole.

ENGLAND

THE SPELL OF ENGLAND

By JULIA DE W. ADDISON

"The author has the faculty for crisp and animated description, and her story of travel is always entertaining, for she sees things with a tolerant vision, and is quick to discern the humor of a situation. The book merits hearty approval."—*Brooklyn Daily Eagle.*

FRANCE

THE SPELL OF FRANCE

By CAROLINE ATWATER MASON

"Both in style and substance THE SPELL OF FRANCE lives up to its title. It confirms anew Mrs. Mason's rare power of conveying the charm of a storied land undiminished to her readers. The country of magnificent chateaux and famous men is here portrayed vividly by a master pen."—*Chicago Herald.*

Each published in the popular SPELL SERIES, boxed, *net* $2.50; *carriage paid*, $2.70

RUSSIA

THE RUSSIAN EMPIRE OF TO-DAY AND YESTERDAY

By NEVIN O. WINTER

"Mr. Winter has travelled everywhere in Russia and has read about everything that has been written about the people and gives in this book the cream of the twentieth century about Russia. The book will make a valuable addition to any library and will be an authority on Russia for many years."—*Boston Herald.*

Illustrated, net, $3.00; *carriage paid*, $3.20.

BELGIUM

BELGIUM: ITS CITIES

Including an account of the recently razed city of Louvain.

By GRANT ALLEN

"The history, the legends, the architecture and the art of this old-world province are faithfully narrated and described. Mr. Allen has done some of his best work in this volume." — *Louisville Courier-Journal.*

Illustrated, net $1.75; *carriage paid*, $1.90.

BULGARIA

BULGARIA AND HER PEOPLE

Including an account of Bulgaria's relations with Servia and Montenegro.

By PROF. WILL S. MONROE

Author of "Bohemia and the Cechs."

"Almost the only man of British stock, Prof. W. S. Monroe, an American, was able to penetrate the cordon and see with his own eyes the state of things. . . . Lieut. Miles and Prof. Monroe succeeded in penetrating into the theatre of the recent Balkan War and gained their impressions upon the spot."—*London Quarterly Review.*

Boxed, net, $3.00; *carriage paid*, $3.20.

NEW FICTION

SYLVIA'S EXPERIMENT

The Cheerful Book
Trade Mark.

By MARGARET R. PIPER

"If POLLYANNA stands for THE GLAD BOOK, then SYLVIA'S EXPERIMENT stands for THE CHEERFUL BOOK, for cheerfulness is a sister of gladness. SYLVIA'S EXPERIMENT should be read by all the exponents of POLLYANNA, THE GLAD BOOK."—*Mr. H. V. Meyer, manager Amer. Baptist Pub. Soc., Boston.*

Net $1.25; *carriage paid*, $1.40. *Second Printing*

ANNE OF THE BLOSSOM SHOP

A Sequel to "The Blossom Shop"

By ISLA MAY MULLINS

"Grown-ups as well as young folks will enjoy this new Blossom Shop story. Like its predecessor, ANNE OF THE BLOSSOM SHOP is a 'sunshine maker,' and refreshingly natural in every way."— *Boston Times.*

Illustrated, net, $1.00; *carriage paid*, $1.15.
Second Printing.

PLANTATION STORIES OF OLD LOUISIANA

By ANDREWS WILKINSON

"Grown-ups can read it with intense interest because running through the stories is a vein of light humor, which is most refreshing. It is an excellent contribution to Southern literature and worthy of a place in every home which has children to be entertained and instructed."—*From an editorial in the New Orleans Times-Picayune.* Superbly illustrated by Charles Livingston Bull.

Net, $2.00; *carriage paid*, $2.20. *3rd printing.*

THE ROSE OF ROSES

By Mrs. HENRY BACKUS

Author of "The Career of Dr. Weaver."

A romance which begins in a famous cellar in Bremen, Germany, on the ceiling of which is a marvellous painted rose—the symbol of silence—under whose spell the Man and the Girl enter upon an unusual bargain.

"Daringly original," says the *Boston Transcript.*

Net, $1.25; *carriage paid*, $1.40. *3rd printing.*

MISS MADELYN MACK DETECTIVE

By HUGH C. WEIR

In which are solved the mysteries of "The Purple Thumb," "The Man with Nine Lives," "The Missing Bridegroom," "Cinderella's Slipper," and "The Bullet from Nowhere." "Miss Madelyn is the very prince—or princess—of detectives! And her wonderful exploits are set forth in a volume of rare interest."—*Every Evening*, Wilmington, Del.

Net, $1.25; *carriage paid*, $1.40. *3rd printing.*

OF GENERAL INTEREST

ON OLD WORLD HIGHWAYS

By THOMAS D. MURPHY

Author of "British Highways and Byways From a Motor Car," etc.

A book of motor rambles in France and Germany and the record of a motor pilgrimage from Land's End to John O'Groats in Great Britain.

"The book has much of interest seldom noted in the literature of travel and will please alike the prospective tourist or the 'arm-chair' traveller."—*Philadelphia Press.*

Illustrated, boxed, net, $3.00; *carriage paid*, $3.20.

OLD PANAMA; and Castilla Del Oro

By C. L. G. ANDERSON

A narrative history of the discovery, conquest, and settlement by the Spaniards of Panama, Darien, Veragua, Santo Domingo, Santa Marta, Cartagena, Nicaragua and Peru. This sumptuous volume is of particular interest and importance now in connection with the recent opening of the Panama Canal.

With maps and many rare illustrations. Boxed, net, $3.50; *carriage paid*, $3.75.

NEW SCRIBNER PUBLICATIONS

In Dickens's London
By F. HOPKINSON SMITH

The dusty old haunts of the people of Dickens and of Dickens himself are described by this versatile author-artist with a humor and a human insight which he shares with the great Dickens himself. In addition to these descriptions there are more than twenty charcoal sketches of the various scenes described in the text. Mr. Smith is particularly fortunate in being able to portray in so appropriate a medium the atmosphere of soot-stained London.

$3.50 *net; postage extra.*

The Cruise of the "Janet Nichol" Among the South Sea Islands
THE DIARY OF MRS. R. L. STEVENSON

Here is new inspiration for the lover of Stevenson and his work in the diary of his wife written during their voyage in the South Seas in 1890. This material has never been given to the public before in any way and is so intimate and so sympathetic that it gives, as no other description of Stevenson can give, a beautiful picture of his temperament, his thought and his personality.

Illustrated. $1.75 *net; postage extra.*

Artist and Public, and Other Essays on Art Subjects
By KENYON COX

There is no one writing of art to-day with the vitality that fills every paragraph of Mr. Cox's work. Its freedom from what has become almost a conventional jargon in much art criticism, and the essential interest of every comment and suggestion account for an altogether exceptional success that his book on The Classic Spirit has had within the last few years and that will be repeated with this volume.

Illustrated. $1.50 *net; postage extra.*

The Amateur Garden
By GEORGE W. CABLE

Mr. Cable not only knows how to plan and make attractive small gardens, but he also has the faculty of telling about it in a way which is not only entertaining but highly effective in its practical suggestion. There is nothing of the elaborate, formal garden which must be cared for by a number of employes and built by a landscape expert. The gardens here described are only those which the owner himself can plan, make and care for.

$1.50 *net; postage extra.*

FICTION

PIERRE VINTON
The Adventures of a Superfluous Husband
By EDWARD C. VENABLE

Holds up in the white light of brilliant satire the ridiculous figure of unnecessary divorce, and through its vividly clever telling is an incontrovertible condemnation of one of the growing evils of our day.

$1.00 *net; postage extra.*

GIDEON'S BAND
A Tale of the Mississippi
By GEORGE W. CABLE

The New York Tribune: "Mr. Cable now proves that for one of the original masters of the financial picture of the Old South the material is still far from exhausted. His story is sure to interest you. The picture is of a beautiful mellowness."

Illustrated. $1.35 *net; postage extra.*

THE WOMAN IN THE ALCOVE
By JENNETTE LEE

"It is not the least of Mrs. Lee's achievement that she has presented a truth of which this modern day needs much to be reminded, in a way that we may all of us want to read. 'The Woman in the Alcove' is exquisite. It is significant. And, again, it has charm."—*New York Times.*

Illustrated. $1.00 *net; postage extra.*

NIGHT WATCHES
By W. W. JACOBS

A new volume of this famous humorist's most delightful stories of seamen, 'longshoremen, and the people of sea towns.

"His pen is of a robust and well-authenticated sort which has many prototypes. He is the most successful writer of humorous fiction who has come to light in recent years."—*Springfield Republican.*

Illustrated. $1.25 *net; postage extra.*

ONE CLEAR CALL
By FRANCES NIMMO GREENE

A story of the real struggles and real success of life to-day. The novel centres about the personality of a young physician who becomes involved in many difficult problems of love and honor, and presents a situation that is very tense but essentially human. The book is even more absorbing than Mrs. Greene's last novel.

Illustrated. $1.35 *net; postage extra.*

THE WALL BETWEEN
By RALPH D. PAINE

"Mr. Paine has made a substantial and attractive monument to the Marine Corps. . . . The story is written in Mr. Paine's customary virile style and it will be no less appreciated by all good Americans than by the marines, who are given a new glorification."—*Boston Transcript.*

Illustrated; $1.35 *net; postage extra.*

The British Empire and the United States
By WILLIAM ARCHIBALD DUNNING
With an Introduction by the Right Honorable Viscount Bryce and a Preface by Nicholas Murray Butler.

A time when nearly every nation of world importance, except the United States, is embroiled in the greatest war of history, is surely the psychological moment for the appearance of a book which gives the history of a century of peace between Great Britain and the United States. During the past hundred years there have been many temptations to dispute between these two nations which have three thousand miles of common frontier and the story of the settlements of these difficulties in the face of strong feeling, is a record of restraint which should stand high in the annals of civilization.

$2.00 *net; postage extra.*

Notes on Novelists with Some Other Notes
By HENRY JAMES

All of the essays in this volume, critical and commentative, have naturally the peculiarly high value inherent in anything by this writer because of his almost isolated position of eminence among men of letters to-day, and his minute powers of vision and expression, which enable him to see and reveal points of importance on art, literature, life invisible or inexpressible for any other writer.

$2.50 *net; postage extra.*

The Man Behind the Bars
By WINIFRED LOUISE TAYLOR

Miss Taylor has for many years devoted her life to the study of prisons and prisoners, and her book contains studies of intense human interest and deep and intelligent sympathy into the lives of convicts, the effects of prison life, the careers of men who have served their terms, and the prospects and sources of their reform.

12*mo.* $1.50 *net; postage extra.*

Una Mary
By UNA A. HUNT

Here is child idealism beautifully described in personal reminiscences. A sensitive and imaginative child creates in her fancy a second self embodying her dearest ideals. The two selves grow up together and eventually become one. The book is intensely interesting not only from a human point of view, but also from that of a scientific psychologist.

$1.25 *net; postage extra.*

THE ATTENTION OF OUR READERS

is called to the book publishers' advertising in this number. The leading American publishers have prepared with much care and at considerable expense to themselves descriptive lists of their new and forthcoming books.

We commend to our readers the advertising columns as being worthy of careful perusal, for they constitute a complete and valuable guide to American book production for the approaching season.

YALE UNIVERSITY PRESS

209 ELM STREET, NEW HAVEN, CONN. 225 FIFTH AVENUE, NEW YORK CITY

Has pleasure in announcing eleven important and valuable books among its early fall publications

MEMORIALS OF EMINENT YALE MEN

A Biographical Study of Student Life and University Influences during the Eighteenth and Nineteenth Centuries. By the REVEREND ANSON PHELPS STOKES, Secretary of Yale University.

Library edition. Royal 4to. Cloth binding. Gilt top. 2 volumes. Vol. I, 368 pages; Vol. II, 439 pages. Index. Boxed, per set, $10.00 net; delivered. Limited edition on English hand-made paper. With reproductions of rare early prints of Yale College. Boxed, per set, $25.00 net; delivered.

THE DEPARTMENT OF STATE OF THE UNITED STATES: ITS HISTORY and FUNCTIONS.

By GAILLARD HUNT, Ph.D., LL.D.

An illuminating book, done in the style of a man who is bent upon stating historic truth without himself making much comment. The work is unique, the first and only history of a department to be written by an expert. *8vo. Cloth binding. 448 pages. Price, $2.25 net, postpaid.*

WILD LIFE CONSERVATION IN THEORY AND PRACTICE

By WILLIAM T. HORNADAY, Sc.D., Director of the New York Zoological Park.

The author has already endeared himself to a large circle of readers by his descriptions of his camp life on the trail of wild animals and by his gift for expressing their case to the public. An interesting feature of the present volume is a chapter on private game preserves by Frederic C. Walcott. *12mo. Cloth binding. 230 pages. 14 illustrations. Price, $1.50 net, postpaid.*

SCIENCE AND RELIGION: THE RATIONAL AND THE SUPER-RATIONAL

By C. J. KEYSER, of Columbia University.

A fresh handling of interests that are at once universal and eternal. *12mo. Cloth binding. 75 pages. 75 cents, net, postpaid.*

THE CHALLENGE OF FACTS AND OTHER ESSAYS

By the late WILLIAM GRAHAM SUMNER, LL.D., Professor of Political and Social Science, Yale University. Edited with an Introduction by Albert Galloway Keller, Ph.D.

The title essay of this volume is one of Professor Sumner's most powerful and characteristic utterances, which is here published for the first time. Uniform with "War and Other Essays" and "Earth-Hunger and Other Essays." *8vo. Cloth binding. Gilt top. 350 pages. Price, $2.25 net, postpaid.*

CONCERNING JUSTICE

By LUCILIUS A. EMERY

These pages are full of thoughts rich with wide reading, common sense and the experience of a former Chief Justice of the Maine Supreme Court. *12mo. Cloth binding. 150 pages. Price, $1.35 net, postpaid.*

CICERO OF ARPINUM

By E. G. SIHLER, Ph.D., Professor of the Latin Language and Literature in New York University.

This important volume is designed to be a full and comprehensive biography of M. Tullius Cicero. It is the result of years of study, of patient research, and of ripe scholarship in a man who has achieved first rank as a classical historian both in this country and abroad. *8vo. Cloth binding. 487 pages. Bibliography. Index. Price, $2.50 net, postpaid.*

THE FALCONER OF GOD AND OTHER POEMS

By WILLIAM ROSE BENÉT

Mr. Benét's verse has found a cordial reception from readers of the best known magazines. The present collection contains several poems now published for the first time. They are markedly original and interesting. *12mo. Cloth binding. 122 pages. Price, $1.00 net. Limp leather binding, $1.50 net, postpaid.*

TRADE MORALS: THEIR ORIGIN, GROWTH, AND PROVINCE

By EDWARD D. PAGE.

The author is well fitted to speak with authority and interest upon this subject. Not only has he had the experience as a partner in a prominent business, but he has made a long and thorough study of business ethics. *Price, $1.50 net, postpaid.*

OUR MANY-SIDED NAVY

By ROBERT W. NEESER, Author of "A Landsman's Log."

Developing even a far less interesting theme, Mr. Neeser's vivacious style and genuine enthusiasm would make a readable book. But with all the unsung powers of our Navy as a theme, he need fear no inattention from either naval or civil readers. *8vo. Cloth binding. 220 pages. End papers in color. 40 illustrations. Price, $2.50 net, postpaid.*

[*In Preparation*]

THE EAST I KNOW

By PAUL CLAUDEL.

Translated into English by Teresa Frances and William Rose Benét.

Paul Claudel is a French poet forty-six years of age who is bound to make a profound impression upon American as he has done upon Continental readers. Already, Claudelian societies exist in Germany and France for the study of his poetry, like the Browning societies of America.

LA CONNAISSANCE DE L'EST is the first of M. Claudel's work to appear in English, and the action of the Yale University Press in producing it is expressly authorized by him. THE EAST I KNOW is a series of prose poems of life in the far East, showing the brilliant range of the poet's moods and the individuality of his expression. The translators have captured with complete success his exquisitely delicate feeling for words, expressing the color and soul of the East with poetic modulation yet unmistakable truth.

Complete catalogue will be sent on request

IMPORTANT NEW PUBLICATIONS

From the American Viewpoint

The War in Europe

By ALBERT BUSHNELL HART, Professor of the Science of Government, Harvard University.

The book is a frank discussion of the conditions existing at the present time, written from the American point of view, and outlines the causes that led up to the outbreak of hostilities, including a study of the efforts to stop the war, the questions of mobilization and of neutrality and the successive drawing in of Russia, Germany, France and Great Britain. *Cloth binding, $1.00 net.*

From the German Viewpoint

The War and America

By HUGO MÜNSTERBERG, Professor of Psychology, Harvard University.

An important volume on the present European War written from the viewpoint of one of the most eminent psychologists of the day. The volume aims to present the causes that led up to the outbreak of hostilities, and the probable ultimate effect of the war upon America. Every fair-minded person in America should read this book. *Cloth binding, $1.00 net.*

A true story of the Real Mexico

Insurgent Mexico

By JOHN REED.

This is the true story of the Mexico of today; showing the peon in war and in peace; intimately portraying the character of this little understood people and their leaders; describing many of the scenes along the march of Villa's victorious army, and offering to the reader the only up-to-date and accurate account of the Mexican situation available "The book bristles with anecdotes and little happenings all illustrative of Mexico."—*Pittsburgh Post.* *$1.50 net.*

Americans and the Britons

By FREDERIC C. DeSUMICHRAST

A timely book discussing the differences between the American and British social order; Education; Foreign Relations; Journalism in America and Britain, and many other subjects of interest to all English speaking people. *$1.75 net.*

Psychology—General and Applied

By HUGO MÜNSTERBERG, Professor of Psychology, Harvard University.

For the student and general reader, covering the whole field of applied psychology, with special reference to application in education, law, medicine, commerce, industry, art and social reform.

12mo. $1.75

Retail Selling and Store Management

By PAUL NEYSTROM.

A valuable work for the retail store manager, or salesperson, taking up in detail the problems of the retail store and the various activities with which salespeople are closely connected.

12mo. $1.50 net.

Albania

By WADHAM PEACOCK, formerly British Consul-General in Albania.

An informing, authentic volume on a little known country which is really the key to the whole European situation. All who would keep posted on current events will find this volume on the Balkan situation invaluable. *Illustrated. $2.50 net.*

Rural Credits

By HON. MYRON T. HERRICK, formerly Ambassador to France.

The author's exhaustive study of credit conditions among farmers is the basis of this work, which discusses rural credits from every angle.

12mo. $2.00 net.

Fundamentals of Plant Breeding

By JOHN M. COULTER, Head of the Department of Botany, University of Chicago.

A popular work written to show how new and desirable plants are developed. It gives the latest information on plant breeding, making it invaluable to farmers, florists, gardeners, teachers, and every one concerned in raising plants of any kind.

Illustrated. $1.50 net.

The Dawn of Christianity

By ALFRED W. MARTIN.

An account of the various forces that helped to advance Christianity from its narrow provincial environment to the place of one of the great religions of the world. *Cloth, $1.25 net.*

Important New Fiction

Anne Feversham

D. APPLETON AND COMPANY, PUBLISHERS, NEW YORK

The University of Chicago Press
NEW AND FORTHCOMING BOOKS

The University of Chicago Science Series

This new series enables the investigator to present the results of his special researches, not only to a wider public but to his scientific colleagues, in a form more attractive and accessible than is possible through scattered contributions in technical journals.

THE FOLLOWING VOLUMES ARE IN PRESS:

The Origin of the Earth. By THOMAS C. CHAMBERLIN, Head of the Department of Geology in the University of Chicago. *16mo, cloth;* $1.00, *postage extra.*

The Evolution of Sex in Plants. By JOHN MERLE COULTER, Head of the Department of Botany in the University of Chicago. *16mo, cloth;* $1.00, *postage extra.*

The Isolation and Measurement of the Electron. By ROBERT ANDREWS MILLIKAN, Professor of Physics in the University of Chicago. *16mo, cloth;* $1.00, *postage extra.*

The Theory of Collineation Groups. By HANS F. BLICHFELDT, Professor of Mathematics in Leland Stanford Junior University. *16mo, cloth;* $1.00, *postage extra.*

Other Important Books

The Evolution of Early Christianity. By SHIRLEY JACKSON CASE.
The beginnings of the Christian movement are here studied from a wholly new point of view. By examining the actual religious situation in which the Christians of the first century lived, the author is able to shed fresh light on many parts of the New Testament. 390 *pages, 12mo, cloth;* $2.25, *postage extra* (*weight* 1 *lb.* 11 *oz.*).

Water Reptiles of the Past and Present. By SAMUEL WENDELL WILLISTON.
A comprehensive volume of great scientific importance, by the author of *American Permian Vertebrates,* which has become a recognized authority in its field. The book discusses in sixteen chapters the classification and skeleton of reptiles, their age, the adaptation of land reptiles to life in the water, and the various orders. 256 *pages, royal 8vo, cloth;* $3.00, *postage extra.*

William James and Henri Bergson. By HORACE M. KALLEN.
A striking presentation of the relation between the philosophies of William James and Henri Bergson, by Dr. Kallen. The book is particularly significant as coming from a former student and intimate friend of Professor James.
264 *pages, 12mo, cloth;* $1.50, *postage extra.*

Problems of Boyhood. Studies in Ethics for Boys of High School Age. By FRANKLIN W. JOHNSON.
This book, prepared by the laboratory method, is the result of the wide and successful experience of the principal of the University of Chicago High School. His book is the first in the field to start with a recognition of the boy's point of view.
160 *pages, 12mo, cloth;* $1.00, *postage extra* (*weight* 1 *lb.* 1 *oz.*).

The Sunday-School Building and Its Equipment. By HERBERT F. EVANS.
With the modern reorganization of the curriculum of the Sunday school there has come an urgent demand for adequate housing of the school; and the author in this book answers the question as to how buildings should be constructed for Sunday-school use, and how old buildings may be remodeled at moderate expense. It is the most recent practical discussion of Sunday-school architecture.
16mo, cloth; 75 *cents, postage extra.*

Graded Social Service for the Sunday School. By WILLIAM N. HUTCHINS.
A highly suggestive discussion of the question as to what may be done in the Sunday school to convert its social teaching from theory into practice. As the outcome of a wide study of present activities the author presents a varied program of possibilities, from which teachers and workers may select according to the conditions in their own schools. *16mo, cloth;* 75 *cents, postage extra.*

The Weather and Climate of Chicago. (Publications of the Geographic Society of Chicago.) By HENRY J. COX and JOHN H. ARMINGTON, of the United States Weather Bureau.
The importance of this book is indicated by the fact that it is issued under the auspices of the Geographic Society of Chicago, and has been prepared by two of the best known weather experts in the country.
396 *pages, 8vo, cloth;* $3.00, *postage extra* (*weight* 3 *lbs.* 1 *oz.*).

Unpopular Government in the United States. By ALBERT M. KALES, Professor of Law in Northwestern University.
An especially timely book, presenting with great clearness and cogency some of the political needs of the country, particularly the necessity of the short ballot. The author discusses various expedients for restoring the American ideal of democracy. The book has already attracted wide attention and discussion. 270 *pages, 12mo, cloth;* $1.50, *postage extra* (*weight* 1 *lb.* 8 *oz.*).

BLANCHARD & WADE'S FOUNDATIONS OF CHEMISTRY

is a new book for High Schools and elementary work in college classes, which treats the few chemical principles forming the foundation of all chemical work in a simple but thorough manner. Explanations are made in language which the pupils will readily understand, and illustrations are drawn from their everyday experiences. Important applications of chemistry to the home life and to industrial processes are given much prominence.

The price of the book is $1.25. A specimen page circular will be sent to any address on request.

Published October 2nd

BOYS AND GIRLS OF GARDEN CITY

By JEAN DAWSON, Head of the Biological Department, Cleveland Normal School.

346 pages, illustrated, 75 cents.

This story tells the experiences of a group of children engaged in solving the problems of their own community life—developing efficiency, preventing disease, and ridding their city of mosquitoes, filth, and flies.

Dealing with children in action, the story vitalizes all the facts of hygiene, sanitation, and civic betterment, and for this reason is especially suitable for supplementary reading in the upper grammar grades, or for use by Boy Scouts and Camp Fire Girls.

The author, Dr. Jean Dawson, has a nation-wide reputation as the originator and director of the city of Cleveland's recent successful campaigns for the extermination of the house fly.

PORTLAND, MAINE

WAVES OF SAND AND SNOW

By Vaughan Cornish, Doctor of Science, Manchester University. Pp. 378, 8vo; cloth. Illustrated; 88 photographs and 30 diagrams, and two maps. Price, $2.50.

A book of experiment and observation of the behavior of gravel, sand, and dust before the wind. It is a strange thing that waves, progressive and transverse, should be produced by wind on sand and snow, for the action of wind upon other loose bodies is of an opposite kind. Dr. Cornish is an acknowledged authority on the subject of wave action, and he believes that the coördinated study of all kinds of waves might lead to important developments of the periodic law governing the direction of moving bodies. Some of the important chapters, well illustrated, are On the Formation of Deltas; Sand Dunes; Clouds; Sand Waves in Tidal Currents.

NEW FALL BOOKS

Europe from a Motor Car. By Russell Richardson. Maps and thirty-two artistic illustrations in sepia. 277 pages. Cloth. Boxed. $1.50 net.

An account of the wanderings of a forty-horse-power car over the superb roads of the Tyrol, the frightfully difficult mountain passes of the Stelvio and Petit Bernard, by the lovely Italian lakes and across the snow-covered Alps.

"Americans can get all the pleasures of foreign travel, with none of its discomforts in time of war, by perusing this very ably written and entertaining book."—*Bookseller, Newsdealer, and Stationer, N. Y.*

"The author, a keen observer, comments most entertainingly upon European conditions, and his personal experiences and conversations with the peasants of various countries add much gayety to the book."—*Public Ledger, Philadelphia.*

"Russell Richardson has done good travel service in the production of 'Europe from a Motor Car.' It is simply written but charming."—*Herald, Chicago.*

The Dons of the Old Pueblo. By Percival J. Cooncy. Frontispiece in color by James Reynolds. Two illustrations in black and white. Cloth, 8vo. 440 pages. $1.35 net.
To be published November 6th.

This is the only thing in fiction that covers one of the most interesting periods of American history—the conquest of California. A thrilling and well-sustained love story threads the pages and holds the attention until the book is closed.

"The author has finely depicted the old Spanish settlers, who, as years pass, are looming up as ancestors in the literature and traditions of the Pacific Coast."—*North American, Philadelphia.*

"This rattling romance has to do with the annexation of California. All the scenes are laid in and about Los Angeles and Pasadena, directly in the path of tourists who visit them by electric car or automobile."—*Columbus Journal, Ohio.*

Figures Famed in Fiction. By H. G Pillsbury. 8vo. Cloth. 409 pp. $1.25 net.

It has been Mr. Pillsbury's purpose to transform fifteen great novels into fifteen telling short stories.

"Fifteen selected stories from the world's best—a collection to be remembered."—*Portland Oregonian.*

"The characters are all well described—so well, in fact, that the reader gets nearly as good an idea of them as he would have done had he gone to the novel itself."—*The Nation, New York.*

"The usefulness of the book should lie in so interesting its readers in these personages that life will be intolerable until the novels themselves have been read from cover to cover."—*New York Independent.*

"Why waste time on Dickens, Blackmore, Hugo, Sienkiewicz, and others when you can get samples of the best of their wares, not in extract, mind you, but in the summaries of a man who reduces fifteen novels each to less than the average chapter? To the compiler's credit be it said that he has done his work well."—*San Francisco Chronicle.*

"The work is skilfully done."—*North American, Philadelphia.*

"A book that will be welcomed by many."—*Christian Observer, Louisville.*

The Promise of Life. By Howard Sutherland, Author of "Idylls of Greece," etc. 12mo. Paper boards. 50 cents net.

An expression of positive belief. It will make an appropriate gift from friend to friend upon any and all occasions.

For sale by all Booksellers.

NEW YORK, THURSDAY, OCTOBER 15, 1914.

Summary of the News

Rumors of impending mediation in the European struggle by this country cropped up last week and accounts of them probably inspired a statement in the semi-official London *Westminster Gazette* on Friday, reiterating the determination of England not to be content with a drawn war. That these various reports of the intention of the Administration again to offer its services as mediator in the conflict were rumor pure and simple needed no demonstration to any intelligent person. Nevertheless it is perhaps as well that explicit denial has been made of them by Acting Secretary of State Lansing, who, in a statement given out on Saturday, declared them to be wholly without foundation and warned the public against accepting similar reports in the future unless they should come from official sources.

The death on Saturday of King Charles, of Rumania, increases the uncertainty of the situation in that country. According to current report, which, in this instance, is likely to have at the bottom of it a residuum of truth, the dynastic Hohenzollern sympathies of the late King have inclined him in the war to favor the cause of Germany, while public opinion in Rumania has been almost unanimously on the Russian side. Rumania, like Italy, looks to the break-up of Austria-Hungary for the redemption of its kin from a foreign rule and the Russian offer of Bukowina and Transylvania, as the price of joining the Allies and the reward of ultimate victory, is tempting. The Crown Prince Ferdinand, who succeeds to the throne, does not, it is generally assumed, share the late King's Hohenzollern prejudices, and the fact that his wife, an able woman, is an English princess, a daughter of the late Duke of Edinburgh, may be supposed to incline his sympathies further to the side of the Allies. That Rumania will forthwith embrace the earliest opportunity to enter the war, as some of the dispatches from Europe imply, is not, however, to be credited for a moment. The tradition of Rumanian statesmanship is eminently cautious—it has been called opportunist—and the project of adding another blaze in the Balkans to the general European conflagration is not one that will be rashly undertaken.

The attitude of Rumania, as we have noted before, is likely to be largely determined by that of Italy. In that country there appears to have occurred something not unlike a ministerial crisis, if we may believe the somewhat meagre reports of resignations and threatened resignations that have reached us. The Marquis di San Giuliano, despite a critical condition of health (as we write his death is said to be expected momentarily), has patriotically stuck to his post throughout the European crisis,and has been the most important influence in the Cabinet on the side of peace; but the resignation of the Minister of War, Gen. Grandi, following that of his Under-Secretary, was announced on October 9, and is stated to have been due to press criticism of the administration of his Department, particularly in the matter of supplies and equipment. He has been succeeded by Gen. Zupelli, a native of an Austrian province. Following on the announcement of this appointment comes the news that the veteran troops which have been in Tripoli and Cyrenaica since the war with Turkey, are to be brought home. As we write currency is given also to rumors of other impending resignations, and the Premier, Signor Salandra, has for some time been the target of severe criticism in a certain section of the press on account of the inactive policy of the Government. The general situation in Italy, however, need not be regarded as having undergone any definite change. If there is a "war" party there is also undoubtedly a very strong "peace" party in the country, and there is no good reason to suppose that Italy intends, for the present at any rate, to swerve from her attitude of neutrality.

According to statements made by President Wilson to callers last week, satisfactory assurances have been received from Japan regarding the recent attacks on German possessions in the Pacific. The seizure by the Japanese Pacific squadron of the island of Yap is explained as only part of the development of the general plan to seize all the German naval stations in the Pacific. This is regarded as necessary to terminate the activities of the German cruisers which have inflicted serious injury upon British commerce.

The War Revenue bill, as perfected by the Democratic caucus of the Senate, was favorably reported by the Finance Committee on Thursday of last week, and debate on it was begun in the Senate the following day. It is expected that the bill will be passed by the end of the week, and, with the Alaskan bill held up, it is probable that this will be the last business transacted by Congress before adjournment.

Final action was taken by Congress on the Clayton Anti-Trust bill on October 8, when the conference report on the measure was adopted in the House by a vote of 244 to 54. The passage of this measure, which had been before Congress since April 14, marks the completion of the Administration's anti-Trust legislative programme for this session.

According to dispatches from Washington on Tuesday, Governor Ammons, of Colorado, is engaged on plans for the reorganization of the State militia, in order that the Federal troops at present on duty in the region affected by the coal strike may be relieved. Up to the present the efforts made by the President to induce the mine operators to accept the settlement already adopted by the miners have been fruitless.

It is with a particular sense of pleasure that we take note of the celebration of the one hundred and fiftieth anniversary of the founding of Brown University. The observances in connection with the anniversary of this honorable and useful institution began on Sunday and conclude to-day (Thursday), when the University awards honorary degrees to several of its guests. Among those on the programme of speakers are Associate Justice Charles E. Hughes, of the United States Supreme Court, and Vice-Chancellor William Peterson, of McGill University.

As we have noted previously in other columns, no aspect of the war has been more inspiring to those who, like ourselves, welcomed the generous policy adopted by the Liberal Government in England towards the South African colonies than the loyalty of the Union to the Empire in the present crisis expressed through the mouth of its Premier, General Botha. It is with the more regret, therefore, that we have to record the official announcement made at Capetown on Tuesday that a command under Colonel Maritz had rebelled in the northwest of the Cape provinces. Martial law has been proclaimed throughout the Union, and, though few details are available as we write, it is probably safe to assume that the disaffection, which has been fostered from German sources, will not be widespread.

The situation in Mexico remains as confused and perplexing as ever. A fair idea of the difficulty of venturing any statement as to the real status of affairs is given by dispatches published in Tuesday's papers. In the news from Washington on that day we learned that hopeful reports had been received concerning the conference in progress at Aguas Calientes, which met on Saturday, and particular emphasis was laid on the fact that not only were General Carranza and General Villa represented, but that General Zapata had also sent three delegates. On the same page dispatches from Mexico City informed us that the city had been thrown into a panic through attacks on the suburbs by adherents of Emiliano Zapata. The confusing thing is that these two dispatches are not necessarily in any way conflicting. Some reassurance, however, is afforded by the news that after creating a disturbance the Zapatistas agreed to suspend further fighting until after the termination of the conference.

Meanwhile the Administration has taken occasion to restate its attitude of neutrality, and to make it clear that no recognition will be accorded to any Government until more stable conditions shall have been established. The United States Government has also demanded from General Carranza an answer to the questions put to him some time ago, when the matter of withdrawing the troops from Vera Cruz was first considered, relative to the taxes collected at that port by the United States, and to the protection of foreigners and refugees. General Villa added to the perplexities of the situation at the end of last week by issuing his own particular "white paper," in which he asserted the existence of a mysterious secret agreement between himself and Carranza which, had it been observed, would have had the effect of depriving the latter of everything except the barren honor of "First Chief of the Constitutionalists."

The deaths of the week include: Richard Lockhart Hand, Brig. Gen. Edgar R. Kellogg, October 7; Prof. Richard Meyer, October 8; Col. Jeffrey Hale Burland, October 9; King Charles of Rumania, Cardinal Domenico Ferrata, October 10; Arthur Weld, October 11; Oliver F. Lyford, October 12.

The Week

The official Belgian statement given out in Washington last week, dealing with the violation of Belgium's neutrality, is one of the most illuminating documents issued since the war began. Admirable in tone and substance, it cannot fail to convince any one whose mind is open to reason. We wish it might be placed in the hands of every German, but as it appears in the *Staats-Zeitung* only in abbreviated form, as "Belgium's Pleading," it will hardly have much circulation even among German-Americans. For one thing, it effectually disposes of the German pretension, officially uttered by the Chancellor, that France was ready to invade Belgium; and shows that, had the Belgians not taken up arms to protect themselves, they would have been false to their own pledges of neutrality. As for the German assertions that automobiles carrying French officers had entered Belgian territory; that French officers had been training Belgian troops and helped to man their forts, etc., not one scrap of real evidence has ever been submitted by the Germans. The delay in getting any French troops into Belgium is itself proof of the absurdity of the charge that they were massed on the border ready to cross the Belgian line. It is not surprising, therefore, that even so ardent a partisan as the *Frankfurter Zeitung* has recently suggested, very mildly and diplomatically, that it would be well for the German Government to bring out its proofs of this alleged conspiracy between French and Belgians.

When the Duke of Wellington was once told that he would live longer in popular memory for the beautiful style of his dispatches than for his victories in battle, he replied: "Yes, I didn't think Gurwood had it in him." Now another illusion is shattered in the announcement that the author of Sir John French's remarkable dispatches from the seat of war is not Sir John himself, but a Col. Swinton, probably Col. Edward D. Swinton. This the War Office itself admits. Thus does history repeat itself. Lord Roberts's South African dispatches were also not his own, but the work of a gifted subordinate, Lieut.-Col. H. V. Cowen, of the Royal Horse Artillery, whose merits were not so obvious as to have prevented his remaining for seventeen years in the grade of major before Lord Roberts chose him as an aide. So remarkable and so thrilling was the first dispatch from Sir John French telling of the wonderful English retreat from Mons that it was freely hailed as an imperishable contribution to the history of war and to literature itself, and it was thought that the British commander had added himself to those other great generals like Grant, Sherman, and Sheridan, who have made their mark as writers as well as soldiers. But the honors this time are plainly not Sir John's, but Col. Swinton's.

We know little of the personality of the new King of Rumania to serve as a basis for speculation with regard to his influence on the country's position in the great war. We do know that the new King is in his fiftieth year, and that no youthful impulses will enter into the shaping of his policy. In other columns the moral effect of the fall of Antwerp is discussed. Among the most important moral effects of a victory is the influence it exerts upon nations wavering on the narrow edge of neutrality. The reasons that might impel Rumania to cast in her fortunes with the Allies are what they were at the beginning of the war: her aspirations for Austrian Transylvania, with a large Rumanian population; her connection with Servia, by which Rumania, during the second Balkan war, won a large slice of Bulgarian territory without firing a shot; the fear that, in case of an Allied victory without Rumania's participation, it will be Russia who will come into the inheritance of the Rumanic territory under Hapsburg rule. On the other hand, the penalty of intervention for the Allies followed by an Austro-German triumph is bound to be so drastic that the neutral nations, and Rumania among them, will probably continue to watch and wait until the tide sets definitely in one direction.

The War Tax bill has been altered in many points by the Senate Democrats, and of the changes two stand out as so obviously commendable that they call for special notice. One is the putting of an added tax on whiskey, for the omission of which subject of taxation from the House measure it is difficult to find a creditable explanation. The emergency tax on spirits is expected to yield $5,000,000, and there is certainly no good reason why whiskey should not contribute to the required revenue as well as beer. The other improvement we have in mind is the striking out of the tax on brokers. This was a proposal about as ill-judged and inequitable as can be imagined, the class thus singled out being one that suffers more distinctly and more seriously from the break-up of business by the war than almost any that can be named. When the bill leaves the Senate, it will probably be found that it has been made much better than it was when it left the House—not to speak of the queer errors of judgment of which the House committee was guilty in its first attempts.

The New York *World* asks us why money rates should be ruling so high in this country, when, as the London *Times* reports, three months' bills in Lombard Street are going at 3 per cent. and "the abundance of credit has been very marked." The London *Economist* answers this question in its statement, regarding these same London rates, that "the easy conditions are purely artificial." In this it refers to the fact that the load of foreign bills in the hands of London banks, non-negotiable because of the war embargo, have by a very unusual recourse been guaranteed by the British Exchequer and discounted at the Bank of England. This obviously left the joint-stock banks free to utilize their resources in the ordinary discount market, with the assurance that no claim would be made on them, for a considerable period, to meet the heavy liabilities incurred through these foreign bills. This, moreover, is only one phase of the London moratorium. American banks are meeting a similarly difficult situation without a moratorium, without a Government guarantee of their non-negotiable loans, and with the further handicap of providing for a heavy maturing indebtedness to foreign markets, which does not exist in the case of England.

A commendable and unusual vigilance is shown by the action of the Post Office Department in its sharp scrutiny of the use of the Congressional frank by three Maine Congressmen—Representatives Hinds, Peters, and Guernsey. An important part of the campaign by which they have just obtained reëlection was the distribution of a pamphlet containing excerpts from the *Congressional Record*, in such numbers that the bill for ordinary postage would reach $1,000. Its "frankability" is doubted on three grounds: the Postmaster-General is unable to ascertain that all its contents are correct reproductions from the *Record*, the heading of one speech is stated to be misleading, and there has been interpolated before another an explanatory note of partisan character. It is to be hoped that the case will be pushed, if only to demonstrate the Department's determination to hew to the line in enforcing the franking law. If it can be proved, it will be remarkable chiefly as convicting the Representatives of a piece of stupid management.

Secretary Garrison's allotment of the $20,000,000 appropriated by Congress for rivers and harbors improvement will disappoint many localities—among them New York, which must still tolerate the Coenties Reef in the East River. But this was inevitable, and the allotment provides for the wisest expenditure upon waterways development the country has yet seen. The Mississippi River receives $5,000,000, as against $8,500,000 in 1913, and about the same sum ($6,650,000 for work below Cairo) in 1912; an amount that will permit the maintenance of existing projects. The Ohio River receives $1,750,000, as against $1,800,000 in current appropriations, with the authorization of further contracts to cost $3,200,000, in 1913. The Columbia, where extensive jetties are being undertaken, has the same sum which it was allowed last year—$1,000,000; while the Hudson, with $750,000, shows a reduction of $250,000. On the whole, the larger river and coastal projects have not suffered grievously. When we consider that the 1913 bill carried over $41,000,000, and the 1912 bill about $31,000,000, it is evident that the retrenchment has been mainly in the little disconnected undertakings against which President Taft protested so eloquently in 1910. Such necessary projects as the deepening of the Delaware between Philadelphia and the Atlantic, now half-accomplished, will not be interrupted in the least. In years to come, when more liberal sums will be available, the example of 1914 in the avoidance of works where no real improvement is possible, or where no connection with a general waterways scheme can be expected, should be remembered with profit.

Though 652 cases await the Supreme Court during the regular term which began on Monday, its record of efficiency last year was so striking that the number of decisions of national importance will be small. The chief of these will probably be in the Danbury hatters' case, involving the validity of a $252,000 verdict against the Hatters' Union under the Sherman Anti-Trust law; and the St. Louis terminal suit under the same measure. General attention should also be drawn to an Oklahoma test of the "grandfather clause" legislation, and to the Henry case, involving the right of Congress to compel the testimony of citizens before its committees. But of cases coming close home to the interests of individual States, there is a much larger number. The Oregon Minimum Wage law case has been fought up to the highest tribunal. Ohio will ask the Court to dismiss an attack upon the validity of her coal-screen law—a conservation measure, checking the waste of small coal, which has resulted in the closure of mines by certain operators; while the Ohio Workmen's Compensation Act will also be passed upon. Among railway cases, the attempt has been renewed to annul the West Virginia Two-Cent Fare law, asserted to be confiscatory, and the Florida gross-earnings tax upon sleeping cars. Western States, finally, are concerned in an attack upon the recent withdrawals of oil lands.

Such laws as the Oklahoma "grandfather-clause" law are not numerous, having existed only in North Carolina, Louisiana, Georgia, and Oklahoma; while that in Louisiana expired by self-limitation in 1899, and that in North Carolina in 1908. The clause in the State of Georgia will similarly expire on the first of January, 1915, and in Oklahoma alone has it been made permanent. There is therefore special reason, in spite of the small negro population, for contesting the indefensible distinction it makes. Like the others, it would permit literate and property-holding negroes and whites to vote alike, but while it excluded illiterate or propertyless negroes—and only the justice of election officers would prevent the classification of almost all colored applicants under these heads—it would permit the registration of any illiterate or propertyless white whose father or grandfather had been a voter in 1866. Such laws are deeply objectionable in themselves, and in the lesson they give the population in racial discrimination in other matters; while they add new difficulties to the whole task of giving the negro an adequate civic education.

Travellers, shippers, and investors in railway securities should alike take keen interest in this year's convention of the National Association of Railway Commissioners. It will be held at Washington next month. Messrs. Harlan and Prouty will speak for the Interstate Commerce Commission, and representatives of all of the State commissions will be present. The chief discussion is to be of the need of harmonizing Federal and State rules and regulations affecting railways. In his annual report President Ripley, of the Atchison, warned his stockholders that "their interests are more endangered by the various governmental regulations than from any other source." That is the common attitude of railway officials. They have no objection to proper supervision. In fact, the benefits thus obtained by the railways are frankly recognized by all fair-minded officials. But on all sides the feeling is growing that no business can long endure being pulled and hauled in forty-nine different directions. That the various Commissioners are awake to the need of the hour is made evident by the list of subjects to be discussed at the Washington meetings.

Taking the country as a whole, what are the chances of the Progressives in the Senatorial contests this autumn? In twenty-one of the thirty-two States holding elections, they have, according to the latest tabulation, candidates; while seven of the remaining eleven are Southern States in which not even the Republicans have thought it worth while to name men. The outlook cannot be called bright in any quarter. Although the Pennsylvania Progressives are maintaining that a vote for Palmer is a vote for Penrose, and those of Illinois that a vote for Sherman is a vote for Sullivan, the independents in these States will be well advised to vote for the old-party opponents of the two bosses. They inevitably have the best chance of winning. In California, Francis J. Heney has a strong following, but he can scarcely do more than so split the old Republican vote as to elect the Democratic nominee, ex-Mayor Phelan, of San Francisco. In a dozen other States, among them Colorado, Iowa, Indiana, and Connecticut, the Progressive candidacy is looked upon merely as strengthening Democratic hopes of success, or as absolutely guaranteeing it. In Utah, the Democratic-Progressive fusion candidate, J. H. Moyle, is a Democrat. The Progressives are undoubtedly proud of the fact that in so many States they have been able to bring their party into the field; but it is altogether improbable that the present party alignment —52 Democrats to 43 Republicans—will be altered by the choice of Progressive Senators.

The buy-a-bale-of-cotton campaign, which has now assumed the proportions of a movement, ought to be a most fruitful subject for directors of psychological laboratories. Why do people buy a bale of cotton, and, when they cannot afford a bale, take a pound? Does the phenomenon prove the truth of the canon of advertisement-psychology that you should put your suggestions into the form of imperatives? Perhaps; but one impelling element in the crusade is probably the patriotic appeal that has been cleverly woven into it from the first. Who would refuse a little money for the sake of his country, especially when he may give it of his own free will instead of having it dragged out of

him by a hateful tax? But there is more than this in the affair. In the back of people's minds is there not a shrewd notion that they are lifting themselves by their bootstraps out of the pit into which they have fallen through no fault of their own, and thus outmanœuvring the foolish and wicked Old World that is upsetting our trade by its mediæval antics? The matter is put in especially irresistible form by an enterprising firm that promises to buy a pound of cotton for every pair of shoes it sells. This alone ought to save the South. To offer us the opportunity of being indirectly philanthropic by ministering to our own necessities is like placing candy within reach of a child.

It is hard to smile at Mexico just now, and yet some of her most earnest sympathizers must have been unable to restrain something like a smile when they read the report that Villa was "mobilizing," and again when the same doughty chieftain condescended to imitate the European chancelleries by issuing a White Paper. For the most part, the distressed country on our Southern border carries on her war in her own way. Carranza's latest stroke is a new tribute to the sway of the democratic ideal in this hemisphere. By careful enumeration it is ascertained that his followers number 104,000, while those of Villa number only 24,000. This emphatic endorsement fortifies him in his purpose of going ahead with his provisional government. If the figures had revealed that he was in the minority, we are bound to believe that he would have announced that the returns were against him, and have sent the usual telegram of congratulations to his successful opponent—or would he have set up the claim that bribery had been indulged in to an extent that warranted him in continuing the contest?

People with due regard for the beauties of legal procedure will have scant sympathy with the petition to the Supreme Court asking it to expedite the Thaw case. It makes the surprising assertion that the delay has been a "scandal"; that it is more than a year since Thaw escaped from Matteawan and fled to New Hampshire, yet the courts have been unable to decide what his status is. But this is very superficial and *aliunde*, as the lawyers say. Such an intricate litigation, growing out of the conflict of laws and the divergent decisions of judges, ought to be thought of as an end in itself. The fate of the insane criminal himself, and the dignity of the State of New York, are merely trifling considerations. The great thing is to have this new Jarndyce vs. Jarndyce threshed out to the very last quibble. In no other way can the majesty of the law be vindicated; for it is sure to be positively settled in a few years whether Thaw can be extradited from New Hampshire. Meanwhile, it is for laymen to admire in silence the wonderful way in which abstruse legal principles and refinements of interpretation can be fallen back upon, like intrenchment after intrenchment, in defence of the humblest and poorest.

The literature of opposition to scientific medicine abounds in intellectual perversity, but it does not often offer a better sample of this than is given in an article in the current issue of the *Forum*. The writer looks forward to the time when the germ theory of disease, which "is in great vogue at present," will be "generally regarded as superstitious." Several of the arguments presented for the purpose of discrediting that theory would form excellent examples of bad reasoning for an elementary class in logic. Thus the writer knows "a druggist's family in which all of the six children had adenoids. Adenoids are not regarded as contagious, so far as I have ever heard. So contagion cannot be made the scapegoat in this instance. The children had adenoids because the mode of living was the same for all." Why not, then, suppose that the same thing is true "when several members of a family contract tuberculosis, diphtheria, or measles"? But here is the biggest gun which this profound reasoner trains against the poor deluded doctors:

> But if one contracts tuberculosis from the germs of another case, and he in turn from some one else, how did the first case that ever happened originate? . . . That troublesome first case is the missing link in the chain of the theory; but it happened so long ago that it has been lost sight of, and doctors are seldom embarrassed by being asked to account for it.

For this magnificent disproof of the results so painfully accumulated by the misdirected, though life-long, labors of a host of scientific workers from Pasteur down, the writer modestly disclaims any credit, the poser being attributed to "the leaders among those who reject the germ theory." This sort of stuff is too childish to be interesting, even as an absurdity; but a question of real interest is that of the state of mind of the editor who gives space to articles of this nature.

Zealous chess-players must support with all their hearts the claims of a new Shakespeare portrait, for it shows the dramatist—who does not mention the grave game in his works—intent over a board with Ben Jonson. The remainder of the world will be skeptical of the discovery, though we are assured that Paul Wislicenus, Ph.D., of Darmstadt, a distinguished Shakespearean scholar, pronounces it genuine, while Sidney Lee "was immediately struck with the great resemblance of the canvas to the Chandos portrait." The Mander portrait, now owned in Brookiyn, was acquired by one Col. Miller in 1878, who later lost all the documents telling its history in a fire, and carried his own information to the grave. A label on the back, stating it to be the work of Isaac Oliver, 1603, is contradicted by the German authority, who in thirty-two photographs has made out the signature of K. van Mander (1548-1606), a Fleming. It is true that none of the continental biographies of Van Mander mentions such a work; but a writer in *Arts and Decoration* explains this away on the ground that it was painted in England. In favor of its genuineness are the possibility that it is symbolic, representing a battle of the wits between the rival poets, and its defects, some bad details being exactly in Van Mander's worst manner. Besides, at the time it was painted Shakespeare was thirty-eight, Jonson twenty-nine; "yet in this canvas Jonson seems the older man."

Indiana's attempt to keep literary Iowa in the background by having a State-wide celebration of the birthday of her special poet, James Whitcomb Riley, at the time when Iowa is having her first "homecoming" of native authors, will be regarded as an admission of the seriousness of the new menace to the literary preëminence of the Hoosier State. Of the East, Indiana has long been without fear. Indeed, upon Boston itself she looks in a patronizing way that approaches a gentle scorn. The older part of the country, in her estimation, has shot its bolt. And while Irving and Hawthorne and Emerson are names of which the East may be proud, and even Indiana need not be ashamed, still one living author is better than two dead ones. It is just here that Iowa is looming up so dangerously. As the Des Moines *Register and Leader* reminds its readers, the lineage of such bright stars as Hough, Ferber, Hughes, Butler, Garland, Norton, and a dozen others equally notable is to be traced, not to Indiana, but to Iowa. Every one of these writers is known to some publishing house, not of ten or twenty years ago, but of to-day, this autumn of 1914.

THE FALL OF ANTWERP.

Despite the efforts in dispatches from Paris to minimize the fall of Antwerp, there can be no doubt that the Germans' elation over it is justifiable. It is not only that they have smashed to pieces in ten days what was considered to be an impregnable stronghold, and thereby consummated a feat of arms which is only partially paralleled even in the fall of Liège and Namur; they have achieved a success which cannot but have a profound moral effect upon their enemies. A week ago the value of Antwerp was admitted in dispatches which represented the Allies as racing to the rescue of the city; the hasty dispatch of the British naval guns that were so effective in South Africa is further proof that the Allies recognized the enormous value of a German check or of a long-delayed siege. French newspapers freely stated that Antwerp was sure to hold out for weeks or months; but just as the expert of the London *Times* declared the day before the fall of Namur that that city would block the Germans for four weeks, so the experts again went astray. The German attack was beyond anything ever seen in modern warfare, and the Krupp artillery can now boast of unsurpassed victories.

The military value to the Germans of the capture of Antwerp is best measured if we think what would have happened if the Allies had succeeded in preventing it or had raised the siege. Then they would have been in a position gravely to menace Brussels and the German communications in Belgium. It would have been hailed as necessitating the retirement of the Kaiser's forces from France, as well it might have, and the Allies would have cheered it as indicating the beginning of the end of the struggle on anything except German territory. Now the conditions are reversed; the Belgian army has again received a stunning blow, and may have lost as high as 40,000 more men by casualties and internments in Holland, the latter said to total 22,000, all in addition to the British loss of 2,300 from similar causes. That the British marines' support was so futile and that they were bundled out so unceremoniously in forty-eight hours will cause more rejoicing in Berlin than anything else, since the feeling against England is so intensely bitter.

As to the direct military advantage to the Germans, that, as we have already pointed out, lies chiefly in the fact that the attacking army is now free to move on Ostend and Calais, and that the last menace to the German communications in Belgium itself is at an end. It is the great battle line in France and the extreme northwest corner of Belgium which is now protecting the transportation lines to Cologne and Aix-la-Chapelle. Everything but a skeleton force of railway guards may now be thrown towards Lille or towards Ostend, to meet the Allied troops. With them must now be fought out the question whether the Germans can cut off and hold the Channel ports as far as Calais, or whether they must content themselves by building the last link in the 300-mile line of breastworks from Switzerland to the sea, and waiting until the German artillery can crack the hardest nuts of all, Toul and Verdun, or until they are compelled to fall back towards the Rhine.

Whatever the outcome of the next moves, the Allies fight with a heavier burden than before. In England fresh anxiety and a recognition of the heartening effect upon the Germans must bring about considerable depression, not because of any real danger of the enemy's using Antwerp for naval or aerial attacks—we cannot believe that they will seek to violate Dutch neutrality—but because of the plain fact that every such German success means the stiffening of the backbone of the Empire. In Austria, as in Italy and Turkey, the moral results will be far-reaching as well. To the hard-pressed Austrians this fresh proof of the power of the German arms comes in the nick of time. In France, too, with her large reliance upon those eastern fortresses which have fought so manfully, the collapse of Antwerp must have a chilling effect. Indeed, the whole world outside of the sympathizers with Germany must grieve at this fresh evidence that we are in for a long-drawn-out, brutalizing struggle, in which the poor Belgians are apparently to be ground to pieces, since there is every prospect for further terrible fighting upon their soil. There is but one satisfaction for the humanitarian and anti-militarist in it all—the universal admission that fortresses have been vanquished by ordnance, unless supported by great mobile forces, in which case hasty earthworks seem to serve about as well. As the honors at sea are for the moment, at least, with the submarine, so on land the prestige belongs to the guns, not the forts. Antwerp's defences were planned by the ablest French and Belgian engineers, only to go down like paper before what was probably chiefly an army of reserves and of the *Landsturm*. It will be difficult, hereafter, for War Ministers to demand millions for structures that are certain to prove merely the tombs of their defenders. In addition to this the question must also be asked whether the money which may be lost by the shelling of so great and rich a city as Antwerp does not now exert a powerful if unconscious influence against the defenders and in favor of an early surrender. In the future it should be a powerful argument against fortifying any great urban marts.

GERMAN APPEALS TO AMERICA.

By every mail we continue to receive from German friends and correspondents masses of printed matter, specially marked, and prepared and intended to convince us of the correctness of Germany's position, and of the cruel injustice that has been done her by the failure of American public opinion to support her cause. Moreover, this propaganda is not confined to the newspapers. Teachers of German in preparatory schools are being bombarded both by individuals and societies. In numerous German cities associations have been formed entitled "The ——— Society for the Spreading Abroad of the Truth About Germany," and they are mailing to every ascertainable address printed matter exposing misrepresentations and presenting their holy cause as they see it. Special editions of newspapers were handed to all the Americans leaving Berlin by special train during the first weeks of the war, with the request that each copy be preserved and sent to an American newspaper. Under date of September 12 the Leipzig *Neueste Nachrichten* printed a special issue for circulation abroad, containing all the official dispatches which had appeared up to that time. As for the misleading pamphlet entitled "Truth About Germany," the mails have been heavy with copies, and it is now on sale on our news-stands, besides having been reprinted in full in a New York paper.

Yet the deluge of pro-German literature flows on, always on the theory that the German side is not getting a hearing in the American press. In this our German friends are mistaken. Their cause, as they view it, has been fully and adequately presented in its every phase to the American public. With but trifling exceptions, the newspapers of the country have freely opened their columns to the German sympathizers among their readers, and to such advocates as Dr. Dernburg and Professors Münsterberg, Sloane, Burgess, and Kühnemann—the last, we hear, is to tour the country setting forth his views. The German White Paper has been widely printed, besides being circulated by certain groups of German-Americans here, who are also engaged in the hopeless task of convert-

ing public opinion to their side. The circulation of our German newspapers has, moreover, gone up by leaps and bounds, both here and in Chicago. Americans who never dreamed of subscribing in peace time are reading Mr. Ridder's publications, for the express purpose of getting both sides. In addition, the German Ambassador has set forth in the *Independent* and elsewhere his views of the situation. Surely, no fair man can contend that the present American attitude is based on ignorance or is due to deceit.

That there have been gross misrepresentations and endless lies in the news dispatches no one can deny; the latest absurdity being the report of Count von Moltke's retirement as Chief of Staff in favor of a little-known junior general. The most striking allegation of British duplicity we have seen is what is apparently a deliberate falsification by the Central News Association of an official statement of Gen. von Stein, sent out from Amsterdam. As reprinted in the Hamburg *Fremdenblatt* of September 18, from the London *Times* and *Daily Telegraph*, a statement of Gen. von Stein's, reading that the "approach of new and strong hostile forces compelled the moving back of one wing, but the enemy nowhere followed," is translated to read "but stronger hostile columns came to the assistance, *and the enemy won the battle*, obliging the German troops to retire." Everything else in von Stein's dispatch was translated with scrupulous fidelity. On its face, this garbling of official reports is nothing less than an outrage, and a disgrace to British journalism. About the British censorship, which has played anything but a broad-minded or generous part, something also might be said.

But if every news dispatch received from England had been falsified, it would not go to the heart of the matter, so far as American judgment of Germany is concerned. That has not depended upon the number of cities burned or atrocities reported, any more than the fact that some British soldiers have been shot in the field for committing the worst of crimes upon French women, has affected America's opinion of British diplomacy. What our German friends, in their eagerness to have the towering moral influence of the United States on their side, do not realize is that the judgment of this country was based upon a calm consideration of the facts leading up to the war, and upon the invasion of Belgium as set forth by the Germans themselves. American good opinion was forfeited when the Kaiser rejected Sir Edward Grey's two distinct offers to assure peace, when the "scrap of paper" incident occurred, and the Chancellor admitted the flagrant violation of the law of nations. This judgment cannot be swayed by the thrilling uprising of the German nation, its readiness to sacrifice its best, or its wonderful unanimous belief in the justice of its cause. These things do not affect the moral issues at all, any more than does the fact that the British, who have connived at the wiping out of the nationality of Persia and Morocco and destroyed the Boer republics, are in an inconsistent rôle in going to war for the independence of small countries. The *Frankfurter Zeitung* in a recent issue declares that America will come to Germany's aid as soon as the statements of returning American travellers are published and German newspapers cross the seas. A bitter disappointment is before all Germans who hope for this. Indeed, we fear that the end of it all will be their early retreat to the position taken by the Berlin *Tageszeitung*, as reported last week in these words: "We, however, do not need to regard the public opinion of the world. In the last instance, the German people, united with the Emperor, are alone competent to decide the correctness of Germany's course."

THE CHANGED CLAYTON BILL.

If the war had not swept everything else out of sight, there would have been much more in the press about the bill "to supplement existing laws against unlawful restraints and monopolies." This measure, known as the Clayton bill, passed the House last Thursday in the form agreed upon by the Senate, and known to be acceptable to the President. During its passage through Congress it underwent many radical alterations. These were mostly improvements, safeguarding the language of the proposed statute at several points, and writing in important provisos. No one can deny that it is now a much better act than when it was introduced. Its original aims are still preserved, but the steps to attain them are much more cautiously taken. Dangerously loose phraseology has been revised with care, and the old landmarks of the law have been specifically retained. All told, the bill in its final form is a fine illustration of the value of discussion and minute criticism. The public and business men will accept the changed Clayton bill with much more equanimity than would have been possible if the measure had been hurried through as first drafted.

The chief substantive feature of the bill is its legislation against interlocking directorates, with its prohibition of various contracts between corporations having trustees in common. For some act of the kind, public opinion in this country has long been ready; and with all the safeguards now placed in these sections of the bill—especially the ample time given for industrial companies and railways and banks to make the necessary arrangements—it is not probable that any real harm will be done or much inconvenience suffered. As regards those parts of the bill which relate to combinations tending to produce a monopoly, price discriminations to the same end, and unfair trading, there is good reason to believe that they are superfluous. By this is meant that all oppressive acts of that kind could probably be brought under the existing anti-Trust laws, as interpreted by the Supreme Court in the Standard Oil and Tobacco cases. Some of the best lawyers in the Senate held this view. But the contention of the majority was that it was just as well to make assurance doubly sure.

From the first, the clauses of the Clayton bill which excited most interest and provoked the sharpest debate were the so-called labor-exemption clauses. It is instructive, and to a degree reassuring, to take note of what was done with these sections of the act, in the course of its passage through committees and Congress. To a merely casual inspection Section 7 of the original bill reads almost the same as Section 6 of the perfected measure; but there are one or two slight changes which really make an enormous difference. For example: according to the first draft of the Clayton bill, "nothing contained in the anti-Trust laws shall be construed to forbid or restrain individual members of such organizations [labor unions, etc.] from carrying out the legitimate objects thereof." Just one word has been inserted by the revisers, but it has a world of significance. It is the word "lawfully." Labor unions may not be enjoined from "lawfully carrying out the legitimate objects thereof." That leaves the whole question undecided—or, rather, throws it back to the courts, with their previous decisions as to what may and may not be done lawfully.

A similar care has been shown in restricting the other provisions of the Clayton bill relating to organizations of workingmen or farmers. We refer to the section—18 in the original draft, 20 in the final form—which undertook to relieve labor unions from injunctive process. As first proposed, these clauses were thought to legalize what had previously been illegal—that is, extreme forms of picketing and the secondary boycott. Whether that was the intent or not,

the danger was there. But it has been met. The original picketing clause stood: "from attending at or near a house or place where any person resides or works, or carries on business or happens to be, for the purpose of peacefully obtaining or communicating information, or of peacefully persuading any person to work or to abstain from working." Note the change made: "from attending at any place where any such person or persons *may lawfully be*." Again, the decision to be made by the courts in accordance with existing law! Similarly as concerns the secondary boycott. There was, in the Clayton bill as first drawn, to be "no restraining order" against "ceasing to patronize or to employ," or "recommending, advising, or persuading others by peaceful means so to do." But now we read, "by peaceful *and lawful* means." This makes, or easily may make, when the matter comes to judicial decision, a great difference.

It is not argued here that this whole matter of special legislation in the interest of organized labor is left by the completed bill in satisfactory shape. Both sides to the controversy may well think that they are getting the better of it. If the new law does not work as labor unionists hope, they will start their agitation afresh. It is only fair to say, however, that those finally responsible for the measure were at least bold enough and strong enough to stand out against giving away the whole case to the labor leaders. A word of praise should be added for the removal by the revisers of the bill of a very objectionable provision that a "decree" of a court against any defendant should be "conclusive evidence" against him "or any other party" in other proceedings. This has properly been changed so as to read "prima-facie evidence." It is but one of the many instances in which the recasting of the Clayton bill was most useful.

CAMPAIGN LETTERS AND ORATORY.

President Wilson's decision to make no political speeches before the November election is based on sound reasons. Public duty comes before party leadership. At a time when a world-crisis puts heavy responsibilities upon the President, and when he is asking his fellow-citizens, without distinction of party, to do what they can in helping him to meet them, he thinks it but fair and right that he should abstain from active campaigning. If he were to go on the stump only a few times, he would necessarily expose himself to reply and attack. That would be unfortunate at a juncture when the authority of his office ought to be preserved whole for possible use in ways far transcending party conflicts, or even the interests of our own country alone. Asking the support of all his countrymen as vigilant upholder of our neutrality in a devastating war, and as mediator between the combatants, if the opportunity offers, President Wilson will prudently refrain from doing anything that might cause political controversy to rage divisively about him

This does not mean, to be sure, that he has not a keen interest in Democratic success in the elections. And to help win it he will quietly do what he can. Instead of making speeches he will write letters. He has already begun the series. Several Senators seeking reëlection have had the President's warm epistolary endorsement. And it is understood that he will shortly issue a general written approval of Democratic Representatives. Possibly, Democratic candidates for the Governorship in various States may find something from Mr. Wilson in their mail, which they will not shrink too long from making public. At all events, it is letters to which the President is to confine himself in seeking to exert political influence between now and election day. One of the most persuasive speakers of his day is to forego oratory. Not even the malicious can say that the reason for this, in President Wilson's case, is the one referred to by the Apostle: "His letters (say they) are weighty and powerful; but his bodily presence is weak, and his speech contemptible."

The letter, as a political instrument, has scored many successes. Historic instances could be multiplied. Everybody remembers how Lincoln occasionally seized it, as Milton did the sonnet, in order to blow a blast heard through the land. During the Presidential campaign of 1860, Lincoln made no speeches at all, but he was a busy letter-writer. Throughout the Civil War he was exceedingly sparing of oratory, but now and then a letter would come from him which, like his famous answer to Horace Greeley, was much more than a half-battle. Several of his successors in the Presidency wrote letters that were more noteworthy than any of their speeches. This was true of Grant, and possibly of Cleveland. President Roosevelt was probably the most prolific letter-writer that was ever in the White House. Many of his letters were intended for the public and had considerable effect; but the great sensation was made by those—such as the ones addressed to "Dear Maria"—that leaped to light without his privity. It was letters of the latter kind that Martin Van Buren must have had in mind when he gave his well-known advice to public men: "Walk eleven miles to see a man rather than write him a letter."

If one asks what are the comparative advantages of letters and speeches, as a means of moving the voters, one will find many reasons for believing in the superiority of oratory. A speaker has the power of getting directly at his audience in ways forbidden to the printed page. All the questions of personal magnetism; of the eagerness of the crowd to see and hear famous men and candidates for office; the whole matter of give and take between hearers and the orator which often leads to impassioned utterance far beyond the range of a man coolly sitting at his desk to write—all these things suggest the higher opportunity of the speechmaker, and show why political oratory persists in favor. On the other hand, the speech can sway only its immediate audience. When it is printed in more or less imperfect form, and read by the distant public, a great deal of the fervor and virtue seems to have gone out of it, and readers wonder how those who heard it could have been so enthusiastic about it. The fire of oratory has a way of dying out in cold type. A letter, however, carefully prepared and published simultaneously over the whole country, wins at once, and with large masses of readers, its effect. In a way, it is like giving a speaker the chance to address an audience of millions. Moreover, the thrill and glow with which one comes from hearing a powerful oration are evanescent. But a letter can be kept by one and read again and again in calm deliberation.

President Wilson's campaign letters will hardly be great literary productions. Those that have already appeared are quiet in tone. In any that he may hereafter write, in support of this or that candidate, or in general appeal for his party, he will probably not be inclined to force the note. In view of what has been done, and of the anxieties which the war has caused to press upon the country, he will be apt to write upon the theory that, after all the words which can be used, "if silence will not speak, there's nothing told."

A MODERN BLESSING.

The celebration of the twenty-fifth anniversary of the opening of the Johns Hopkins Hospital is an event in which the participants may take such a degree of pride and pleasure as can rarely be sincerely experienced on similar occasions. In its own equipment and general activity, that institution has been one of the great agencies for the relief of suffering, and has played

an important part in the general advancement of hospital standards in this country; but it is in its function as an integral part of the resources of the Johns Hopkins Medical School that its most signal service has been done. The remarkable rise in the character of medical education in this country which the past quarter-century has witnessed has owed its chief impetus to the Johns Hopkins Medical School; and to that source, too, is to be traced the origin and successful development of the institutions devoted exclusively to medical research, of which the Rockefeller Institute is the leading example.

But when we take a backward glance over the story of medical progress during the past twenty-five years, we make a very great oversight if we overlook the change that has taken place in one matter of vital importance, belonging neither to the domain of hospital management nor to that of medical education or of medical research. There has grown up, during that time, in this country, what is almost literally a new profession, that of the trained nurse. In 1889, there were not in the whole country, outside of hospitals, more than a few hundred trained nurses; now their number is estimated to exceed a hundred thousand. And the standard of qualification is steadily rising. To the development of that calling, and to the lifting of it to a higher professional plane, the Johns Hopkins Hospital contributed powerfully. Its Training School for Nurses was started simultaneously with the hospital itself, and it at once took a commanding position in its field, and had the effect of stimulating the growth, multiplying the number, and greatly raising the standard of training schools for nurses throughout the country. It was Florence Nightingale who established in London, in 1860, the first school for the systematic training of nurses upon modern principles; and it is to the Bellevue Hosptal in New York that the honor belongs of establishing the first institution of the kind in this country. This was in 1873; and the next great landmark in their development in America was the starting of the Baltimore school in 1889.

There could hardly be a better illustration of the way in which we get accustomed to the gains of progress, and come to regard them as a matter of course, than the story of the trained nurse. To be able to command such help in time of sorest trouble, to be able so to increase the chances of recovery on the part of the sick and to reduce the danger of breakdown on the part of the anxious relatives watching the sickbed—this ought to be considered a blessing beyond price, and a cause of profound thankfulness. Persons still young remember the time when any such aid in the home was virtually out of the question; and it does not take a much longer memory to recall the time when hospital facilities were so much more limited in amount and so much less perfect in kind that recourse to those institutions was to be thought of only in exceptional cases. Yet it is very seldom that any one stops to dwell on this immense gain that has been won for millions of human beings in one of the most important concerns of life. It is true that the full benefit of this new resource is enjoyed only by the well-to-do. But even these constitute a numerous class; and it would be a great mistake to suppose that those in less fortunate circumstances do not receive such benefit in very considerable measure. The free beds in hospitals, with the best of nursing, are many; and visiting nurses, supplied either by city authorities or by private effort, do an incalculable amount of good among the poor. The number of trained nurses in the employ of New York city alone —indoor and outdoor—is nearly 800.

To appreciate what the trained nurse does towards alleviating distress of mind and body, it is only necessary, as we have said, to make a little effort of memory; but most of us are not in the habit of doing even so much as that. In this as in other matters pertaining to modern progress, we take present advantages for granted, and are more prone to complain about their not being greater or more general than to dwell upon their being in our possession at all. If this is so in regard to a thing which has come about so rapidly that we all can picture the contrast with our own previous experience, how much more must it be the case with things that have been two or three generations in the making. When people talk glibly about the condition of the masses in these days of modern industrialism being worse than it was in former times, they never stop to think of the way in which the city poor lived in narrow streets, unpaved and unlighted, of the dirt, the scant and impure water, the insufficient police protection, the absence of cheap transportation—the want, in short, of almost everything which we now regard as essential and which is enjoyed as a matter of course by the poorest, or all but the very poorest, of the people. There are other things besides nursing in which the standards of to-day differ as much from those of a hundred years ago as does the fine, humane, disciplined modern nurse from Sairey Gamp.

Chronicle of the War

Beyond the possibility of a doubt the past week has been Germany's. Whether, when the history of the war comes to be written it will be set down, as some of the English and French critics assert, as marking the apex of German success remains to be seen. At all events, of the present success there can be no doubt, nor have the Allies made serious efforts to minimize its importance. Both in the eastern and in the western areas of conflict notable successes for the German arms are to be recorded, and, viewed simply from the standpoint of military efficiency, these successes are as creditable as they are astonishing. In the west, Antwerp, next to Paris supposed to be the most impregnable fortress in Europe, fell on Friday of last week, after an amazingly short siege; in the east, German armies have pressed forward in Russian Poland, have swept the Russians back to the Vistula, and are threatening Warsaw. By the time these lines appear in print that place may even have fallen. That its capture is regarded as not improbable is indicated by dispatches from Washington which assert that Great Britain has requested the United States to take over her consular interests in Warsaw in that event.

Whatever may be the strategical advantages derived from these successes—and in the first flush of victory there has been observable in the dispatches from Berlin a natural tendency to exaggerate these—their moral effect must be considerable. In Germany, for all the determination that has been displayed, some amount of depression must have supervened on the sudden sweep back of her forces from Paris after their triumphant progress thither and when the goal was not only within sight, but almost within gunshot, and this depression cannot have been allayed by the long-drawn battle on the Aisne, showing as it has that man for man French and British troops are at least the equal of German, and that there was to be no repetition of the easy victories of 1870. Serious misgiving, too, must have been occasioned by the undeniable, though officially denied, Russian victories at Augustowo, which we recorded last week, and by their rapid advance in Galicia and the apparent total inability of Germany's ally to withstand the forward march of the Czar's forces. This depression now will have given place to a corresponding feeling of elation, both in Germany itself and among her troops in the field, while at the same time there are many elements in the situation which must be disturbing to the Allies.

One thing, as is pointed out in our editorial columns, is definitely established by the fall of Antwerp. The efficacy of fortified cities in warfare is a thing of the past. The gun has beaten the fort. Liège, Namur, and Maubeuge had given us more than an inkling of this fact; Antwerp has put the matter beyond a doubt. The fall of Antwerp will be viewed with mixed feelings of relief and apprehension by the Allies for other reasons. They must be realizing how narrow was the escape of Paris in the early stages of the war, for had the German armies not been checked at the Marne, there is small reason to suppose that Paris would have proved

more impregnable than Antwerp. They must also be watching with anxiety the development of events on the Verdun-Toul line, where so stout a resistance to German attacks has hitherto been maintained. The Germans have not got many of the dreaded Krupp siege guns—report places their number at no more than two—but those have proved uncommonly effective. After the surrender of Antwerp, dispatches stated that these guns were being transported elsewhere, and it is not unlikely that they may make their next appearance at Verdun.

From the strategical standpoint the possession of Antwerp is of immediate importance for the Germans principally because it clinches their hold upon Belgium, thus consolidating their whole front and securing their lines of communication, and also because it releases for service elsewhere an army of probably 150,000 men, and disposes of the menace of a mobile Belgian army on their flank. Their success at Antwerp would have been more important still had the Belgian army failed to make good its escape to Ostend. As it is, there is some doubt as to the numbers which did actually reach the latter city. Dutch reports state that 20,000 troops, including 2,000 British, were forced to cross the Scheldt into Holland, where they have been interned; German reports put the numbers considerably higher. It is probably safe to assume, however, that, allowing for casualties during the siege, half of the army of 100,000 men is still effective, and full credit must be given to the leadership which enabled these troops to accomplish the seemingly impossible and effect their retreat.

Writing last week, we spoke of the northward advance of the Allies' forces in the direction of Lille and the Belgian frontier—a remarkable advance, progressing as it did some fifty miles in the space of a week—as clearly directed to the relief of Antwerp. That object has been frustrated, and it remains to consider the alternative plan which must have been in the minds of the commanders of the Allies. The relief of Antwerp, as we know now, must have appeared, even while desperate efforts were being made to compass it, as a forlorn hope. Had Antwerp not fallen, the Allies would have joined hands with the Belgian troops there, and their line of battle would have been complete from the Swiss border to the North Sea, running from Antwerp south, through Ghent, Lille, and Arras, to Roye and Lassigny; then turning east, through Soissons and Rheims, to Verdun, and southeast again, through Nancy, to Belfort. With Antwerp taken, it may be assumed that the aim of the Allies is to make Ostend the extreme westerly point of their line, which will then run directly south and north from Ostend to Roye, or, should the Germans win the race for Ostend which is in progress as we write, it may be assumed that the forces in that place, British and Belgian, will effect their retreat in time to Dunkirk, thirty miles down the coast, and that the line will be rested there. The news that the Belgian Government has transferred itself from Ostend to France would seem to indicate that the capture of the Belgian port has already been discounted.

The success of what we may presume to be the Allies' plan will depend largely upon the outcome of the severe engagement which has been in progress for some days all along the line Lille-Arras-Albert. Lille was occupied by the Germans on Tuesday, and heavy cavalry fighting was reported at Hazebrouck, twenty miles to the west. There apparently the Germans had some successes, followed by a resumption of the offensive on the part of the Allies. Between Arras and Albert, the French War Office, which has been noticeably reticent and conservative of late, in its report on Tuesday afternoon recorded "notable progress." Within the next few days we may probably expect some decisive development in this quarter, and obviously the Allies are here fighting against time, since it is of the utmost importance that they should achieve an emphatic success before the German troops released from Antwerp can be thrown into the fight. Along the rest of the long line of battle there is no change of importance to record, although at most points slight progress is reported by the Allies.

In the east, as in the west, there have been startling developments, all the more startling in view of the impenetrable veil of secrecy in which the movements leading up to them have been hidden. Petrograd paved the way for the surprise when, as we recorded last week, it made casual mention of German troops in the neighborhood of Warsaw. Those troops have now developed into a full sized army, which is not only in the neighborhood of Warsaw, but is threatening the capital. From a comparison of the various dispatches, unusually significant in what they leave unsaid as well as in what they say, we can form an idea of the existing situation. Berlin reports that the whole of Poland west of the Vistula is now in German possession, with the exception of Warsaw, the fall of which is expected at any time. At the same time the official report speaks disparagingly of the "few kilometres" lost near the East Prussian frontier as of no importance, and declares that the siege of Ossowiecz could not have been abandoned, because that place was never besieged. Vienna speaks of the rapid advance of the Austrian troops along the River San as having resulted, on October 11, in the withdrawal of the Russian investing force from Przemysl, Galicia. Petrograd ignores events in Poland and Galicia, but reports further successes on the East Prussian border.

The situation, then, may be reconstructed thus: The Austrian forces, partly by virtue of their own reinforcements, but more probably as a result of the stiffening afforded by the arrival of German reinforcements, have so far recovered themselves as to be able to resume the offensive. The Russians, presumably for strategic reasons, since there has been no hint of any severe fighting in that region, have retired from their position between Przemysl and Tarnow. The central Russian army has taken up a position on the east bank of the Vistula and is waiting there to give battle to the German host which has advanced from the line Kalisz, Lodz, Petrokow, Kielce. This army is supported on its right by the Austrians who have relieved Przemysl, and on its left by the army of Gen. von Hindenberg, which is having difficulty in holding its position on the Prussian frontier. The critical part of the battle line will most probably be between Sandomir and Ivangorod on the Vistula, and we may presume, in view of the skill with which the Russian campaign has hitherto been directed, that this battle ground is of their own choosing.

Foreign Correspondence

THE RED CROSS SOCIETY—AN IDEAL HOSPITAL — FOREIGN K.G.'S AND K.C.B.'S—LONDON'S LOST CATS.

By SIR HENRY LUCY.

WESTMINSTER, October 3.

"The Duchesses have nobbled the Red Cross Society." The remark was made more in sorrow than in anger by one who has not only generously contributed to various funds for the relief of the wounded in war and those dependent upon them, but has devoted great capacity and valuable time to personal endeavor in furthering the enterprise. There is unfortunately a basis of fact in the bitter lament. Nursing the sick and wounded in hospitals, and providing garments for them, has become the fashion of the day in high society. The brief-lived rapture of ping-pong which captured it a few years ago was nothing compared with this. Even afternoon bridge parties have suffered from the competition. A real Duchess has just come home from the front, to the relief of authorities embarrassed by her well-meaning amateur efforts. There are to be seen in the shop windows obtainable for a few pence photographs of other ladies of title caught, not without connivance it is feared, in the very act of sewing a shirt.

Since the Red Cross Society has been officially recognized by the War Office and is the recipient of subscriptions from the public exceeding a quarter of a million sterling, the absence of strong, trained, capable direction threatens to become a national calamity. It is even whispered that these *grandes dames*, some of whom were prominent in the political arena when the fight around Ulster most fiercely raged, are not wholly uninfluenced by party prejudice. Certain wealthy Liberals having town or country houses suitable for transformation into hospitals communicated to the War Office their willingness to devote them to the service of sick and wounded soldiers. They were referred to the Red Cross Society, and the committee, so it is said, take care to keep the preserves sacred from invasion by vulgar Liberals.

A case coming within my personal knowledge goes some way towards substantiating the rumor. A country neighbor who has a spacious residence set in a far-reaching park within convenient distance of Folkestone, a port in close touch with the battlefield, offered to furnish it and to maintain it at his sole expense as a hospital. He made this proposal to the War Office and was in the ordinary course referred to the Red Cross Society. He hastened to lay the precious gift at their feet, and in due course received a formal letter stating that there was no need for his assistance. Unfortunately (perhaps fortunately for those who will presently benefit by his patriotic hospitality) he is a member of the House of Commons well known for strenuous effective support of principles abhorred in London drawing-rooms. The sick and wounded had better go uncared for than be indebted to his generous care.

The mere man concluded that here was an end of the matter. The wife thought not. Why not offer the hospital elsewhere on their own account? To begin with, she obtained admission to Guy's Hospital, and for some weeks did the hard work of a nurse while obtaining thorough insight into the working of

a hospital. Returning home she had the rooms stripped of their costly furniture, carpets taken up, curtains removed, floors stained and varnished, the apartments turned into first-class hospital wards with the best of beds. I paid a visit to the improvised hospital yesterday and found it the perfection of light, airy rooms all looking out on gardens or leafy park. Baffled in the effort to serve his own countrymen, the owner of the pleasaunce turned to the Canadian authorities, receiving instant acknowledgment of his proposal and grateful acceptance of his offer.

Here, then, is a home of rest and cure awaiting some of our Canadian brothers who in their gallant efforts to help the Motherland may fall by the way. Every help which surgical and medical skill can provide will be placed at their disposal. Every comfort that trained nurses can bestow will be theirs, together with every luxury in the way of meat and drink suitable for the case of the sick and convalescent liberally provided. Fifty patients will be housed and cared for with a tenderness that could not be excelled by mother or wife. Meanwhile, whether the time be long or short, the hostess with her maid will bestow herself in rooms in a gardener's cottage in convenient contiguity for the matronly supervision to which she has devoted herself.

Although the Kaiser's heart bled for looted and burned Louvain—this was just before his gunners made a target of Rheims Cathedral—it is possible that he has suffered even acuter pangs in conditions brought home to him as one of the earliest fruits of the war. He has felt bound to discard from his wardrobe the uniforms ordered in connection with various high positions in the British army and navy conferred upon him during the last twenty years. He will presently suffer further deprivation by the removal from St. George's Chapel, Windsor, of his banner and insignia as a Knight of the Garter. A minor consideration is the fact that thereafter he will be deprived of the solace conveyed by knowledge of the fact that the congregation at St. George's regularly include his name in their petitions to the Throne of Grace for the welfare, temporal and spiritual, of companions of the Most Noble Order of the Garter.

In addition to the Kaiser there are in the field against us a medley of foreign potentates, big and little, who by favor of the Sovereign of the Order of the Garter, have been privileged on state occasions to display its star and blue ribbon. The oldest foreign K.G. is the helpless Emperor Francis Joseph, upon whom Queen Victoria bestowed the coveted ribbon as far back as 1867. Others, in addition to the Kaiser, are the King of Württemberg, the Grand Duke of Hesse-Darmstadt, the German Crown Prince, and Prince Henry of Prussia. *Item*, there are several Knights Grand Cross of the Bath, including the Grand Dukes of Mecklenburg-Strelitz and Saxe-Meiningen, the Princes of Hohenlöhe-Langenburg, Frederick Charles of Hesse, and Philip of Saxe-Coburg-Gotha. These names will be solemnly erased from the roll of the Order, as will those of the Knights of the Garter who have sent contingents to the German army in the field. It will be interesting to know what will become of the banners and insignia when taken down. Worse use of them might be made than offering them for sale to the highest bidder, the aggregate proceeds being handed over to swell the coffers of one of the many relief associations which are striving to mitigate the sufferings of innocent people who have suffered through the Kaiser's forces.

Among the more obscure but not less sensitive communities suffering from the war are the lost cats of London. Eighteen years ago a kind-hearted lady set up a home for their reception. Finding many sympathizers, the establishment entered upon a course of moderate but effective prosperity. In normal times its opportunity widened in the holiday season. People going away holiday-making cannot take their cats with them. A large proportion so situated turn with gratitude to the Cats' Home and make arrangements for their housing and keep. Too many leave the cats to look after themselves. The founderess and manageress of the home writes to tell me that on account of the falling away of subscriptions owing to competition in other directions arising out of the war, the institution is on the verge of breaking down. A contributory to this regrettable condition of affairs is the fact that the number of homeless cats is just now greatly in excess of the average. German residents in London, breaking up their establishments on quitting the country, had not time to make provision for their cats. They were accordingly left to starve in empty tenements, whence upon information received they were rescued by emissaries from the Cats' Home.

HOLLAND AND FLANDERS—AN INTELLECTUAL KINSHIP—THE "GREATER NETHERLAND."

THE HAGUE, September 28.

Holland has become a haven of refuge for the Northwestern Continent of Europe. Order and quiet reign in her towns and villages, while slaughter and destruction rage all round. Common talk would have us believe that the Dutch owe their safety to the Kaiser's devotion to the House of Orange. As if German strategy were to be guided by such sentimental motives! The Dutch General and late Minister of War, H. P. Staal, has shown, in a series of articles in *Het Vaderland*, how absurd this popular assumption is. There was no urgent reason for the German army to violate Holland's neutrality; what use, then, would there have been in the attack upon a country whose army, though small in itself compared to the host of the German invader, might have formed a dangerous increase to the enemy's opposing forces? Nor is there any truth in the rumor, repeated in a letter from The Hague, which appeared in your issue of August 27, about a secret German-Dutch understanding, which, to quote your correspondent, "has so often in recent years been alleged to exist." The Belgians, unfortunately, seem to believe in it, and their press helps to spread it by repeating, in spite of official contradiction, that the Dutch have allowed German troops to march unopposed through their province of Limburg. It may be in the line of German tactics to encourage this rumor so as to disseminate wrath among the Belgians and cause estrangement between the Hollanders and their Flemish brothers. The attempt will prove utterly hopeless. For these two peoples, knit together by their common language and their earlier history, have, for the last twenty years, formed an intellectual and literary alliance stronger than international diplomatic treaties, as it is based not on promises, but on feelings of kinship and love.

Flanders has, in the past few decades, awakened to a new life of literary and artistic activity, such as it had not known since the thirteenth century, the great age of Jacob Van Maerlant and the poets of "Van den vos Reynaerde." From the time of the establishment of Belgium as a separate kingdom (1839) down to the early 'nineties, Flemish authors had anxiously tried to imitate the language and style of Dutch contemporary literature. But during the last quarter of that century a poet arose in Belgium who dared to speak the language of his own native home, the sweet, simple dialect of Flanders. It was the history of Scottish literature in the eighteenth century repeated: so long as Thomson and the minor Scottish poets of his age sailed in the wake of English poetry, London retained its literary supremacy over Edinburgh. But when Burns began to sing in the native dialect, high poetry rang in the homely notes. Guido Gezelle is the Burns of Flanders. He sang his lyrics in the words and phrases heard along the roadsides of the Flemish country, and Holland recognized that in his song the Flemish soul was revealed as never before.

Gezelle died in 1899, but the impulse he gave to the younger generation of Flemish poets and novelists survives with undiminished force. Stijn Streuvels, Herman Teirlinck, August Vermeylen, Cyriel Buysse, Karel van de Woestijne deserve a wider fame than the limited scope of the language they employ can gain for them. Holland is the only country where they are read and appreciated; the Dutch writers realize how their own literary language is enriched by the quaint and picturesque language of the south. Dutch publishers vie with one another in bringing out works of popular Flemish writers, and the reading public encourage their competition by an increasing demand for Flemish books. Flemish orators—and it seems as if eloquence were a native gift of that race—find an enthusiastic audience in every Dutch town, and the most popular of all Flemings, the singer Emiel Hullebroek, has sung his bright Flemish songs into the memories of all Dutch lovers of popular music. Holland repays these beautiful gifts by sending her famous acters, Royaards and Bouwmeester, to play in Ghent, Antwerp, Bruges, Brussels; by sending her scholars to Belgium to lecture before the students of Brussels and Ghent; and every summer members of the University staff at Leiden give a course of holiday lectures to students from Belgian universities.

This intellectual and literary intercourse and mutual appreciation has created, of late years, a strong feeling of what their German neighbors would call "Zusammengehörigkeit." The Dutchman has begun to realize that his nation covers a wider field than the small area enclosed within his frontiers, the Fleming that it is not to France that he must look for inspiration congenial to his mind and natural talents. Both have conceived the possibilities of a "Greater Netherland." *Groot-Nederland* is the name of a leading literary monthly, which is edited by the Dutch novelist Louis Couperus and his Flemish brother-in-art Cyriel Buysse. Those two, with their periodical, exemplify the hopes and aims of the best and greatest among the Flemish and Dutch. No "Groot-Nederland" in a political sense is what they look for. There is no such thing as Dutch Imperialism; neither north nor south of the Escaut prevails a wish to alter the map of that little corner of Europe. But an intellectual "Groot-Nederland" is the aim they have in view, and no German policy, terrorism for Belgium, coaxings for Holland, can disturb its growth.

A. J. BARNOUW.

Some Novels from Abroad

COUPERUS — MADAME MAETERLINCK — POMPEO HAGEDORN—MRS. BAILLIE-REYNOLDS — MRS. WARD—A. S. HUTCHINSON.*

Whatever effect the war may have upon other industries, there is no doubt that it will change the face of European literature for a generation. Already the poets, historians, and philosophers may be observed indignantly withdrawing from the mild circle of intellectual brotherhood and unsectional benevolence, and bristling under the standards of race. As for the novelists, there is too little doubt about what we have to expect from them. As soon as they have got their breath, as soon as they have made out some sort of head and tail to the prodigy, they will be at it hammer and tongs. The formidable mass of more or less partisan literature bred by the Franco-Prussian War will seem inconsiderable a few years hence, since all the writing nations are now involved, offensively or defensively. Some rich blood will doubtless he injected into a body of fiction which has recently shown signs of anæmia. War will rid Europe of the defects as well as the virtues of civilization. Butchers do not suffer from neurasthenia, nor are shipwrecked men concerned with problems of social and sexual pathology. Out of the welter and hurly-burly of the immediate future, out of the inevitable deluge of tracts and photographic studies, a few big, strong novels are likely to emerge.

In our anticipation of this red and salty influx now so near, the novels of the current season already take on a flavor of survival. Can it be that only yesterday French and Dutch and German and Italian and English writers were preoccupied with these precious or provincial or romantic or "timely" themes? Do these volumes mark the end of an epoch? Are they to be dismissed presently as out of date, or to be cherished as a resource and refuge from the stress and confusion of post-débâcle fiction? They will have documentary value, at least; for the old Europe is passing away, Baedeker will have to be rewritten, the middle-aged tourist who has too long deferred his pilgrimage will have lost something he can never recover. The glories of Louvain and Rheims have departed, and who can say what tomorrow may bring to the shrines of Cologne or of Westminster, or of Rome herself? And as for the color and flavor of life abroad, they can never again he quite what they have been. The belated tourist must make shift with old pictures and old books to get the atmosphere of that already antiquated "abroad" which his neighbor so casually visited a year ago.

I.

Luckily, there are ample stores of material which remain to he drawn upon for the benefit in this kind of the English reader. English and American publishers have been less chary of translations in recent years, but have followed a natural law in preferring a tenth-rate novel in English to a first-rate novel in French or German or Italian. Now and then a fresh author is introduced tentatively, and, if he "takes," may he really conveyed to a fresh audience.

An experiment of this sort has just been made with the "Small Souls" of Louis Couperus, a writer virtually unknown in England or America, yet unhesitatingly pronounced by his accomplished translator the foremost novelist of Holland. This is the first of a series of four novels known as "The Books of the Small Souls." "The remainder," says Mr. de Mattos, "will be published if and as the antecedent volumes find favor with English and American readers." This is fiction of a high order, and ought, in its new dress, to find favor with a sufficient audience to justify the translator's hopes. That it is not of a popular sort, the blunt title suggests. The four volumes chronicle the fortunes of a middle-class Dutch family, the Van Lowes. The nearest analogue of this work in English is "The Old Wives' Tale," which Mr. Bennett frankly hased upon a foreign novel. "Small Souls" is undisguised "realism." The Van Lowes are real people, not engaging or striking, but alive. Nor are they parties to a "plot" of carefully prepared situations and salient crises. They are chronicled, not exploited, made plain by means of a large body of cumulative detail. Yet as with all fictitious chronicles which survive the hour, this body of detail exists not for its own sake, but in the service of a larger interpretation. These small souls are such stuff as life is made on. Their creator neither veils nor mocks them, hut sets them forth for what they may be worth, as if with a smile of kindly irony. One touching figure there is, drawn without sentimentalism, hut with more overt sympathy—young Adriaan, hapless but courageous victim of his parents' folly. He, one foresees, is to be the central person in the three following parts of the chronicle; the last of them bears his name.

Teutonic realism is more naturally intelligible to the Anglo-American mind than the realism of Russia or even of France. Couperus's people, like Ihsen's or Sudermann's, surprise us by being so really human. But for a few foreign quaintnesses of custom and speech, they might be living next door. But how many of us honestly believe in those madmen of Turgenieff, those flighty or dirty children of Zola?

In his version of Madame Maeterlinck's "Choice of Life" Mr. de Mattos offers the English reader something essentially difficult, because essentially alien. As a story, it presents an episode, strained and long-drawn, and on the whole ridiculous in the eye of that common-sense which we worship and by which we are fain to live. The writer—or shall we say a lady?—records an experiment in friendship. She becomes infatuated with a beautiful peasant girl, makes an intimate of her, and tries to lift her to comprehension of the subtleties of art, sex, and life. To John and Jonathan there is something mawkish and unpleasantly suggestive in the insistence upon the physical charm which the girl has for the woman. Here the relation begins, and is doomed to end, for the girl is hopelessly vulgar and wholesome. Much of the lady's effort is given to rousing her protégée's sluggish sex-instinct. A typical incident is her grief and repulsion at the girl's coldness to a casual young man who has invaded her bedroom. The lady, who has been eavesdropping, walks for hours through the night in the attempt to forget "the ugliness of the scene." At last she finds comfort: "Little by little, hope returned to me. I was persuaded that over there, in the little room which my care had provided for Rose, love would yet be the conqueror. . . . And, in the dead stillness, I kept hearing the kisses falling, falling heavily, like the first drops of a storm." As for her advice to the girl, it is not in the direction of marriage and motherhood, but of love, *l'amour*. Convention is nothing: "It is right that woman should make her own experiments; it is right that she should know men to judge which of them harmonizes with her. . . ." The style is of a Gallic sleekness and melodiousness which the admirable work of the translator more than suggests. The effect of the book as a whole is (to John and Jonathan) strained, sensuous, ecstatic, doubtfully wholesome. John and Jonathan will need to remind themselves once more that the realists and the pathologists are not the whole of a racial fiction which includes Tartarin and the Abbé Constantin.

II.

Ingenuous forms like the problem novel, or even the sheer tale of sentiment, still subsist on the Continent. "Monsignor Villarosa" might he called the one or the other. It recalls "The Saint" of Fogazzaro, but is less intellectual and more romantic in spirit. As a problem story, it emhodies again the struggle between modern thought, liberality, and sincerity, and the reactionary forces of the Roman Church. Villarosa is a provincial bishop of great scholarliness, and of generous and unworldly disposition. He is of nohle race; in youth and on the eve of taking orders he has fled from his seminary to join the Garibaldian Thousand in Sicily. After the campaign, in which he is wounded, he does penance and enters the church. He is advanced in time to his bishopric, hut the higher dignities which his remarkable character and powers might have brought him are held back as the penalty of his early revolt. And, indeed, the

spirit of independent thought and action has not died in him. In old age he takes the part of the peasants in their struggle against the landlords, is condemned by his adversaries, and turned upon by those whom he has served. Then his great work of exegesis, hailed by scholars the world over, is put upon the Index, and, finally, for a technical fault, and upon his deathbed, he is unfrocked and discommunicated. But he has come to see a greater glory than that of Rome, and dies triumphant. The tale is frankly anti-clerical, but its human quality lifts it above the plane of tract or campaign document.

The author of "Faces in the Dawn" is an American, but a German-American, and he has chosen here to write a story of the Fatherland. There are only a few persons—a country baron, his wife, his daughter Gudrun and her lover, a country parson and his wife. The lover is an American, the baron approves the match, but the baroness, who is a mollusc, steadily obstructs it on selfish grounds. The outcome of the comedy is never in doubt, but its conduct is sufficiently interesting. The chief figure is really Parson Adam, a gross husk of a man with a sound core. And early disgrace has first embittered, then dulled him. Salvation has for a time seemed to offer itself in an ideal attachment for Gudrun, the young baroness, but has reacted in a perfunctory marriage with a girl of his own class. We meet him as the domestic boor, the spiritless pastor. We leave him, by grace of the generous Gudrun's efforts and his own sound heart, on the way to a happy conduct of his married life and of his spiritual labors. Gudrun holds a brief for the right of woman to be mate on equal terms of her man, and joyfully exchanges the mediæval atmosphere of her German home to take her place among the proud women of her husband's Colorado.

III.

In America the movement for suffrage has gone on so quietly, but for language, as hardly to tempt our novelists. The militancy of England (now dormant or extinguished?) has provided more salient material. Two current novels yield militant heroines, though it is notable that in both instances the militancy is a phase, and the damsel led to see the error of her ways. Mrs. Baillie-Reynolds, indeed ("The Cost of a Promise"), has made of the suffrage motive a mere item in her narrative. A single scrimmage with rough protesting men is enough for this maiden. She goes through it as a heroine of elder date would have gone through a reckless feat of horsemanship or of dining at a restaurant without a chaperon—as a token of independent spirit, which the author must not too painfully subdue. As for the promise about which there is so much pother, it is of little account, except as a fulcrum. There are some very respectable characters in the book who might have been exercised to better advantage.

Mrs. Ward's "Delia Blanchflower," on the other hand, is a deliberate study of militancy; and her heroine's conversion from the cause does not profess to dispose of the whole problem. Delia is an interesting person. She is daughter of a retired officer (that mainstay of British fiction), has fallen by chance into the hands of a militant leader, and, largely as a matter of personal devotion, has pledged herself to the Cause. The father is outraged, and, dying, leaves his large fortune in the care of a guardian, who is to see that none of it goes to the support of militancy. The guardian, Mark Winnington (it could have been nothing else but Hugh) is that reserved, athletic, handsome Briton with whom, apparently, the fortunate Isles are peopled. Delia resents him and disobeys him, and, of course, in the end loves him and is by him rescued from the perils and absurdities of the Cause. The story is told with Mrs. Ward's customary suavity and charm. That she believes in suffrage as apart from militancy is clear, but her closing paragraph shows how little, with her serious intelligence, she relies upon such remedies as "the vote" for the final settling of the woman's problem.

IV.

In "The Clean Heart" the author of "The Happy Warrior" has provided another effusion of the serio-whimsical order which has been so popular during the past decade. Mr. Hutchinson is more serious, or more lyrical, than Mr. Locke or Mr. Bennett. On the other hand, he has his undoubted vein of humor under less skilful control. He has not been able to compass that first duty of the humorist—to forget Dickens. He has been saluted as a prose-poet, which we suppose to mean that his reviewers have noted the affectation of certain inversions once permitted to that familiar spirit of the lamp, poetic license; and his habitual lapses into set metre. Phrases like "Groan that was prayer of thanks came from Mr. Wriford" lend mannerism to every page, and there is passage after passage of what to the eye is prose, but, printed differently, would have to stand on its own feet as blank verse in one metre or another, of one quality or another. The hero, Mr. Wriford, will appeal to different readers as ridiculous and tiresome, or humorous and touching, or, to the very young, as tragic even. There is a sort of timeliness in the main situation: it may be taken as an exhibit against the rush of ceaseless toil now required of the industrious apprentice. Mr. Wriford is a successful journalist and novelist, who, like Mr. Arnold Bennett, works twenty-four hours a day. Unlike Mr. Bennett, he does not exult in the process. A strange fear, diffidence, and sense of unworthiness take hold upon him. Finally, his mind gives way to hallucination and despair. He tries to drown himself, but is rescued; wanders about the country, and has strange adventures with improbable persons; is a hero at times, a poltroon at others, an egotist always. The crowning effort of the Clean Heart is quite modern—so modern that it might naturally seem the effort of a very dirty heart—namely, to appropriate as his mistress a village girl, who is the life of her parents and who loves him devotedly, after allowing her to think he means her to be his wife. When she piteously refuses, he insults her grossly, and almost immediately after is so clumsy as to let her fall over a cliff and break her back. He is so overwhelmed with grief at this, and with the sense of his unworthiness, that he runs away at once without finding out whether she is going to live or die. Finale—a year later, the girl in a bath chair, crippled for life, and the literary gentleman with the clean heart fawning upon her, forgiven, and secretly satisfied with himself. Have we just spoken of the Anglo-American as little tolerant of the unwholesome and mawkish in fiction? He has endured quite enough of it in later years. It may be that these days of national storm will clear our air of these vapors also.

DISCUSSIONS OF SOCIAL, ECONOMIC, AND SPIRITUAL PROBLEMS.

In Eugen Loewenstein's "Nervöse Leute" (Leipzig: Kurt Wolff) it is rightly stated that nervousness is no longer a subject of medical research only, but an important trait of modern life which extends far beyond the professional field of vision. Loewenstein, who admits that his book was suggested by Dr. Alfred Adler's work, "Ueber den nervösen Charakter," bases his conclusions upon what he calls the nervous temperament's consciousness of inferiority. The normal type is one that is habitually in a state of repose, the nervous is always on the alert. The nervous man or woman is conscious of an uncertainty or indecision which hampers action, but which he tries to hide by over-exertion and over-assertion of his will. The normal type has a free outlook on all sides; the nervous is surrounded by blind alleys. Frequent allusions to the principle of substitution, the unconscious exchange of motives, prove the influence of Dr. Freud upon the author. There is also a chapter upon the dream, in which he quotes the old German satirist Lichtenberg, who, in his polemics against the physiognomist Lavater, said: "Wenn Leute ihre Träume aufrichtig erzählen wollten, so liesse sich der Charakter daraus eher erraten, als aus dem Gesicht."

Eberhard Zschimmer, the author of "Philosophie der Technik" (Jena: Eugen Diederichs), has been a worker in the technical field for many years, and during his connection with the famous glass-works of Jena not only made improvements upon optical instruments, but found time to theorize and philosophize about what is, in his words, "without much thought" comprised under the one term "die Technik." The spirit of the book is sometimes aggressively critical, but Herr Zschimmer is a man who sees and surveys his subject from within,

as one initiated into its manifold practical manifestations. He suggests his conception of "Technik" when he says of the inventor that he not only finds means to accomplish certain purposes, but that he works upon no other foundation than nature itself, which he attempts to master by creating "new possibilities to make nature run its course according to our desire."

Herr Zschimmer's acrid criticism is directed primarily against those who assert that the technical processes upon which our modern industrialism prides itself are a menace to the individual worker, because they have the tendency to depersonalize and dehumanize labor. Zschimmer says, on the contrary, that just as machines have taken from the laborer the burden of the hardest physical labor and are unburdening him more and more in that respect, so the new technical progress will in the end free man from all labor that tends towards mental deterioration.

In the latter part of his book Herr Zschimmer calls attention to the achievements resulting from a coöperation of practical industry and nature science, as that of the physicist Siemens and the mechanician Halske in the electrical field and of the physicist Abbe and the optician and mechanician Zeiss. He says that the technical tendency to-day is no longer limited to experimental research, but that it extends to the abstract sciences, and emphasizes the great difference between university professors that invent field-glasses, etc., and those "harmless idealists" who formerly were regarded as types of the German schoolmaster. Herr Zschimmer is especially bitter in his denunciation of "pessimists" who, like the admirable essayist, Victor Auburtin, see in the mechanization of our life through technical processes the doom of art. He also resents the fear of Rathenau and others, that technical progress makes for uniformity as against individualtiy and threatens the world with a spectre of equality. Zschimmer, on the contrary, hails it as a factor of democracy.

The library of sociological culture inaugurated by Eugen Diederichs, of Jena, has been enriched by an important monograph on the work of the Salvation Army. The author is Dr. P. A. Clasen, and the title reads: "Der Salutismus. Eine socialwissenschaftliche Monographie über General Booth und seine Heilsarmee." The author is a social worker, whose first acquaintance with the Salvation Army dates from the time when he was studying the social academic movement in Germany and stopped at one of the Salvation Army's lodging houses for men. That the work was compiled in no partisan spirit, but in the desire to treat the Salvation Army as one of the manifestations of an awakened social conscience and to rank it with other attempts at social service, is evident from the methodical arrangement of the material, the bibliography of 242 books and pamphlets pro and con in English, German, and French, the statistical tables, and the general tone of the work. He calls the nineteenth century the age of a new technical and economic order with a new science inevitably following in its wake: social research. The first part of the book deals with the organization, religion, and history of the Salvation Army and closes with a survey of its work the world over, the countries being given in the order in which they opened their doors to the institution.

The second part deals with the Salvation Army as a social phenomenon and with the personalities and the work of its leaders. The third is devoted to the social activity, and after a judicious review of the "Darkest England" scheme, gives an account of its work in the cities, of its farm colonies, and of its transatlantic ventures.

The monograph by Dr. Oscar Bie, "Der Tanz als Kunstwerk," was long ago followed by a more comprehensive volume by the same author, and last winter another sumptuously illustrated work appeared by Hans Brandenburg, the Munich poet and critic. Now a German professor has surveyed the whole field of hygienic physical culture from the pedagogical standpoint, and has produced a book which is of the greatest value to parents and educators who would familiarize themselves with the various methods now taught in Europe. Prof. Fritz Winther's "Körperbildung als Kunst und Pflicht" (München: Delphin-Verlag), is dedicated to President Wheeler of the State University of California. He approaches his subject from the standpoint of the German concerned about the menacing physical degeneration of his race; but the conclusions he draws from his comprehensive survey of all that is being done for the physical culture of the people in England and in America, and by individual teachers and schools throughout Germany, are applicable to the people of all countries. He justly emphasizes the fact that a system of physical culture based on hygiene alone cannot have permanent interest, and makes a point of bringing out the relation of physical culture to art, psychology, philosophy, and social life. He condemns the American custom of making business out of sport: instead of twenty experts performing for twenty thousand spectators, he would like to see sport socialized into a performance of the masses themselves. On the other hand, he admits that the British and American example has greatly stimulated the Germans' growing interest in outdoor exercise, as every visitor to Germany will see, from the increasing number of tennis courts and the vim with which both sexes, but especially women and girls, go in for this chance of acquiring strength and suppleness which their forebears did not possess. But the greatest value of Professor Winther's work rests upon his review of the numerous attempts that are being made in Germany to introduce systems of physical culture at once hygienic and æsthetic; his description of the schools of Elizabeth Duncan and of Dalcroze, of the work of Laban de Varaljas in Munich and Ascona, of the Seminar at Cassel, the municipal enterprises of Mannheim, etc.

A unique bit of autobiography is contained in the book which Switzerland's greatest poet of the present, Carl Spitteler, calls "Meine frühesten Erlebnisse" (Jena: Eugen Diederichs). Recollections of earliest childhood are so rare that comparison with Pierre Loti's famous book is inevitable. But what a difference of racial temperament and of individual character it suggests—and with all that difference, what curious coincidences! The one follows the lure of that mysterious voice which surges and roars and murmurs in the distance—the sea; the other is fascinated by a modest little brook in the heart of Basel, and lost in the tortuous maze of its little alleys. But the imprint of the experience upon the brain of the child, the first realization of being alone, remote from kindly care—how alike these are! Spitteler's memories go back to the first year of his life. They are little more than dreams:

Im Anfang ist der Schlaf, lehrt tausendjährige Beobachtung. Im Anfang war der Traum, ergänzt meine Erinnerung. Und kein Traum war jemals der erste, selbst der älteste besann sich auf einen Vorgänger.

That introductory chapter about the dream-world of the child is a remarkable specimen of Spitteler's insight. It proves him also a master of poetic prose. He never poses as a poet: he always is one; and when he unrolls the films of his memory, the dream-like impressions of his childhood, he gives his readers poem upon poem of entrancing delicacy and simplicity. Here is the opening paragraph of the chapter entitled Grossmutter:

Tag und Nacht, immer von neuem Tag und Nacht—wozu? Auf allen Seiten ungeheuerliche Dinge, die einen nichts angehen—wofür? Doch aus dem wüsten Wirrsal taucht zu Zeiten ein holdes Gesicht, und so oft das Gesicht nahe kommt, wird einem wohl. Jetzt braucht man nicht mehr zu wissen, warum, fragt überhaupt nicht mehr nach etwas anderem. Dieses Gesicht wurde mir lieb, und mit der Zeit, als ich anfing, Worte zu verstehen und nachzulallen, lehrte man mich seinen Namen: "Grossmutter."

The child left alone dreams—poems. But there is the reverse of the medal: the erroneous idea of nurse-girls and other persons in charge of children that children have to be amused. There are visits of relatives identified in the child's mind with the gifts they bring; there are the first impressions of a world outside of the native town, little journeys to Basel or Berne, each leaving some one vivid image which becomes the symbol of the place; finally, in his fourth year, there is the removal of the family to Berne and the child's first experience of homesickness. To the general reader a remarkable document of child-life, these recollections of Spitteler are of double value to the reader familiar with his works. For the connection between his life and his work is close; half a century later those dreams of his childhood were woven into the "Extramundana" and other poetical works which have given him a permanent place in the German literature of the present.

Poetry

A POET OF THE ELDER FRANCE.

LAUSANNE, September 27.

A French poet, past middle age, for he was born in the first days of 1843, whose work leaps over to the sympathies of the latest French youth in their return to the past of their race, obliterating the wrangling systems and technicalities of those who are still, but wrongly, known abroad as Young France—such is Charles de Pomairols. In like wise, some day the youngest English and Americans who shall still read poetry will go back to Tennyson and Longfellow, and, further, to the Wordsworth who copied Cowper's "Task." It is curious how the sentiment of Charles de Pomairols's verse calls us back to Cowper's lines to his mother's picture, with as lofty an inspiration and more perfect form. The sorrow of a lifetime has thrown its shadow on the poetry of the Frenchman also. Feelings are disclosed which unseeing English tradition refuses to associate with what even Emerson thought was

France where poet never grew!

It was left unnoticed that Chateaubriand rose once to poetry—

Combien j'ai douce souvenance—

there where Tom Hood long after remembered, remembered

The house where I was born.

It is such depths of intimate love, carefully hidden from outsiders, which have always been at the foundation of the human community in France. Maurice Barrès is far younger than Charles de Pomairols and has played his part in notorious movements of the Young France of his time; but for years he, too, has devoted all the magic of his language to calling Frenchmen back to themselves; and, in a loving preface, he has given to his elder a very true title. For him Charles de Pomairols is "the Poet of the Hearth," of the *foyer*, that mystic French word which replaces "home" by adding to it the intimate notion of "family" and excluding from it all who have no rightful belonging in that inmost shrine.

From 1879 to 1904, Charles de Pomairols published five books of verse and was twice crowned by the French Academy, which also distinguished his prose studies of Lamartine—and all this again is of the Elder France. This year 300 pages of a selection of the poems have been published and have already reached a second edition. Maurice Barrès explains how this ancient among living poets has become their youngest in spirit.

. . . (In the French village) the château as the peasants call it is often a very modest dwelling; but it is the antique dwelling of leisure and hemmed in by ancient trees. Under its clinging ivy it is beginning to crumble. It has ceased to be a deciding factor in the village life. Politically, it is vanquished. But it still represents the refinement and delicacy—a whole group of ideas—on which France has lived for long generations. . . . Here breathes domestic and religious poetry. . . . Here is the conservatory of a sentiment of life and of a sum of habits and manners which are properly French. Here lived Eugénie de Guérin. Hence George Sand made her escape. In such a house M. de Pomairols was born. Its moral qualities he inherited, and he has expressed them in their least shades.

It was in provincial and meridional Rouergue that Charles de Pomairols was born. He drew classic tradition from a church college of his countryside and worldly learning from the State College of Toulouse—and then he drifted into poetry, as he tells us:

The last year I was bitten by philosophic curiosity and it pursued me all my youth and even led me to Germany. There I passed 1867 listening to the courses of different universities. Returning home, I married a young girl of my country; she was of a family of landowners like my own. The sentimental life blossomed out in me and my powerlessness to find the solution of metaphysical problems cast me into poetry. It was a belated entrance into art, for I had passed my thirtieth year; and it was an enchantment for me. . . . Unluckily, long habit of analysis had ill prepared me for poetic speech and—during my apprenticeship, which was ill done in the country, without guide or counsel—I did wrong to publish two books of verse in form too prosaic and deficient. Then the needs of my children's education and also a growing literary vocation brought me to Paris. There I became acquainted with Sully Prudhomme. Coppée, Heredia, Bourget. Their nearer example and their counsels made me understand, better than before, the rules of our art.

So here was our middle-aged poet adding to the melody of his native woodnotes new harmonies of the Parnassian school of the times. Leconte de Lisle, who was still a master of many, felt his Olympian serenity disturbed by one of Pomairols's titles—"the poetry of property"—and he smiled at the line—

Very great honor 'tis to own a field.

He was more respectful as he read forward in the grave poem on an old country, "The Romans in my Field," celebrating ancestors and heroes in the ages of a farm. Wordsworth, beside a stream once visited, could sing:

. . . I know, where'er I go,
Thy genuine image, Yarrow!
Will dwell with me, to heighten joy
And cheer my mind in sorrow.

Pomairols has become a part of his ancestral "Rivière":

Restless, my soul with agitated sense
By my slow river loves to pause and dream:
. . . . . .
I am so one with it, too near its flow,
That now I cannot walk but where it leads.

It has led the poet to a conception of his art which overturns all English ideas of the French:

In the pictures of poets who are true artists—for example, in the works of Leconte de Lisle or Heredia—I do not believe you will find a single carnal feature. . . . Leconte de Lisle liked to say that *la volupté* was not a subject for literature.

While Maurice Barrès makes his reserves about this "repugnance to total life, this something like disgust which is only too justified," he frankly avows:

In the spiritualized world whither M. de Pomairols draws us onward, we feel a sort of delicate, bare, choice joy. Freed from the brutal burden, we find ourselves in a finer medium bathing in thin transparence. . . . Other poets, with magnificence, build us castles in Spain; Pomairols represents for us the ideal life of old country homes. . . . He has not gathered all there is in the old provincial house—it has more blood and daring than he perhaps imagines. But, better than any other, he sings a tradition which comes to us from the depths of Celtic ages, a tradition which is our glory—infinite attraction for all that is pure, virgin, childlike, intact in nature.

So Charles de Pomairols sings the days and nights of the French family, of which it has been said that the man in it—all his life long—is the willing slave of one of the three women, mother, wife, or daughter. The untimely death of his daughter at thirteen forced from the poet his last volume, "Pour l'Enfant":

Thou hast been humbled amid all thy mates.
. . . Oh! what can I do
To make up to these thy fate so stern,
To draw to thee the kind and loving looks
Which, unjust, now turn but to those who live,
To win for thee that place of light and love
Where hearts shall see thee rise in all thy grace?

This "ideal reparation," as Maurice Barrès calls it—this "illusion which he gives himself of prolonging for him and his dead child the life which was cut short before its time," as Paul Bourget says—has produced a sequence of elegiac verse unexampled except for Tennyson's "In Memoriam."

In these last years, since he has ceased to publish his poems, this "spiritual" emphasis has grown yet more imperative in the life of Charles de Pomairols. It is not probable that many more than the fit will commonly read his hyper-ethereal verse, even for the exquisite words and music of it. During the already forgotten days of Symbolists and Décadents and the rest, his verse was not read at all—perhaps because it is so sincerely and gracefully French. And now, writers who have aspired to lead that divided, unguided youth of so near yet far a past, will doubtless toss aside his new editions as another instance of what Max Nordau, who is neither French nor a critic, brands as reviving clericalism. Yet it is only at the end that the positive religious strain is heard. Charles de Pomairols has written two lines which, in their adequate expression of pure human emotion, reach further depths than Victor Hugo's

Oh! I have seen young maidens die.

The two lines, of unequalled music in their simple French, are the poet and father's first grief at the "Abyss," which is death:

L'enfant qui sourlait en me donnant la main,
Je l'ai perdu, je l'ai perdu sur le chemin!

S. D.

News for Bibliophiles

OLD WARWICKSHIRE MORRIS DANCES AND SONGS.

The account and songs which follow were recently given me in Stratford-on-Avon by a Warwickshire workingman, who in his youth wandered about much in the country near Stratford, and is steeped in its lore and customs. He tells me that about forty-five years ago, when he was a boy, the nine men's morris dances with the hobby-horse feature were still given spontaneously by the people of his neighborhood. These village celebrations of the primitive sort were of course quite apart from the imitations and revivals which have more recently resulted from the interest of scholars and artists.

They are abandoned now in the immediate neighborhood of Stratford, as in most parts of England apparently, but he reports that not very far away, in Ilmington, Bidford, Sawford, and Pibbath, the custom still holds to some extent, and that the leader of one of the main groups of morris dancers is an old man past seventy years of age. These bands of morris men still keep to their old custom of dancing in front of gentlemen's houses and public houses in these sections, he thinks, but he seemed to have no detailed acquaintance with them and drew all the material which he gave me from the entertainments with which he had been familiar as a boy. The nine morris men were dressed, he says, in smocks, top hats, knee breeches with bells at their knees, and ribbons crossed on their legs and arms. They had always with them a clown dressed grotesquely to represent a hobby-horse, with a horse's head in wood projecting above his own, an oval-shaped clothes basket for his body, and a tail projecting from the back. He carried a big stick with a pig's bladder at the end of it, and ran in and out of the crowd to keep them back while the morris men danced, to the music of a fiddle. This precaution was partly necessary because of the popularity of the dancers with all classes. The morris men stood and danced in a circle. Their besom dance is described by my narrator as the drawing of handkerchiefs under the knees and throwing them over the heads, with this additional comment: "And so, clap hands and shake." Several of the songs which I quote from him below give suggestions as to other movements in the dance:

Nine men in a eirele dost stand,
Each one ready to elasp in hand,
With a merry step forth, with a bend in the knee,
They'll trot merrily and jig, jig, jig.
The fiddler will be there to keep them in tune,
Dancing from morning to the light of the moon,
And when the moon's gone to bed, still dancing they'll go
From ten o'elock, twelve o'eloek, two o'elock, four o'clock, on with the show.
Never think of tiring, stopping? Oh, no!
Such a thing cannot be.
Whirl the morris daneers. Display the show,
To the merriment of others, in the games to see
What jolly fellows we morris dancers be.
To amuse, not abuse, witb simple musie, we don't offend
If a little we extract
From the poekets
Of gentlemen and ladies gay,
Who will help the piper pay
And to call what tune they like.
Well, we'll wait and smoke our pipe,
Then the danee will fresh begin,
With Sam and Bill, Tom and Ben,
And Jim and Dick, Charley and Harry and George,
And don't forget, to plesse you all,
Our hobby-horse though stout and small
Is round diaplayed with many a bumper.
If a drop of aaek our mouths to wash out,
Then we'll show the long shout,
Heigh—i—O.
Hieketty—O.
Don't tumble over, but keep go O.

. . . . . .

We nine men, bold and sonnd
We'll amuse you, round yonr town.
Merrily we jig it, happy and gay,
In our dancing blithe and gay.
Heigh—O, away we go,
With onr gallant hobby-horse we cnt this show,
Heigh down, derry a day,
Jolly old farmers have earried their hay,
We morris daneers blithe and gay,
Heigh down, derry-a-day!

Come folks long and tall,
And gladsome girls, get lief to-day,
From your dads, daneing gay,
No matter how long out you atay,
If you danee the night away
Know your limbs so tired may get,
Happy and merry, I'll baek yon be,
Dancing around the greenwood tree.

Now bold Robin Hood was a forster good,
Who ever drew a bow in the merry greenwood,
And the wild deers he followed; there's none
So bonny, blithe, and gay as Marion,
Pride of the dale. Then in stepped little John
With a eourage so strong
To conquer them all in a by ding dong,
And the bugle horn did eebo,
Did eebo, did echo.

When good King Henry ruled the land
A noble King was he,
They used to make bag puddings,
And the lumps of suet as they'd put in,
Was big as my two tbumbs,
And what they didn't eat that day,
Next morning they ate up fried,
And the noble lord stood by.

Heigh!
Heigh! Heigh-o!
Don't you know
Little dog burned his tail,
And he's got to be bung to-morrow.

A stiek and a stake,
For King George's sake.
I pray thee old dame
Give us a faggot or two,
And if not, we'll take two
As us used to do.

O. L. Hatcher.

Correspondence

THE METAPHOR OF THE IRON RING.

To the Editor of The Nation:

Sir: With the correspondence between Gerhart Hauptmann and Romain Rolland your readers are doubtless familiar, yet one or two phases of this counterplay of two elect minds deserves emphasis. Hauptmann, it will be recalled, first wrote to Rolland protesting against the application by France of the epithet barbarian to Germany. Rolland very handsomely disavowed the word for himself and intellectual France, but challenged Hauptmann, as representing the noblest sentiment of Germany, to clear her of reproach or misunderstanding by condemning the needless havoc wrought on prostrate Belgium. The retort of the author of "Die Versunkene Glocke" was a forthright one. Romain Rolland was merely a coward, pleading for Belgium to-day because fearing a like fate for France to-morrow. So, probably, the incident is closed, for Hauptmann's brutal taunt merits no notice.

The incident, then, is closed, save for the verdict of the men of letters of the world. As a very obscure member of that craft, yet one jealous of the dignity of his calling, I wish to ask how a poet and idealist can for a moment mistake a splendid *élan* of compassion for a stricken people for physical fear. The sensitive poet, Gerhart Hauptmann, would seem incapable of such a misreading of motives, and suddenly the war turns him into a *miles gloriosus*. His case is not single. Almost without exception, the best minds of Germany have championed their Fatherland merely by reckless imputations against her foes. They speak the words of angry men, of angry men of very common type. We meet the anomaly that as Germany mounts her tragic Calvary, she storms and mutters through her ablest mouths with the manners and phrases of a defiant criminal, faces her ordeal with shrunken and diminished soul. It is as if her mind were clouded by a rage, so that she can no longer creditably express herself before the court of civilization. Bewildered observers of the bankruptcy of her higher capacity at her hour of utmost need can only lay the strange phenomenon to the inherent weakness of her cause. The advocate rather quickly sinks to the level of the cause he espouses.

The only approach to a rational apology for Germany's course offered by Gerhart Hauptmann was a metaphor, which, since he used it twice, must be a favorite with him. Germany was encompassed by an iron ring which threatened to crush her chest, the chest has swelled at last, and the iron ring is shattered. The figure of an unfairly trammelled titan struggling for the right to breathe is calculated to win sympathy. But as a writer I have found it prudent to accept no figure of speech until I have also considered the fact signified. What is the fact in this case?

Germany, whose territory has been steadily increased for two generations, whose science and commerce have been brilliantly successful, finds herself here and there incommoded by her neighbors. For in simple prose the iron ring is merely so many nations, many with a right in the sun historically antedating that of the German Empire, each with its own legitimate ideals of growth each with a civilization precious to itself and valuable to the world. In such a situation there will be clashes, but there is compensation in positive relations of helpfulness, admiration, and mutual interest. Thus interpreted, the iron ring becomes simply a false metaphor. Every nation and every individual might be said as truly to be cramped within an iron ring. It is the normal human state. The right which Hauptmann asserts to burst the iron ring is simply the right to destroy these surrounding nations and slaughter their people. It is not only an inhuman doctrine, but also a bad metaphor, for the ring, like all things human, is infinitely flexible, and the national, as the individual, duty is one of adjustment to the encompassing ring, here giving, there taking, as reason dictates.

Now mark the awful potency of false thinking. Persist long enough in a monstrous delusion, and you may make it a dire fact. Through falsely thinking she was straining against an iron ring, Germany to-day finds herself no longer figuratively but quite literally in that plight. Truly an iron ring is closing about her chest, her breath is already shortened, her very life perhaps measured. Frank Jewett Mather, Jr.

Princeton, N. J., October 9.

PERPLEXITIES OF A BRITISH LOVER OF AMERICA.

To the Editor of The Nation:

Sir: Before me, as I write, lies a weighty document to which one of the signatories is the United States of America. It embodies the results of the Hague Conferences of 1899 and 1907. One section of this paper (Convention Concerning the Laws and Customs of War on Land) consists of a recitation of the practices which the signers solemnly undertake to abstain from in the prosecution of a war. Among the provisions in this code are the following:

Undefended towns shall not be bombarded (Article 25; also Article 1 of Naval Code).

Pillage is expressly prohibited (Arts. 28 and 47).

Illegal contributions must not be levied (Arts. 49 and 52).

Militia and volunteer corps enjoy the rights of belligerents (Art. 1).

The seizure of funds belonging to private persons or local authorities is prohibited (Arts. 46, 53, and 56).

Collective penalties for individual acts are forbidden (Art. 50).

Every effort must be made to spare buildings dedicated to public worship, art, science, or charitable purposes (Art. 56).

The terrorization of a country by outrages on its civilian population is forbidden (Art. 46).

It is forbidden to make improper use of a flag of truce, of the national flag, of the military insignia and uniform of the enemy, or of the distinctive signs of the Geneva Convention (Art. 23); and it is forbidden to kill or mutilate the wounded, or to kill and wound by treachery (Art. 23).

The weight of evidence that Germany has flagrantly violated most of these regulations is overwhelming, even if we omit those in the last paragraph as difficult to prove and peculiarly liable to exaggeration.

The question, then, seems to arise obviously and inevitably: What is the position in these circumstances of the other signatories to the code?

The United States of America was not one of the guarantors of the neutrality of Belgium. Hence, whatever may have been the feelings of its citizens, it was not, as a nation or government, legally called on to interfere. True, the action of Germany was a direct attack on the principles of liberty and independent nationality, of which the United States of America is rightly considered as one of the greatest protagonists. But it may be granted that civilization has not yet progressed so far that intervention on a purely ideal ground can be held to be a matter of practical politics—even for a country with 90,000,000 inhabitants, and wealth beyond the dreams of avarice.

But unless the "scrap of paper" theory is to be applied indiscriminately to all contracts and treaties between nations, what is the exact value or meaning of the signatures of other Powers, including the United States, to the decisions of the Hague Conference? Do they mean only a promise that the signatory will itself observe those decisions? Or do they go further, and involve the obligation that each signatory state shall, so far as lies in its power, enforce the observance on any signatory that violates them? It cannot be maintained that such an obligation goes so far as to involve undertaking war for the purpose of enforcing observance, but surely it involves *some* effort to procure it? Can a great nation afford to put its name to a document, and then stand by in icy neutrality while that document is being torn to shreds by another of the high contracting parties? Is the conduct of Germany in this regard really as much a matter of indifference to the United States of America as to China or Abyssinia? It is obvious that the signature of Germany is worthless, and that the signature of Great Britain is being honored. But has, or has not, the value of that of the United States of America been somewhat impaired? Germany's word was given to America as much as to England. Can America, then, consonantly with its dignity and honor, allow Germany to snap its fingers at her, and say, "Well, what are you going to do about it"?

Is it the hopeless delusion of a directly interested party that makes me see this war as different from almost every other war in history? Is it, or is it not, the case that this struggle is not merely between one group of nations and another, but between the attackers and the defenders of civilization as hitherto understood? Even the warfare of Napoleon began as a continuation of that defence of national liberty which animated the first resistance of the French Republic to foreign dictation; and it was only by gradual stages that it came to mean the glutting of personal and selfish ambition. Napoleon gave lip-homage, at least, to the doctrine of liberty; but the cynical frankness of Germany has removed all possibility of misunderstanding, and has made the issue clear from the very beginning. We may admit that the instinct of self-preservation is mingled with England's sense of national honor in this great crisis; but we have also to admit that it was the need of the little country, Belgium, that put England's decision beyond the peradventure of a doubt, and made it immediate and (in the gravest and deepest sense) "popular."

Need we attach too much importance to the Russian bugbear? Have we any reason to expect anything worse from Russian "barbarity" than we have already experienced from German "culture"? Is not the recent story of Belgium one of the most appalling pages in human history—perhaps the most appalling of all? And is not the German plea of provocation precluded by the fact that the Germans themselves had no legitimate belligerent rights in Belgium, but were there as pirates or burglars? Russia, too, is surely on the upward grade, whereas Germany seems to be revealing the fruits of the acme of her civilization. Is not this civilization the perfection of intellectualism and materialism, with the spiritual and moral element almost wholly omitted from international relations? And does not this omission involve a state of never-ending war? Unfortunately for the Germans, this attitude has led them to ignore utterly the soul of the British people. Accustomed themselves to work on a carefully organized system, with every detail pigeon-holed and every logical contingency provided for, they seem to have been totally unprepared for a spontaneous outburst in response to an urgent call, and for the immediate creation of the machinery demanded by the crisis.

I prefer to say nothing about America's own eventual danger should Germany prove successful. Brazil and the Monroe Doctrine are not at present in the limelight. I refuse, too, to believe that the heart of the great American people is adequately represented by the somewhat pettifogging sentence from Mr. Champ Clark's speech quoted in the *Times* of September 22 ("We are here to-night in an effort to encourage peace-making in the Old World, partly out of motives of humanity, but largely because we do not want to be injured"). I simply ask whether this is, in the last analysis, a warfare for ideals, and if these are the ideals of the United States of America, what should be its attitude? Should it be, must it be, that of a neutral, equally friendly to both parties and waiting quietly for the chance to insinuate proposals of peace—to be made, according to Mr. Clark, from materially interested motives? Is not the necessity of the case something wider and deeper than can be met by an ordinary peace based on comparatively unimportant mutual concessions? Is it not inevitably a fight to a finish, and is not the United States of America enormously interested in having that "finish" in one way only?

We cherish the hope that the Allies will need no material assistance from the United States of America in achieving their ends. Those of us, however, who love America must pray that she will definitely declare herself on the side of popular liberty, if for nothing else than for the preservation of the full measure of our love and admiration.

MONTAIGNE ON WAR.

To the Editor of The Nation:

Sir: Mr. Gamaliel Bradford's citation from Shakespeare in the *Nation* of October 1 reminds a reader of Montaigne of the following passage in his essay, "De la Praesumption":

Et ne fut jamais temps et lieu où il y eust pour les princes loyer plus certain et plus grand proposé à la bonté et à la justice. Le premier qui s'avisera de se pousser en faveur et en crédit par cette voye là, je suis bien deceu si à bon conte il ne dévance ses compaignons. La force, la violence peuvent quelque chose, mais non pas toujours tout (1588).

"PRUSSIANISM" AND WHAT-NOT.

To the Editor of The Nation:

Sir: The letter of your correspondent, Frank Jewett Mather, jr., in your issue of September 24, is most unfair in its strictures on Prussia and "Prussian militarism." If anything is clear in this war, it is that your correspondent's "liberal, intelligent, and kindly Brunswickers, Hanoverians, Saxons," etc., are one heart and one soul with his "arrogant Prussians" in backing this war and in standing behind the Emperor. A somewhat more eminent authority than your correspondent—the late Thomas Carlyle—had a quite different opinion of Prussia and of the wonderful family of Hohenzollern, to which Prussia, and through it Germany, owes its greatness. A perusal of the introductory chapters to Carlyle's "Life of Frederick the Great" is strongly recommended to your correspondent and to those holding similar views.

I defy your correspondent, in the entire line of Prussian monarchs, to point out a royal Bluebeard like Henry VIII, a Mary with the historical epithet "Bloody," an enthroned demi-virgin like Elizabeth, and a Lothario gay (until grown gray) like the Paris-loving predecessor of the present King of England. The Prussian monarchs—since 1640, when the first prëminent Hohenzollern, Frederick William the Great Elector, mounted the throne—are all paragons of excellence compared with monarchs of the Allies, with Russia's imperial harlots, Catherine and Elizabeth, France's profligates, Louis XIII, XIV, and XV, and Belgium's malodorous King "Cleopold."

It is hardly necessary to dwell on the fact

that, both as regards Prussia and as regards the danger of "Slavic peril" in the event of Russian domination on the Continent of Europe, your correspondent's opinion is utterly at variance with that of the learned dean of the School of Political Science at Columbia, Prof. John W. Burgess, and of the eminent historian, Prof. William N. Sloane.

THE WAR AND SOCIALISM.

To the Editor of The Nation:

SIR: Dismayed by the unmistakable collapse of the German Socialist party's fabric of theory, thinking Socialists of the United States and elsewhere have been forced to note this monumental object-lesson and inquire into the causes of what is to them so striking a disaster to their cherished hopes. Undeniably, there is throughout the Socialist ranks an extraordinary state of trepidation over the unexpected development.

To understand the extent of the consternation, it is only necessary to point out the acclamation given generally to the German Socialist party before the outbreak of the present great European war. It was the first party of the sort ever established. It was religiously accepted by the Socialist parties of many other countries as the great model, and its methods and tactics were imitated and emulated. It had the largest and most unified organization of any Socialist party in the world. And with such phenomenal steadiness had its enrolment, voting strength, and Parliamentary representation grown, that comparatively few Socialists anywhere doubted the soundness of its theory.

This was the party that proclaimed its mission to be that of emancipating the working class from the thraldom of capitalism. This was the party that so persistently avowed its unrelenting opposition to brute force, and, especially, to militarism. It vociferously denounced wars as the products of capitalist aims, and declared that it would never, no, never, lend itself to any scheme of the ruling clique whereby the workers of one country were called upon to butcher the workers of another.

Keen observers noted that it avoided formulating any definite plan by which war could be effectively averted. But when this defect was pointed out, the leaders replied by a new avalanche of assertion. Had they not the most compactly disciplined and completely ruled organization in the world? Their iron discipline could be depended upon. Moreover, the real way to abolish war, so they sanguinely proclaimed, was by the force of exposure and denunciation of its purposes. And so their presses emitted vast quantities of books, pamphlets, magazines, and newspapers, and they had, at the same time, an extensive staff of paid organizers, speakers, and lecturers. Patriotism, they argued, was a relic of tribal days, skilfully kept alive by an intriguing ruling class for its ulterior profit and aggrandizement.

But behold! in a twinkling the whole elaborate structure of theory has been proved a colossal pretension, a monstrous self-deception. The mother organization precipitately did the very thing that it had so long and so aggressively vowed that it would never do. It supported war. It voted for the war budget. Its newspapers printed patriotic articles. Its men adherents (comprising, it is reckoned, one-fifth of the German army), instantly obeyed military orders, and forthwith went out to shoot and be shot. Its accredited delegates, sent on a special mission, sought to induce the Italian Socialists to influence Italy to coöperate indirectly with Germany; they were spurned and contemptuously denounced.

During the French Revolution members of the National Assembly unflinchingly went to the guillotine for their convictions, yet not a single German Socialist leader, so far as is known, invited death by refusing to go to war, or by counselling others not to do so. And if their own theory is right that wars are of capitalist manufacture, then the only end of the formidable German Socialist organization has been to fight for the very capitalist interests that it vaunted it was organized to crush!

But this ghastly mockery is not unexplainable. In method, the German Socialist party was organized on Prussian lines, with a suspicious resemblance to Prussian military formation. The carefully inculcated Prussian ideal of a rigid obedience to constituted authority and a practical suppression of criticism was imitated by the German Socialist party. The consequence was the discouragement and virtual penalizing of a critical attitude and individual thought on the part of the mass of membership, and the development of a cult and bureaucracy whose dogma and edicts were not to be questioned. With the typically Prussian habit of obedience to authorized committees so strongly intrenched, the whole German Socialist party acquiesced in the decision of the majority of its august Parliamentary leaders and its Executive Committee to support the war.

Parenthetically, it may be said that the Socialist party in the United States is established on the same lines of Prussian discipline, having been founded by Germans in the United States, and long influenced by resident Germans. Equally so, the only Socialist writings long used by the Socialists in the United States were the German works either in their original form or paraphrased by natives of the most mediocre ability. Consequently, we have seen the authorized committees of the American Socialist party degenerate into mere drummers for the organization machine; and to insure their "party discipline" we have seen them indirectly or formally boycott and blacklist Socialist magazines presuming to criticise party tactics; independent Socialist writers and speakers have virtually been proscribed by Socialist officialdom, and many members suspended or expelled in "heresy hunts" usually cloaked under some pretext.

As the German Socialist organization grew and prospered, pomp and dogma supplanted spirit at the expense of character. It could profess to have numbers, resources, political power, prestige, but it lacked genuine character. Materialist to the core, it necessarily placed no valuation upon spiritual qualities of which character is one great manifestation. It increasingly moved in a loquacious and hard-set world of theories and phraseology, extolling its machine and its numbers, caring nothing for the soul of things, and priding itself with being able to explain every human impulse, aspiration, and movement—in short, all of the phenomena of mankind—by a hard-and-fast economic doctrine. And what has been true of the German Socialist party has been generally true of some other Socialist parties.

Already Socialist politicians in the United States are giving out plausible explanations and justifications for the course of the German Socialist party. Is it not a significant characteristic that even after their theory of action has been so impressively proved to be a sham they continue to insist that it is right?

A FORMER MEMBER.

New York, October 12.

SYMPATHY FOR BELGIUM.

To the Editor of The Nation:

SIR: Distance necessarily dulls sympathy because it requires an effort of the imagination to picture what is not before the eye. It is for this reason, doubtless, that there has not been that immense manifestation of popular indignation against Germany for its treatment of Belgium and of sympathy for the unfortunate Belgians which would undoubtedly have been shown by Americans if they could have acutely realized the position of Belgium and its people.

Let any one picture to himself, say Maine or Connecticut, as an independent country, peaceful, prosperous, and happy, without political ambitions, with no desire to disturb its neighbors, and secured, as it thought, by a treaty to which its powerful neighbors were parties. Suddenly, one of these demands that this little country shall cease to be neutral, and when it refuses to depart from the peaceful position it occupies in Europe that powerful neighbor forthwith ravages it with sword and fire. Let any American living quietly in his home think what this means—homes destroyed, women and children sick wandering over the country. One knows how carefully, in these days, those who are ill are tended. What do Americans think of the old and the delicate fleeing from burning houses?

At this moment, I have in my house two Belgian young ladies who have had to fly from Belgium almost penniless, with nothing but a small package of clothes. Around the committee rooms in London you may see homeless peasant women and children, their husbands dead or fighting for their country. Yet we hear in this country of no great popular expressions of feeling in America. Diplomatic neutrality may be necessary, but this should not prevent that expression of sympathy or offers of help which would certainly be forthcoming in the United States if its citizens would put themselves mentally in the position of the inhabitants of the peaceful and once prosperous Belgium.

E. S. ROSCOE.

London, October 2.

A WANTONLY MISUSED WORD.

To the Editor of The Nation:

SIR: In the *Nation* for October 1, page 406, Elizabeth Waddell writes interestingly on the "Various Abuses of Words." May I ask her if she does not agree with me that the word "universal" is one of the most wantonly misused words in our language? I ask because in her letter she twice wantonly misuses this word and because I want to call general, not universal, attention to this wanton misuse of the word in the United States.

Literature

THE GOLDEN BOUGH: ANOTHER INSTALMENT.

Balder the Beautiful: The Fire Festivals of Europe and the Doctrine of the External Soul [being a part of the series called the Golden Bough]. By J. G. Frazer, D.C.L., Professor of Social Anthropology in the University of Liverpool. Two volumes. New York: The Macmillan Co.

In the preface to these volumes, which Mr. Frazer describes as the concluding part of that vast storehouse of custom, folk-lore, and primitive superstition which we have come to know as the Golden Bough series, the author makes three confessions which will not surprise those who, having studied the preceding volumes of the series, peruse this part also. One of these confessions is that the aim of the books has been and now is not to establish any theory or theories, but to present an immense multitude of facts out of which theories may hereafter be built up with a fuller confidence than is at this moment possible.

My contribution to the history of the human mind consists of little more than a purely provisional classification of facts gathered almost entirely from printed sources. In this, as in other branches of study, it is the fate of theories to be washed away like children's castles of sand by the rising tide of knowledge, and I am not so presumptuous as to expect or desire for mine an exemption from the common lot. I hold them all very lightly and have used them chiefly as convenient pegs on which to hang my collections of facts. For I believe that while theories are transitory a record of facts has a permanent value, and that as a chronicle of ancient customs and beliefs my book may retain its utility when my theories are as obsolete as the customs and beliefs themselves deserve to be.

The second confession is that the title of the original book which has now grown into a connected group of books, viz., "The Golden Bough," with its concomitant the Priest of the Grove at Nemi, who obtained his office by slaying his predecessor and was himself fated to be slain by another aspirant, is but a small part of the subject dealt with in these books. It is a particular problem of ancient mythology which has been used to introduce "questions of more general interest which concern the evolution of human thought from savagery to civilization." The author does not add, but we suspect the fact to be so, that his studies began from the Bough and the Priest, and that as he advanced from one parallel custom or legend or superstition to another, the whole panorama gradually unrolled itself before him. Lastly, he admits—and this is most to our present purpose—that the picturesque Scandinavian tale or myth of Balder, the beautiful and universally beloved deity who was killed by a piece of mistletoe thrown at him by the blind god Hodur, may have really nothing to do with the Priest of Nemi and his Bough, tempting as the similarity is, but may belong to a different order of conceptions. Anyhow, Balder plays but a small part in this book, which is occupied with a number of topics but faintly connected with his tale, and the relation of which with one another becomes clear only through our author's theories seeking to link them together.

The first volume, beginning with a chapter on the curious "tabu," which forbids certain priests and kings to touch the earth, proceeds to describe at great length the customs which require the seclusion of girls at the age of puberty, and then sets forth at still greater length the numerous modes of holding fire festivals, sometimes in Lent, sometimes on May Day, sometimes in the autumn, more frequently at Halloween, but most often at midsummer. The second volume carries on the inquiry by examining the ceremonies of burning men or animals as a sacrificial rite, or passing them through flame and smoke, or setting fire to images representing them. Then we pass to what is the most curious part of the whole subject, the belief in the existence of a principle of life which dwells outside the body and is usually kept for safety in some secure spot where no one would be likely to find and destroy it. This is what our author calls the External Soul; and the numerous illustrations of the belief which he has collected from many sources present a striking picture of the forms which the thought of primitive man takes. That the soul, or vital principle, is separable from the body in lifetime as well as at death is a practically universal belief among uncivilized races, and appears in the legends and stories of many peoples as well as in their ceremonial usages; and some races, like the West African savages described by Miss Mary Kingsley, raise the number of souls to four.

There are many objects in which the external soul may have its residence. Perhaps the commonest is an animal, and in not a few countries a beast or bird of prey is preferred as the dwelling place, because the creature in which the soul resides becomes a sort of relative, or at least a friend and ally, of the human being, and as such can aid him by defending him or attacking his enemies. A leopard, a wolf, a serpent, are frequent homes for the external soul, less frequently an eagle or hawk or vulture. But the soul may dwell also in a tree or a plant. Our author tells of an ancient oak at Dalhousie, near Edinburgh, which was, as late as the year 1874, deemed by the older inhabitants of the place to be so connected with the family of the Earls of Dalhousie that the fall of a large branch from it was thought to announce, and was in fact immediately followed by, the death of the eleventh Earl. A still more instructive case is that of an ancient tree growing inside a private imperial garden within the Forbidden City at Peking, which was, as late as 1901, held to be the Life Tree of the Manchu dynasty, and was then in a dying state, despite all the care which the gardeners lavished upon it. The year 1912 saw the fall of the dynasty. In these cases the superstition had outlived the belief that the tree held the soul, but there are plenty of instances given in the book (chapter xi) to show what was the origin of the superstition.

So, too, the soul may reside in inanimate objects. He who fears for the safety of his soul will often deposit it in some remote and secret hiding place, in a box or a bag, as in one of the tales of the Arabian Nights. Seyf-el-Mulook finds and destroys the external soul of the jinnee who held captive the lady of his affections; whereupon the jinnee dies, and the lady is set free. This doctrine of the separable soul is of course connected with that of the were-wolf and with the power of human beings to transform themselves into animals, passing back at will into human shape. It is also intimately related, as our author points out, to Totemism, for the soul may dwell in the animal or object, which is the Totem, and in a sense the second personality, of the man or woman. This part of the treatise is one of the most interesting in these volumes, or, indeed, in the whole work, for it seems to admit one furthest into the thoughts of primitive man, and it has given rise to not a few picturesque tales. Its direct connection with the Golden Bough, that is, with the mistletoe, and with Balder, who was killed by the branch of mistletoe thrown innocently at him, appears in the notion that the mistletoe is the visible and external soul of the tree on which it grows as a parasite.

The idea that the life of the oak was in the mistletoe was probably suggested by the observation that in winter the mistletoe growing on the oak remains green while the oak itself is leafless. But the position of the plant, growing not from the ground, but from the trunk or branches of the tree, might confirm this idea. Primitive man might think that the Oak Spirit had, like himself, sought to deposit its life in some safe place, and for this purpose had pitched upon the mistletoe, which, being in a sense neither on earth nor in heaven, might be supposed to be fairly out of harm's way. "Primitive man seeks to preserve the life of his human divinities by keeping them poised between earth and heaven, as the place where they are least likely to be assailed by the dangers that encompass the life of man on earth" (Vol. II, p. 280).

In a striking passage at the close of the book, Dr. Frazer describes the progress of man's thought when we trace it down the ages from primitive times, as being an advance from magic to religion and from religion to science.

In magic man depends on his own strength to meet the difficulties and dangers that beset him on every side. He believes in a certain established order of nature which he can manipulate for his own ends. When he discovers his mistake and recognizes sadly that both the order of nature he had assumed and the control he had believed himself to exercise over it were purely imaginary, he ceases to rely on his own intelligence and his own unaided efforts, and throws himself on the mercy of certain great invisible beings behind the veil of nature, to whom he now ascribes those far-reaching powers which he

once arrogated to himself. Thus in the acutef minds magic is gradually superseded by religion, which explains the succession of natural phenomena as regulated by the will, the caprice, or the passion of spiritual beings like man in mind, though vastly superior to him in power.

He then procceds, in a passage too long to quote, to argue that when man perceives that there is a uniformity in nature and a regular succession of events, effect steadily following cause, he reverts to that conception of a regularity in the order of natural events which had been implicitly assumed in magic. This statement is in so far true that magic may be described as a sort of crude and primitive form of science, because certain expedients which the wizard or medicine man employs are deemed calculated to have certain definite results. Much the same, however, is true of the early religions. Sacrifices are believed to please and propitiate the deity, whose action may be determined by the acceptability of the offerings made him. Man always acts upon the scientific principle which assumes that certain antecedents will be followed by certain consequents. His real upward progress is marked by the fact that he ceases to rely upon superficial analogies and imaginary relations of one thing to another, and begins to substitute the observation of facts for his own fancies. The most curious part of the matter is that long after he has entered the stage of exact observation, man continues to cling to ancient practices and beliefs essentially incompatible with the growth of his knowledge and of his reasoning faculty. The grounds of this singular persistence may be found, partly in the fact that the habit of close observation and exact inference has not yet in any country permeated the bulk of the population, partly in the association (in many men and in an even larger number of women) of old superstitions with the recollections of childhood. We must also allow for the feeling that, "After all, there may be something in it," "If it does no good, at least it can do no harm." It is that sort of feeling which prompts a man, even if he is half-ashamed of it, to invite a fourteenth guest to dinner or to turn a silver coin when he sees the new moon through glass, or to tap upon wood and say "unberufen" when he has made some boast which may provoke that retributive misfortune which the Greeks called Nemesis.

Dr. Frazer dwells more than once upon the miserable state of primitive man, always trying to defend himself by some sort of magical device from the evils due to the omnipresent influences of malignant spirits which surrounded him on all sides. One can hardly exaggerate the strength and generality of the belief in the abundance and activity of the spirits. But our author may perhaps underestimate the amount of pleasure which man derived from his constant efforts to combat or get round the spirits. The elaborate and often cruel or disgusting ritual which was designed to counterwork their malign influences made to our remote ancestors no small part of the interest of life. And those ceaseless sacrifices of animals which seem to us repulsive were to them occasions of enjoyment. A European tourist in India is revolted when he sees a goat's throat cut in honor of Siva; but a man so refined as the poet Horace could indite a charming little ode in honor of the sacrifice of a kid to the fountain of Bandusia. Mankind will always be doing something, and draws delight from its activities. Superstition was, as Lucretius said in a famous line, the source of unnumbered ills, and cast many a dark shadow upon life; yet it could also associate itself with joy, and it gave to the ancient world and the Middle Ages nearly all their festivals, not to speak of romantic legends and themes for moving poetry.

CURRENT FICTION.

The Greenstone Door. By William Satchell. New York: The Macmillan Co.

This story of the early days of New Zealand recalls in many ways the work of Joseph Conrad. Its theme is the contact of the white race with a savage race; in action it lags a little, but by way of compensation it abounds in striking and brilliant description. It enters deeply into the heart and spirit of the Maori tribesmen, among whom the hero grows up. When Cedric Tryarthen is a child of two, his father, a "pakeha-maori" (white man living as a native), is killed in an attack on the village by a hostile tribe. Saved from the Maori spears by an English trader and a missionary, the boy is adopted by the trader, Purcell, and is brought up in his family. Purcell also lives among the natives, and has taken a Maori wife. His daughter, Puhi-huia, loved by Cedric as a foster-sister, is a singularly graceful and appealing figure. It is not easy to recall a finer piece of writing of its kind than the account of the siege and capture of the Maori stronghold, with the tragic death of Puhi-huia and her young Maori lover. But the dominating character of the story is Purcell himself, a man of Plutarchian simplicity and strength. Having lived among the Maoris for so many years, and being bound to them by the most intimate of ties, he is forced by the great rebellion to choose between them and his own people. To the last moment he strives for peace; he cannot bear arms against the English, but neither can he desert his adopted people. He takes their side, not to fight, but to advise them and suffer with them; and at last, generous and noble as he is, dies the death of a traitor to his race. The situation is one of hopeless and appalling irony. As for Cedric Tryarthen himself, he is overshadowed by his foster-father: he is not much more than an interesting point of view for the story. The English heroine is unimportant, and seems a needless concession to conventionality. A brief glossary defines the Maori words, many of which, the author tells us, "have long since been adopted into the English language as it is written and spoken in the Dominion." We wish that other writers of stories of distant lands, including Mr. Kipling, had often followed this considerate plan.

The Layman Revato. By Edward P. Buffet. New York: Douglas C. McMurtrie.

This is a book which the reader may call fiction or preaching or archæology, according to his mood, and may enjoy or find tedious according to his taste. The scene is laid in India, in the time of Asoka, the great king who for a brief season made Buddhism the national religion, and ostensibly the thesis of the story is the perplexed anguish of a young lay brother whose mind is distracted between the conflicting claims of Buddhistic renunciation, as the author understands that gospel, and the Hellenic conception of abundant life, which the hero hears from the mouth of a Greek architect employed by the king, and from the more persuasive lips of the daughter, with whom, of course, he must fall in love.

Mr. Buffet knows his Pāli literature well, and altogether the best feature of his work is the archæological skill with which he has reproduced the color of the old Buddhistic life by weaving together incidents and fragments of conversation from the riches of the Pāli canon. Particularly convincing is the contrast in character of the formalistic monk Kondañño and of the more humbly pious Bhāradvājo. But the story itself moves languidly, partly, no doubt, owing to the stiffness of the author's style. Phases such as the "obsolescence of social goodness," which are pardonable in translation where they represent the abstract texture of Hindu speech, are something worse than pedantic when they clutter up the narration. And there is a more serious blemish. The conflict between Buddhistic and Hellenic ideals is regarded by Mr. Buffet as similar in nature to that between the philosophies of Tolstoy and Nietzsche, whereas he ought to have known that Buddha would have had little sympathy with the morbid doctrine of the Russian, and Nietzsche himself utterly repudiated the Platonism which is here set forth as the flower of Greek culture. As a matter of fact, Mr. Buffet is really concerned with the counter claims of a gospel of renunciation which he attributes with some misunderstanding to the disciples of Gotama, and of a doctrine mediating between the "will to refrain" and the "will to act" which he ascribes to Christianity. "As if the eye of man should dwell most intently *upon* divinity and not rather, *like* divinity, upon suffering humanity," he reflects, for his hero—a reflection which belongs to no true Buddhist, but to a modern radical confused by humanitarian doubts.

There is something odd about Mr. Buffet's scholarship. He apparently knows his Pāli at first hand, but he misquotes a famous Sanskrit phrase scandalously, and, though he presumes to copy out lines of Greek poetry, he three times refers to τὸ Ἐν — alas for Aristotle!

A curious book of self-imposed learning,

not without various interest to this reviewer at least.

An Unfinished Song. By Mrs. Ghosal (Srimati Svarna Kumari Devi). New York: The Macmillan Co.

The author is a high-caste Hindu, sister of the now famous poet, Rabindranath Tagore. She was reared in the zenana, and married very young, but to a husband who gave her great freedom and encouragement. She was "one of the first Bengali ladies to mix freely in society." While still in her teens she wrote a novel which, published anonymously, won remarkable success; during the quarter-century which has passed since then she has written a large number of novels, poems, and plays. This novel is a story of life among the class of Bengali who have responded most thoroughly to contact with Western society and literature. "It shows," says the author in her Preface, "the change that touch with Europe has brought upon the people of India, but in their inner nature the Hindus are still quite different from Western races. The ideals and traits of character that it has taken thousands of years to form are not affected by a mere external change." Speaking more strictly, the story shows the changed exterior and conceals rather than reveals the inner nature of this society. It is a society imitative, consciously Europeanized. They deal in the literary catchwords of England; they quote from and talk about Shakespeare and Shelley and George Eliot. English is the preferred speech: "That the love letters of a Bengali youth, whose life is one great imitation, should be written in his native tongue —this preposterous idea would not occur to any one." The love story here told has hardly a suggestion of Oriental flavor. The heroine is altogether free to choose her own mate. The villain who almost wins her has betrayed another (English). The hero is a benign and faithful lover, who is willing to sacrifice himself to his beloved's happiness quite according to the code of English romance. It is, in short, a simple and pleasant story of a type very familiar to Western readers.

The Rose of Roses. By Mrs. Henry Backus. Boston: The Page Co.

It is a character that does not appear in the story at all, except by allusion, that arouses one's deepest interest in this narrative. This character is Philip, the dead son of Pastor Holt, whom his father's stern injunction had kept from marrying the winsome Toni, niece of his *Hausfrau*, in Jena. The pastor meets Toni a few years afterward, under odd circumstances. Toni wants to escape from her surroundings in Bremen, which are not altogether pleasant, and at the insistence of another youth from America, the country from which Philip had come, takes passage on the boat with him, with the idea of trying her fortune in the new land. She soon repents of her bargain, and on shipboard makes the acquaintance of the pastor, who is not long in identifying her as the girl whom his letters had prevented his son from marrying. This Philip motif, try as the author does in the latter portion of the book to minimize its seriousness, is tragic; and the final jerk by which the philanthropic youth from America is made to win Toni's hand, and supposedly heart, is anything but convincing or satisfying.

The Blind Spot. By Justus Miles Forman. New York: Harper & Bros.

Mr. Forman in his latest novel has returned from his pleasant excursions in Europe, in the drawing rooms of which he is so very much at home, and takes both scene and inspiration entirely from his own country. The change is welcome, for there is a note of sincerity in "The Blind Spot" which is perhaps heard all the more clearly for the obligato of cosmopolitanism through which it is played. It is a citizen of the world writing of things and people that are essentially American. The broad problems with which the author deals are as wide as the civilized part of the globe, but the particular aspects of them which he singles out for consideration are of native growth. Not only for its sincerity, but for its point of view, Mr. Forman's book is welcome, for it is in substance a defence of the *via media* in social reform as well as in other relations of life —and to pursue the *via media* in these days requires courage. Mr. Forman has a wholesome abhorrence of sociological cranks and of the various quack-doctors of reform who rise up intermittently in our midst to trouble the well-ordered progress of social life; and the career of the central character of his story will be followed with appreciation, perhaps even with a little unholy joy, by those who are quite willing to march with progress if only they are not expected to trample on tradition as they go.

Arthur Stone is a kind of American Bernard Shaw—or rather he is the kind of man that Mr. Shaw would have us believe in. "Common Sense" is the particular nostrum with which the world is to be regenerated; Stone worships efficiency, of the Teutonic variety, but without the saving admixture of Teutonic sentiment. To the standard of common sense—an attractive catchword and so obvious that it is surprising no society has actually been formed for its propagation—rally a number of people who sincerely desire a better adjustment of social conditions and who see in Arthur Stone a heaven-sent leader for the work. But heaven, in point of fact, is the last thing dreamt of in Stone's philosophy. In his nature is a blind spot; he is the efficient man carried through a vicious circle to his logical absurdity. He is concerned about the condition of his fellow-men, not because they are his fellow-men, but because they are inefficient, and he is anxious to make them efficient for the sake of sweet efficiency. The "blind spot," in fact, is a lack of charity, in the biblical sense, and Stone fails in the end, after astonishing success, precisely because he is "as sounding brass or a tinkling cymbal."

There is something too good to be true, though, we fear, not quite good enough to be Greek, in the nemesis which dogs Stone's path and leaves him crushed and broken at the end, but there is a genuine touch of Greek irony in the conclusion, where the human man who has taken Stone's place both in his sociological work and in the affections of his fiancée explains, with all charity, that something of Stone still remains, his spirit—the very thing that Stone had spent his career so vigorously denying.

PROFESSOR MÜNSTERBERG'S ARGUMENT.

The War and America. By Hugo Münsterberg. New York: D. Appleton & Co. $1 net.

Professor Münsterberg has a marked superiority over most German apologists in not abusing Germany's foes. His method of argument, however, seems directed at a singularly untrained public. He illustrates pretty nearly all the fallacies he has analyzed in his entertaining book on judicial evidence. His major premises he never takes the pains to substantiate. Instead, he reiterates them as axiomatic. "Culturally, Russia is Asia," Russia desires to blot out Western European civilization, hence Germany is fighting for civilization against barbarism, in an inevitable conflict. These fundamental notions are drummed in with Prussian thoroughness. But these are just the postulates that a thoughtful reader wants to have proved. Has Professor Münsterberg never in his pre-psychological days dabbled in logic, or for the reader he has in mind does he think the "vicious circle" will be as convincing as the O of Giotto? Aside from bandying big impressive antitheses—Teuton and Slav, Europe, Asia, etc.—Professor Münsterberg varies his tactics by condescending flattery of America, and by occasional excursions in pure sentiment. The whole *mélange* is highly seasoned, and possibly grateful to the literary palate of the very simple reader for whom it is concocted.

The omniscient tone of the plea is characteristic. Professor Münsterberg stands impressively near the highest sources of information. Servia, he tells us—on authority which naturally is not divulged—would have yielded to the Austrian demands unless heartened to resistance at the last moment by "a cipher dispatch" from St. Petersburg. How "culturally Asiatic" and wholly sinister that cipher dispatch must sound—to one who does not recall that diplomatic dispatches are generally in cipher. Again such a generalization as that Europe means thought while Asia means feeling, and accordingly one must cut the other's throat, is admirably calculated to solve the vexed problem of West and East—in any corner grocery store. And for whom does Professor Münsterberg limn the picture of an idyllic, scholarly, industrial, unaggressive, and wholly pacific Germany reluctantly kept under arms by bellicose neighbors? Plainly, for a reader who has not heard of the partition of Poland, the seizing of Silesia, the

grasping of Schleswig-Holstein, the annexation of Hanover, the retention of Alsace and Lorraine, and, only yesterday, the premature incorporation of Belgium into the German Empire. Then what kind of a reader is asked to swallow whole the theory of a ruthlessly aggressive Russia menacing all Western Europe? Evidently, a reader who does not know that, first, Russia set conquered Germany on her feet, then Austria threatened by the Hungarian revolution—a reader who does not know that in a hundred and fifty years, when Russia was strong and Central Europe a congeries of weak states, Russia showed no exceptional aggressiveness against European Powers.

To follow the various threads of this kaleidoscopically devised plea, to expose even the major sophistries, would lead us far afield. We must at least note the kind of political philosophy that underlies the surface rhetoric. It is a philosophy not overtly expressed. It would hardly bear ventilation in America. You may sense it in the sharp distinction between "routine agreements like the neutrality treaties," and a "pledge of international honor" like the Triple Alliance. Why is there no pledge of honor in a neutrality agreement? Plainly because it is made with and in behalf of a weak Power. Honor first begins among peers. Thus is honor made in the Germany of Zabern. Again consider the system of international morals implied in the following:

> It was the ethical duty of the Russians to strain every effort for this expansion of their influence, and it was the ethical duty of the Germans and Austrians to strain every effort to prevent it. In the same way, it was the moral right of France to make use of any hour of German embarrassment for recapturing its military glory by a victory of revenge. And it was the moral right of England to exert its energies for keeping the control of the seas and for destroying the commercial rivalry of the Germans. No one is to be blamed.

International morality, that is, consists in the insensate inevitable clash of national egotisms, which, being national, are holy. Machiavelli would not have disowned this delightfully simple and comprehensive *Weltanschauung*. Gobineau, Treitschke, Nietzsche, Houston Stewart Chamberlain have passed it on to Professor Münsterberg. Do Americans like either this apostolic succession, or the doctrine itself? Being Professor Münsterberg's, it must be sound psychologically.

We have left dangling the very interesting question, For what kind of a reader is this skilful blend of dogmatism, innuendo, sophistry, and gush intended? Fortunately, Professor Münsterberg has the candor to make the matter clear. It is addressed to "the American mind" which has an "unusual degree of imitativeness and suggestibility." It is addressed to the individual American who, when excited, tends to become "a mere automatic mechanism in which the thoughts and feelings and impulses of his neighbor control his mind." . . . "There is a lack of individual resistance to prescribed opinions which produces in excited states a colorless, wholesale judgment which may be entirely different from the natural stand of the sober single individual." Elsewhere we learn that in all European matters the American is moved chiefly by a provincial prejudice against the paraphernalia and nomenclature of monarchy. He takes mere names for real things.

Professor Münsterberg may be unreservedly congratulated upon producing a book that is precisely adapted to impress the "American mind," as defined by one of its most distinguished foreign analysts.

APOLOGIA.

Oscar Wilde and Myself. By Lord Alfred Douglas. New York: Duffield & Co. $2.50 net.

Let the reviewer admit at the outset that he is at loss to know how to deal with Lord Alfred Douglas's apologia, just published in this country with some quite unnecessary portraits. Into the unsavory matter which underlies the whole question it is not easy to enter discreetly, and in point of fact the documents are not forthcoming which would enable your reviewer to pass judgment, if he felt disposed to do so. Wilde's "De Profundis," written while he was serving sentence in Reading Gaol, is well known in the form in which it was posthumously published by Wilde's friends in 1905. Eight years later, in a libel suit brought against Arthur Ransome by Lord Alfred Douglas, it came to public knowledge that the still unpublished part of Wilde's manuscript contained virulent attacks on the character of the plaintiff. Passages from the manuscript were read in court, and the whole of it passed through the plaintiff's hands, but he was forbidden by an injunction to print the document, or even sufficient excerpts from it, as he desired, with justificatory comments. It was presented to the British Museum, to be kept under seal until the year 1960. And now, as a kind of rebuttal against that defamation when it shall appear, Lord Alfred Douglas prints his apologia. In the main the charges against him seem to be that he was in some way the corrupter of Wilde, and that he not only failed to befriend Wilde in his time of stress during imprisonment and afterwards, but was actually a drain on Wilde, preventing him from following his career as a poet and sucking away his slender resources. To both these charges the present answer is, in our judgment, clear and convincing. From the dates given by the friendly biographers of Wilde, it is perfectly manifest that he began his corrupt practices before his acquaintance with the unfortunate son of Lord Queensberry, and, if any blame of the sort attaches to the younger man, it is that he clung to Wilde too generously in his downfall and befriended him too fully after his evil character was made manifest. Into the deeper accusation which has followed Lord Alfred Douglas ever since his father brought the calamitous suit against Wilde, we cannot enter. Indiscreet, and perhaps worse than indiscreet, the youthful victim was, by his own confession. He acknowledges his foolish letters and proceedings in defence of Wilde's conduct, and manfully repents of them. The best thing in his favor is the letter of confidence in him from his cousin, the much-honored George Wyndham, which is here printed in facsimile.

But there is another aspect of Lord Alfred Douglas's writing which the critic cannot let pass unnoticed. The whole book is a violent diatribe against the character of one whom for many years the writer befriended against the world, but whom he now presents as a corrupting maleficent influence in literature and a noxious vulgarian in private life. The blackening is done persistently, remorselessly, and, in our judgment, successfully. Wilde comes through the ordeal just such a man and writer as he might reasonably be supposed to have been. But the defamation from this particular pen is not nice, and the tone of the defamer, however his particular charges may accord with the facts, has about it, we shall not hesitate to say, something of the cad. This is a pity; for a frank and properly conducted exposition of Wilde's qualities as man and author is much needed. It is true, as Lord Alfred Douglas asserts, that he is doing real harm to literature through the agency of a certain clique in London who still set him on a pedestal as the artist *par excellence*, and this cult has apparently attained absurd proportions in Russia and other foreign countries. What is to be said of such words as these from the pen of Wilde's biographer, Robert Harborough Sherard:

> In Wandsworth Prison first and then in Reading Gaol, Oscar Wilde's mental development reached a point of transcendency to which never in the world of men he could have hoped to attain. There had been forced upon him the recluse life which had raised many men in the world's history towards the stars, but which, perhaps, never before demonstrated its reforming and enhancing powers in a manner more magnificent, more orbicular, more triumphant. . . . What the real Oscar Wilde was, and of what he was capable, was now to be made patent. In "De Profundis" he laid his soul bare, and the impartial are to judge from that book of the man's new powers as a thinker and as a literary artist. His friends will ask no more than that, reserving to themselves the high delight of taking a holy joy in the lofty virtues which that book reveals, the kindness, the patience, the resignation, the forgiveness of sins so splendid that one may almost believe that in his ardent meditations on Christ he was able to bring the bodily presence of the God who taught these things into his cell, and to learn from the divine lips themselves what is the true secret of human happiness. Critics abroad have said: "There is too much about Christ in 'De Profundis,'" overlooking the fact that the book is, from the first page to the last, inspired by Christ—that no man who had not found Christ could have written that book, nor lived as the man who wrote it did live.

To such nauseating cant there is only one reply—the verse which Lord Alfred Douglas might have chosen for the motto of his at-

tack—"He which is filthy, let him be filthy still." What shall be said of the "forgiveness" of this saint who filled his meditations, as we now know, with base recriminations against the one whose reputation he had ruined and who was, to his own great detriment, to befriend his ruiner in the years of quick decline? And as for the life which this Christ-like convert "did live" when once more "in the world of men," it would be better for him and his defenders if nothing were said about it. It is regrettable that Lord Alfred Douglas's book is not written in better taste, but it is not easy to handle mud without defilement, and the crushing exposure of Wilde as a second-rate artist and as a man of ignoble character is a sound medicine for one of the dominant cliques of letters to-day in Wilde's own London.

THE LORDS OF PROVIDENCE.

The Colonizing Activities of the English Puritans: The Last Phase of the Elizabethan Struggle with Spain. By Arthur Percival Newton. With an Introduction by Charles M. Andrews. New Haven: Yale University Press. $2.50.

Introduced as a work that "fills in the missing parts of our picture and renders intelligible aspects of the scene hitherto obscure," this study of the records of the Providence Company during the period from 1630 to 1641, when it was a formidable rival of the new commonwealth of Massachusetts Bay, offers "a connecting link between the exploits of Drake and Hawkins and the founding of Jamaica." It is also shown that the plans of "the inner circle of the leaders of the opposition to the arbitrary rule of Charles I . . . were matured in secret under cloak of the company's meetings." The importance of the attempt to mobilize the settlers in New England for predatory enterprises in the West Indies is also discussed, though not quite in the American spirit. The English scholar whose work inaugurates a new series from the Yale University Press has used manuscript sources which are still inaccessible to students in the United States, but he has not exhausted the printed materials bearing on his topic. Thus, he has missed the royal commission of February 7, 1638, published by Rymer, which gave the Earl of Warwick and his associates license to take ships, plunder towns, and conquer territories in the West Indies wherever free trade and navigation were denied to Englishmen—the only English charter for "No peace beyond the Line" ever granted by an English sovereign. The work of John Pym in carrying on privateering under this commission is, however, set forth in detail, and his speech in the Short Parliament of 1640, when he urged that the King's backwardness in encouraging colonies of adventure was one of the chief grievances of his subjects, is also cited.

Short work is made by Mr. Newton of some time-honored blunders. Though the charts distinguish between Old and New Providence and place them a thousand miles apart, nearly every historian has confounded the two islands and missed the foundation of a Puritan outpost in the Caribbean in 1630. The error which regards the Warwick faction in the Virginia Company as "mere tools of the court" is also corrected. That Warwick's motive for wrecking the company grew out of his fondness for piracy has long been suspected, but the evidence is not complete without comparing the annals of Bermuda, where Elfrith and Butler were notoriously "pirates accurst," with those of Old Providence, where both men had official warrant to continue their trade. Warwick's earliest predatory ventures began when his ships roved the East and West Indies under a commission from his personal friend, the Duke of Savoy; and he had another squadron taking spoil in the Caribbean up to 1645, when he was Admiral of England for the Long Parliament and fighting against the monarch whose commission had confirmed his predatory habits. Noting the Earl's connection with the English plantations of his time, a connection to which many geographical names bear witness, Mr. Newton suggests that Warwick is entitled to "his due meed of recognition" as an historical figure. Whoever undertakes the proposed task will have to recognize that Warwick cherished militant and rapacious aims altogether inconsistent with those which led Winthrop to found a commonwealth instead of a colony of adventure.

The plan of this work excludes any account of the foundation of New England, except when the "Lords of Providence" interfered with its progress. Thus the project of Lord Saye and Sele and Lord Brooke to found a colony at Saybrook, in Connecticut, furnishes Mr. Newton with the heading of a chapter of which the chief interest lies in the outline of the proposal of these persons of quality to emigrate to New England and found an order of "gentlemen of the country," for whom and their heirs the higher offices should be reserved. The author thinks it most reasonable that the colonists should accept a rule "which very closely represented the Constitution under which all the Puritans had grown up"; but the founders of Massachusetts had other views. Their immortal answer of 1636 reminded the lords that even their qualifications were subject to the customary elections, and that their posterity might be found of inferior desert. Yet Mr. Newton holds that this answer, with its pithy exposure of the fallacy of hereditary political privilege, contains "no material objection" to the demands of these patrons of the Puritan migration. Really, it is worth while to consult Palfrey now and then.

The West Indian ventures of the Providence Company are studied closely by Mr. Newton, and he discloses many interesting features not dealt with by previous chroniclers. Old Providence and the settlement on the adjacent coast at Cape Gracias à Dios were the basis of the hopes of the Puritan lords and their allies in the coming conflict with royal authority. Association, better known in the annals of buccaneering as Tortuga, was a mere speculation; and its social order must have been about the same whether the governors were Dutch traders or agents of the English company which purchased their claim. The annals of Tortuga under the intermittent domination of Huguenot captains or roving knights of Malta show that the island was worthless except as a base for filibustering and for traffic with the buccaneers who hunted cattle in Hispaniola. Providence, under the meticulous rule of its proprietors, had some likeness to a Puritan community, though neither the governors nor the populace could be brought under the moral discipline of the ministers—whom they sent home to be tried by Laud shortly before the island was captured by the Spaniards in 1641. The plundering of Spanish commerce began as an act of reprisal for an attack on the island in 1635, apparently with verbal permission from Charles I. It was extended to Spanish cities under the royal warrant of 1638, and it continued for at least five years after the overthrow of the company's plantations in the Caribbean Sea.

Not much is made of the log of the wonderful voyage Capt. William Jackson made as a servant of Warwick's between 1642 and 1645, when he pillaged in Jamaica and Yucatan and sacked towns along the Spanish Main. Capt. Thomas Cromwell, of Boston, left half a dozen bells to the churches of that town as a memorial of these exploits. In spite of temptation, Mr. Newton refrains from animated narration and picturesque detail, taking warning, perhaps, from the writers who tell the story of the buccaneers, with Esquemeling as their chief authority. He does not shirk economic detail, however, and he tries to unravel the disordered financial statements of the Providence Company. As collections were barred by the Parliamentary privilege of most of the surviving members, the case of the creditors was hopeless, in spite of their claims against Pym's estate.

Plenty of evidence is found to connect Cromwell's "Western Design" and the conquest of Jamaica. The Protector was eager to recover Providence, but it was left to the buccaneers of Jamaica to raise the British flag on Warwick's forts, though the conquests of both Mansfeld and Morgan, which Mr. Newton does not mention, were transitory.

This volume has broken the ice for other students of the records of the Puritan colonies of adventure; but the addition of a bibliography would render it of more service. The author is as sympathetic as any modern can be with the Puritans who held "the least and worst of islands," as Sir William Monson called it, in hope of "damming up Euphrates" by intercepting Spanish treasure before the fleets were joined together at Havana for the voyage towards Seville. But, after all, Winthrop's vision of the future was clearer than that of Pym or Cromwell.

Notes

"The Divided Medal," by David Skaats Foster, will be published on November 1 by the Franklin Book Company.

G. P. Putnam's Sons announce the immediate publication of "The Real Truth About Germany: Facts About the War," by Douglas Sladen.

The autumn list of E. P. Dutton & Co. includes the following recent or forthcoming volumes: "The Wild Knight," by G. K. Chesterton; "English Dramatic Poetry," by Felix E. Schelling; "Tales of the Trail," by James W. Foley; "Poetry: The Renascence of Wonder," by Theodore Watts-Dunton; "The Ego Book," by Vance Thompson; "An Economic History of Russia," by James Mavor; "American Public Opinion," by James Davenport; "Poverty and Waste," by Hartley Withers; "Cervantes' Life," by Robinson Smith; "Sixty Years in the Wilderness; Nearing Jordan," by Sir Henry Lucy; "The Church Revival," by S. Baring-Gould; "Three Free Cities," by Wilson King; "The Dutch East," by J. Macmillan Brown; "England of My Heart," by Edward Hutton; "Things Seen in Sweden," by W. B. Steveni; "A Pilgrimage in Surrey," by James S. Ogilvy; "Trout Fly-fishing in America," by Charles Z. Southard. In fiction the list includes: "Christopher Quarles," by Percy James Brebner; "The Awakening," by Henry Bordeaux; "Tents of a Night," by Mary W. Findlater; "Tansy," by Tickner Edwardes. In the Collection Gallia, edited by Dr. Charles Sarolea, eight new volumes are announced: Gebhart's "Autour d'une Tiare"; Veuillot's "Les Odeurs de Paris" and "Le Parfum de Rome"; Bourgeois's "La Société des Nations"; Constant's "Adolphe"; Nodier's "Contes Fantastiques"; Villiers's "Axël"; Huysmans's "Pages Choisies."

The autumn list of George H. Doran Company includes, in fiction: "The Patrol of the Sun Dance Trail," by Ralph Connor; "Innocent: Her Fancy and His Fact," by Marie Corelli; "The House in Demetrius Road," by J. D. Beresford; "The Fakers," by Samuel G. Blythe; "The Laughing Cavalier," by Baroness Orczy; "Quinneys," by Horace Annesley Vachell; "We Are French!" by Perley Poore Sheehan; "On the Staircase," by Frank Swinnerton; "Reminiscences of a Ranchman and the Red Blooded," by Edgar Beecher Bronson; "The Cost of a Promise," by Mrs. Baillie-Reynolds; "The Magic Tale of Harvanger and Yolande," by G. P. Baker; "James," by W. Dane Bank· "To My Beloved," Anonymous; "Tess Harcourt," by Rosamond Napier; "The Mercy of the Lord," by Flora Annie Steel; "The Little House," by Helen S. Woodruff; "Rosemary, for Remembrance," by Norma Bright Carson.—Miscellaneous: "The Memoirs of Francesco Crispi," Vol. III; "Charles Stewart Parnell," by Mrs. Katharine O'Shea (Mrs. Parnell); "Europe Revised," by Irvin S. Cobb; "The Wellknowns," by James Montgomery Flagg; "The Author's Craft," by Arnold Bennett; "A South American Tour," by Annie S. Peck; "From Dublin to Chicago," by G. A. Birmingham; "Letters of an Old Farmer to His Son," by William R. Lighton; "Big Game Fields of America, North and South," by Daniel J. Singer; "For the Comfort of the Family," by Josephine Story; "The Student's Guide," by John Adams; "A Grammar of the Greek New Testament in the Light of Historical Research," by A. T. Robertson.—Children's books: "The Forest Ring," by William C. De Mille; "Wings and the Child," by E. Nesbit; "Cinderella," by Githa and Milicent Sowerby.—Poetry: "Trees: And Other Poems," by Joyce Kilmer; "In Deep Places," by Amelia Josephine Burr.

Doran Company also announces a number of volumes dealing with the war: "How Germany Makes War," by Gen. F. von Bernhardi; "Liberty!" by Arnold Bennett; "The German Army from Within," by a British officer who has served in the German army; "The Russian Army from Within," by a special correspondent; "How the War Began," by W. L. Courtney and J. M. Kennedy; "The Fleets at War," by Archibald Hurd; "The Campaign of Sedan," by George Hooper; "The Campaign Round Liège," by W. L. Courtney and J. M. Kennedy; "The Red Cross in War," by Miss M. F. Billington; "In the Firing Line," by A. St. John Adcook; "Forty Years After," by H. C. Bailey; "A Scrap of Paper," by E. J. Dillon.

The "Essays," by Alice Meynell, now published in this country by Scribners, are a selection from the five previous prose volumes of the author, with the addition of a slight gleaning of hitherto uncollected pieces. As a consequence, they bring little that is new; but they present Mrs. Meynell's known charm and delicacy in more accessible form, and will meet with a warm, if perhaps limited, welcome. The new essays are all apologies, so to speak, for women who, in Mrs. Meynell's judgment, have not been quite understood by the dulled minds of later readers and critics. Mrs. Hutchinson, the stanch Puritan wife, is one of these; though for her the apology is not so necessary or so apparent. The essay is chiefly notable as showing the breadth of a Catholic writer's sympathy. With the pages on "Prue" we are on other ground. For her Mrs. Meynell takes up cudgels—not exactly cudgels, either, but the slenderest sort of rapier—against Thackeray's rather sneering insinuation: "There are four hundred letters of Dick Steele's to his wife, which that thrifty woman preserved accurately." Indeed, exclaims our essayist, "'thrifty' is a hard word to apply to her whom Steele styled, in the year before her death, his 'charming little insolent.'" That is the tone of the defence—let us not say a thrifty but an economic display of whatever of romance the records hold in regard to women otherwise harshly treated. Mrs. Johnson, the great Samuel's "Tetty," comes in for the same kindly gilding, after Macaulay's disparagement; and Madame Roland is made very human. The essay on the latter ends with these characteristic words: "'She leant,' says Riouffe, 'alone against her window, and wept there three hours.'"

If any criticism were to be directed against Mrs. Meynell's style, it might be couched in her own fine phrasing: "So should the writer's work be done, and, with an intention perpetually unique, the poet's." Her language is exquisite—exquisite in the sense of being almost too manifestly "sought out"—the intention is almost too perpetually unique. But she is saved by her taste and the fineness of her thought. There is something really precious in her work.

Between Pierre Loti, the travelling romancer, and Pierre Loti, the travelling observer, there is a wide gap. The warmest admirers of his delicate exactitude in rendering the scenes, sounds, and perfumes of his narrative settings will hardly quarrel with the opinion that his books of pure description are comparatively empty and unsatisfying. Unsustained by action, there is too much of the senses and too little of the intellect in them, and the rhetoric often approaches a stucco magnificence. Of the row of such volumes, in which he has written of lands from China to Morocco, that on Egypt ("La Mort de Philæ," published in 1908) holds only an average place. The chapters on Thebes in Sunlight and The Mosques of Cairo are in his happiest vein, but the pervading querulousness at the English invasion and the hordes of Cook's tourists sometimes affronts good taste. This work has now been translated by W. P. Baines, and issued by Duffield uniform with A. F. Inman's version of "India." The translation has verbal accuracy, and avoids as well as may be the falsity that is almost inevitable in reproducing "word-pictures"; but it is sadly deficient in attention to the felicity of phrasing and the cadence of style which procure so large a part of Loti's effects.

A new edition of W. E. Henley's "shot rubbish" of literary criticism, "Views and Reviews," has been issued by David Nutt, for whom in 1890 the author first collected the volume from the *Scots Observer, Academy, Athenæum*, and other periodicals. After twenty-four years the sub-title—"Essays in Appreciation"—reads as queerly as ever for such an expression of right literary hatreds and prejudices. Showing kindliness and gusto for some authors, upon most it bestows a dogmatic bludgeoning that accords with Henley's boisterous individuality and with the most violent traditions of Edinburgh reviewing. The book's frequent insight, however, and the poet-critic's knack of picturesque and epigrammatic phrasing, give it permanent value among those who can remember that Henley is much more trustworthy in his likes than in his dislikes.

Ozanam's "Poètes Franciscains," well known and honored for half a century in Continental Europe, has at last received an English version ("The Franciscan Poets in Italy of the Thirteenth Century"; Scribner). The book is delightful still, but its services, though memorable, are no longer necessary. Ozanam's essay on St. Francis was perhaps the mainspring of the modern religious-æsthetic Franciscan interest, and his two essays on Jacopone da Todi were pioneer work of an excellent sort; but the progress of the very studies they stimulated has left many of their statements sadly out of date. The translators, Amy E. Nellen and N. C. Craig, have made little attempt to supply the requisite modern corrections. Their numerous notes are mainly futile and often erroneous. Readers of Ozanam will hardly need five-line accounts of Orpheus, St. Augustine, Roland, or Machiavelli; Thomas of Celano has not been canonized; the identity of Brother Pacificus is not known, nor is any extant poem to be attributed to him. The translation itself, however, is exceedingly good; the vigor and charm of the French original have been preserved to a remarkable degree. Among the illustrations are two unfamiliar and very beautiful portraits of St. Francis and St. Clare by Tiberio d'Assisi.

"The Cavendish Family," by Francis Bickley (Boston: Houghton Mifflin Co.; $2.50 net), is made unnecessarily long by detailed recitals of whole episodes of English history in which members of the clan participated. Omitting these, we have left a series of biographical sketches, many of considerable interest, ranging from the notorious Bess of Hardwick, builder of the family fortunes, to the Dukes of Devonshire, who have proudly maintained the great Whig tradition to the present day. Of the Cavendishes it may be said, perhaps more truly than of any other great English house, that, from generation to generation, they have deserved well of their country. Statesmen, scientists, scholars and patrons of learning, great landlords and agriculturists, they embody, variously, most of the qualities that go to make the best type of Englishman. Their annals are well summed up in our author's concluding chapter: "Sprung from the loins of a fourteenth-century lawyer, rising to wealth on the devastation of the monasteries, earls by the grace of the first James, dukes for their part in dethroning the second, the Cavendishes may well stand for the type of the English aristocratic family. For four centuries they have kept their name unstained, and their part in history has been an honorable and consistent part."

For a complete contrast to the Cavendishes, we may turn to "The La Trémoille Family," by Winifred Stephens (Boston: Houghton Mifflin Co.; $2.50 net). From the Crusades to the Revolution, the Trémoilles were typical French nobles. For centuries kinglets in their districts, they yielded perforce to the centralizing policy of Richelieu and Mazarin, sank to the estate of satellites of the dazzling sun at Versailles, and finally went a glimmering in the vast cataclysm of the Revolution. Soldiers by necessity, through the centuries when the French noble was that or nothing, they lend themselves to anecdote—the Cavendishes do not. Of this the author takes full advantage, as also of the excursions and alarums incidental to the life of camp and castle. Swashbucklers that they were, they sent a daughter across the channel to represent them in the troublous days of England's Civil War. Charlotte de la Trémoille, Countess of Derby, is already familiar to us in the pages of Sir Walter Scott. Her defence of Lathom House affords perhaps the most stirring of many stirring chapters in the present book. Having said so much, it is only fair to note the assurance of the author that "the heads of the La Trémoille family may be classed in two categories, those who played a prominent part in war and national affairs, and those who lived quietly the lives of country gentlemen." We are willing to take her word for it, but there is nothing in the book to indicate that the family produced any members fit to take their place beside the great country gentlemen of Holker.

Though he lays no claim to original research, Mr. Strickland Gibson has consulted no small number of authorities and investigated not a little in preparing his volume, "Some Oxford Libraries" (Oxford University Press; 2s. 6d.). It is an interesting and pleasing little book, illustrated by about a dozen views of the principal libraries. The Bodleian, as the first "public" library (in the English sense) in Europe; Merton, the oldest in England; Corpus, St. John's, Queen's, All Souls, and the Radcliffe Camera are the libraries chosen for description. The book is full of quaint anecdotes of royal visits and other matters, and is altogether readable.

The origin of Christianity in Rome is still an unsolved problem. All that can be affirmed with certainty is that the Epistle of St. Paul to the Romans presupposes the existence of a church or churches in the capital. To be sure, there is a fourth-century tradition, perhaps derived from Hippolytus, to the effect that Peter came to Rome in the year 42, and died in 67; and there is another tradition, noted by Clement of Alexandria and regarded by Harnack as "very old and well attested" which states that the Apostles were to remain in Jerusalem for twelve years. Though there are obvious difficulties with these traditions, yet the arguments adduced against them are not so compelling as to preclude the possibility of their essential genuineness. In fact, the brilliant Leiden scholar, Professor Lake, who happily for American scholarship has just accepted a call to Harvard, recently confessed: "I am not at all convinced that St. Peter was not the founder of the Roman Church." This negative and tentative adherence to tradition becomes positive and final in the Bampton Lecturer for 1913, George Edmundson, whose work entitled "The Church in Rome in the First Century" (Longmans; $2.50 net) is at once industrious, erudite, and independent. This independence, to which he himself alludes (p. 31), enables him to concentrate for his own purposes into the decade 60-70 A. D. a number of documents which the tradition of critical scholarship inclines to put later, *e. g.*, Acts, First Peter, Hebrews (which, according to Tertullian and our author, was written by Barnabas), Clement of Rome, and the Revelation of St. John. Even the Shepherd of Hermas is to be dated at about 90, while the Didache is thrust forward into the fourth century. Thus equipped with contemporary documents and leaning heavily on late traditions, our skilful author traces with unexpected firmness of detail the movements of St. Peter, namely, his arrival in Rome in the summer of 42; his departure from the city in 45, accompanied by St. Mark, who had just written his Gospel; his appearance in Jerusalem in 46, and in Antioch from 47 to 54; his visit with Barnabas to Corinth in 54, and to Rome and Italy during 55 and 56, and finally his third and last visit to Rome in 63, which was followed in 65 by his First Epistle and his martyrdom. Curiously enough, it would appear that since the encounter of St. Peter and St. Paul in Antioch in the year 49 the two Apostles never met again. It is needless to add that the eight lectures are well documented with footnotes and appendices, and provided with adequate indices.

The first instalments of Cuthbert Hamilton Turner's "Ecclesiae Occidentalis Monumenta Iuris Antiquissima" (Oxford University Press) were reviewed in these columns upon the appearance of this work in 1899 and 1908. Its aim is nothing less than to publish all existing Latin translations of the acts and canons of the Greek councils, as well as other matter incidentally pertinent. We now have two more fascicles, the first containing various appendices relating to the Council of Nicæa; one is devoted to the Council of Pope Damasus, one to some twenty translations of the Nicene creed, and another to two commentaries on this creed, the first of which, written about 380 A. D., has never been published before. The learned author includes also a text of the fragments of the Apostolic Constitutions and Canons which he was fortunate enough to discover in a sixth century manuscript at Verona; the Latin version here contained is perhaps as early as the fourth century, and is of use in reconstructing the original Greek. The second fascicle comprises the acts of the Councils of Gangra and Antioch. The editing is done with utmost care on the basis of the best manuscript sources. There are notes of paleographical interest and indices of words and locutions which illustrate the Latinity of the documents here published.

The adventures of Marie de Rohan are so fundamentally romantic that they rather gain than lose in being presented by the austere historic method, heavily documented, shorn of impossible coincidences, and permitted to exhibit the inconclusiveness of real life ("The Duchesse de Chevreuse," by Louis Battifol; Dodd, Mead; $3 net). Victor Cousin's classical life of the duchess did not draw upon all the available documents, nor did it make the most intelligent use of those cited. Cousin, in fact, whitewashed his subject. M. Battifol, on the other hand, is concerned only to give us all the data. Incidentally, of course, the age of which the lady was so typical a pa is shown us too, the amazing age of Richelieu and Mazarin and Anne of Austria. It will, however, seem to many that old acquaintance has been forgot when Anne meets the Duke of Buckingham without the intervention of M. d'Artagnan and when Mme. de Chevreuse runs about the country in manly dress without a fateful meeting with Athos.

"The Gods of India," by the Rev. E. Osborn Martin (Dutton; $1.50 net), supplies a need long felt by those interested in the various myths and legends surrounding the Hindu pantheon, and its chief recommendation lies in the direct record kept by the author during a period of thirteen years' service in India as a Wesleyan missionary. Books of this nature frequently defeat their ends by affording peripatetic, and even studious, writers the radiant opportunity for interpretation and easy generalization, and the results, often confusing and incongruous, do not always reflect credit on the tenuous claims of the authors as ethnologists. In India, above all other Oriental countries of to-day, the perpetual flux of religious and political ideas makes especially difficult the final analysis and identification of many long-accepted and sanctified myths. In the outlying peasant villages many amazing transformations and modifications are continually in process, and the task awaits a scholar of classifying these changes, especially where types of Hindu and Mohammedan culture, by constant attrition, have adopted and assimilated from each other. Mr. Martin's classification is admirable, a tribute to his long experience, and especially to his powers of selection. Into the three divisions of the Vedic, Purānic, and Inferior Deities he has grouped only those gods that have survived this process of change. Of the inferior deities, whose numbers are legion and whose origin, history, and worship still remain unwritten, Mr. Martin has selected only those that can be strung on a tangible mythological thread. The author does not pretend to the rôle of a strict historian; his book is a manual that is suitable

for popular consumption. The illustrations might have included more photographs of actual shrines and idols; for, as even the casual tourist remembers, throughout India the enterprising German lithographer has made popular to the Hindu worshipper gaudy, ill-conceived, and bowdlerized versions of his myths: a few of the author's collection, through no fault of his, since doubtless they are the only ones available, betray a brummagem chiaroscuro.

Since the review in the *Nation* of July 13, last year, of J. A. Herbert's "Catalogue of Romances in the Department of Manuscripts in the British Museum," Vol. III, London, 1910, two other works of value for mediæval *exempla*, or illustrative stories for the use of preachers, have been published. The first, consisting of a selection of *exempla* from mediæval manuscripts, by Joseph Klapper, was published in Hilka's "Sammlung mittellateinischer Texte," II, Heidelberg, 1911. This collection of 115 stories contains many interesting parallels to well-known stories, some of which, like the Don Juan legend, had not been found previously in *exempla*. The second work, just published, is far more interesting. As long ago as 1890, Professor Crane, in his edition of the *exempla* of Jacques de Vitry, called attention to a manuscript (Add. 11284) in the British Museum, containing nearly six hundred illustrative stories for the use of preachers, arranged in alphabetical order. This manuscript was generally known as "Thoms's MS.," from the last owner, the distinguished antiquary W. J. Thoms. Professor Crane mentioned other manuscripts containing this collection, and gave the stories found also in Jacques de Vitry, but overlooked the fact that the collection was one that had been attributed to John of Hoveden (who died in 1272 or 1273), and known as the "Speculum Laicorum." Mr Herbert in his "Catalogue" (pp. 370-414) examines the question of Hoveden's authorship, and gives an analysis of the 579 *exempla* in MS. 11284. Mr. Herbert's conclusion as to the authorship is that it is not absolutely impossible that Hoveden may have been the author, but more than this cannot be said in the absence of further evidence to support Bale's attribution. It seems fair to conclude that the author of the work was an English cleric, and that it was written certainly after (and probably not very long after) the death of Henry in 1272. A few of the stories were printed while Mr. Thoms owned the manuscript, but the great mass of tales of considerable interest and value for the history of culture in England in the thirteenth century were unknown until Mr. Herbert's analysis.

It is not altogether creditable to English and American scholars that this manuscript should have had to find an editor and publisher in France, but such is the case, and it has just been printed under the title: "Thesaurus Exemplorum. Fascicule V. Le Speculum Laicorum. Edition d'une collection d'exempla, composée en Angleterre à la fin du XIIIe siècle," par J. Th. Welter, élève diplomé du Collège libre des Sciences Sociales (Paris: Auguste Picard). M. Welter has produced an admirable piece of work which entitles him at once to high rank in this field, and assures him the gratitude of all scholars of mediæval Latin literature. It is impossible to enter into details in this brief note, but it may be said that the editor has examined carefully all the known manuscripts of the "Speculum Laicorum" and reprinted (with certain omissions) the MS. 11284. The editor denies the authorship of Hoveden, and attributes the work to some member of one of the Mendicant Orders.

The original work is arranged alphabetically under eighty-seven topics, each containing a definition and theological exposition, with citations of various authorities and finally *exempla* of illustrative stories. The editor has omitted the purely theological portions and also the *exempla* borrowed from such well-known works as the "Vitæ Patrum," Gregory's "Dialogues," etc. Such stories are, however, briefly mentioned, and references to where they may be found are given in the *Notes et indications des sources*, pp. 113-153. The student has therefore before him practically the entire collection, with all the stories of interest printed at length. M. Welter has added enormously to the value of his edition by his introduction, comparative tables, and notes indicating sources and, sometimes, later derivative stories. It is to be hoped that he may be encouraged to print before long the *exempla* of Etienne de Bourbon (in MS. 15970 of the Bibliothèque Nationale at Paris) and ultimately the best perhaps of all the collections of *exempla*, from a literary standpoint, the "Alphabetum Narrationum," of which an English translation was printed some years ago by the Early English Text Society, under the title "An Alphabet of Tales," edited by Mrs. M. M Banks, 1904-5.

"L'histoire en France depuis cent ans," by Prof. L. Halphen, of the University of Bordeaux, is a concise and clear account of what has been preëminently an age of historical study in a country where this movement has been very strongly marked. In contrast to the treatment of French historiography in the recent books of Gooch and Fueter, M. Halphen deals with tendencies more than with individual historians, and analyzes with skill and exactness the alternating periods of detailed study and synthetic effort which characterize the great advance of historical knowledge in the nineteenth century. Those whose knowledge of French historians is limited to writers of the type of Guizot, Michelet, Renan, and Taine have much to learn from the author's description of the growth of special investigation and the widening of the field of history in recent years. The recognition of the indebtedness of France to German scholarship is generous and just, but one can see from M. Halphen's own work how it was possible to import the German critical method without losing clarity and proportion, and without adopting the chauvinism and declamatory tone which have disfigured too much of the historical writing beyond the Rhine.

To the Oxford edition of standard works is added Hans Christian Andersen's "Fairy Tales and Other Stories" (50 cents net). Some of these are here for the first time translated into English. Those not specially translated for this edition have been revised, both revision and translation being done by Mr. and Mrs. W. A. Craigie. The arrangement follows that of the standard Danish edition, in which the tales appear mainly in the order in which they were originally written or published. The volume, which runs to 650 pages, has fifty-six wood-cuts.

Science

THE GROWTH OF MEDICINE FROM ANCIENT TO MODERN DAYS.

An Introduction to the History of Medicine. With Medical Chronology, Bibliographic Data, and Test Questions. By Fielding H. Garrison. Philadelphia: W. B. Saunders Co. Cloth, $6 net.

Dr. Garrison's History of Medicine—frankly an outline—gives a connected, logical account of the development of our present substantial knowledge of medicine, and of the individuals concerned in the discoveries upon which this knowledge is based, while, at the same time, it emphasizes the bearing of these advances upon human progress and the general welfare of mankind. Though intended primarily for practitioners and students of medicine, the clear and concise treatment of facts and progress and the interesting method of telling the story render the volume of great value to the non-medical reader who either seeks specific information or desires to become familiar with the influence of medicine as a factor in promoting human happiness and the higher forms of human endeavor.

In the opening chapter is sketched the identity of all forms of ancient and primitive medicine, and it is shown that all phases of "folk-medicine," as is true of folklore, "have been essentially alike in tendency, differing only in unimportant details"—in each case "an affair of charms and spells, plant-lore, and psychotherapy, to stave off the effects of supernatural agencies." The development is traced of a simple pharmacopœia of herbs by primitive man, who sought, when sick, certain herbs and grasses, and of a simple surgery based on the use of crude flint instruments in the letting of blood, the opening of abscesses, scarification, trephining, and ritual operations, such as circumcision. The larger part of the chapter, however, is devoted to a discussion of superstitions, myths, and charms, and the influence of the persistence of a belief in these, in a modified form, upon the popular view of medicine to-day; a view which, in the author's opinion, can be changed only through the kind of public enlightenment which teaches that prevention is better than cure.

Ancient medicine is covered in three chapters, which deal respectively with Egyptian, Sumerian and Oriental, and Greek medicine (to A. D. 476), and following these are chapters embracing the Byzantine period and the Mohammedan and Jewish periods, bringing the story up to A. D. 1096. The paucity of material and the slow advance of medicine in these periods is shown by the fact that these five chapters are contained in 58 pages. The chapter on Egyptian medicine deals largely with the information obtained from hieroglyphics and the Ebers Papyrus. Under Sumerian and Oriental Medicine are discussed the Biblical diseases, the hygienic regulations of the Hebrews,

the surgery of the Hindus, and the stationary medicine of the Chinese. Greek medicine is presented in three periods: the early period of the worship of the tutelary divinities of medicine, and the practice of votary offerings centring upon Æsculapius; the classic period, represented in medicine by Hippocrates, who cultivated the power of exact observation as a basis for diagnosis; and finally the Græco-Roman period, the most important figure of which was Galen, the founder of experimental medicine. Following the discussion of Mohammedan medicine come chapters on Mediæval Medicine (1096-1438) and the Renaissance (1438-1600), which, in that they are largely detailed presentations of the cultural and social aspects of medicine during these periods, are of great value to the student of general history. The conditions of education, of general hygiene, the relations of the clergy to medicine and of the barber-surgeons to the physician, the founding of hospitals, and the influence of the great plagues are discussed in an interesting manner. Here also is presented an account of the establishment by Vesalius of anatomy as a living, working science, and of those advances in surgery which are inseparably associated with the name of Ambroïse Paré.

After the discussion of the medicine of the Renaissance, the author continues his story in four chapters devoted respectively to the medicine of the seventeenth, eighteenth, nineteenth, and twentieth centuries. To these periods is given the bulk of the book, 457 pages, as contrasted with 176 pages devoted to the several thousand years of record preceding the year 1600. Naturally, the largest share falls to the nineteenth century, in which scientific effort in medicine became organized, and therefore more effective.

In the seventeenth century, that of individual scientific effort, the labors of Harvey, the discoverer of the circulation of the blood, of the post-Vesalian anatomists, and of the early microscopists, are presented, as well as the methods of internal medicine as exemplified by Sydenham. Under Cultural and Social Aspects is a reference also to early American medicine.

The chapter on eighteenth-century medicine is given up largely to a discussion of the theories and systems of that period—largely, now, of interest only as evidence of the insecure basis upon which medicine then rested—but is relieved by accounts of the fundamentally important physiological discoveries of von Haller, Hales, Réaumur, and Hunter; the initial observations in electrophysiology by Galvani, the studies in combustion and respiration by Black, Priestly, and Lavoisier, the introduction by Auenbrugger of percussion as a means of diagnosis of diseases of the chest, the discovery of vaccination by Jenner, and the initial work of Morgagni in pathological anatomy. Despite these isolated brilliant advances, the "tendencies of the age were artificial and theoretic rather than sincere or realistic. This periwigged period is conceded to have been the 'Golden Age,' alike of the successful practitioner and the successful quack."

In opening his chapter on medicine in the nineteenth century, the author presents three factors as of importance in determining the rapid and organized advancement of medical science so characteristic of this period: (1) the industrial or social-democratic movement of civilized mankind which followed the political revolutions in America and France and which intensified the feeling for intellectual liberty and dignified human labor of all kinds; (2) the influence of Hemholtz's and Darwin's publications, which did away with preconceptions that had previously hampered scientific progress, and (3) the rapid advances in physics, chemistry, and biology, which came to be studied as objective laboratory sciences, untrammelled by subjective human prepossessions.

The list of advances in this century, for the most part in the latter half, is too lengthy for comment. The rapid sequence may be shown by naming a few of the more important: Anæsthesia (1847), the cell theory of Schleiden and Schwann (1838-1839), Virchow's theory of cellular pathology (1858), Pasteur's work on fermentation, the specific origin of disease, and the use of vaccines (1857-1885), Lister's antiseptic surgery (1867), the studies in bacteriology, made especially momentous by Koch's discovery of the tubercle bacillus (1882), and the discovery of antitoxin for diphtheria (1890-1894). These are perhaps the best known of the momentous discoveries of the nineteenth century, but at the same time, in physiology, chemistry, pharmacology, medicine, and surgery, other important discoveries were continually made. These are all presented by the author in more or less detail, according to chronological sequence, and are usually accompanied by portraits of the individuals concerned. The presentations are largely biographical, and include every medical worthy of the past century and many still active.

The influence of such advances upon medical education, public hygiene, and military medicine is sketched, as are also the increase in specialties, the growth of medical laboratories, and the founding of large numbers of scientific medical publications.

The book ends with a discussion of work in the present century. In the author's mind the modern tendency of medicine is in the direction noted by Cushing: "Dr. Pound of Cure Lane is being superseded by his young disciple, Dr. Ounce of Prevention Street." The summaries of "cultural and social aspects," which close each of the last six chapters, are of as much interest to the student of history or social relations as to the medical man, and remind one of the summaries found in Traill's "Social England." In an appendix the author presents: (1) A Medical Chronology, (2) A List of the Histories of Medicine, (3) A Medical Bibliography, (4) Histories of Special Subjects, and (5) A List of Test Questions.

Drama

"THE PHANTOM RIVAL."

In this production, which is adapted for the American stage by Leo Ditrichstein from a play by Ferenc Molnar, and presented at his own theatre by Mr. Belasco, we see with pleasure that Richard is himself again. It is perhaps unkind to recall last season's unhappy experiment with "The Man Inside," in the selection and production of which Mr. Belasco showed himself a prey to his own ingenuity, and if we do so it is only to point a contrast. In "The Phantom Rival," Mr. Belasco has out-Belascoed himself; not a trick of the producer and of the stage carpenter is omitted, but the difference is that the present production lends itself admirably to the kind of treatment in which Mr. Belasco excels. This excellence is perhaps not of the highest kind; indeed, were it not for a belief that dramatic standards can be trusted to adjust themselves almost automatically, and that the public itself will insist ultimately on the preservation of some sort of mean, we should entertain grave misgivings as to the healthiness of the Belascan influence on stage production. The importance of the external appurtenances of the drama may well be over-emphasized, as we think that Mr. Belasco does over-emphasize them, to the detriment of the art both of the playwright and of the player; on the other hand, Mr. Belasco's influence on the side of careful as against slovenly production must be gratefully acknowledged. Public opinion may be trusted to preserve the balance.

At all events, "The Phantom Rival," as produced by Mr. Belasco, affords an uncommonly good entertainment. Nor is it by any means without merit for its purely dramatic qualities. The author proposes an interesting thesis—that for women the maxim holds, "Nous revenons toujours à nos premiers amours," that however satisfactory may be a woman's present connubial blessedness there will be times when the image of a former love and the vision of what might have been will obtrude themselves on the picture of domestic felicity; in her mind the early love will become idealized, a figure of heroic proportions, and the excellent, but prosaic, husband and father must inevitably suffer by comparison with the phantom rival.

This idea is cleverly worked out in Mr. Molnar's play, the author adopting for its development the machinery of a dream, often used before, and with notable success in recent years in "The Message from Mars." And, as was the case with that production, the success of its use in the present instance is owing to the fact that the dream episodes follow logically the sequence of the play and are interwoven into the texture of it. Louise Marshall is the woman, and by way of heightening the effect, the author endows her husband, Frank, with an abominably jealous disposition. In the first act, which takes place in a restaurant and which is worthy of note for the absolute fidelity of the setting, the thesis of the play is propounded in a discussion between two characters, an author (Frank Westerton) and an actor (Lee Millar), who after this scene have little to do. The Marshalls appear, and man and wife quarrel violently throughout dinner, the quarrel being started by the unjustifiable jealousy of the former, which reaches its climax when a stranger enters, and Mrs. Marshall acknowl-

edges his bow. The stranger, it appears, is a Russian, Sascha Taticheff, whom Mrs. Marshall knew as a girl and with whom she had an incipient love affair.

This scene and the subsequent one in the second act, in the Marshalls' home, where the quarrel is continued, are amusing, but drawn out at too great length. Finally, the husband reads a letter written to Mrs. Marshall years before, when the young Russian was recalled to his native land to serve as a soldier. He will, he protests, return to her covered with glory, a great soldier, a great statesman, or a great musician, or even if he shall return in rags, a failure, he will still love her—and the bombast of the epistle amuses the husband and sets his mind at rest. Here is the irony, for in point of fact the sole real cause for jealousy that he might have is the wife's memory of this early hero and her vision of the fulfilment of his bombastic promises. Before dressing to go to a ball, at which the husband expects to settle a large business deal with a high Russian official, the wife dozes in a chair, and in her dream we see her reunion with Sascha in the various guises suggested by his letter. For the mechanical perfection of the arrangement of the dream scenes no praise can be too high, and the acting of Miss Laura Hope Crews in these very difficult scenes is a clever and finished piece of work.

The amusing third act preserves the continuity of time and reveals the Marshalls ready to start for the ball. Sascha is introduced as the emissary of the high Russian official, bringing with him the papers necessary for the settlement of the business transaction. This early lover, whom we have seen in various romantic guises in the dream, turns out to be an exceedingly commonplace young man, owing his present position to the benevolence of a wealthy uncle, and displaying an unromantic interest in the excellent liqueurs with which he is refreshed. So the phantom rival is laid low, and the worthy husband and father enters into undisputed possession of his wife's affections.

The play is cleverly executed and affords Mr. Belasco a rare opportunity for the exercise of his ingenuity as a producer. The cast is, with one exception, excellent. Mr. Ditrichstein's Sascha Taticheff is a smooth and easy performance. In the dream scenes he is less at home impersonating the general and the statesman than in the more familiar character parts of the musician and the beggar. Malcolm Williams gives a good general performance as the husband, but displays a tendency to overact in the first act. John Bedouin's agile interpretation of the part of a society dame's secretary is amusing. S. W.

"THE MONEY MAKERS."

Mr. Charles Klein's latest drama, "The Money Makers," which is presented at the Booth Theatre, will add little to his reputation. For the atmosphere in which the story unfolds is much the same as that which he made familiar in "The Third Degree" and "The Lion and the Mouse"—the selfishness of greed confronted by generous impulses or by distress of its own making; and the central character is the usual captain of industry who has made a fortune by corrupt practices. Only in the present case the capitalist is the first to see the light, his own conscience being his sole accuser. One was prepared, of course, for a daughter made sensitive about her father's methods by a lover absorbed in social reform. Instead, we have a daughter and two sons greatly alarmed by the first signs of a better course exhibited by their father, and prepared to thwart his purposes by "railroading" him to an asylum.

The surrounding characters, with the exception of the wife, may be dismissed out of hand; they are manifestly so many stage devices designed merely to promote the action and showing small resemblance to human beings. But the father himself is soundly imagined. James Rodman, suffering from a serious breakdown due to overwork, sees in his children only parasites, waiting for him to die, and in his young second wife a woman still in love with the young man whom, save for opposition, she would have married. He is revolted by the emptiness of his achievements, and there and then determines to get well in order to make restitution to those whom he has ruthlessly crushed, and thereby to obtain peace of mind. As might be expected, he is the masterful man that Mr. Klein would have him be, and as portrayed by Emmet Corrigan, presented an admirable figure, his back against the wall, fighting for righteousness. That in the end his nobility of spirit wins the love of his wife and the respect of his children is a matter of course.

Technically, the play is open to grave criticism. It is surprising, for instance, that a writer of Mr. Klein's experience should be so careless about entrances and exits. Persons come and go as they are needed, little regard being paid to probability. They remind one by their arbitrariness of the excuses for songs and dances employed in musical comedy: Somebody lets fall the word "gasolene," and forthwith the orchestra strikes up a song recounting Mr. Smith's adventures in a touring car. Mr. Klein has not thought it necessary to use the old standby: "and here he comes." F.

"EVIDENCE."

The main advantage of a dramatic prologue is that it relieves the first act of cumbersome exposition and that it visualizes for an audience important antecedent conditions. But it has the disadvantage of necessary brevity, which is apt to turn what might be a truly tragic scene into melodrama. In the prologue of "Evidence," by J. and L. Du Rocher Macpherson, now on exhibition at the Lyric Theatre, it is the disadvantage which most strikes one. One dislikes, for instance, to see a woman of the sterling qualities of Lady Una Wimborne placed in a most compromising situation without a gradual preparation for it. It matters little that she is trapped, plausibly enough, into going alone one evening to the rooms of a former lover who is a villain. Dramatically speaking, the scene is undignified.

With this allowance made, "Evidence" is a play of some power. When the first act opens, Cyril Wimborne has been living alone with his small boy, having obtained a divorce from Lady Una seven years before. But such is the impression which this lady has made upon her friends that several of them, believing her innocent, have been putting their heads together in order to bring about a reconciliation. Her name would have been cleared long ago if the dying confession of the villain had not fallen into the hands of another lover who has hopes of winning her love. This is sensed by the audience early in the play, and it is only a question how long lover number two will guard the secret. That he does remain silent for a considerable time furnishes a fat opportunity for the boy, who has seen his mother in the park and taken her for a fairy princess. Naturally his prattle about her to his father offers a strong assault upon the latter's bulwark of pride and cynicism, and thus prevents the final scene from being one of too sudden surprise. There is also a domineering duchess of the old school, Lady Una's grandmother, who takes a hand in putting things to rights. The Duchess of Gillingham, as played by Miss Haidee Wright, is an attractive rôle, partly because of the smart lines which are hers, but, quite as much, probably, because she recalls a pleasant stage tradition.

The play, in the main, was well acted. But Miss Viva Birkett, despite moments of manifest ability, lacked the grace and charm expected of the part. The representation of "Bing" by Master Reggie Sheffield, was a quite remarkable piece of work for a child under fourteen. Yet it was pretty clear that he had learned his intonation from a woman; only a few times did he fall into a truly boyish tone of voice. C. Aubrey Smith's Cyril Wimborne was a finished performance, showing a pleasing combination of depth and restraint.

F.

"MY LADY'S DRESS."

Inspired by his success in taking liberties with the unities in "Milestones," Edward Knoblauch, in his latest play, "My Lady's Dress," presented at The Playhouse, throws all constraint to the winds and gives us an ingeniously contrived production which is enjoyable only if one refuses to regard it as a play. As in "The Phantom Rival," the action is developed by means of a series of dream scenes, but in contrast with that production, here we have no continuity in the scenes and no unity either of time or of action. "My Lady's Dress" is, in fact, a series of isolated one-act plays, absolutely unconnected one with another, save for the purely artificial link that they are all supposed to deal with some process that goes to the manufacture of what any self-respecting sartorial artist terms a "creation."

It is, therefore, as a series of individual sketches that the scenes in "My Lady's Dress" should properly be criticised. Since, however, Mr. Knoblauch has elected to link them together into the form of a play, he invites criticism of his methods. These are arbitrary and artificial. What plot there is in the main play is as tenuous as the garment around which it is spun. A husband and wife have a slight dispute over the price of a dress, which is designed to bring about the capitulation of an elderly but influential roué, to the end that the husband shall secure an enviable appointment. A little cheap socialistic talk by the husband introduces the subject of the various processes which have gone to the making of the garment. Then the wife goes to sleep, and in her dream we see the processes in operation. The connection is slight enough, and on the mechanical side the management of the scenes in the dream leaves something to be desired. The kinematograph arrangement, for instance, showing clouds vaguely floating across a screen, which marks the transition to the dream stage and again from that to the waking, is by no means impressive, and the incidental music should certainly have been supplied by a string orchestra.

The individual playlets are, as might be

expected, unequal in merit, but as a *tour de force*, Mr. Knoblauch's achievement must be recognized as a somewhat remarkable one. Taken by themselves, the scenes are generally well constructed, and some of them possess a good deal of dramatic interest. They present in turn the care of the silk worms in Italy; the weaving of the silk at Lyons; the manufacture of lace in Holland; the making of artificial flowers in Whitechapel; the trapping of animals for their fur in Siberia, and the establishment of a fashionable costumier in the West End of London. The principal characters in each scene are taken by Leon Quatermaine and Miss Mary Boland. The former is an experienced actor of great versatility, and much of the success which the production is likely to command will be attributable to his excellent impersonations of the various characters. Miss Boland is pleasing in some of the scenes, but does not possess the versatility, or, we should say, the training necessary to the successful rendering of a number of diverse rôles. S. W.

The purpose of Dr. C. V. Boyer's "The Villain as Hero in Elizabethan Tragedy" (Dutton; $2 net) is well indicated in the title. His thesis is that Machiavellian villain-heroes were established by Marlowe in Tamburlaine and Barabas, that they at once became popular and ran a long course on the stage. "The ambitious type may be traced through Richard III, the perfect Machiavellian, through Macbeth, who is no Machiavellian at all, to Catiline, in whom Machiavellian traits are noticeable once more." The revengeful type appears most clearly in some seven plays. These conclusions, it will be observed, rest on Meyer's notable study of the influence of Machiavelli and Professor Thorndike's paper on the now accepted series of "revenge plays" that culminated in "Hamlet." The revengeful type of villain-hero is pretty well made out, and for an obvious reason. The playwrights who tried to satisfy the demand for tragedy with revenge as the eternal motive naturally imitated, not merely plot, scenes, and situations, but likewise types of character. Dr. Boyer, however, by leaving out of account all matters but portrayal of character, gives an inverted view of the development. What to all appearances those writers were primarily interested in was to produce a play of a particular kind that was very successful, not to vary the chief character that figured therein. The account of the ambitious villain-hero is likely to be even more misleading. Richard III, to be sure, has for more than a generation been recognized as a rôle created under the influence of Marlowe. But that Macbeth is due to that influence is a grotesque thought. Indeed, Dr. Boyer is careful not to lay stress on such a relation, contenting himself with an effort to bring Macbeth within his definition of villain-hero. Catiline is just as obviously not an imitation of Richard or Tamburlaine. All the antecedent probabilities favor the supposition that Jonson was influenced by the vogue of Roman plays in the preceding three or four years. All the positive evidence indicates that he drew Catiline with an eye on Sallust and Cicero rather than on Machiavelli or the sensational popular successes of a score of years before. The distinctive feature of Dr. Boyer's treatment is his interest in the academic question of how well these various romantically conceived figures measure up to Aristotle's classic standard for the tragic hero.

Music

FAITH UNFAITHFUL.

Wagner as Man and Artist. By Ernest Newman. New York: E. P. Dutton & Co. $3.50 net.

When it was announced that the eminent English critic, Ernest Newman, had written his third book on Wagner, it was hoped that it would prove to be the complete biography, "incorporating all the material that the last ten years have placed at our disposal," which, as he says in the preface to his latest volume, "is urgently needed." But he modestly declares that even if he had felt qualified to write such a biography, he would have "shrunk appalled from the magnitude of the task." Probably no man of genius ever left so much material as Wagner did for his biographers. Of his letters alone some 2,700 had already been printed when Mr. Newman wrote this volume, and 2,000 more were to be added to a new edition of his correspondence. Without waiting to see these, he thought it justifiable now to attempt—what was impossible until the publication of the Autobiography in 1911—"a complete and impartial psychological estimate of him."

If Mr. Newman really thinks he has given his readers a complete and impartial estimate of Wagner as a man, it must be said frankly that he has failed lamentably. It is ridiculous to maintain, as another English author has done, that Wagner's character was flawless. From the many pages of Glasenapp's official biography one gets the impression that he was almost an angel, and many other writers have treated him as a demigod. That Wagner was human—often very human, and sometimes inhuman—he himself made clear in his Autobiography, which, indeed, contains the unkindest things ever said about him. But he was very far indeed from being the petty, selfish, heartless, arrogant, ignoble person he must appear to readers of Mr. Newman's book who have not seen the other side of the shield.

Doubtless, Mr. Newman did not really mean to convey this impression. There is every reason to believe that he merely intended to present the other side of the question, against Ellis and the others who have deified Wagner as a man; but he failed to remember that his readers would not all be, as he was, fresh from a perusal of the brief for Wagner and would therefore get an altogether one-sided view of the case from his elaborate indictment. He comes to the rescue of Wagner's first wife in a way far more unfair to him than Ellis's treatment is to her. He devotes no fewer than eleven pages to the Mme. Laussot affair; he fails to convey a correct impression of the Lachner and Hanslick episodes; he places a childish credence in the silly Hornstein stories and other tittle-tattle current among Wagner's enemies. One of the stories the reader is asked to believe is that Wagner invited some friends to dinner, and not only kept all the wine for himself, but sneeringly intimated to the others that if they wanted any, they might do as he did and buy it at the nearest restaurant!—this of the same Wagner who on other pages is represented, and justly so, as the most lavish and reckless of givers and entertainers!

More than a hundred and forty pages are devoted by Mr. Newman to an exposition of the foibles, real or alleged, of Wagner, and only here and there do we get a glimpse of his kind heart and the nobility of his character, which asserted itself whenever he was not treated like a Hun, and which culminated in his unswerving allegiance to the highest ideals in art, when he might have easily made the fortune he so much desired by neglecting these principles. His bitterest enemy, Dr. Hanslick, was struck by the fact that "he exercised an incomprehensible magic in order to make friends and to retain them." And Nietzsche, even after the estrangement, wrote: "I declare Wagner to have been the greatest benefactor of my life," and that, of all his experiences, the days spent with Wagner were those he would not have blotted from his life "at any price."

Incidentally, Mr. Newman remarks that "we smile now at the stories told of Beethoven's grossness and ill-breeding." Why not smile also at Wagner's peccadillos, instead of devoting half a volume to them? The question is all the more pertinent because a careful study of the facts in many cases puts things in quite a different light from that in which Mr. Newman presents them. Thus, he dwells repeatedly—and quite properly—on the fact that Wagner was a "professional borrower," but fails to note that whenever it was possible he paid his debts. Only a few months ago, the well-known Hungarian author, Ludwig Karpath, issued a brochure entitled "Wagner der Schuldenmacher," in which proofs are adduced that he did ultimately pay for the luxuries he had bought with borrowed money. In commenting on this pamphlet the eminent Berlin critic, Dr. Leopold Schmidt, makes some remarks which Mr. Newman would do well to ponder before he writes his fourth book on Wagner, ten years hence, as he intimates he may, the subject being "inexhaustible." It is well to know the truth, says Dr. Schmidt, but is it not a matter of superlative unimportance whether or not the man who created "Tristan" paid his debts? Even if he hadn't, "the world would still be his debtor." "We are nevertheless grateful to Herr Karpath for throwing a pleasant light on this Wagner tattle, in contrast to those who manifest their interest in a great man solely by an indelicate curiosity and spiteful attempts to belittle."

It is much to be regretted that Mr. Newman has so signally failed in his attempt to paint Wagner as Man, because his presentment of Wagner as Artist is one of the very best that has been made in any language. It is far superior to his own "A Study of Wagner," which, though thoughtful and suggestive, is marred here and there

by an inability to sound the depths of Wagner's genius. Little of this is left in the new volume. Greater familiarity with Wagner's works has bred increased enthusiasm for them and caused some fancied defects to disappear. The author frequently indulges in outbursts that sound like rhapsodies. Concerning "Siegfried," for instance, the wonders of which the general public has not yet discovered, he writes:

> There is an absolute exultation of style; the music seems to dance and cry aloud out of pure joy in its own strength and beauty. . . . In sheer fertility of idea Wagner was probably the greatest musician the world has ever seen. . . . Wagner's is the only imagination in music that can be compared with Shakespeare's in dramatic fertility and comprehensiveness. It pours itself over the whole surface of a work, into every nook and cranny of it.

In proof of these assertions, Mr. Newman points out many details in the operas, from the earliest to the latest. He takes it for granted that the reader is familiar with these works, wherefore he does not tell their plots or analyze the music systematically. This leaves him plenty of space for comments on significant details. Even the best-informed readers will gather new knowledge, while marvelling that this eminent English critic has been able to find so many new things to say about works concerning which whole shelves of books and tons of periodical literature have been written. Every opera-goer will find increased enjoyment if, before attending "Rheingold" or "Parsifal," or any of the other works, he will read what Mr. Newman has said about them in this volume. It will teach him how to admire understandingly and with critical discrimination. HENRY T. FINCK.

Wilhelm Ganz, whose death was recently announced, was engaged by Jenny Lind as accompanist during her tour in England and Scotland in 1856, and for many years he was associated with Adelina Patti in a similar capacity. She often sang his song, "Dear Bird of Winter." His "Sing, Sweet Bird" frequently was in the programmes of Parepa Rosa, and Melba sang it at her début. For more than half a century Ganz gave concerts during each London season, and he was much in demand in the highest aristocratic circles as teacher and coach. He was also prominent as an orchestral conductor. As such he had the honor of being the first to produce in England Liszt's "Dante" symphony, as well as Berlioz's "Symphonie Fantastique." Among the artists who made their first appearance in England at the concerts in question were Madame Sofie Menter, Madame Essipoff, Dr. Camille Saint-Saëns, and Mr. Wladimir de Pachmann. In 1871 Wilhelm Ganz was appointed grand organist of the Grand Lodge of Freemasons, this entitling him to wear the "purple and gold" at all masonic meetings. The German Emperor decorated him with the Order of Saxe-Coburg-Gotha. For many years he was one of the professors at the Guildhall School of Music. Towards the close of 1913 Ganz issued his "Memories of a Musician," a book full of anecdote and amiable and amusing record of adventure in the concert-room and elsewhere.

Art

GOYA AND HIS ART.

By FRANK JEWETT MATHER, JR.

PART TWO.

IV.

The period of Goya's greatness as a painter, coincides with one of extreme disaster for Spain, the eve and midnight of the Napoleonic wars. He found inspiration alike in the imbecility of his Bourbon patrons, and in the rough heroism of such partisan captains as Juan Martin, solace in the soft comeliness of the Madrilenas and in the more accentuated charms of the actresses of the day. In his decorations for the Church of San Antonio de la Florida his audacious imputation of carnality to the saints and the very angels reaches its height. He had arrived at a fame to which everything was permitted. His portraits from 1795 for fifteen years have the old aggressive accent, but carry themselves with more composure and assurance. To enumerate the best is impossible. Typical examples of his successful portraiture of women are the stiffly posed but vital group of the Countess of Montijo and her four daughters in the Liria Palace, Madrid, a palpitating complex of warm and amiable femininity; the petulant Bookseller of the Calle de las Carretas; the self-confident effigy of the actress, La Tirana, somewhat stolidly facing the footlights, and recently, at an international dealer's, a seated portrait of a plump and powdered beauty looking out with due complacency over spreading flounces of loveliest peachy hue and lightness—these are pure Goya. Among male portraits of highest excellence are the arrogant, potent, fleshly face of the toreador Costillares, Goya's predecessor, rumor insisted, in the graces of the Duchess of Alba; the austere and somewhat shrinking figure of the poet Moratin; the ardent, hirsute mask of the patriot Juan Martin; the hawk-like sketch of Arthur Wellesley. These are startling, perturbing, impressive visions—salient, casual, yet significant documents rudely torn from life's book. The artistry is greater than before, but still not the finest; the accent of civilization is neither sought for nor attained.

Goya was after all more than half a caricaturist and illustrator. His power in the latter capacity may best be felt in The Episode of the 2d of May with which our survey began. His position as a painter in the narrower sense may perhaps most readily be ascertained from a study of the two Mayas and of The Family Group of Charles IV. Thus a few steps in the Prado will inform one, not concerning his diabolism and the vast variety of his invention, but at least as to the pieces which may most fairly meet the inevitable comparison with similar work of the great masters.

That the two Mayas were done from the pretty Duchess is not certain. They may simply be, like many later works, reminiscent of her charms. Indeed, it is hard to reconcile their customary date, 1799, with her being the sitter. Yet, when it is recalled that she owned the famous Venus of Velasquez, it was natural enough that she should wish to have similarly commemorated her own certainly not inferior graces. She and the Venus are in any case the starting point for the Mayas, and chronology must reconcile itself with that fact. The Maya Nude, rosy from top to toe, balanced consciously upon her silvery cushions, feet brought together with bewitchingly natural awkwardness, head abandoned to the hands clasped behind it, yet directed with provocative appeal towards all the world, hips and breasts thrust forward, is a true eighteenth-century Astarte. In comparison with her, the half pagan nudities of the *école galante* are ineffectual; only Fragonard, and he exceptionally, has so fully spoken the word of the flesh. The painting is of the most featherlike lightness, and only escapes oversweetness from the sharp carnal flavor of the whole. The criticism of such a picture is difficult, involving eventually the more complex issues where art and morals touch. In the sense that a definite emotion pungently expressed radiates from it, it is a masterpiece. Until lately the authorities shut it away in a private room, showing, if a certain lack of æsthetic courage, a perfectly just sense of moral values. Astarte unveiled will always be a perilous spectacle for those who cannot see life quite steadily and whole. It will not commend the picture to moralists that Manet's copy of the Maya Desnuda solaced the last drug-clouded days of Charles Baudelaire, and moralists have, despite much current sophistry, much to say in the matter.

The place of the Nude Maya may best be found by comparing her with other famous nudes. Naturally, the idealism of the Greeks is out of the comparison, but take Titian's Danaë or the Venus Listening to Music in the same gallery, his Bacchante overcome by love and wine, how cosmic, necessary, and noble their animality, after all, is. Velasquez's plebeian Venus has a saving and wholesome athleticism. Manet's Olympe, frankly derivative as she is from the Maya, has more suggestion of life and character apart from her professional utility, and is, I think, more beautifully painted. The Maya is orientally soft and specialized, and symbolizes the least significant aspect of sex, symbolizes it quite superbly.

For the reason given by the legend or otherwise, the fancy took Goya to represent the same model in the same pose, lightly clothed in the white linen breeches and bolero of a Spanish dandy. He bettered the composition a little, bringing the frame nearer the figure, and laying the coquettish form more slashingly athwart the oblong. The actual painting is volatile to frothiness. The tinge of vulgarity in the Nude Maya is

increased in the clothed version. The glance is more insistent, the effect more seductive. Startling and effective the picture is, but the reservations already made apply in higher degree. The Mayas embody after all just a sportsman's ideal of a fine woman.

The great portrait group of Charles IV and his family is a more serious matter. It enlisted Goya's love of reality, his measured admiration, and an almost surer guarantee of a fine picture, his scorn. It is a group of quite magnificent portraits, the painter's own bulldog face being not the worst, but I cannot regard it as a fine portrait group. The characterization of the individuals is superb, and better modulated than is usual with Goya, who generally imposes his own mood upon all sitters. The domineering turn of the Queen, appropriately the central figure, the sinister stolidity of the King, the skull-like face of an aunt which glowers behind so much frivolous young life, the thoroughly genteel ineptitude of the Crown Prince, the amiable exuberance of the easy-living Luis of Parma and his wife, the precocious sensitiveness of the little Maria Isabella—all this is of Goya's best. The whole thing vividly suggests the Bourbon incapacity either for learning or forgetting. Few pictures are of higher historic significance. Goya spared no pains upon it. Some of his most admirable sketches were made in preparation. Yet the group would barely hold its own with a family group by Sir Joshua, much less by Copley. It breathes an intenser life, but it lacks unconsciousness and ease. The sense of space is weak in it, as it often is with Goya, the atmosphere is torrid and unbreathable, the color, however varied, is in appearance tarnished. The royal figures have the defect of standing rather awkwardly in unharmonized poses. It is plain that he who greatly values arrangement, style, harmony, mind in painting, will think this impressive canvas less than a great masterpiece. He who sets no store by style, but wants merely trenchant notation of casual appearance, way well find his æsthetic law and gospels in the Charles IV and his Family. All insurgents against the tradition of the Renaissance have naturally found their warrant in what, if it be not Goya's masterpiece, at least contains within a single frame a number of masterpieces of drastic portraiture.

The early years of the new century were Goya's heroic period, full of disaster for himself and for Spain. In 1804, his fifty-eighth year, his wife died. Most of his intimates were taken away about the same time. Doubly isolated by bereavement and deafness, he continued as court painter of the treacherous Ferdinand VII, who in 1808 ousted his incompetent father. Napoleon's armies had already overrun the Peninsula, which had reacted in the most bitter and heroic of partisan insurgency. When the old King was taken away by the French, May 2, 1808, Madrid rose in patriotic if illogical revolt. Murat hurled his Mamelukes through the unarmed mob, and the day closed in massacre and the rattle of firing squads before whom the captives were pushed indiscriminately. A few days later a deaf old man made a strange exhibition before a crowd of idlers. Dipping his handkerchief in the mud of the gutter, he sketched on a wall the turbaned horsemen riding down Spanish men and women armed only with the national knife. Whether this was a taunt or a compliment, the sketcher in mud did not say. It is more important to note that it was the first idea for the great canvas now in the Prado. It is a weltering, confused, and ferocious work, overpowering but less significant than its companion piece, The Military Execution by the French, which is of steel-like clarity. Late in the year began the terrible siege which ended in the sacking of his native Zaragoza. He visited the smoking ruins, just escaping being shot as a spy on the way. He painted the portrait of the alien King Joseph Bonaparte, and, under orders, selected the pictures to be seized by the conquerors. He absolved the ungrateful commission like a patriot, helping select fifty that would hardly be missed.

The trip to Zaragoza had burned in certain pictures of a ravaged country, and when in failing health, Goya once more forsook the brush for the etching needle, these impressions took form in the eighty-two plates, which were published in 1863, long after his death, by the Academy of San Fernando. There never was an album less academic than "Los Desastros de la Guerra." It is an unsparing record of actual butchery and rapine. Even in Napoleonic times, which accepted such spectacles as matter of common experience, Goya only dared circulate a few proofs. The reek of the human garbage heap is revealed with an emphasis horrible, yet wholly true, and the actual portrait of clotted bodies with lopped-off limbs, of bawling humans staggering out from under burning rafters, of virgins dragged away by sweating ravishers—the sufficient horror of all this is enhanced by a sense of overruling malignity, of a world delivered over to the vilest and most destructive passions. The "Desastros" is a raw and throbbing bit of life in its basest manifestation, in its least human aspect. When I saw and smelt overturned Messina, I verified the outer veracity of Goya's picture, but there was dignity in the impersonal awfulness of the catastrophe. Dignity there could not be in the "Desastros de la Guerra." It is an inferno of the most truthful sordidness. Such a work is profoundly moral or wholly revolting or both, as you choose to take it. The only critical question that fairly arises, for something more or less than art is involved, is that of the artist's attitude. Was he wholly moved by fierce indignation at the outrage, or did his sinister spirit find also a certain pleasure in the very extravagance of these terrors? The similarity of certain themes and forms in the "Desastros" to the nightmares which he deliberately contrived for the adornment of his suburban home, and presumably for his own delight, suggests that we should not too readily admit the "Desastros" as in intention a peace document.

V.

The "Desastros" was completed in 1813, Goya's sixty-seventh year. The remaining fifteen years form an unexpected peaceful epilogue. He became a detached artist. Painting was on the whole in abeyance in favor of etching, and later, of the new art of lithography. In 1818, on the restoration of the despised Ferdinand, Goya seriously considered leaving Spain. Instead, he retired to the little house on the fickle Manzanares, and with his decorations soon made a kind of witches' kitchen of the new home. A grass-widow second cousin, Leocardia Weiss, became housekeeper, and she brought with her a "niece," Rosario, who lived long enough to comfort the painter's declining days, and developed a certain talent as a miniature painter. In 1815 Goya issued a few copies of the Bull Fights, the "Tauromaquia," in thirty-three plates. It is done with more care than most of his etchings, has undiminished vigor. Rembrandt and the more recent Venetian etchers have been studied to good purpose. Everything considered, this is the most desirable of Goya's albums, though, as the most normal, it is also the least characteristic, and the official edition of 1855, from the Royal Calcografia, is none too good. The twenty-two plates of "Los Proverbios," eighteen of which were published by the Academy in 1850, is in the main merely a sequel to the "Caprichos.' Still it contains the highly imaginative and even prophetic design of flying men, which, amplified, is also represented by a superb canvas in an American private collection.

When Goya left Madrid for France in 1824, his seventy-eighth year, he probably had no clearer reason than the discontent of a restless and invalid old age and the absence of any real bonds at home. At the Paris salon of 1824 he saw a far more accomplished application of some of his own theories of painting in the landscapes of Constable and Delacroix's Massacre at Scio. It is of record that he admired the work of the young romantic, and even more that of Baron Gros. Gericault was still the sensation of the hour, and it is strange that Paris paid no especial attention to a genius whose ways it was rapidly, if unconsciously, adopting. Goya soon withdrew to Bordeaux, where, with occasional absences and visits to Spain, he was a diligent and venerable figure in the Spanish colony for his few remaining years. He took up lithography, and did some splendid large plates of bull fights; he invented a short way of doing miniatures by smoking the ivory and rubbing a drop of water about with the thumb, and attended to little Rosario's artistic education. To the impoverished refugees he was a ready benefactor, to his mediocre son Xavier a sagacious counsellor. The turbulent life was to close on a note of ripe-

ness and wisdom. His feeble health and imprudent wanderings caused much anxiety to his intimates, and, when apoplexy carried him off swiftly, on April 16, 1828, in his eighty-third year, it may have been something of a relief. He was buried in the cemetery of the Chartreuse, and his body lay there undisturbed for sixty years, until Spain reclaimed it in 1888. For a generation before the translation, he had been a spiritual leader among all the insurgents against the academic tradition. Delacroix, Daumier, Manet, Regnault, had done him homage, by word and by imitation. He is to-day, with El Greco, the old master most honored by the emancipated art student.

VI.

His primacy as a forerunner of the anti-academic revolt is merited, not merely by his practice, but by his few recorded opinions. Nature, Rembrandt, and Velasquez—surely an anti-academic trinity—were avowedly his gods. "Always lines and never body," he once protested. "But where do we find these lines in Nature? I can only see masses in light, and masses in shadow, planes which recede, reliefs or backgrounds." Here we have virtually the programme of Couture. Yet he fell short of the modern notion of construction in pure color. His own color is not quite organic, but conceived as light and shade. "In Nature color does not exist any more than line," he told a friend. "There is but the sun and the shadows. Give me a piece of charcoal, and I will make you a picture." Evidently he had advanced only half way towards Manet. His vindication of the artist's freedom of invention, conveyed in a discarded preface to the "Caprichos," allies him to the artistic movements of to-day. Imitation of nature is difficult and admirable, but let us also admire "a method which leaves Nature out of the question and reveals to our eyes forms and movements existing only in the imagination. . . . The artist must be allowed the title of inventor, and ceases to be a mere servile copyist."

This is the modern note. It naturally met opposition from those to whom modernism is anathema. Ruskin in 1872 found a fine copy of the "Caprichos" at F. S. Ellis's, the bookseller's, besought him to burn the accursed thing, and was obeyed. Hamerton visited the Goya exhibition at Paris in 1878, and hurried home to write that the Spaniard had a foul mind, had risen to notoriety chiefly from his legend as a revolutionist, and delivered the more telling thrust that he was a slovenly and rather incompetent etcher. Both parties, each from its own point of view—the modernists and the authors of "Modern Painters" and "The Intellectual Life"—are right.

We may best reconcile the contradiction by inquiring where lies the value of Goya's work. Surely not in the execution, which is often slack. Goya seldom shows fine arrangement; he cared nothing about it. His draughtsmanship is at times negligent, his color seldom harmonized, and frequently rather hot and stuffy. The value of his work must then lie in the sheer turbulent emotion that begot it, which sometimes contains much that is morally questionable. And this prompts the further inquiry, Where lies the value of art in general?—a question easier to set than to answer. Yet a tentative answer must be essayed unless we are to leave all criticism the mere play of contending temperaments. It will probably be agreed that the creative act—and naturally its appreciation as well—includes two elements, one of expansive impulse and one of restrictive discipline, and that the supreme work of art grows out of a just fusion of these two elements. Artists may be classed as they approach one or the other extreme. In some—Raphael, Vermeer, Velasquez—the discipline is so patent that the impulse may seem weak and defective, but it is there all the same. In others, as Tintoretto and Rembrandt, the impulse is so evident that discipline seems absent, but all the same it is there. Only a few artists, like Rubens and Titian, arrive at a serene balance of the two elements, and the tragedy of some of the noblest works of art, Michelangelo's and the best of Rodin's, lies precisely in the tenseness and instability of the equilibrium between the expansive and restrictive mood.

Whether we should choose for impulse or discipline seems to me an idle issue. Impulse utterly without discipline is mere formless fury or febrile vaporing, while discipline wholly uninformed by impulse is, if conceivable, wholly void and negligible, mere dusty algebra of the mechanical mind.

As for Goya, he plainly belongs pretty far up or down, as you choose to put it, on the side of impulse. There is a minimum of discipline about him. He has the obvious faults of insurgency when untempered by tradition. His eminent literary cogener, Byron—and in many respects Goya is the most Byronic of painters—had more of saving historic sense. His insurgency was more central and less provincial. This is not to say that Goya is not a large and significant figure. He felt tremendously, and this is value. We must beware of considering the artist as a satisfactory ratio. It is true that in the finest art, discipline will carry creation a remove from life, or, rather, will ally it with the more disciplined forms of life. Goya's art is never at this remove. Its lurid orbit swings in the perilous border line where art and raw life meet. This unhallowed limbo has no more distinguished denizen than Francisco Goya, and, because his art arises largely from confusion and revolt, it will always excite; even where it does not satisfy, it will instruct, not on the terms of the balanced artists, but with a hurtling emphasis all its own. In his waiver of civilization he was true to his peasant blood and to his Spanish breeding. He may be regarded merely as an inversion of those seventeenth-century artists who filled Spain with agonized Christs and tortured martyrs. Diabolize one of these early masters, deprive him of the leading of the Church, turn him loose in a disordered and despicable Spain, energize him more highly, and you will have something very like the insolent master of Zaragoza. To produce a central art Spain has never yet attained adequate civilization. Her triumphs are legitimately read in the aristocratic individualism of Velasquez, in the grotesque fantasy of El Greco, in the turbulent emotionalism of Goya. That he was not unworthy of the great predecessors whom he venerated is surely praise enough for him.

Rambling adventures of two enthusiastic collectors are related in Robert and Elizabeth Shackleton's "The Charm of the Antique" (Hearst; $2.50 net). The authors are lucky. They cannot stir on a New England roadside or in a Dutch village without stumbling upon a "museum piece." Even in the new communities of Colorado they hunt the antique successfully. To the friendly offices of a New York janitor they owe an exquisite old Empire table which his wife would have sold for a dollar. In Provincetown an aged sea captain gives away the seat and back of a fine Windsor chair; later, in an Ohio town, they happen on seatless legs that apparently were made for just this colonial example. Without display of erudition these Shackletons tell good stories, the moral of which is that they who think antiques somehow find antiques. One suspects that they underestimate the dangers of the spurious and one wishes that the title of their book were less like that of Walter A. Dyer's "The Lure of the Antique."

Finance

A DRAMATIC CONTRAST.

In an ordinary period, conclusions as to the country's outlook for business activity and prosperity would be largely determined during these early weeks of October. Week before last we had the cotton crop indications; on Wednesday of last week came the grain estimates. In June, a 900,000,000-bushel Government estimate on wheat was received with amazement and incredulity. Wednesday's figure of 892,000,000, which practically fixes the actual yield, is close to the all but incredible June estimate. The same day's other estimates showed this year to have produced the third largest oats crop in our history, the second largest barley crop, the largest rye crop, and the third largest yield of hay. The corn crop's figure is not what was hoped for early in the season, but it is 10 per cent. above last year's actual harvest, and has been exceeded only in two years since the great crop of 1906.

To this attractive agricultural picture the Government estimate on the cotton crop added color. Sometimes the cotton yield runs short in a season of great abundance in the grain belt. But the Government's "October cotton condition figure" on the crop of 1914 was the highest in a decade, on the second largest recorded acreage; and the yield which the trade interpreted from the figures would be second only to the crop of abnormal lucky accidents, in 1911.

There is no great use in reflecting on what might have been the results of such agricultural achievements, if the Archduke had not been killed at Sarajevo, or Austria had not fixed impossible conditions in her ultimatum to Servia, or the military cabal had not forced the hand of Government at Berlin while England was laboring with all its power for peace. Under normal conditions, such harvests, coming in face of a European shortage, would undoubtedly have meant something like an autumn business boom in America. But since what has happened in Europe since August 1 has happened, the matter of larger interest is, to determine what these events mean under present conditions.

Nobody doubts what the grain crops mean. From the farm community's point of view, there was one real source of apprehension in the otherwise brilliant agricultural outlook last June. It was, that a wheat crop of such wholly unprecedented magnitude, coming in full volume on the market in the autumn, would force down prices, for a good part of the sellers, almost to an unremunerative basis. In fact, the Kansas and Oklahoma farmers were then getting only 65 to 70 cents a bushel, and the Chicago market's price was 77. The war began; Europe bought in enormous quantities; the Chicago market rose continuously to $1.21.

On that rise, the farmer sold at prices which ran at times nearly double what he had feared would be the best figure obtainable. When it is considered that the farmers are selling, at the present exceptionally high prices, supplies which average 16 per cent. more in quantity than in the largest previous harvest, and when grain experts hold that the outside world will probably need every bushel of our surplus wheat this year, the case is clear enough. The benefits which the grain crops would have brought to the agricultural West, without the war, have been immensely enhanced as a result of war.

The contrast in the cotton trade is most dramatic. Our planters will apparently raise 15,000,000 bales. When they raised 16,100,000 in 1911, the export trade took 10,600,000. Normally, other nations would have taken between eight and nine millions from the present season's crop. But nearly one-third of our cotton export, even from the crop of 1911, has usually gone to Germany, and Germany is now cut off from our market. Not a bale has gone to her since August 1, whereas in the three months ending with October, 1913, she took 829,000 bales. Only a few days ago, the first shipment since the war began was made to battle-torn France; in the same three months of 1913, we sent her 464,000 bales. Nor is this all; for England's spinning industry has been so far depressed, as a result of war and disturbed finance, that she took from us, during August and September, 348,000 bales less than in 1913—a decrease of 77 per cent.

If the general ratio of decrease in our exports should continue until next August, the twelvemonth's total exports, instead of, say, 8,000,000 bales, would be barely 800,000. If home use of cotton did not heavily increase, more than 7,000,000 bales of cotton would be left unsold at the season's end. The usual surplus, undisposed of during a cotton year, is a quarter of a million bales.

Thus the war which has created an unhoped-for profitable market for one crop with a bumper year, has for the moment utterly crushed out the market for another. While wheat is our main reliance in creating foreign credits and breaking the deadlock of exchange, the cotton situation is more than offsetting what is thus achieved. The problem is of far larger interest, even than the prosperity of the South. Perhaps the answer to it is, that the recent low range of cotton exports cannot possibly continue; that people must have new garments, war or no war; that the six or eight millions of soldiers in the field must be clothed as well as fed, and that this cannot be done without Europe resorting to heavy purchases of our cotton. In fact, the increase has begun already. In August, we sent less than one-tenth as much as in 1913. Last week's exports were 40 per cent. of a year ago.

THE REAL "TRUTH ABOUT GERMANY"

By Douglas Sladen

With an appendix

GREAT BRITAIN AND THE WAR

From the English Point of View

By A. Maurice Low, M. A.

The volume contains the full text of a monograph recently issued in Germany under the title of "Truth About Germany," together with the analysis and refutation of a series of unfounded and incorrect statements contained in the German work.

Mr. Sladen's monograph presents the case for England.

Price $1.00——Order from Your Bookseller Now.——

Calkins's Biology

By GARY N. CALKINS, Professor in Columbia University. viii+241 pp. 8vo. $1.75.

The type and laboratory method of instruction is the basis of the book, and the types are chosen so as to serve as points of departure for various lines of development in subsequent course work. It provides for about thirty class exercises and as many laboratory periods. The course leads up to a discussion, in the final chapter, of physiological adaptations as illustrated by parasitism and by some of the phenomena of immunity, and of the origin and perpetuation of variations, with the modern principles of heredity.

Bessey's Essentials of College Botany

By CHARLES E. BESSEY, Professor in the University of Nebraska, and ERNST A. BESSEY, Professor in the Michigan Agricultural College. (*American Science Series.*) The eighth edition, revised and entirely rewritten, of Bessey's *Essentials of Botany*. xiv+409 pp. 12mo. $1.50.

It is, except for its plan, an entirely new work. It begins with the study of protoplasm, the cell and its modifications, tissues and tissue systems, in the course of which the functions of these structures are discussed briefly. Two chapters on physiology follow and the remainder of the book is devoted to the study of characteristic forms of the fourteen phyla of plants.

NEW BOOKS ON A WIDE VARIETY OF INTERESTS

MISCELLANEOUS

OUR PHILADELPHIA

By Elizabeth Robins Pennell. Illustrated by Joseph Pennell. (Regular Edition.) 105 illustrations from lithographs. Quarto. In a box. $7.50 net. (Autographed Edition.) Signed by both author and artist, with ten additional lithographs. Special buckram binding in a box. $18.00 net. Carriage charges extra. (*This edition limited to advance subscribers. After publication no orders will be filled.*)

A book of personal experience more entertaining than a novel, with Mr. Pennell's illustrations made especially for this volume.

COLONIAL MANSIONS OF MARYLAND AND DELAWARE

By John Martin Hammond. Limited Edition, printed from type, which has been distributed. With 65 illustrations. Octavo. In a box, $5.00 net. Postage extra

This volume is uniform in style and price with others in the Limited Edition Series—"Colonial Homes of Philadelphia and its Neighborhood," "Manors of Virginia in Colonial Times," and "Historic Homes of New Jersey"—all of which are now out of print and at a premium.

ESSAYS POLITICAL AND HISTORICAL

By Charlemagne Tower, LL.D., former Minister of the U. S to Austria-Hungary, Ambassador to Russia and Germany. 12mo. Cloth. $1.50 net. Postage extra.

Essays upon vital subjects by one of our greatest figures in the diplomatic world will demand instant attention. The book will be widely read for its important revelations in the light of the present disturbed conditions.

THE TRUE ULYSSES S. GRANT

By General Charles King. 24 illustrations. Octavo. Buckram. $2.00 net. Half levant. $5.00 net. Postage extra.

This new volume in the True Biography and History Series is the work of a writer peculiarly fitted to deal with Grant. Not only Grant, the general, but Grant, the man, and Grant the president, are treated with the same regard for truth that characterizes all the volumes in the series.

HISTORY OF THE UNITED STATES

By Matthew Page Andrews, M. A. 155 illustrations and 24 black and white maps in the text. Also frontispiece and 2 maps in full color. 426 pages. $1 10 net.

Viscount James Bryce, author of "The American Commonwealth," writes: "I am reading it (Andrews' History of the United States) with great interest, and admire the skill with which you have succeeded in treating a vast subject without becoming dull or even dry. Your conciseness has been made compatible with a flowing and agreeable narrative style."

HEROES AND HEROINES OF FICTION

Modern Prose and Poetry

By William S. Walsh. Crown 8vo. Half morocco. $3.50 net. Postage extra.

Mr. Walsh has compiled the famous characters and famous names in modern novels, romances, poems, and dramas. These are classified, analyzed, and criticised and supplemented with citations from the best authorities.

THE MYSTERY OF THE ORIENTAL RUG

Including the Prayer Rug and Advice to Buyers

By Dr. G. Griffin Lewis. Frontispiece in color and 21 full-page plates. Octavo. Cloth. $1.50 net. Postage extra.

This charming volume is compact with information and no one should buy rugs without its aid. Those already possessing the author's "Practical Book of Oriental Rugs" should not fail to secure it as an interesting supplement.

SHAKSPERE AND SIR WALTER RALEGH

By Henry Pemberton, Jr., M.A. Including also several essays previously published in the New Shakespeareana. Illustrated. $1.50 net. Postage extra.

All those who are in anywise interested in the greatest problem in English literature, i. e., the Shakespearean authorship, must necessarily consult this book, which presents the picturesque and tragic figure of Sir Walter Raleigh as the true author.

GOOD FICTION

A Novel of Unusual Distinction

THE THREE FURLONGERS

By Sheila Kaye-Smith. Frontispiece. $1.25 net. Postage extra.

New York Times: "Her story is written with such sincerity of feeling and appreciation of moral beauty and contains so much human truth that the author deserves warm commendation. For she . . . has given it also dramatic moments and strong emotional tension. . . . An achievement worth while."

THE WARD OF TECUMSEH

By Crittenden Marriott. Illustrated. $1.25 net. Postage extra.

The author of "Sally Castleton, Southerner," has here written a novel of the American wilderness that has the tang and flavor of a James Fenimore Cooper tale. It is intensely exciting—the heroine, a charming French girl, mysteriously disappears among the Indians, and one reads the story with the same eagerness that the hero feels in his attempt to find the lost girl.

THE DUKE OF OBLIVION

By John Reed Scott. Frontispiece in color. $1.25 net. Postage extra.

New York Times: "There are plots and counter-plots, hand-to-hand fights, and many thrilling adventures . . . Until the end the reader is kept in a high state of doubt as to whether or not they will all escape in safety."

BETTY'S VIRGINIA CHRISTMAS

By Molly Elliot Seawell. Illustrated in color, with page decorations, artistic cloth binding. $1.50 net. Postage extra.

A captivating picture of Southern life of ante-bellum days. Betty wins the reader on the first page and holds him to the last, while the story has the true Christmas spirit of dancing, merry-making, song and sport.

WILD MUSTARD

By William Jasper Nicolls. $1.25 net. Postage extra.

Philadelphia Press: "A racy, rollicking and irresistible satire on woman suffrage, with the vicinity of Philadelphia as the scene of its ebullient, but always good-natured fun. . . . This story . . . is so genial that even the wildest of 'wild women' could scarcely find cause for offense in its raillery."

FOR BOYS AND GIRLS

Boys of All Ages Will Enjoy

BUFFALO BILL AND THE OVERLAND TRAIL

By Edwin L Sabin. Illustrated in color and black and white. $1.25 net. Postage extra.

This new volume in the Trail Blazer's Series, in addition to being a thrilling story of the adventures of a boy in the days of the Overland Trail, is also a true sketch of the great pioneer and Indian fighter, Colonel William F. Cody.

A New Volume in STORIES ALL CHILDREN LOVE SERIES

THE CUCKOO CLOCK

By Mrs. Molesworth. 8 full-page illustrations in color by Maria L. Kirk. Ornamental cloth. $1.25 net.

This famous book is one of the most delightful children's stories ever written. The story has much of the charm of "Alice in Wonderland," and can justly be called a classic. The boy or girl who does not read it misses one of the greatest treats of childhood.

The Nation

VOL. XCIX.—NO. 2573 THURSDAY, OCTOBER 22, 1914 Reg. U. S. Pat. Office. PRICE TEN CENTS

NOTABLE NEW BOOKS

The Unknown Guest — By Maurice Maeterlinck

The title suggests in that beautifully imaginative yet wonderfully apt way characteristic of Maeterlinck the contents of his latest book. The Unknown Guest within ourselves—that mysterious, little known, rarely manifested, vaguely realized stranger that is part of us, and which is sometimes termed the psychic self—has called forth this strangely beautiful and exquisitely worded book.

Bound uniform with Maeterlinck's other books. Price $1.50 *net.*

The Mason Bees — By J. H. Fabre

"Prof. Fabre is a great magician. He is the good fairy of the scientific world. . . . With true scientific precision, with none of the arid stretches that mar even the least dull pages of the average scientific tome, he visualizes in a way past understanding the lives and doings of the spider, the grasshopper, the butterfly."—*N. Y. Times.*

Bound uniform with "The Life of the Spider" and "The Life of the Fly." Price $1.50 *net.*

Lombard Towns of Italy — By Egerton R. Williams, Jr.

The author of those fascinating books about those fascinating places—the Hill Towns and the Plain Towns of Italy, has written another book along the lines of his former ones. Of all the books about Italy, and there are many which have been offered to the American public, few have been as popular as Mr. Williams'. And deservedly so.

With many illustrations. Price $3.00 *net.*

Beauty for Ashes — By Albion Fellows Bacon

The story of a woman who waked up a State, and made the lives of thousands of men, women and children happier and better.

Jacob Riis has said: "Mrs. Bacon's chapters are great human documents of wondrous power and appeal. They stirred me through . . . What a little woman she is. Indiana has cause to be prouder of her than of seventeen Presidents and Vice-Presidents, alive and dead."

Illustrated. Price $1.50 *net.*

Beside the Bowery — By John Hopkins Denison

In the belief that a brief record of the life of Eliza Rockwell, who for many years gave herself to the poor and suffering of the crowded streets which lie along the lower end of the Bowery, will be a source of help and inspiration to others, and with the wish that the memory of such a life should be perpetuated, this book has been written.

Price $1.25 *net.*

Jewish Life in Modern Times — By Israel Cohen

This volume represents the first attempt in English to give a comprehensive account of the life and labour of the Jewish people all over the world at the present day. It contains a full and graphic description of the social conditions of Jewish life, with particular reference to communal organization, family customs, and the distinctive features of home life, whilst the moral status and philanthropic activity, as well as the racial and physical conditions of modern Jewry, are also dealt with.

Illustrated. Price $3.00 *net.*

John Hay: Author and Statesman — By Lorenzo Sears

This sympathetic biography of John Hay, confidant of Lincoln, friend and right-hand man both of McKinley and Roosevelt, will help to keep alive the memory of a singularly gifted and singularly charming American gentleman. "The fine flower of our civilization," President McKinley called him; and President Roosevelt's tribute is:—"The most charming man and delightful companion I have ever known."

Price $1.00 *net.*

PHYSICAL LABORATORY MANUAL

By EMORY LEON CHAFFEE, Ph.D., Instructor in Physics and in Electrical Engineering in Harvard University.

8vo. *Cloth.* 128 *pages.* $1.30 *net.*

Comprising thirty-five laboratory experiments of college grade, in the fields of Mechanics, Sound, Heat, Light, and Electricity. The aim has been not only to teach physical principles and cultivate precision in measurement, but to illustrate many practical applications of physics as well. For this reason, the experiments included are widely different in character and include some that are distinctly engineering problems.

The War from the American Viewpoint

THE WAR IN EUROPE

By

ALBERT BUSHNELL HART

Professor of the Science of Government, Harvard University

This new book on the European War from the American point of view contains a careful analysis of the conditions which brought about the war, and the grave questions involved. The author's standing at once stamps the volume as authoritative. Besides discussing the causes the volume contains information on the progress of the war, the possibility of involving nations now neutral, the startling aspects, the effect upon America both for good and evil and the probable outcome, which is the cumulative result of serious, unprejudiced study of the terrible war from every possible angle. It has been written with the single purpose of giving to the American public—facts, uncensored, reliable, and complete. Furthermore, Professor Hart has some extraordinarily pertinent things to say about our own Army and Navy which thoughtful Americans will want to ponder over. Every person in America should read it.

RURAL CREDITS

By Hon. MYRON T. HERRICK

Former United States Ambassador to France

A book for farmers, bankers, lawyers, economists, legislators, land owners, and every one interested in the establishing of a solid working foundation for the improvement of credit conditions among farmers and land owners in the United States. Mr. Herrick has made an exhaustive study of the subject both at home and abroad and his book discusses rural credits, both real and personal, from every side.

AMERICANS and the BRITONS

By Frederick C. De Sumichrast

A timely book discussing the differences between the American and British social order; Education; Foreign Relations; Journalism; Feminism; Patriotism; Militarism, and many other important subjects of interest to all English-speaking people. Professor Sumichrast is frank to point out the manifest defects in Democracy, giving us a splendid opportunity to see ourselves as a Briton sees us, denies we are "braggarts," and concludes with a very hopeful outlook for the future. Few books are more timely, none more frank. *$1.75 net.*

D. APPLETON AND COMPANY, PUBLISHERS, NEW YORK

NEW SCRIBNER PUBLICATIONS

By J. M. Barrie
HALF HOURS

A book of plays, including: "Pantaloon," "The Twelve-Pound Look," "Rosalind," "The Will."

From the delightful romantic fantasy of "Pantaloon" to the present-day realism of "The Twelve-Pound Look" represents the wide scope of Sir James Barrie's dramatic work. All four of the plays in this volume, though their subjects are quite diverse, are beautifully suggestive of Barrie at his best, with all his keenest humor, brightest spontaneity and deepest insight.

$1.25 *net; postage extra.*

By Sigurd Ibsen
ROBERT FRANK

Henrik Ibsen's only son is the author of this drama, which William Archer, the distinguished English critic, considers convincing proof that he possesses "dramatic faculty in abundance." Mr. Archer defines it as "a powerful and interesting play which claims attention on its own merits," "eminently a play of to-day, or, rather, perhaps, of to-morrow." The truth of this last comment is sufficiently evinced in the fact that its motive is the attempt of a young statesman to end, once and for all, the struggle between capital and labor by dramatically heroic measures.

$1.25 *net; postage extra.*

By F. Hopkinson Smith
In DICKENS'S LONDON

With 24 full-page illustrations from the author's drawings in charcoal.

The reader of this volume will, in effect, have the delightful experience not only of visiting those London scenes frequented by Charles Dickens himself, but also those used by him as scenes in his novels and familiar through them in connection with Alfred Jingle, Nancy, Bob Sawyer, Sam Weller, Quilp, The Marchioness, Mr. Pickwick, Mr. and Mrs. Micawber, and so on, in the company of that most sympathetic and eloquent guide, the author-artist.

By Kenyon Cox
ARTIST AND PUBLIC

And Other Essays on Art Subjects.

There is no one writing of art to-day with the vitality that fills every paragraph of Mr. Cox's work. Its freedom from what has become almost a conventional jargon in much art criticism, and the essential interest of every comment and suggestion, account for an altogether exceptional success that his book on The Classic Spirit has had within the last few years and that will be repeated with this volume.

Illustrated. $1.50 *net; postage extra.*

THE MAN BEHIND THE BARS
By Winifred Louise Taylor

Miss Taylor has for many years devoted her life to the study of prisons and prisoners, and her book contains studies of intense human interest and deep and intelligent sympathy into the lives of convicts, the effects of prison life, the careers of men who have served their terms, and the prospects and sources of their reform.

BOOKS OF
IMMEDIATE IMPORTANCE

The British Empire and the United States
A Review of Their Relations During the Century of Peace Following the Treaty of Ghent.
By William Archibald Dunning

With an introduction by the **Right Honorable Viscount Bryce** *and a preface by* **Nicholas Murray Butler.**

This is the psychological moment for the appearance of a book which explains the century of peace between Great Britain and the United States. When nearly every world power except the United States is at war, the history of our relations with a country, one of whose dominions borders ours for a distance of 3,000 miles, cannot help being intensely interesting and helpful to an understanding of war and peace and their underlying causes.

Outlines of International Law
By Charles H. Stockton

Admiral Stockton's practical experience in dealing with the complex problems and delicate situations in connection with international law renders him especially well qualified to speak with authority at this moment on a subject of such general interest. And a book on international law from his pen is especially timely since a number of works previously published upon the subject have become out of date, especially in the body of the text, by the changes that have occurred, partly as the results of the recent tribunals and conferences of The Hague, and of the London Naval Conference of 1909, at which Admiral Stockton was the first representative of the United States. $2.50 *net; postage extra.*

FICTION

PIERRE VINTON
The Adventures of a Superfluous Husband
By Edward C. Venable

Holds up in the white light of brilliant satire the ridiculous figure of unnecessary divorce, and through its vividly clever telling is an incontrovertible condemnation of one of the growing evils of our day. $1.00 *net; postage extra.*

"AND SO THEY WERE MARRIED"
A Comedy of the New Woman
By Jesse Lynch Williams

Author of "The Married Life of the Frederic Carrolls"

A sparkling comedy satirizing the conventional view of marriage which involves the subjection of woman, and bristling with the present advanced ideas of her right to independence and individual development. The hero and heroine are idealists and the despair of their practical, hide-bound relations, and the play is the clash between the two, the brilliant dialogue being social philosophy up to date. $1.25 *net; postage extra.*

By John Galsworthy
MEMORIES

Illustrated with 4 full-page colored illustrations and a large number in black and white by MAUD EARLE.

This is a charmingly sympathetic biographical sketch of a dog—a spaniel that came into the author's possession almost at birth and remained with him through life.

$1.50 *net; postage extra.*

By Henry van Dyke
THE GRAND CANYON
AND OTHER POEMS

This collection of Dr. van Dyke's recent verse takes its title from that impressive description of the Grand Canyon of Arizona at daybreak, which stands among the most beautiful of Dr. van Dyke's poems. The rest of the collection is characterized by those rare qualities that, as *The Outlook* has said, have enabled the author "to win the suffrage of the few as well as the applause of the many."

$1.25 *net; postage extra.*

By Henry James
NOTES ON NOVELISTS
With Some Other Notes

Here is a book which describes with penetrating analysis and in a thoroughly entertaining manner of telling, the work not only of the great modern novelists of the last century, Stevenson, Zola, Balzac, Flaubert and Thackeray, but also takes up in a chapter entitled "The New Novel," the work of Galsworthy, Mrs. Wharton, Conrad-Wells, Walpole, Bennett and the other more important contemporary novelists. This chapter gives in a short space as keen and authoritative a criticism of present-day fiction as can be found.

$2.50 *net; postage extra.*

By Mrs. R. L. Stevenson
THE CRUISE of the "JANET NICHOL" AMONG THE SOUTH SEA ISLANDS

Lovers of Stevenson and his work will discover a new inspiration in the diary of his wife written during their voyage in 1890 through the South Seas. This material has never been given to the public before in any way. The diary was written with no thought of publication, but, as Mrs. Stevenson says, "to help her husband's memory where his own diary had fallen in arrears."

ANNOUNCEMENT
COMING
BY
THEODORE ROOSEVELT
THROUGH THE
Brazilian Wilderness

CHARLES SCRIBNER'S SONS, Fifth Ave. at 48th St., New York

The Nation.

NEW YORK, THURSDAY, OCTOBER 22, 1914.

Summary of the News

So far as the political aspect of the war is concerned, Italy is still the centre of attention and of speculation. With Italy, it is generally assumed, will go Rumania, and if Rumania enters the war on the side of the Allies, there are grounds for believing that Turkey and Bulgaria may take part on the other side. In other columns we publish a closely reasoned article from a correspondent in Rome setting forth the case for Italian intervention.

It has been generally assumed in dispatches from Italy that the death of the Marchese di San Giuliano, the Italian Foreign Minister, which took place on Friday of last week, would remove a restraint which has hitherto been imposed on the advocates of that case, and the appointment as Minister of War earlier in the week of Gen. Zupelli, who comes from the Italian provinces of Austria-Hungary, seemed to lend confirmation to that impression. Another significant indication of public sentiment was the adoption of Signor Battisti, until recently member for Trent of the Austrian Chamber of Deputies, as the representative of Venice in the Italian Chamber. The policy of the late Foreign Minister, however, was clearly not a personal one, but had the earnest support of Signor Salandra and his Cabinet, as well as of a considerable body of responsible public opinion in Italy, and the latest dispatches agree with the statement of the Italian Ambassador to this country, given out on Thursday of last week, that the present attitude of neutrality will be maintained unless some overt act shall occur which threatens the vital interests of Italy.

Interest has again been intrigued by the position of Turkey, and various rumors have been circulated as to the intentions and activities of the Ottoman Government. Early last week those historic cruisers, the Goeben and the Breslau, were reported as having been seen in the Black Sea, flying the Turkish flag, and the inference was made that the German commander of the Goeben was designated as the head of the Turkish fleet and would presently try conclusions with the Russian fleet for the command of those waters. On Monday it was stated specifically in a dispatch from Constantinople that the Government of the Porte, in reply to the representations of Great Britain, had declined to discharge the German crews of the two cruisers, declaring the question to be a domestic one, and on the same day there came a report that a German train laden with munitions of war for Turkey had been stopped by the Rumanian authorities between Bucharest and Giurgevo, on the Danube. Nevertheless, even assuming that all these facts are as stated, it is difficult to discover what inducement Turkey could find in the present state of affairs to cause her to take an active part in the war. It is perhaps the irony of history that that portion of Europe which so definitely upset the existing balance of power is now the only quarter where a balance of power may be said to exist.

The War Revenue bill was passed by the Senate on October 17 by a vote of 34 to 22.

An investigation into the financial transactions of the Rock Island Railroad and its associated corporations by the Interstate Commerce Commission was begun on October 16, and was adjourned on Monday until October 26.

The Alaska Coal Land Leasing bill, an Administration measure designed to open up the coal resources of Alaska, under a leasing system, was agreed to by the House on October 15. It was in the form of a conference report already adopted by the Senate and became law on receiving the President's signature on Tuesday.

Public hearings on the new application of Eastern railways for increased freight rates, which they contend are necessary on account of financial conditions caused by the European war, were begun in Washington on Monday before the Interstate Commerce Commission.

The decree embodying the agreement reached by the New York, New Haven & Hartford Railroad Company and the Government for the dissolution of the company's system of railway, trolley, and steamship lines, in settlement of the suit brought against it under the Sherman Anti-Trust law, was signed on Saturday of last week.

In view of the approaching adjournment of Congress and the forthcoming elections, the President on October 17 addressed a letter to Representative Oscar Underwood reviewing the work of the present Congress and expressing confidence that a Democratic majority will again be returned. The letter is the President's most notable contribution to the political campaign this year, and will be widely used as a campaign document.

For the first time since August 8 the weekly bank statement last Saturday showed a surplus of cash reserves for the banks in the Clearing House. The surplus reported by the banks alone was $5,033,250, as against a deficit the previous week of $1,445,250, and a maximum deficit for the period of $43,389,250 in the week of August 15.

Traffic through the Panama Canal was interrupted on October 14 by a serious landslide in the Culebra Cut. The slide, according to the official report, was about 1,500 feet long and completely blocked the channel for a distance of 1,000 feet. Col. Goethals expressed the opinion that the damage would be repaired and the canal open for traffic again by the end of this week.

An interesting suit, both on account of the antiquity of the dispute and because an original suit is rarely instituted in the Supreme Court, came up for consideration before that court on October 15, after preliminary proceedings that had extended over five years. The dispute is between North Carolina and Tennessee over the exact location of the boundary line between these States. The line was originally marked out by a commission in 1821, but no attention was paid to it until after the Civil War, when the markings had become obliterated. Both States then granted titles to the disputed land, and both demanded taxes. The land involved is a tract of between thirty thousand and forty thousand acres.

According to statistics announced by the Department of Agriculture, the wheat crop of the world will be less this year than in 1913 or 1912. The crops of all nations are estimated as aggregating approximately 3,741,018,000 bushels this year, as against 4,125,310,000 bushels in 1913, and 3,791,875,000 bushels in 1912. The harvest in the United States is expected to break all records, and in Great Britain the crop will be far above the average, but a large decrease is shown in Russia. The war, it is reported, has had little effect upon the harvest this year, as most of the wheat was gathered before or soon after hostilities began.

In reply to the Chinese protest against the occupation by the Japanese of the railway in the Shan-tung province in connection with the military operations against Kiao-chau, Great Britain has stated that Japan had no alternative, as the railway is under German control and the Germans have used it for military purposes.

The outlook in Mexico has not brightened perceptibly since we wrote last week. The convention at Aguas Calientes adjourned on October 14, pending the arrival of additional delegates representing Zapata, without acting on the resignation of General Carranza as First Chief. On reassembling on Tuesday, according to reports received at the Mexican Consulate at San Antonio, the delegates were thrown into something like a panic by the intelligence that General Villa was moving an army into a position whence he could envelop the city and imprison the convention.

In the rush of subsequent events we have almost forgotten our astonishment at being reminded at the outbreak of war of an antiquated alliance between Great Britain and Portugal which the latter country protested its readiness scrupulously to observe. Recent dispatches from Lisbon have rekindled this recollection, and last week we were definitely informed in a statement by the Portuguese Consul-General at New York that two expeditionary forces of Portuguese troops, for one of which English transports were used, had sailed from Lisbon on September 10 to reinforce garrisons in Portuguese possessions in Africa which adjoin those of Germany.

The deaths of the week include: Prof. Frederick Aldrich Cleveland, October 15; Dr. Joel Foote Bingham, Dr. James Gregory Mumford, Frederick de Coppet, October 18; Monsignor R. H. Benson, October 19; Major-Gen. Hubert Ion Wetherall Hamilton (in France).

The Week

It is well to suspend judgment on the exact nature of the documents which the Germans have found in the Belgian archives, covering some sort of military plans by England and France to defend Belgium in case of war with Germany, but some things are certain. Whatever arrangements were made, were made with the full consent of the Belgian Government, and were designed to defend its neutrality as guaranteed by solemn treaties to which Germany was a party. That cannot be tortured into a violation of Belgian neutrality. And this is to be remembered. The most that the German apologists assert is that France or England was *going* to break the treaty. But Germany *did* break it. Nothing that can be found in the Belgian archives or elsewhere can equal the open confession made by the German Chancellor in his speech to the Reichstag. Announcing the purpose to invade Belgian territory, he said: "Gentlemen, that is a breach of international law." If anything comparable to that had been uttered by Prime Minister Asquith or Sir Edward Grey, public opinion in the United States would have turned as swiftly and decisively against England as it did, in fact, turn against Germany.

A recent editorial in the *Frankfurter Zeitung*, the most influential journal in South Germany, bears intrinsic evidence how heavily the war begins to bear down upon the German people, for its manifest purpose is to hearten its readers. It recites that the number of unemployed is diminishing; that industry is beginning to find itself; that a meeting of chambers of commerce has proclaimed the war holy, and the condition of trade sound; that the recent public subscription has poured into the Treasury not merely enough money to run the Government until the end of the year, but for double that period. None the less, it finds it necessary to go over the whole ground of the war again, to assure the public that it was forced upon Germany, and that the Empire has undertaken it innocently, in self-defence, merely to preserve the Fatherland. It concludes by urging the people to consider that every personal sacrifice is but a contribution to the nation's welfare and to its very existence, and exhorts them to bear patiently the terrible price to be paid. That the price has only just begun to be exacted, it also admits. The note of confidence in eventual success is, of course, still there, but it is not quite so certain and confident as before. The terrible casualty lists, with their record that whole battalions have been wiped out, though telling a story of unsurpassed bravery, are beginning plainly to affect the German public as needs they must.

Writing about the great German victory in Lorraine in August, about which we on this side of the water heard so little, Field-Marshal von der Goltz speaks with extraordinary frankness in this time of military secrecy. The victory, he says, was quite surprising to the Germans, who were enormously aided by their minute knowledge of the country, which has long been a favorite place for manœuvres. The Germans, he says, were very much puzzled by the French taking the offensive instead of following their old policy of sticking to the lines of the forts and letting the Germans pound themselves to pieces against them. The purpose of it we now know to have been largely political; the Field-Marshal thought it part of the general campaign undertaken with a view to affecting the field of battle in Belgium. Comparing this battle with the conduct and military ability of the French in 1870, he noted a marked advance in efficiency, despite the lack of success, and he rejoiced that the enemy was a more dangerous one. "An efficient enemy does not frighten us," is his phrase. Finally, it is interesting to note that this veteran, who has been serving in the German and Turkish armies since 1861, declares that it is no longer possible, in view of the masses of men engaged, to throw large reinforcements from one endangered point of a line to another during a battle.

All the news from South Africa, since the first announcement of Col. Maritz's rebellion, has indicated that the trouble is likely to be far less serious than at first seemed possible. It is stated that Gen. Hertzog, who has been one of Gen. Botha's bitterest opponents, has placed his services at the Premier's disposal. Since no concealment was made in the early dispatches of the gravity of the situation presented by the outbreak of armed hostility to Britain in the former Boer republics, there is no reason to doubt the correctness of this encouraging intelligence. As to the number of Col. Maritz's men in the field, which has been reported as only five hundred, this of course may be a mistake. But it seems clear that the number is not great; and a victory over a part of his little army is already reported in the dispatches. But, whatever the future development of the difficulty may be, nothing is more certain than that the position of Britain in South Africa owes its strength at the present world-crisis to the course pursued by her in winning the confidence and friendship of the Boer nation by conduct that was not only magnanimous, but was dictated by a regard for the fundamental principles of the government of free peoples. Had it not been for this, all South Africa would at this moment be aflame with sedition.

But for the war, the trial at Sarajevo of twenty-five men for the murder of Archduke Francis Ferdinand, which indirectly caused the war, would have attracted the keenest interest. It will be easy to show a connection between the crime and the race feeling of the Servians. But this will be far from proving that Servian officials were in the plot to assassinate the heir presumptive. In a virtual attempt to indict a nation for a murder, therefore, Austria has a difficult task. As to the ultimate responsibility of Servia for the Pan-Servian propaganda, the former Servian Minister to England has just written frankly in the London *Outlook*. The Bosnian feeling, he says, was absolutely spontaneous. Of course, in Servia, "with the full liberty of the press, rights of public meetings, and of associations, there was not wanting agitation for the political union of all the Servian and Croatian people." But veiled as this was, it was hard to attack legally; and it did not create, it only encouraged, sentiment to the north. Whatever light the trial can throw upon all this, will be welcomed by the impartial all over the world.

We cannot believe that the frantic appeals of the Navy League for more ships and men, and Congressman Gardner's demand for an inquiry as to our military helplessness, are going to find a substantial echo from the common people of this country. The spectacle of all Europe in flames is not, in our judgment, going to induce the Americans to squander more millions annually for military purposes, and the burden of extra taxes already called for by the war ought still further to cool those who can see nothing in this but a call to arms, that we may cripple our resources further by military burdens. Rather, recognizing the splendid moral position in which this country finds itself to-day, due in no wise to our fleet or troops, and the prospect that we shall be able profoundly to influence the peace in the direction of disarmament, we do not recall a single argument of moment in any newspaper to the effect that the European war calls upon us to go and do likewise. For-

tunately, as Mr. Wilson proves by his withering reference to Congressman Gardner's alarms as "good mental exercise," he does not propose to be stampeded by a warscaro of the type that has been going on since he was "a boy of ten." What could not the United States do to-day to succor the injured and restore downtrodden Belgium were it to decide to vote no new battleships next year, but to devote the sum that the two authorized this year will cost—about $24,000,000—to the humanitarian work!

President Wilson's letter in praise of the work of Congress, during its record-breaking session, neccssarily goes over familiar ground. Yet his literary skill enables him to give his presentation an air of freshness. He frankly makes his appeal one for his party, declaring that the Democratic organization is at present the only instrument which the country can use effectively to get done what it wants done at Washington. It would be hard to gainsay this. A time-honored Republican argument has been that, with the Senate and the Executive secure for one party during two years to come, it would be folly to turn over the House to the other party. The result could be only working at cross-purposes with nothing accomplished. This is, in effect, the argument which President Wilson now employs in asking the voters to elect next month a House in sympathy with the Administration. Republicans will not, of course, be deterred by any mere dread of inconsistency from affirming that this is wholly unsound; but the fact remains that they held it a perfectly sound appeal when Republican Presidents used it. Another of their chickens coming home to roost they may detect in Mr. Wilson's warning against "turning back the hands of the clock." Col. Roosevelt might almost allege this to be an infringement of his own patent. The clock, however, has a way of keeping on striking the hour, whether parties or leaders come or go.

None of the amendments with which the Republicans tried to hamper the Philippines bill had any effect in preventing its passage by a large majority. Friends of the measure derive particular gratification from the defeat, without debate or roll-call, of the most important proposal, that of Representative Towner of Iowa. It would have exempted from the bill the territory occupied by "the Moros, or other non-Christian tribes," and would have permitted these peoples to maintain their tribal organization under the supervision of a new Philippine Commission appointed in Washington. It is true that the Moros, whose rebellion in Sulu in 1913 is still remembered, constitute from social and governmental points of view a peculiar problem; but it is a problem which can be solved at least as well by their fellow-Filipinos as by Americans. The essential purpose of the Jones bill is to give to the Philippine Legislature, preponderantly native in both branches, full legislative powers throughout the islands on matters not affecting tariff, currency, and public lands, under the restriction of Congressional veto; and there is no reason for suddenly limiting these powers to a portion of the archipelago. The bill in its present form, carried into effect with the coöperation of Governor-General Harrison, should give the people the fullest possible experience in handling their own affairs.

A frightful disclosure of turpitude is that which the Republican Congressional Committee has been making. Who would have thought that President Wilson's real motive in bringing about the repeal of the Panama tolls-exemption clause was to get money for the Democratic Congressional campaign fund? But this is what these Republican Sherlock Holmeses have found out. It appears that Andrew Carnegie and his Peace Foundation, and James J. Hill and his Pacific railways, and Woodrow Wilson with the power of the Presidency in his hands—that these three deliberately got together and sandbagged the exemptions clause; and that Wilson's share of the swag is to be the financing of the Democratic campaign for the control of the next Congress. The gentlemen who put forward this story appear to have been so sure that it would strike everybody as the most likely thing in the world that anything like proof was quite unnecessary. But of fine mouth-filling phrases there is no lack. "So it was that a common cause was made between President Wilson and these two foremost representatives of the predatory interests"—that does very well; and so also does this: "Free tolls went down to defeat amid the unsuppressed exultation of the Hills and the Carnegies." The thing is more absurd than it is amusing; and yet we indulge the hope that, if it accomplishes nothing else, it will afford the President a moment's merriment in these sombre days.

In his address on Tuesday as president of the American Bar Association, Mr. Taft took the usual wide survey of public events and current legislation. His references to the European war were mainly for the sake of giving high praise to President Wilson, whose course had been such as not to "sacrifice and destroy the great leverage for successful mediation" which this country may yet be able to exercise. The item of Congressional law-making upon which Mr. Taft chiefly dwells is the Clayton bill. His verdict upon it, as a whole, is not unfavorable; though, as regards the labor-exemption clauses, far as they are from going the dangerous lengths first demanded, he remarks that they are almost certain to disappoint the extremists, while throwing new burdens upon the courts. Naturally, the former judge and President dwells with satisfaction upon the dying out of the agitation for the recall of judicial decisions. This even leads him into a witticism. Observing that these "unwise and dangerous proposals" were "incorporated in the platform of the Progressive party," he adds:

> The leader of that party has felt called upon to declare that they were the rock upon which it was founded, and were essential to the efficacy of every other one of the reforms which the platform of the party set forth and advocated. It would appear that the party which fathered these proposals now finds that, instead of being the rock on which it is founded, it is, to change the metaphor, the rock on which it founders.

This ought to prompt another of those letters of the Colonel to "Dear Bill."

Without prejudging the case which the railways presented on Monday to the Interstate Commerce Commission, in their request for an authorization of certain increases in rates, it is fair to point out two important considerations. A question asked by one Commissioner was whether the railway business, confessedly hard hit by the war, was to be treated differently from other forms of business. Why should not transportation companies take their medicine like other people? But other corporations are protecting their stockholders and their creditors, so far as they can, by raising prices. The railways arc not allowed to do this. That is the reason why they have to apply to the Commission for permission to do what other business men can do, so far as the state of trade admits, on their own motion. Another argument put forward by the railways is even more powerful. When the Commission, in its decision of last July, granted the railways some slight increascs in rates, it justified its refusal of the entire 5 per cent. on the ground that financial conditions

were improving. It conceded that "during the world-wide financial stringency prevailing in 1913, the railroads . . . found it difficult to secure loans, however good the security"; but it added that, "with the growing ease in the money markets, this difficulty has largely disappeared." If this was true at the time, it notoriously is not so today. It would appear, therefore, that the railways have a right to appeal strongly to the Commission on the basis of its own admissions in July. Then it thought that there was "little foundation" for the view that the railways would "encounter great difficulty in renewing their maturing short-term notes and other obligations unless investors were assured that the carriers' revenues would be increased immediately." At present, the foundation for that view is manifest to all.

Full of unusual things as the *Congressional Record* is wont to be, even the date-line prefacing its contents has lately invited special attention. That for the issue of Monday, October 5, 1914, for example, immediately above the record for the Senate, reads: "Legislative day of Monday, September 28, 1914." By going a little further back, the attentive reader will notice that the legislative day of September 5 actually lasted until September 15, when Senator Burton forced an adjournment. The explanation is that the Senate leaders, to hasten legislation, have adopted the practice of recessing for day after day; thus eliminating the chaplain's prayer, the reading of the journal, and the introduction of petitions, memorials, and general resolutions. The saving is not inconsiderable, for the "morning hour" has sometimes lasted well after noon. In other small matters the Senate has adopted cuts which should shame the Representatives, as in the old practice of obtaining a quorum by counting as present members who are absent but paired. In the lower body expedition will wait, in some directions, upon the long-agitated use of electric devices for voting and for answering the roll-call by simply pushing a button. The present roll-call consumes thirty-five to forty minutes when the title "Mr." is used before each name, and twenty-five whenever it is not. For certain of these time-saving devices arrangements have long since been made, and the forthcoming adjournment until December should permit of their installation.

La Follette is vigorously supporting for Governor of Wisconsin, not the winner in the Republican primary, but an independent candidate. This seems an anomalous position for the father of the direct primary, and the Senator perceives that an explanation is due from him. His explanation is twofold. In the first place, "the reactionaries of the two old parties have secured control on a fluke," the fluke being, presumably, the failure of the voters to exercise their right of second choice, which allowed the standpat candidate to win over a divided Progressive vote. But the portion of the explanation which will go home is that the primary nominee "has openly boasted of his repudiation of the direct primary ever since it became a law," and "has persistently refused to support Progressive Republican candidates nominated by overwhelming majorities." In politics, what your opponent does is lawful for you to do. Atrocity may be met by atrocity. Still, La Follette must realize that any such argument weakens the sacredness of the primary as he has preached it. His position emphasizes the truth, so hard for some of our political reformers to accept, that no mechanism is final; in the last resort, appeal must be made to the voter to do what the best machinery can only make more convenient for him.

The economic side of the probation system is emphasized in a report issued by the Civic Federation of Chicago. Year before last, the earnings of adult probationers in Cook County amounted to $540,000, and the amount of restitution made by them was something more than $20,000. Last year, their earnings were more than triple those named, the amount of restitution being $33,000. On the moral side of the system, the report is equally commendatory, pointing out the advantage of the opportunity for reëstablishing one's self without undergoing the stigma that imprisonment inevitably means. One defect is mentioned in the operation of the probation arrangements. "There have been instances," says the report, "where overworked judges have been prevailed upon to release prisoners on probation who are old offenders and should have been sent to prison. Such abuses are a menace to public safety, inadvertent though they be." A system that has resulted in a saving of well over two millions of dollars in two years would seem to deserve the expenditure of a few thousand dollars for additional judges in order to render it still more profitable, morally as well as financially.

That race prejudice should go so far as to prevent the sale of a white church to colored people because it is in "too good a district" seems almost incredible; yet it has actually done so in Richmond. The Immanuel Baptist Church had sold its property to colored people, apparently in the belief that no place was too good to worship in. But the Common Council knew better, and promptly passed a special ordinance which, if upheld by the courts, will prevent the colored people from carrying on religious observances within the sacred precincts at Fifth and Leigh Streets. Thus we have another deliberate interference with personal liberty of both whites and colored people through special legislation of the most obnoxious kind. We do not know if the black reconstruction Legislatures, to whom the South owes its public-school system, ever did anything like this, but it is easy to imagine how they were portrayed as shamelessly abusing power and authority if they did. What an outcry would rise to high Heaven were colored people to interfere in the slightest degree with the desires of whites! This reaction in Richmond, when it desires to be known as a progressive, up-to-date city, recalls the fact that just now they are quoting in India these words of a distinguished native as a reason for the marked loyalty to Great Britain in its present distress: "When I think of the large negro populations in the United States, as the republican Americans treat and govern them, I thank God that I am a British subject."

That the same American composer should twice in three years win a $10,000 prize for the best native opera argues well for his work, but may also argue something for the poverty of the competition. It is to be hoped that Professor Parker's "Fairyland" will have more of the elements which make for popular favor and for stage permanence than "Mona," which received the $10,000 prize offered by the Metropolitan Opera Company in 1911. The decision of a jury, it has been said with some justice, is a good deal of a lottery; but to men honestly fired by the aspiration to do something for American drama or opera, the fact that such an impartial and competent body, unmoved by many of the commercial motives which appeal to managers, is to pass upon their work, counts for far more than the opportunity of winning a large prize in money.

NEEDS AT HOME AND ABROAD.

The cry of suffering and agony that comes to us from across the ocean finds us in a condition in which the needs of our own humane and charitable works are unusually pressing, and in which the resources for meeting those needs are materially impaired. In this state of things, it is not surprising that in one quarter and another voices are raised in protest against sending to the stricken peoples of Europe funds that might be applied to the relief of poverty at home or to the maintenance of those permanent works of social betterment which depend for their support on private generosity.

With the solicitude lest our own poor should be neglected, lest we fail in our duty to the thousands thrown out of employment through no fault of their own, lest injury may come to activities directed to the welfare of large classes and dependent for their effectiveness upon continuous maintenance—with this we are in the heartiest sympathy. Every person of right instincts should feel that whatever he has been contributing for charitable and humane work at home in past years, he must do that and more at a time of trial like the present. If he has to cut down his expenses, let him cut down first those which relate to his own indulgences and luxuries; let him reserve to the last that parsimony which consists in stinting the dole he has been in the habit of giving to those infinitely less fortunate than himself, and now in more need than ever. But to say that everybody should give at home as much as he has been in the habit of giving, and more, is a very different thing from saying that in order to give at home he should harden his heart or shut his mind to the appeal of unspeakable distress and desolation from across the sea. To fail in sending to the desolated sufferers in Europe, and especially in Belgium, contributions on a scale in some degree corresponding to our wealth, our luxury, our vast expenditure for selfish indulgences, would be a disgrace. To recommend that we should so fail is to offend against an instinct of compassion that will not be gainsaid.

Moreover, we do not believe that, as a matter of fact, the giving to the war-stricken sufferers of Europe does interfere in any perceptible degree with the giving at home. While we are piling up those funds with a fair degree of rapidity, the whole number of contributors to them is not very great. What is interfering with the collection of money needed by the various charitable enterprises and associations at home is a wholly different thing. The state of business, actual or prospective stoppage of dividends, inability to collect debts—such are the causes that really operate on a large scale to check the customary flow of giving. It is not because a man has given to the Belgian fund, but because he doesn't know what his investments are worth, or because his business has ceased to yield its usual income, that he thinks of holding back his customary aid to this or that good work. And it is to this disposition that exhortations not to fail in the duty of the hour should be addressed. The feeling is easy to understand, but it is none the less wrong. There are, of course, a certain number of cases in which losses are so serious as to amount to positive embarrassment; but as a rule the rich are still rich, the well-to-do still well-to-do, the comfortable still comfortable; and each and all—with the exception already noted—can, if they only choose, keep up their usual charitable donations, and even increase them, without suffering. It is merely a little imagination, a little realization of the true proportion of things, that is necessary. Aside from an extremely small number of persons, what people usually give is not in any true sense a sacrifice at all; and if at the present time the giving should assume somewhat of that character, is that any more than the occasion calls for? It ought to be a source of gratification to every right-minded man that, when the needs of the poor and unfortunate, in a time of extraordinary trial, demanded that he make something of an inroad on his own satisfactions, he did not hesitate to do that simple duty.

What well-to-do Americans are called upon to do is at best but an insignificant fraction of what would be demanded if we were ourselves at war. Millions in Europe are starving or homeless, hundreds of thousands of our own people are suffering from unemployment, and our permanent charitable and humane enterprises are having a hard time keeping up their sorely needed work. The spirit the time demands is one of generosity and large-mindedness and unselfishness. The question is not to which we shall give, but how much we shall give. Don't rob Peter to pay Paul; go down into your own pocket and pay both—even if it costs an effort, even if the pocket is not so full as usual. The need is exceptional, extraordinary, of a kind that comes only when the world is under the pall of a great calamity. Don't go about as though nothing of the kind existed; don't insist that because you have been hurt a little you cannot afford to do anything for those who have been struck down. Give to those causes which most appeal to you. But above all give generously; that is the one thing needful. If this spirit should spread as it ought to, there will be no need to trouble overmuch as to the particular allotment of the gifts.

THE WAR AND CREDULITY.

The chief duty of Americans, while the war in Europe is going on, has been many times said to be that of observing strict neutrality. In a public way, and officially, this may be true. But so far as the attitude of private citizens is concerned, there are other duties which come first. One of these is to preserve our intellectual integrity; to form our judgments on the basis of ascertained fact and reasonable probability; not to take rumor for proof; and, in general, to keep our heads at a time when it is so easy to let them be blown off our shoulders. Among the evil effects of the war has been a great temporary heightening of human credulity. Men are found to believe anything. Trifles light as air are retailed as if they were proofs from Holy Writ.

In regard to both the origin and the conduct of the war an immense mass of contradictory reports and assertions has been put before the public. It should have been subjected to tests of evidential values. Scraps torn from their context should have been put back in their rightful place. Gossip should not have been taken as the equivalent of testimony under oath and subject to cross-examination. Evidence at second or third hand should not have been put on the level of affidavits by eye-witnesses. Yet we all know how far these merely ordinary rules of caution in coming to a verdict have been disregarded. Nor is it simply the unthinking newspaper-reading public that has shown itself credulous in the extreme. Public men, clergymen, university professors have gulped down incredible stories. In fact, a large part of the controversy provoked by the war has been on the basis of unproved allegations or statements which could easily be shown to be false—on matter, that is, which in a court of justice would speedily be ruled out as irrelevant or unsupported. With the great war debate raging all over the world, there is nobody to hold the disputants to facts and logic, or to tell them that they will not be heard unless they confine themselves to the law and the testimony.

In consequence of the resulting confusion, all kinds of sudden discoveries or revelations of supposed secrets get, not only a hear-

ing, but acceptance as conclusive proofs of who and what caused the war. Anybody who has heard something or seen something which he regards as highly significant brings it forward. For example, we are just now in receipt of a letter from a highly esteemed German correspondent who thinks he has discovered proof that England had decided to declare war on Germany several days before the official action was taken. He was in the Canary Islands at the time, having landed at Teneriffe on July 28. Three days later he found himself in Puerto Oratava, where there is a small English colony. He proceeds with his personal experience:

> August 2 was a Sunday. That morning a Scotch lady, stopping at my hotel (there were but very few guests at the time), returned from church in great excitement, and, though our acquaintance was of the slightest, came up to me and said: "You ought to know this, sir. The English Consul has received official notification that England is going to go to war with Germany." I asked her how she knew, and she continued: "The Consul told us just now at church, after the service. There is no doubt about its being so. The English firms here know it since yesterday." I asked her how the firms knew, and she replied: "The Consul told them yesterday morning. Some clerks have already been discharged; everybody feels terribly disheartened. Business here will be ruined," etc. The following day a young Englishman told me he had been working all day Sunday, unloading a partly loaded fruit steamer. When I asked for the reason, he replied: "Why, don't you know we are going to make war on Germany?" On August 6 an English steamship, with some eighty-odd passengers, arrived from Liverpool that had been escorted all the way by a warship. It is a six or seven day voyage.

Here, then, was damning evidence that the English Government had early determined to attack Germany, and had so notified its Consuls in advance! We scarcely need point out that this confident inference by our correspondent is entirely unwarranted, *pace* his excited Scotch lady. All that his evidence shows is that England was doing, what doubtless every other European country was doing at the moment—namely, warning its diplomatic and consular service that there was imminent danger that the peace of Europe might be ruptured. Not to have done so would have been a gross oversight. All the world had known for more than a week—ever since the Austrian ultimatum to Servia, especially after Austria's declaration of war upon Servia—that the peril of a general war was acute. It was an elementary duty to put Ambassadors and Consuls at a distance on their guard. England did it like all the rest; and this is really all that our German friend discovered in the Canary Islands. What the English Government was actually doing at the time, in the critical negotiations with Germany and France and Russia, we know from the published official correspondence. Whatever word it sent to Teneriffe, must have fitted in with the word it was sending to Paris and St. Petersburg and Berlin. The really vital witnesses in the case are Sir Edward Grey and the German Chancellor and the Kaiser and the Czar and the various Ambassadors, whose language and attitude at the time we know, not an alarmed Scotch lady in the Canary Islands.

This particular instance is of small importance. It illustrates, however, the tendency we referred to, and to which we see so many yielding. It is partly a romantic tendency. We hate to stick to prosy fact and document. There must be some thrilling mystery, some plot, some stage-villain. It is also, in part, what John Fiske called the myth-making tendency. Plain tales will not do when we can just as well have brilliant fancies. And so we get Sir Valentine Chirol now convinced that the official papers shown to him a few years ago at the German Foreign Office were either garbled or forged. We get also the *Allgemeine Zeitung* with its vague secret Russian dispatches. Now, against all this, it is necessary to maintain a resolutely skeptical attitude. Keeping the mind open does not mean that we must permit our brains to be swept clear of reason by every idle surmise that blows. The war has brought a great rush of many kinds of human weaknesses; but we ought to do our best to prevent it from causing fresh inroads of credulity and superstition.

CLINGING TO WILSON'S COAT-TAILS.

Some rather amusing evidences are given of the way in which Democratic Congressmen, standing for reëlection, are depending upon President Wilson to pull them through. One Representative has sent broadcast through his district two letters. The first is a reprint of what the President wrote in September to the Chairman of the Democratic National Congressional Committee, stating that he felt it his duty to refrain from political campaigning, and to "stick to his job" in Washington. With this goes a letter from the Representative himself. In it he explains how his determination to stay in Washington and hold up the President's hands has prevented him from being "among my constituents" as frequently as usual. But he doubts not that they will approve his course. After pointing out the great work which has been done by Congress, he closes with a delightful personal touch:

> It is possible that there may be some matters in which you are especially interested that could be adjusted before this session of Congress ends. If there be any, kindly let me know at once, and I shall be pleased to serve you in any way in my power.

All this Democratic unanimity just now in saying ditto to Wilson is a growth of the past three months. Close observers in Washington early in the summer noted many signs of active discontent with the President, if not hostility to him, on the part of Democratic Congressmen. There he was holding them to their work when they wanted to go home. He was insisting upon further legislation in which they had small interest, and for which the country was displaying no enthusiasm. Moreover, business was not good, and the drift was against the party in power. Was there ever such stubbornly mistaken leadership? With such angry questions asked in the committee-rooms of Congress, and with all kinds of muttered dislike of the President given expression in Washington clubs and at dinners, it was only a question of time, so it was thought, when something like an avowed revolt would break out within the party.

Over the spirit of this dream, however, a change came suddenly. Instead of complaining that they were kept so long in the heated capital, Congressmen went in droves to the White House to volunteer staying in session indefinitely. And they began to send messages to their districts, in advance of the primaries, something to this effect: "Of course, boys, I should like to come home and make a square fight for renomination, but so long as the President wants me here, I must stand by him. I am only one Representative, to be sure, and can't do very much, but whatever I can do to help our heroic leader in this great crisis, I am going to do. If my people choose to turn me down for this, that's all right."

Needless to say, these moving appeals were usually successful in helping procure renomination. Equally needless is it to point out the reason for the marked change of heart in many of these Democratic Congressmen. They had seen the President rise to the unexpected and multiplied and severe demands thrust upon him by the war in Europe. They had seen him meet emergency after emergency with rapid but cool decision. Most significant of all, they had noted the way in which the country had shown full and grateful recognition of the high qualities displayed by the President. Why, the man was immensely popular! That was enough for the doubting Congressmen; and they instantly proceeded to hitch their wagons to the Presi-

dential star. It at once became obvious that the whole aspect of the political campaign was changed. The Republican hopes wilted under the Wilson sun. And Democratic managers and speakers began everywhere to make all their efforts appear to be to obtain an electoral endorsement of the President. Even his inveterate enemies among the bosses, like Nugent and Smith in New Jersey, threw up the sponge, and with grave faces aligned themselves with Wilson's supporters.

This remarkable political transformation has naturally left the Republicans a little dazed and uncertain of their tactics. How to attack a President whom everybody is praising? How nicely to discriminate, so that the voters will understand, between the leader of the Democratic party, whom all Republicans are bound to belittle, and the head of the nation in a great crisis, whom all the people are commending? It is a new and puzzling kind of campaigning which the Republicans are called upon to undertake. The old unqualified and swingeing epithets cannot be used. Yet to split hairs 'twixt north and northwest side is a poor way of campaigning. One brilliant diversion has been attempted by a Republican newspaper in Boston. It comes out with round denunciations of the Democrats for seeking to make party capital out of the great services of the President to the nation at a time of European war. The fame thus acquired ought, it appears, to be laid away in amber, as it were, and kept as a thing too precious to be thrown into party conflicts. But the more one looks at this argument the more one fears that it would be received only with laughter by people of ordinary sense. They will be apt to say that if they are asked to pass upon the President, they are entitled to take him for all that he is and has done; not to cast their votes thinking only of those things in him which the Republicans do not like.

THE CHURCH AND HIGHER EDUCATION.

There are peculiar reasons why Brown University's celebration of 150 years of full life invites a survey of the course of denominational education in America. Of the half-dozen colleges founded in America before the Revolution, Brown was the one most closely connected with wide ecclesiastical influences. Harvard was primarily the child of Boston, Kings of New York, Pennsylvania of Philadelphia; Princeton's charter of 1748 contained no denominational stipulations. Brown, however, while gaining a local impulse from the previous residence at Newport of the great Bishop Berkeley, was founded on Baptist endeavors which stretched from Massachusetts to South Carolina. The first step was taken in 1762 by the Baptist Association of Philadelphia; and support came from the Baptists of both Old and New Worlds. Brown University, moreover, may still be held to retain more of her ecclesiastical ties than her contemporaries; her presidents have all been ministers of the Baptist Church, and a majority of the trustees must also belong to that denomination. A university which has grown until its graduates number nearly 8,000; which has given the country laymen like Horace Mann, John Hay, Richard Olney, and Charles E. Hughes, and which is no more connected in the popular mind with any denomination than is the Baptist-founded University of Chicago, still looks with gratitude to the influences which established and nourished it.

In the history of Brown University, again, there is much that is typical of all the more important of the other colleges founded by church action. To those with no special knowledge of the subject, the number of our half-thousand institutions thus founded will be surprising. In the East, and especially the East before 1850, the influence of the churches is recognized. The great majority of the colleges were religious in origin. Yet in the South the record is as striking. By the middle of the century the Presbyterians could list Hampden-Sidney, Davidson, Erskine, Oglethorpe, and Center; the Baptists, Richmond, Wake Forest, Furman, Mercer, Howard, and Union; the Methodists, Randolph-Macon, Emory of Virginia, Henry, Trinity, Le Grange, and Emory of Georgia. In the West peculiar reasons made all the early colleges of Illinois and most of those of Wisconsin, Iowa, Indiana, Ohio, and Michigan religious; the people were poor, the populations diverse, materialism was rampant, and culture was best represented by theologians from the East who could obtain funds from the older States. Western Reserve was Presbyterian; Oberlin originated in a movement lamenting the "degeneracy of the church"; Marietta, Northwestern, and many more were denominational. Until the rise of the State Universities, they alone educated the people. And in virtually all of those which underwent any growth the tendency has been the same as at Brown.

The decay of the denominational impulse which might have been expected to persist in schools like Kenyon, or De Pauw, or Wabash, or Grinnell, or Dartmouth, if not in larger ones, was inevitable, and was often contemplated by the churches. Such schools were their offering to humanism and culture; they had no desire to keep them in leading strings. The purpose behind them was an enthusiastic motive of social betterment rather than one narrowly religious and sectarian. It must be pointed out, however, that in the country at large a great change in public opinion accompanied the growth of many colleges into a broader, freer air, and the rapid eclipse of others which refused to expand. General sentiment, the educator, Dr. J. M. Sturtevant, remarks in his autobiography, was once "almost unanimous in favor of entrusting the higher education to institutions established and controlled by religious people, rather than to those founded and governed by any political body." Against this sentiment militated the natural growth of the broadly social purpose of the larger colleges; the weakening of orthodoxy during the mid-century, and the patent failure of some colleges dominated by sectarian rivalries. Had the Christian bodies united, they might frequently have perpetuated large institutions primarily religious in foundation. But "after a time intelligent men, seeing the denominations entirely incapable of uniting," began to turn to institutions secularly endowed, or towards the State, "as the only hope for great and well-equipped seats of learning."

In some sections are still found colleges whose main excuse for being is their sectarian connection; they draw their support from it, and sometimes hide academic deficiencies under propagation of religious doctrine. In many such colleges the narrowness of the denominational connection is gradually being sloughed off. The process is, of course, one to be carried through in proper spirit. "Primarily," remarks President Pritchett, of the Carnegie Foundation, "the college authorities ought to face fairly the question, 'What does our denominational connection mean to us?' If it means a real gain to the spiritual and intellectual life of the college, . . . the inquiry can go no further." But the real goal of the college is that which Brown set for itself at the start, in its charter declaration—the hope to form "the rising generation to virtue, knowledge, and useful literature"; to be attained by cherishing full and absolute freedom of conscience.

Chronicle of the War

It has become almost a commonplace to remark that the most notable feature of this war is the absence of definite victories or defeats. There have been plenty of actions on a large scale which in other wars would have been of sufficient importance to hasten measurably a definite issue to the campaign. These have been fought and won, or lost, but in relation to the whole campaign their importance has been almost insignificant. The Russians are defeated at Tannenberg, the Germans at Augustowo, the Austrians in Galicia, on a scale comparable to Waterloo; yet these are but skirmishes on the flanks of the great line of battle. We must speak in terms not of battles, but of campaigns; no subdivision can properly be made.

When, therefore, we read that the battle of the Aisne may be considered as ended and another battle in Flanders begun, we know that this is merely a convenient fashion of speaking to emphasize the fact that we have entered on a new phase of the campaign. The battle of the Aisne is obviously not terminated, because fighting is still in progress along this line, and neither side has gained a definite advantage. What is meant is that the centre of interest has shifted from the operations on the Aisne to those in Flanders. Only by a distortion of the meaning of words can it be held that the battle of the Aisne has resulted in victory for the Allies, but it has resulted in a change of the German strategical plan. The beginning of the siege of Antwerp may be considered to have marked the abandonment of the plan for a direct march on Paris. That was checked by the Allies' resumption of the offensive at the Marne and by the failure of the German offence on the Aisne. An alternative plan, then, had to be evolved. The objective is still Paris, but the route is down the coast of Belgium and northern France, to Havre and Rouen, and thence eastward up the valley of the Seine to the capital.

In its initial stages, as we saw last week, the German plan prospered. Antwerp was reduced in a surprisingly short time; a considerable portion of the Belgian army and a fair sprinkling of the British reinforcements which had been sent, as we must think by a mistake in judgment, to its assistance, were put out of action; the rest of the defending forces made good their escape only by forced marches and after a harassing retreat; the besieging army, consisting, at a conservative estimate, of between two and three army corps, was freed for service on the main line of battle. Bruges was occupied on October 14 and German troops marched without resistance into Ostend on the following day. The triumphant progress down the coast had begun; Dunkirk was to go next, then Calais. Not only would the German hosts be well advanced on their circuitous route to Paris, but from the port in which England has always retained an almost proprietary interest they could look across the Channel and glimpse the terrain of the most hated of their enemies.

That plan seems, for the present at any rate, to have been checked, but it was well conceived and how nearly it came to succeeding has only been made known since the danger was averted. Last week there was a noticeable tightening in the censorship, veiling the efforts that were being made to cut off the Belgian forces and the new British army (at the numbers and quality of which we can still only guess) on the northern coast. A dash for Calais was apparently made from Lille, and the Allied lines were forced back as far as St. Omer, twenty-five miles east of Calais. Could the attack have been pressed home to the coast city the capture of the British and Belgian forces in the Northwest must have ensued. At St. Omer, however, the line held and, the dash having been checked, the weight of numbers told. The German offensive from Lille was forced back a distance of thirty miles to Armentières and virtually on its base. The Belgian army along the Yser, from Nieuport, on the coast, ten miles south of Ostend, to Dixmude, ten miles to the southeast, also held, and was able to join with the British at Ypres and Armentières. These two armies have now linked up with the main Allied army and form its left wing, while an extension of the left is afforded by British battleships which are coöperating with the land forces. The line, then, may be imagined as extending almost due north and south, from Nieuport to Arras, and thence again due south to the point where it bends eastward at Noyon. There is a bend, however, in the north represented by the triangle Dixmude, Ypres, Roulers. The Belgians are reported to have reached this last place, and the position would seem to indicate an effort on the part of the Allies to drive a wedge through the German right cutting off the forces around Bruges and Ostend.

During the past week the right wing of the Allies has emerged from the comparative obscurity in which it has been shrouded and we hear of interesting operations around Verdun and in Alsace. Even Metz has come into the news, and reports from Paris on Friday stated that the French held the road from Nancy to Pagny, on the Lorraine frontier, about twelve miles from Metz. The Germans still hold St. Mihiel, but slight French gains in that region have been reported day by day. The constant failure of German attacks on Verdun seems curious by comparison with their success against other equally well fortified positions. The explanation probably is that this eastern barrier of fortresses has been held throughout the war by the French in enormous force. If reinforcements were required on the left, it was not from here that they were taken; evidently Gen. Joffre has regarded the impregnability of this line as a vital matter in his campaign. At the same time there is a strong presumption, from the fact that the Germans have here apparently been for some time acting entirely on the defensive, that their forces have been weakened to some extent in order that reinforcements might be sent to the west. The French appear now to have assumed a vigorous offensive in this region as well as in Alsace, and it is possible that before long the centre of interest may be shifted from the left of their line to the right. In Alsace they are well over the border, occupying Thann in the south, and a line between Le Bonhomme and Sulzern further to the north.

Since the sinking of the three British cruisers, Aboukir, Cressy, and Hogue, by a German submarine, on September 22 there has been but little to record of naval operations. The past week, however, has been an exciting one at sea. On October 16 the cruisers Theseus and Hawke, on patrol duty in the North Sea, were attacked by a German submarine. The Theseus escaped, but the Hawke was sunk, with a loss of life estimated at 327 officers and men. In conformity with the orders of the Admiralty, after the disaster to the three other cruisers, no attempt was made by the Theseus to rescue the crew of her sister ship. The Hawke makes the fifth British warship lost by submarine attack.

The news of the disaster appears to have been the signal in England for a renewal of the outburst of protest against the "inactivity" of the fleet which greeted the former disaster. That there should be a feeling of irritation at the inability of the ships under the command of Sir John Jellicoe to execute to the letter the orders with which they were sent forth, to "capture or destroy the enemy," is perhaps understandable, but it is nevertheless in the highest degree illogical. The service which the fleet has so far performed has not been of that picturesque quality which appeals to the imagination, but it has been a very vital service for the welfare of England and it is difficult to see what else the fleet could have done. Clearly, to rush into the Kiel Canal and make an heroic attack on the German fleet in its home waters would be merely suicidal. As things are, except for guerrilla attacks by submarines, the German fleet has been rendered virtually non-existent and the seas have been kept open to English commerce and closed to German. The fact that Englishmen are able to eat three square meals a day is due almost entirely to that nerve-racking, silent watch which their ships are keeping in the North Sea.

The British fleet rather more than evened up its account with the German, and possibly did something to appease public opinion at home, by sinking four German destroyers off the Dutch coast on October 17. The British ships engaged in this action were a cruiser and four torpedo-boat destroyers, and the Admiralty's announcement of the British loss in the engagement was one officer and four men wounded. Even allowing for the numerical superiority of the British, the result of this, as of other engagements that have taken place in the open, clearly demonstrates the greater efficiency of British sailors in gunnery. That the German destroyers should have been able to inflict virtually no damage at all on the enemy is rather astonishing.

Dispatches from the eastern area of fighting have been meagre and, as usual, somewhat contradictory. They enable us, however, to gain a fair idea of the development of the situation and the alignment of the armies. The report which we accepted last week, that Przemysl had been relieved, turns out to have been inaccurate. The fortress is still besieged and has been desperately assaulted, but is holding out. The great battle along the East Prussian frontier and from there following the course of the Vistula and the San Rivers into Galicia is still in its preliminary stages. The German plan obviously requires that they shall obtain a decisive victory here before the hard winter sets in. Troops would then be released for service in the west, where through the milder winter of France operations may be continued without serious handicap.

Foreign Correspondence

GERMAN SPIES IN ENGLAND—"THE LIGHTS O' LONDON"—COMMANDEERING HUNTERS.

By SIR HENRY LUCY.

WESTMINSTER, October 10.

The outbreak of the war was accompanied by active proceedings taken by the police against the horde of spies in a variety of disguises living in this country on the pay of an avowedly friendly Power. They were promptly and sharply dealt with. The cleverest, most highly placed, and therefore most valuable spy remains at large. During his frequent visits to this country the Kaiser, treated as an honored guest, enjoyed exceptionally full opportunity of spying out the land. Military manœuvres arranged for his pleasure enabled him with trained eye to gauge the value of the forces. Naval reviews were organized in the same lavish manner. He is not the kind of man to have missed or minimized opportunities thus generously thrust upon him.

I happen to have been a witness of his methods on such occasions. In 1889, during one of his visits to this country, a great naval review at Spithead was arranged in his honor. Among the mammoth liners drawn to the scene was the Teutonic, crowded with a distinguished company, the guests of Thomas Ismay, chairman of the White Star Line. On the morning of the second day of the review the Kaiser, escorted by the late King Edward, then Prince of Wales, came aboard and was conducted by Mr. Ismay over the great ship about to make her maiden trip across the Atlantic. The Teutonic was one of the first passenger boats built under Admiralty regulations with the intention of being turned into swift armed cruisers in time of war. A few quick-firing guns were already placed in position about her decks. I chanced to be standing near one of these when the Kaiser in the course of inspection came by. His eye lighting on the gun, he abruptly stopped and made close inspection of the novel arm. As he turned away he, speaking in English, sharply said to one of his suite, "We must have some of those, and quickly too."

"The Lights o' London," which in mid-Victorian times effectually flashed on the stage, are just now turned depressingly low. A native returning home after three months' absence, ignorant of what had happened in the interval, would, taking an after-dinner walk down Fleet Street or other thoroughfares, come to the conclusion that something had gone wrong with the electric lights. We have not yet got back into the stage of the oil lamp which appropriately illuminated London when George III was King. But the appearance of familiar ways is just now reminiscent of what we lived through when gas was our sole illuminating power, and the managers of the gas companies had not yet been wakened up by the discovery of electric light to the necessity of bestirring themselves if they were to hold their own against the newcomers.

A month ago the Home Secretary, under powers conferred upon him by the Defence of the Realm Regulations, ordered a lowering of the lights in all the streets. This week the order has been enforced with greatly increased severity. The inside lighting of shop windows is ruthlessly lessened. In all the principal streets and on the river bridges, formerly flambeaux of brilliant lighting, the continuity of illumination is broken up by here and there extinguishing groups of lamps. The electric light flaring on lofty buildings, bold advertisement of whiskey, tea, coffee, and other articles of domestic commerce, no longer illuminates the banks of the river or the public thoroughfares. This precaution against the German habit of dropping bombs on defenceless masses of population has extended to towns on the seacoast. At all the principal watering places along the English Channel notices have been served upon householders and shopkeepers directing them to show as little light as possible in rooms which face the sea. Doubtless the same order prevails in towns and hamlets on the East Coast of England.

This enforced dwelling in semi-darkness is only one of the minor discomforts in private life arising out of the war. Another was brought under my notice while I was paying a week-end visit to a friend in Kent. He is (or was) a mighty hunter, the chief pride of his far-reaching estate in the loveliest district in the county being his stables. Here, regardless of expense, he homed a stud it would be hard to beat. They were the pride of his life, next to his children his most cherished possession. He told me that within twenty-four hours of the declaration of war he was waited upon by an officer of the Government who commandeered half his stud. Their money value per head was at least £500. "Out of the eight," said the sorrowing master with something suspiciously like tears in his eyes, "there were six I would not have been tempted to sell by an offer of £1,000 each. They gave me £280 for the four, £70 a head, being the maximum price allowed by the War Office. That I didn't mind. But they took away my horses, my daily companions who would feed out of my hand and turned round when I entered the stables to look at me with big, loving eyes." This was bad enough. But four days later the emissary of the War Office paid a second visit and carried off on the same terms the remainder of the stud.

It is obvious from the promptitude with which this individual case was dealt with that in the archives of the War Office were documents in which the possession of every man in town or country owning horses was carefully scheduled. At the time of the Boer War the Government had a useful resource in the stables of the London General Omnibus Company. At a small fee per head the horses were registered, and when war broke out the War Office exercised the option of purchasing them at a sum considerably less than my friend's hunters fetched. It was a well-worn joke in South Africa, happily varying the monotony of ill-luck inevitably following on faulty administration, that the only way to get a trooper's horse to start was to ring a bell in closest possible imitation of the omnibus signal to resume an interrupted journey. At the time Lord Kitchener reached the War Office the omnibus horse in London, as in other centres of big population, was a thing of the past. He, however, found an admirable substitute in motor cars, which have been commandeered as cheerily as if they had four legs instead of as many wheels.

ITALY AND THE EUROPEAN WAR—A PRESENTATION OF THE CASE FOR INTERVENTION.

ROME, September 29.

Italy's position in the Triple Alliance has for long been a source of anxiety to her most thoughtful and patriotic sons. Few will deny that when it was first made, in 1882, and for many years afterwards, it was a useful safeguard against France, then an outspoken malevolent neighbor; that it helped by maintaining the balance of power to secure for a while the peace of Europe, and that especially it enabled Italy to live as an ally in peace with her enemy, Austria. But from the beginning there was a cardinal weakness in this compact from the Italian point of view, in that it gave Italy no security in the Mediterranean. Italians have always, and justly, looked upon England as their friend, and when relations with France began to improve their statesmen were not slow to perceive the necessity of a good and permanent understanding with the two great Mediterranean Powers. Prinetti, as Foreign Minister from 1900 to 1903, came to terms with France and England in regard to Italy's predominating interests in Tripoli quite independently of Germany and Austria. And it will be remembered that at the Conference of Algeciras, in the spring of 1906, Italy's influence was thrown against Germany in favor of England and France.

The growing disfavor in which the Triple Alliance came to be held was strikingly revealed when it was last renewed in November of 1912, nearly two years before it would have expired by limitation. The most authoritative journals in Italy, beginning with the most authoritative of them all, the *Corriere della Sera,* of Milan, were unanimous in condemning so premature and dangerous an hypothecating of Italian interests. Even professed triplicists could show no good reason, from the Italian point of view, why the treaty should have been renewed so long before its term. There can be little doubt that Germany and Austria took advantage of the feeble and supine policy of Giolitti, the Premier, and of di San Giuliano, the Foreign Minister, to renew the compact in their own interests for fear that a later and stronger ministry might raise difficulties.* The immediate reason why they precipitated matters at that particular time was easily divined from the announcement, a few days after the publication of the new alliance, of the success of the Austrian loan. International bankers were evidently unwilling to finance this, in the weak economic condition of Austria then, as now, existing, unless the security of the Dual Monarchy were guaranteed for the term of the loan.

The subsequent conduct of Austria only served to increase the strength of this feeling against an outworn compact thus uselessly and prematurely renewed. Every one knows that the policy of the late Archduke Ferdinand was pro-Slavic even to the point of alienating many Germans. As against the Italian subjects of the monarchy, this policy became a systematic persecution. Within a year, that is, in the summer of 1913, Prince Hohenlöhe, the Governor of Trieste, issued an edict dismissing all Italian subjects em-

*The "Carthage" and "Manouba" incident, which may be called the Trent Affair of the Italo-Turkish War, and in which President, then Premier, Poincaré was much to blame, had just aroused some of the old animosity between Italy and France, and made it easier for Germany and Austria to accomplish their design.

ployed in the public services. Thus many hundreds were thrown out of work, for whom patriotic and charitable societies in Italy undertook to find relief and employment. Intense indignation pervaded the whole country, which steadily grew as the investigations of Italian journalists revealed Hohenlöhe's act as only a part, and not the most important part, of a deeply laid scheme of persecution. Of this I will merely say, without going into details, that it was obviously contrived to make an Italian country impossible for Italians to live in, and to throw it into the hands of Croats and Slavs.

This state of things lasted until the outbreak of the war, when all of a sudden Prince Hohenlöhe saw a great light. Having found himself, it should be observed, under the painful necessity of hanging some of his anti-Italian Slavic agents for complicity in the Serajevo murder, he forthwith proclaimed that Italians were bound by every consideration of sympathy and interest to ally themselves with the Germans and Austrians in a holy war against the Slav. The effect of this announcement upon the Italian public, as well as that of some loud, and unprecedented, *evviva*s for Italy in Vienna, may readily be imagined.

As correspondents of the *Nation* have already written, the Italian Government's proclamation of neutrality met with universal approval; but it was interpreted in different senses. The triplicists and the official Socialist organization soon declared themselves for neutrality to the end of the war. So far as I am aware, not even the most ardent triplicist has ventured to assert that Italy should take up arms for her allies. The Reformist Socialists, on the other hand, the Republicans, and the Nationalists, with other sections of the various constitutional groups, are by this time for war against Germany and Austria. And the chief merit for this stand, in which ideal as well as political considerations have much weight, unquestionably belongs to the new and vigorous Nationalist party.

As early as August 6, writing in the *Idea Nazionale*, the Nationalist organ, Signor R. Forges Davanzati, one of the ablest of the younger generation of Italian publicists, clearly pointed out that the consequences of Austria's and Germany's action should have been, not a promise of neutrality for the present or the future, but the immediate denunciation of the Triple Alliance, which had in effect ceased to exist. Some of the clauses of this treaty are secret, but it is known that it was defensive, not offensive, and that it was based on the maintenance of the *status quo* in the Balkans. "We had," said Signor Davanzati, "both the right and the duty to make clear our line of conduct as soon as Austria behaved in that manner towards Servia. We had the right and the duty resolutely to affirm both at Vienna and at Berlin that a conflict with Servia would greatly disturb the equilibrium in the Balkans, and would precipitate a European war; and that by reason of both these inevitable consequences, without ample and secure guarantees which the Monarchy has always shown itself unready to concede, Italy not only could not take the part of her allies, but could not even maintain towards them a friendly attitude." The observation has repeatedly been made that a word from the German Emperor while the crisis was maturing would have stayed Austria's hand. Likewise, such firm language as this might have given pause even to the war lords at Vienna and Berlin.

There is no question that at Vienna and Berlin they had deluded themselves into the notion that they could count upon Italy's compliance in whatever warlike enterprise they chose to undertake. They treated her in fact not as an ally but as a vassal. It seems that it was partly in consequence of the assurances of the Austrian Ambassador to the Quirinal, von Merey, that Italy would certainly, though perhaps not willingly, follow her allies into war, partly because he knew that she would not give her consent to further Austrian encroachments in the Balkans, that von Berchtold omitted to inform the Italian Government of his intentions in regard to Servia. The same von Merey, who has lately resigned because the Roman climate did not agree with him, said openly: "Les italiens ne veulent pas marcher avec nous, mais nous les ferons marcher quand même."

Not only could Italy never tolerate the aggrandizement of Austria in the Balkans, but a glance at the map and a moment's reflection will show that a Russo-Servian victory over Austria without the help of Italy, which would mean the winning of the whole of Dalmatia for the Servians, would be only less disastrous. The holders of the Dalmatian coast, with its islands, bays, and inlets, control the Adriatic. The holders of the Italian coast have nothing but sandy beach and watering-places. In any event, Servia, of which all are agreed that Montenegro will soon become a part, will have and will deserve, as the Italians themselves admit, a share in Dalmatia. And she will have it all, in the now probable case of the defeat of Austria, if Italy does not intervene. Italy, also, to control the Adriatic, must own or control Vallona, so that the distracted state of Albania only adds to the complexity and difficulty of the situation.

Such considerations, reiterated in all their changes by the most serious representatives of public opinion, including the sober and conservative *Corriere della Sera*, are having their effect, and the most trustworthy information I can obtain assures me that the best intelligence and patriotism of the country, as well as a numerical majority, are now or soon will be in favor of armed intervention. On the other hand, in addition to the easy-going, timorous bourgeoisie, who sagely reflect that if you go to war you may be worsted, there are influences tending in the opposite direction. Some have convinced themselves, in spite of all probability and of all that the authoritative French, English, and Russian press say to the contrary, that Italy may have what she wants at the end of the war as the price of neutrality. The unhappy "Carthage" and "Manouba" incident above referred to has revived in some Italians the old-time rancors against France. In fact, at the time, M. Barère, the French Ambassador at Rome, said ruefully that it had undone his fourteen years of labor for conciliation. Nor can it be denied that the Foreign Office, by its failure to denounce the alliance at the outset, has put the country in such a position that a tardy intervention will seem to be the result of a cowardly policy of waiting to see which side would win. But it is astonishing how little hostility towards Austria, justified though it be by recent insult and wrong as well as by ancient oppression, has had to do with the formation of public opinion.

Apart from the confirmed triplicists, who are really very few, and the orthodox Socialists, the only opposition to intervention which may be said to belong to a party is that of the Clericals. They are consistently on the side of the Austrians, and have been from the first. Cardinal Bourne, when he was in Rome to attend the Conclave, expressed to an acquaintance of mine his great surprise at the strength and extent of this sentiment. Extreme Clericals see in the downfall or weakening of the Austrian Empire the failure of the last chance for the restoration of the temporal power, while the more moderate ones, in the same eventuality, fear the extension of the Orthodox at the expense of the Catholic faith.

In this attitude, however, it is doubtful if the Clericals are to expect much encouragement from the newly elected Pontiff. Even Pius X showed himself on a number of occasions distinctly friendly to the Slavs. For example, in June of this year he signed a Concordat with Servia establishing an archbishopric at Belgrade in direct relation with the Holy See, instead of depending on the archdiocese of Temesvár, as was the desire of Austria. In 1901 a dispute of the southern Slavs with Austria about the possession of the church and seminary of San Girolamo degli Schiavoni, in Rome, was decided in favor of the Slavs, largely through the efforts of Mgr. Della Chiesa, at that time Sostituto in the Secretariat of State. And in 1912, when a Montenegrin was appointed to the archdiocese of Antivari, which had always been held by an Austrian, the Montenegrins again owed their triumph to Della Chiesa, whom they had chosen to plead their cause, and whom they trusted not only as a canon lawyer of the first rank, but also as a well-proved friend. It is hardly necessary in this connection to dwell upon the tradition of friendship for France which the Pope inherits from Cardinal Rampolla. The Roman Pontiff is, of course, the father and pastor of all the faithful, without difference as to race or nationality. But fathers sometimes have their favorite children, and, at times, particular children have need of special care. At any rate, so experienced a statesman as Benedict XV is not likely to lose the opportunity he now has of reconciling the Holy See with France, where the news of his election was received with profound satisfaction.

The Italian Government, as if its present difficulties were not enough, may soon have to decide a novel and very nice question of international law. The Law of Guarantees, passed in 1871, secures to the Pope complete liberty of correspondence and communication with the outside world, including all convenient immunities and privileges for Ambassadors accredited to the Vatican. But in the debate on the law in Parliament, it was pointed out that, in the event of a war between Italy and a power with a diplomatic representative at the Vatican, his presence in the country could hardly be tolerated. An amendment having been offered, providing for the suspension of this guarantee in time of war, Senator Ruggero Bonghi justly objected that, since war is an abnormal condition in any state, such a provision was useless, and might prove harmful. The amendment was lost, but there is little doubt that, if Italy enters the conflict against her former allies, the Ambassadors to the Holy See of Austria-Hungary, Bavaria, and Prussia will receive their passports. H. E.

The Lust of Empire

THE RESPONSIBILITY FOR THE PRESENT WAR—NIETZSCHE AND BERNHARDI AND THE GERMAN PHILOSOPHY OF MIGHT—ENGLISH OPPORTUNISM AND ITS VARIOUS ASPECTS—THE COMPARISON.

I.

There has been, one suspects, a certain change in the attitude of many thoughtful Americans towards the countries that are held most immediately responsible for the war. Their first feeling was a natural one of outrage against the titular rulers of those lands. As the *Nation* exclaimed, in words that have been widely quoted:

> Whatever happens, Europe—humanity—will not settle back again into a position enabling three Emperors—one of them senile, another subject to melancholia, and the third often showing signs of disturbed mental balance—to give, on their individual choice or whim, the signal for destruction and massacre.

But it did not take much reflection to see that, however these crowned bogeys might give the signal, the really maleficent spirit was the militarism which held the governments in its mailed fist and bade emperors and chancellors speak as it wished. And so the *Nation* of October 1, drawing a kind of forlorn hope from history, denounced this "terrible obsession":

> Because Stein and Bismarck drilled and organized, thereby succeeding, everybody must be given over to a passion for drilling and military organization. That this should have finally resulted in the elevation of the soldier above all his fellows, and the apotheosis of war, is a fearful thing, no doubt, but one can understand it. So could one understand the domination of slavery in this country. . . . One long and bloody war made an end of slavery. May we faintly trust the larger hope that another will rid the world of the curse of militarism?

And only a week later we were moved by reading a kind of deprecatory tribute to the patriotism and community of feeling aroused by the war in the whole German people—the enthusiasm of the soldiers, the loyalty of those that stayed behind and their readiness to sacrifice all, "the great uplifting of soul on the part of German women."

There, I think, we touch the bottom of the matter. It may be true that the Kaiser and his ally of Austria might have stayed for a while the flaring up of the great conflagration; but sooner or later the spirit of militarism was bound to assert itself pragmatically, and the flames would leap forth. Nor does it seem to me that by militarism we should understand the mere dominance of the military caste, or their levying and drilling of armies in time of peace under the plea of "preparedness for war." It is at least a plausible thesis that these vast preparations rather in themselves retarded than hastened the conflict; just as two quarrelsome boys are quicker to fight than two trained athletes who know the cost of such an engagement. But however that may be, and there is much to say on both sides of the question, it ought to be clear that, for whatever reason, the so-called spirit of militarism has not been confined to a clique of Prussian officers, but has sunk deep into the hearts of the German people. The unanimity of the German press, the documents sent to this country by the most eminent scholars of the universities, the readiness of the leading poets and moralists of the land to condone the worst vandalism of the army—such things as these make it clear that something more is at work here than the machinations of a group of self-seeking soldiers and armament-makers, and that this marvellous unanimity is something different from the patriotism that is solidifying other countries.

All this we of America, who are so far from the contest as to stand as it were in the position of judging posterity, are beginning to perceive and to wonder at; and with the perception our condemnation of German policy grows wider than a mere democratic antagonism to the phantom of arbitrary power, and deeper than abhorrence of the ruthlessness of the Kaiser's troops under the plea of efficiency. This change, if I am right in suspecting its existence, is coming about from late acquaintance, mostly, of course, at second hand, with certain authors who, with almost incredible frankness, give voice to the inner creed of the nation. Above all, the name of Nietzsche is beginning, by the aid of the daily press, to take on a sinister meaning for the man in the street. Now, the gospel of that fanatic is nothing new. It has a respectable following in Russia and France, and through the efforts of a little body of propagandists in London and this country his works have been translated into English and expounded among us with great fervor and some cunning. But we of the English tongue are pragmatists by blood, endowed by nature with a plentiful scorn of philosophical speculation, and only the hammer of events could drive into us a suspicion that a metaphysical theory of life might have a serious influence on a national policy, and, as at once cause and effect, enter into the moulding of a people's character. And doubtless Nietzscheism itself would not have got such a hold in Germany had not a part of the doctrine been haunting the popular ear ever since Luther pronounced war to be "a business, divine in itself, and as needful and necessary to the world as eating or drinking, or any other work."

Nietzscheism is indeed more than a glorification of war. It is in one sense almost anything you choose to make it, for its author was a master of the various epigram, with little care for verbal consistency, so that from his works the devil or the angels may quote texts with equal conviction, as they are said to quote from better books. But out of his broken discourses, taken as a whole, there does stream a pretty definite tendency of thought and feeling, and this is what has acted dynamically on so many practical minds of his Fatherland. Briefly, the force of Nietzscheism may be summed up thus: A violent repudiation of any faith or tradition which recognizes a power of right and justice lying beyond our impulsive nature and pronouncing a veto on the wilful expansion of that nature; an identification of self-restraint with degeneracy and of self-assertion with health, resulting in a deadening of the response to the value of harmony and proportion and voluntary moderation; a search for happiness in the conquest of others rather than in self-conquest, and a hatred of all sympathy for the weak which would involve even a partial surrender of the privilege of strength; a sharp distinction between the superior individual and the servile horde; a substitution of the Will to Power for the Darwinian Will to Live, with the consequent intensification of the unconscious and instinctive struggle for existence into a battle for conscious mastery; a sharpening of the competition of life, with its self-observed rules of fair play or its traditionally imposed limitations, into a glorification of war as the supreme test of strength, obtaining its justification in success.

Such, then, is the essence of the philosophy distilled by a master mind out of the pragmatism of Luther (whom he praised for his "depth and courage," but denounced for his religiosity), and Frederick the Great (whom he regarded, only less than Napoleon, as the "genius for war and conquest"), and out of the romantic deification of emotional expansion (himself a product of Rousseauism, though writhing in his fetters).

II.

One thing has tended to obscure the influence of Nietzsche. He was no patriot; he even condemned modern Nationalism as a *névrose nationale*, and, for very personal reasons, was most vitriolic against the particular Teutonic brand of chauvinism. "'German intellect,'" he exclaimed at the end of his life, "is my foul air: I breathe with difficulty in the neighborhood of this psychological uncleanliness that has now become instinctive—an uncleanliness which in every word and expression betrays a German," etc., etc. Now, there is something that sounds illogical in glorifying war and cosmopolitanism in the same breath, and certainly there is something not nice for German ears in Nietzsche's vituperative epithets; another mind was needed to make his philosophy thoroughly digestible for the home stomach, and Herr von Treitschke was the man to add the necessary ingredient of chauvinism. This he did in his "Deutsche Geschichte" and in his many lectures and essays, in all of which he really preaches a form of Nietzscheism while denouncing Nietzsche for his betrayal of the Fatherland. The essence of Treitschke's message is thus a tremendous chauvinism, facing the world unveiled and unabashed, facing with particular grimness across the Channel towards the centre of the British Empire. Germany, in his view, has been the great civilizer of mankind and the vigorous purger of shams. "Depth of conviction," he declares, "idealism, univerity, the power to look beyond all the limits of a finite existence, to sympathize with all that

is human, to traverse the realm of ideas in companionship with the noblest of all nations and ages—this has at all times been the German characteristic." Germany should be the leader and ruler of the world, and such she would now be, were it not that, while she has been indulging in dreams of the spirit, England has slyly and treacherously been laying her hand on the outlying regions of the globe and degrading mankind with her materialistic opportunism. But real power cannot always be concealed, and "a thing that is wholly a sham [that is, England, "the great robber-state"] cannot in this universe of ours endure for ever." War is the last revealer of power, and "God will see to it that war always recurs as a drastic medicine for the human race"; it is something more than a purge; it is, in the words of another militarist, the *schaffendes Weltprinzip*. With England, then, the war will come, the sooner the better; and might, which is also right, will prevail.

Such, it appears, are the ideas that dominate the whole school of what are called the Prussian historians, with Treitschke as their coryphæus. Their works have never really reached English readers, but since the outbreak of war their spirit has become sufficiently known across the Channel by the writings of a retired general of cavalry, Friedrich von Bernhardi,* who is an avowed disciple of Treitschke's. The deep-rooted Nietzscheism of this flamboyant militarist will be clear enough from a few sentences taken at random out of the pages of "Germany and the Next War":

> War is a biological necessity of the first importance. . . . "War is the father of all things." The sages of antiquity long before Darwin recognized this.
>
> "To supplant or to be supplanted is the essence of life," says Goethe, and the strong life gains the upper hand. The law of the stronger holds good everywhere.
>
> It is a persistent struggle for possessions, power, and sovereignty, which primarily governs the relations of one nation to another, and right is respected so far only as it is compatible with advantage.
>
> "Justice," says Goethe aptly, "is a quality and a phantom of the Germans."
>
> The end-all and be-all of a state is power.
>
> Might is at once the supreme right, and the dispute as to what is right is decided by the arbitrament of war. War gives a biologically just decision, since its decisions rest on the very nature of things.

Such statements as these would no doubt have passed unnoticed in England as being merely ideas and "academic," as would even the repetition of Treitschke's diatribes against British cant and senility, were it not that Bernhardi's most direct and audacious forecast of a war between Germany and Austria on the one side with France, Russia, and England on the other was so suddenly fulfilled and his theory of its strategy so largely carried out. The most impervious British mind could no longer overlook the fact that Germany was, with a vengeance, seeking for herself "a place in the sun," and attempting, as Frederick the Great once said, to *corriger la figure de la Prusse*. And events are proving that the military prophets were right in predicting that, whatever might be the immediate cause of hostilities and whoever might be the allied contestants, the struggle in the end was to be between Germany and Great Britain for empire, for *Weltmacht oder Niedergang*. At least that is overwhelmingly the passion of Germany at the present moment. Every report from that land shows that her desire to make an end forever of the French longing for *revanche* and her need to set a limit to Slavic expansion are almost swallowed up in a fierce hatred of England as the inaccessible obstacle to her lust of empire. Nor should old causes of detestation be forgotten. Long ago I asked a very intelligent German why he so hated England. His answer implied more than he said in words: "Do you remember Thackeray's picture of court life at Pumpernickel in 'Vanity Fair'?" England must be not only crushed but humiliated.

III.

And what of England herself? In a word, the matter lies thus: while in Germany the lust of empire has produced a tremendously efficient instrument of war, her rival, without any such avowed purpose and with no such efficiency, has somehow created an empire. I would not say that the vision of world-power has not floated before the minds of individual Englishmen, and at times stirred vaguely in the popular consciousness. Even in the early eighteenth century a minor poet, Thomas Tickell, could be lifted to eloquence by such a theme:

> Accept, great Anne, the tears their mem'ry draws
> Who nobly perish'd in their sov'reign's cause:
> For thou in pity bid'st the war give o'er,
> Mourn'st thy slain heroes, nor wilt venture more.
> Vast price of blood on each victorious day!
> (But Europe's freedom doth that price repay.)
> Lamented triumphs! when one breath must tell
> That Marlborough conquer'd, and that Dormer fell.
> Great Queen! whose name strikes haughty monarchs pale,
> On whose just sceptre hangs Europa's scale;
> Whose arm like mercy wounds, decides like fate,
> On whose decree the nations anxious wait;
> From Albion's cliffs thy wide extended hand
> Shall o'er the main to far Peru command,
> So vast a tract whose wide domain shall run,
> Its circling skies shall see no setting sun.

That note is not altogether uncommon in English literature; but it is not prevalent, and above all it was never developed into a practical and widely accepted philosophy. As a matter of fact, the history of the British Empire shows little purpose or guiding policy, but rather a blind following of chance and opportunity. Her great increase of power has come oftener from opposition to the ambition of some other nation than from a conscious ambition of her own. So it was when the navies of Spain were checked, and again when Marlborough stood against Louis XIV, and when Wellington put a stop to the Napoleonic dreams—and so it may happen to-day with Prussia, and to-morrow, who knows? with the sluggish Bear of Europe. She lost half a continent when her Government tried to enforce a theory of empire on her subjects of America; whereas her vast gains in India were rather thrust upon her by the greed of merchants at home and the independent vigor of distant agents beyond her control, just as the conquest of Africa was brought to her half-willing hands by the audacity of two or three irresponsible megalomaniacs.

There has never been anything in the English intelligence corresponding to Nietzscheism or Treitschkeism, and there is nothing like it to-day save perhaps in a few isolated minds, and that for reasons at once a credit and a discredit to the people. For the discredit we shall not hesitate to say, as Matthew Arnold and Bagehot and other good patriots have said very emphatically, that the English as a people are just, not intelligent, if by intelligence one means an interest in ideas for themselves or a pleasure in the operations of the mind apart from immediate utility. From the days of the Reformation to the present the only philosophy that has gained any genuine ascendence in that land is the doctrine of Bacon and Locke and Bentham, which has worked itself out logically in the creation of "comfort" and in the increase of "ingenious trade." Such writers as Nietzsche and Treitschke could not be national powers for this reason, if for no other, that, after all, those men were absorbed in ideas and in subjecting the crude material of life to a rigid theory.

That ever-growing indolence of the brain in England is discreditable; and, to mention a single symptom of the case, if the war can succeed in manifesting to London the hollowness of the mountebanks and decadents and hysterical women who are now supposed there to be making literature, it will have done one good thing at least. But there is a creditable side to British opportunism also—a glory, if you will, in the operation of instinctive, unreasoned character, and in the ready response to the call of duty. Jameson, a physician in far-away Africa, stung by the spirit of adventure and bringing about great international changes by his daring, is characteristic of his people. But more characteristic is the activity of a clerk like Clive, who, under the spur of necessity and without training, takes up the burden of government and creates an Empire.

The German mind, and to a certain extent the world at large, has never been able to understand this opportunism, which is mothered by lack of intelligence and purpose and fathered by a mute or magnificent response to the claim of the thing to be done now and here. So it is that to a philosophical historian such as Treitschke the whole record of the British Empire is a tale of treachery and underhand deal-

How Germany Makes War. (A condensation of *On War of To-day.*) New York: George H. Doran Company. $1.25 net.

ing, and the basis of British character is sham and lying pretence. This, too, is the source of that imputation of cant which is so often retorted upon British pride. And —such is the tangle of good and evil in human nature—the imputation is in part true. When the smug Briton arrogates to himself the virtues of his greater compatriots, when he attempts to give a reason for what his race has irrationally accomplished, when he wraps himself up in a vulgar self-complacency, he does sometimes fall a victim to an unpleasant simulacrum of righteousness. Cant is the sham of morality that confronts the sham intellectualism of Germany—for withal we must not forget that an intellectualism which honors purpose and intellect to the dishonor of the traditional sense of what is right, and which starts from a fundamental disregard of truth, is itself also a sham. But cant is only the shadow and not the substance of British character. The real contrast to Nietzscheism is patriotism. Now, it need scarcely be said that patriotism is not exclusively British, nor is all the so-called patriotism of that land admirable. Was it not Dr. Johnson who denounced the word as the last resort of scoundrels? But patriotism as a kind of philosophy opposed to Treitschkeism, if the paradox may be allowed, the profound emotion that accompanies the lack of reflection and the sense of duty, is peculiarly English.

If any one cares to see what is meant by this comparison of Treitschkeism and patriotism, let him read the little book which contains the lectures of the late Professor Cramb.* It is an eloquent piece of writing, informed with deep feeling, a trumpet call, one might almost say without metaphor, to rouse his countrymen to an understanding of what has been going on across the Channel and to the necessity of preparing for the war which has, since these lectures, actually broken out. Let me quote the words that must be engraved now in the heart of many of his hearers. After telling the story of the perishing of Capt. Scott and his comrades in the Antarctic snows, he continues:

> And then pass to the last stage in the drama—to that other death. There in the tent beside his dead the leader sits, still alive; there he sits, unvanquished and unappalled, his head propped against the tent-pole to ease his fatigue in the last slow dreadful vigil, whilst down over his magnificently English features a night deeper than the Polar night descends. And what are the thoughts which then flicker in front of him? We know them; we have them written in his own hand in that priceless record—priceless because authentic. "The greatness of England—my nation!" It is the greatness of England which uplifts him as death steals over his features like a marble mask. . . .
>
> Now I suggest to you that one explanation of this extraordinary paradox in human history—the persistence of war in spite of what seems its unreason—is that there is something in war, after all, that is analogous to this heroism there in the Antarctic zone, something that transcends reason; that in war and the right of war man has a possession which he values above religion, above industry, and above social comforts; that in war man values the power which it affords to life of rising above life, the power which the spirit of man possesses to pursue the Ideal. In all life at its height, in thought, art, and action, there is a tendency to become transcendental; and if we examine the wars of England or of Germany in the past we find governing these wars throughout this higher power of heroism, or of something, at least, which transcends reason.

The lecturer's illustration of patriotism is clear and forcible; but his glorification of war becomes misty and transcendental, and when he attempts to reproduce for his hearers something corresponding to the Nietzscheism of Germany he begins to speak a language of which he has no understanding. For the clean-cut, shrill ideas of the German he has only a misty sentiment. Perhaps it is better that we should not try to reason too logically about some things; certainly it is better so, unless we are sure of our premises. And one thing we are longing for now is to see German militarism and its philosophy of empire fall before the power of British opportunism, however unreasoning that power may be, and however unlovely in its baser forms.

Correspondence

MR. WELLS AND "VERNON LEE."

To the Editor of The Nation:

Sir: I will not trouble your readers with a lengthy reply to the remarkable "message" apropos of myself which Miss Paget ("Vernon Lee") has written you. For the most part she answers herself, or what she has to say has been quite adequately counteracted by other articles and letters in your columns. But most of your readers will not have read the article by me in relation to which she writes, and as manifestly she has misread it in her excitement, you will, I know, permit me to correct her upon certain specific points.

She declares I want America to "starve" the German people. There was no such suggestion in my article. So far as the internal Austrian and German food supply is concerned, Germany can, with a little economy, go on feeding herself without importation for an indefinite time. But feeding her armies at the front is a different matter. As my article pointed out—a thing "Vernon Lee" has either overlooked or ignored—the Rhine is a natural supply canal for these armies, and the peculiar position of Holland renders it much more convenient to supply them from America via Rotterdam, if America sees fit to play in such a game, than from the threatened granaries of Pommerania and Silesia. In the long struggle that is now reaching its climax, the question of supply is a dominating factor, and so I have no quarrel with the editor who threw up my phrase of Victualling Our Enemies into large type. That is exactly what I meant, our enemies, the German army, and exactly what "Vernon Lee" failed to grasp in her haste.

As for the "thousands of English men and women" who share my former friend's "shame and disgust" at my proposals, I ask you not to believe in their existence. Probably not a score of them have misread me, as "Vernon Lee" has done. I am indeed puzzled and distressed by these onslaughts of hers upon me, by her scarcely sane abuse of republican France, by her quotation, with approval, of such mere abuse as Professor Harnack's description of Russia as a "Byzantine and Mongol semi-barbarism." She even accuses me of flattering America, in spite of the fact that I sent her my little book upon "The Future in America" when it appeared. She will end, I know, by calling me "pro-British"—the last sin of which a true-born Englishman is capable. Whatever other losses or gains this war brings about, it has, I fear, lost England "Vernon Lee." But we shall do our best to reconquer her for the sake of many precious things that she gave us before she was won from us by Berlin.

H. G. Wells.

London, October 2.

DR. CONYBEARE'S REPLY TO "VERNON LEE."

To the Editor of The Nation:

Sir: May I pass some criticisms on "Vernon Lee's" "Message to Americans" in your issue of September 17? Her contention is that she speaks on behalf of English Liberals; I, too, am a Liberal, and come of a family distinguished during two centuries for its liberalism. Nor am I ill-disposed to Germany. I owe my *Weltanschauung*, such as it is, to Kant and the great German Idealists of a hundred years ago; I owe more to German than to English intellectuals, to the teaching, and—I am proud to be able to add—to the friendship of such men as Harnack, Hermann Ugener, Krumbacher, von Dobschütz, Diels, Albrecht Dieterich, and many others, some of whom have been spared the fate of witnessing this terrible war.

"Vernon Lee" singles out for attack Mr. H. G. Wells, who may be the contemptible lightweight she supposes, but whom I anyhow decline to recognize as more than an ingenious imitator of the French author of "A Voyage Round the Moon." It appears that he wishes to see Germany starved into surrender. My opinion is that even in war she can probably stand years of starvation without being obliged by it to surrender; but I would fain ask "Vernon Lee" what she imagines Germany would do to England in this matter, had she the power. Were our oversea supplies of food stopped, we should be starved out in six months. Would Germany, therefore, scruple to stop them, if her fleet were strong enough to do so? Unto what end and against whom has she strained her every nerve and spared no expense to build her fleet? Had "Vernon Lee" made the most superficial study of newspapers read by her people, of the *Militär Wochenblatt* read by all her officers, she could entertain no doubt that Germany's aim is to starve us into abject surrender to her will. She finds it "atrocious" and "hideous" in Mr. Wells to contrive famine for Germany, but would apparently approve if Germany could inflict it on her own fair land of England; she is prepared to see the Prussians, after invasion of our shores, mete out to us the measure they are meting out to their Belgian victims.

We learn that "there are thousands of English men and women who feel only shame and disgust at the proposal Mr. Wells has ven-

tured to make in their name." In my turn, I ask, how many of the German governing class in 1870 felt shame and disgust at the methodical starving of two million people in Paris? How many of them would have scrupled the other day to repeat the operation on nearly four million Parisians? How many of them would scruple to starve out London? These people are hurling bombs on open, undefended, or, at least, unbesieged cities. Would they share the tender scruples of "Vernon Lee"? Are they not even strewing the high seas with mines, to the destruction of neutral crews and shipping?

Our authoress next contrasts Germany, the "best administered and best schooled of all great European nations," with Russia, much to the disadvantage of the latter, and she points to the oppression of Finland and of the Dumas. I agree with her that the treatment of the Finns and of the first crop of Russian Parliamentarians has been detestable; but has she never heard of Zabern, of the Hakatists in Posen, of the political murder of the Danes in Schleswig? Surely, if Germany is so much better schooled and administered than Russia, we should condemn her all the more severely for her failure during forty-four years to win the good-will of Alsace and Lorraine, during 60 of the Danes, during 120 of her Poles. Why do all these races still loathe German administration, if it be as exemplary as "Vernon Lee" pretends? She rails ironically at "the notoriously peace-loving Czar." She forgets that when he came to the throne his first thought was to unite all Europe in a lasting league of peace, and to substitute arbitration for war, that the German Government and press (except the Socialist papers) flouted his proposals, as they flouted the similar overtures of Campbell-Bannerman in 1906, and that the German Emperor has consistently rattled his sword and boasted of his "shining armor" ever since he mounted his throne.

"Vernon Lee" dwells upon the anti-Semitic excesses which are—I admit it as fully as she does—a disgrace to Russia. But is her enlightened Germany above reproach in this matter? There the Jews serve by thousands in her armies, but no Jew is admitted to the grade of officer; and Pan-German chauvinism, as represented by its chosen hierophant Herr Chamberlain, is as hostile to the race as any section of Russian opinion. German sentiment is being sedulously worked up by such writers towards the pogrom.

The authoress next turns to the idea of *Revanche*, which, she says, "has been fed up as sole unifying and purifying power even among the former stalwarts of Dreyfusist anti-militarism." On this side of the English Channel I was a champion of truth and justice outraged in the person of Dreyfus, and so became acquainted with many of those who wrestled in France, until they won, with that corrupt, fanatical, and inhumane faction which called itself Nationalist; but I never met with any other feelings among Dreyfusards than those of the warmest French patriotism. If Sussex and Kent were wrested from us in a war precipitated by a forged telegram, would the next generation of Englishmen have lost all desire to recover them, especially after their inhabitants had writhed for years under the soulless despotism of which Zabern is the symbol? Why condemn the French for cherishing patriotic aspirations? We would despise them, did they not do so; and, speaking for myself, I would never have touched the Dreyfus case, if—as "Vernon Lee" imagines—it had stood for a craven submission to German bullying. Were there ever purer and more single-hearted French patriots than Scheurer Kestner, than Zola, Clemenceau, and the other heroes of that episode?

"Vernon Lee" quotes with glee words of Professor Harnack, in which he speaks of the "inconceivable English betrayal of Western civilization into the hands of Byzantine and Mongol semi-barbarism." She forgets—as does Professor Harnack (von Harnack he styles himself since he became a courtier and a reactionary)—that Germany has steadily now for fourteen years compassed the invasion and destruction of Great Britain; that she has scoffed at all our peaceful overtures; that she seized the occasion of our diminishing the growth of our navy to double her own; that she only waited for the completion of the Kiel Canal to embark on this war; that for twenty years her youth have been sedulously imbued with envy and hatred of us, with malice and all uncharitableness. In the last conversation I ever had with Bishop Creighton I was defending Germany, the Germany I knew as a young man, which I then believed fondly to be yet the true Germany. He answered me that I should, being much younger than himself, live to realize that the German Empire of Bismarck is a thoroughly predatory organism. Does not the martyrdom of Belgium, about which "Vernon Lee" keeps a guarded silence, bear out his words?

But to return to Russia and her "Byzantine and Mongol semi-barbarism." We must not forget that Byzantium kept alive and handed down to us the torch of ancient and, in particular, of Greek culture. No Byzantine Emperor ever set himself, as has this Kaiser, to imitate Attila, none ever encouraged his soldiers to emulate the Huns, none ever made war upon universities, libraries of precious manuscripts, ancient cathedrals. In our own generation Russia's literature is distinctly finer than German, her music and painting, at least, equal, if not superior; in learning alone she falls behind, but not much behind. If any one doubts this, let him examine the transactions published during the last fifty years by the Russian Academy. In chemistry what German can rival Mendiliev? If "Vernon Lee" would understand what Russia can accomplish in the way of ordered government, of well-laid-out and hygienic cities and streets, of engineering works, of carefully prepared statistics, let her visit the Russian dominions, as I have done, and she will drop von Harnack's falsetto rubbish about Russia's "Mongol semi-barbarism."

One last word in this connection about the Russian tongue, which I am privileged to read, though not to speak. I have no hesitation in saying that as an instrument of thought and expression it is vastly superior to High German, less cumbrous and involved, more musical and harmonious, richer, more plastic, akin in its clearness and simplicity to English and French. If "Vernon Lee" doubts this let her compare the first chapter of Turgeniev's novel "Fathers and Sons" with the German translation of the same (accounted elegant and excellent) by Wilhelm Lange. I turn to what "Vernon Lee" accounts the deeper cause of this war; namely, the upholding by Great Britain of the right to destroy or seize an enemy's seaborne goods. Germany, it is argued, would never have built a fleet if we had foregone this "piratical" right. Is she so simple as to suppose that Germany will forego the right, if she ever has the stronger navy? Is she foregoing it at this moment? Would she ever keep to any agreement not to use it? Von Bernhardi, in his "Germany and the Next War," recognizes, indeed, the importance of a German fleet for the protection of German commerce, but he regards this as only its secondary purpose. "We have come to see," he writes (p. 228), "that the protection of our commerce and the defence of our shores cannot possibly be the only object of such a fleet, but that it, like the land army, is an instrument for carrying out the political ends of the state and supporting its justifiable ambitions."

What these ends and ambitions are we learned but two months ago from the German Chancellor himself. They include the humiliation of France and the appropriation of her colonies. I suppose "Vernon Lee" would not account that ambition to be piratical. In the present war Germany has already occupied Belgium, and treats it as a conquered country which she intends to keep; is that not piratical? And Bernhardi (p. 158) informs us that Holland also will soon "prefer that adhesion to the German Empire which geography dictates." He shows the cloven hoof to ourselves pretty clearly when he prophesies that our self-governing colonies, Canada, Australia, and South Africa, will not "permanently retain any trace of the English spirit," and urges his compatriots to embark "in the hard struggle for the sovereignty of the world." He clearly intends that these self-governing colonies of Great Britain shall be annexed by the King of Prussia and Germanized; but, as a first step in the process, he would (p. 78) have "the isolated groups of Germans abroad, in the United States, in Brazil, and in the British colonies, supported in their struggle for existence, and thus kept loyal to their nationality." Such groups will, he declares, not only "obtain their goods from Germany, but they may also be useful to us politically, as we discover in America, where the German-Americans have formed a political alliance with the Irish, and thus united, constitute a power within the state with which the (American) Government must reckon."

In other words, German settlers in the States are no longer to become loyal American citizens. They will henceforth constitute an *imperium in imperio*, an insidious force arrayed to assist and further the designs of Potsdam. "From the point of view of civilization, it is imperative to preserve the German spirit, and by so doing to establish *foci* of universal culture." Yes, of the "culture" which has just razed Louvain and Rheims to the ground, and massacred civilians by hundreds. For this end the German Government spends nearly five million dollars annually; namely, in preventing German settlers oversea from becoming loyal sons of the country of their adoption; it is an insidious policy, calculated only in the long run to raise up around German settlers in all lands an atmosphere of odium and suspicion. I have said enough, and would only in conclusion ask "Vernon Lee" how she can reconcile the martydom of Belgium with her superior estimates of German polity and policy. It is as if an *apache* should violate an innocent girl, rob her, torture her, and, finally, flog her into becoming his bond-servant for ever. She has no word of condemnation for this foulest of crimes, nay, seeks to palliate

it by a sophistry which will deceive no one. She professes to address a "Message to Americans" in behalf of English Liberals, but Americans may rest assured that she represents no section of English opinion whatever, least of all English Liberalism.

FRED. C. CONYBEARE.

Oxford, Eng., September 29.

PRUSSIA AND GERMAN CULTURE.

TO THE EDITOR OF THE NATION:

SIR: Most references in our press to-day to Prussia's contribution to German culture seem to me to suffer from a neglect to consider, at least for the sake of clearness, the point of view of enlightened Prussians. Prussia recognizes clearly and frankly that the West and South of Germany have contributed principally and almost exclusively to the greatness of German culture. It has long since been able to see its own power to systematize as against the power to create of the rest of Germany. Up to the union of the German states under Prussian supremacy that stands out clearly enough. With the exception of a Kant and of some scientists, like the Humboldts, who were often also eminent statesmen, and therefore Prussian, the great creative geniuses have been subjects of the smaller southern and western states. Meanwhile, however, Prussia has been engaged in creating a mighty state and in developing the political foundations that are so sorely lacking in the more æsthetic Germany.

Ex-Chancellor von Bülow has given a clear and unbigoted exposition of this two-fold Germany in his "Imperial Germany," which should carry all the more weight not only because it was written before the stress of the war, but also because its author has always been superior to the bolsterous and more or less troublesome dogmatic leagues and parties of Germany. He recognizes as the most important and only really vital task of modern Germany, the "fusion of the Prussian and German spirit." "Prussian State life and German intellectual life," he says, "must become reconciled in such a way that both their growths become intertwined without weakening each other."

The possibility of such a fusion naturally depends upon the strength or weakness of the element common to the whole. Prussia, "the prosaic state of soldiers and officials," has often been sorely attacked by the democratic and æsthetic South in public sentiment and expression. On the other hand, the Prussian has shown too often a narrow-minded contempt for the finer qualities of his southern neighbor. If you add to that the political philistinism of all of Germany, a result of its long history of petty principalities, the quarrel seems almost hopeless, and the task of a fusion stupendous. However, that same philistinism carries within itself the germ of the quality to which the more enlightened of Germans look for the completion of this task. Local patriotism gives birth to an enormous variety of parties, and stubborn loyalty to party leaders accounts for the dogmatic philistinism these parties evince. From this, in addition to the ordinarily accepted arguments, the Prussian statesmen deduce the essentially monarchical character of German political thought. For the present, to be sure, this is still expressed in narrow-minded and geographically narrow loyalty; but if it is educated skilfully and in a broad-minded spirit to recognize and adopt as common protector the best organized and most powerful monarchy, the greatest common good must result.

This must not be done by a high-handed imposition of that Prussian monarchy upon the lesser states and principalities, but by a sympathetic smoothing over of the differences that exist. A solution of the problem along the lines of the abstract democratic ideals of the 'forties failed, thinks von Bülow, because of their violent antagonism to the monarchical character of the people and historical traditions of Germany and because they were too exclusively intellectual at the expense of the practical, as was all democratic propaganda in Germany.

If this delicate expansion of Prussian system can be effected, German intellect should be infinitely benefited, for under the protection of a strong guardian its output should become stronger and freer. Leopold von Ranke compares the function of Prussia in Germany to that of Rome, which by its military and political organization preserved classical culture. "The Prussian State became the guardian of German intellectual life by giving the German people a united state and a position on a level with the great empires of the world." But this task was subtle and hard, and is not yet completed. Above all, it is important to note how far superior it is to the narrow doctrines of a Treitschke. Men like von Bülow have met with much difficulty in attempting it, and these difficulties often were due more to the intolerance of their own Prussian countrymen than to the opposition of the West and South.

In the 'seventies and 'eighties, before there was mutual understanding and tolerance, the immediate effect of the preponderance of Prussia was actually a stifling of German intellect and æsthetics. But all great innovations must at first pay dearly for a seemingly inevitable lack of balance. The last decades of German intellectual life have, however, been stronger and richer, and are giving evidence of new leadership. If Prussian leaders, then, see in this war, whatever may have been its causes, an impetus towards the realization of their goal, and the rest of Germany realizes more than before Prussia's importance for its culture, each expressing his enthusiasm from his own standpoint, we may profitably take it upon ourselves to criticise the basis of their enthusiasms; but neglecting that, our criticisms have little importance.

Von Bülow, in a recent interview with a Swedish journalist, says: "The tempest of these days has swept away what was retrograde and petty in us. The complete harmony between political thought and national feeling, the conviction which has at last thoroughly imbued us, that the destiny of every single one is indissolubly bound to the destiny of the whole, has made immense inroads in these times." OTTO MANTHEY-ZORN.

Amherst College, October 13.

KULTUR.

TO THE EDITOR OF THE NATION:

SIR: Nearly nineteen hundred years ago a Roman general, in exhorting his troops, made the following comments on the Germans (Tacitus, "Histories," IV, 73): "Eadem semper causa Germanis transcendendi in Gallias, libido atque avaritia et mutandæ sedis amor, ut relictis paludibus et solitudinibus suis fecundissimum hoc solum vosque ipsos possiderent. Ceterum libertas et speciosa nomina prætexuntur; nec quisquam alienum servitium et dominationem sibi concupivit ut non eadem ista vocabula usurparet."

Nature's swamps and solitudes have now been replaced by the less attractive wilderness of German art. Among the fair-sounding names we hear more to-day of *Kultur* than of liberty. Instead of primitive ignorance there is now a superfluity of supreme intelligence, strangely unappreciated by the outside world. The rest is the same. One more *Völkerwanderung*. E. K. RAND.

Harvard University, October 10.

QUASI-LEGISLATIVE POWER OF JUDGES.

TO THE EDITOR OF THE NATION:

SIR: A vast number of American lawyers, especially lawyers under forty years of age, have been constrained to recognize a serious public problem in connection with the quasi-legislative power of judges in our Anglo-American system of jurisprudence. During the last half-century the most notable manifestations of this quasi-legislative power have been in those lawsuits where beneath the surface the real contest is not between individuals, but between classes, such as railways as a class, labor unions as a class, negroes as a class, working women as a class, members of the Republican party as a class. On account of well-known principles of American constitutionalism this quasi-legislative power of judges has been more obvious here than in England. But even in England a similar problem exists and has been commented upon by both scholars and statesmen —such as L. T. Hobhouse and Winston L. S. Churchill.

In this country, among a small but influential number of practicing lawyers, a regrettable and unprofessional tendency has appeared. It is a tendency to treat with scorn and impudence any lawyer, old or young, exalted or humble, who ventures to discuss the social and political effects of the law-making function of judges. As an illustration of this regrettable tendency I shall quote a short passage from page 8 of the printed report of the American Bar Association's outstanding "Committee to Oppose the Judicial Recall." (It is impossible for me to believe that this language has been approved by all members of the Committee.)

Within the past year a chief justice of one of the oldest States, in an address avowedly intended for the people of the entire nation, held up to derision our Federal Constitution, its makers and expounders, as a basis for his advocacy of the decision recall and of other changes in our form of government. His attack upon the Federal Constitution and upon our system of government has never been surpassed in malignant vituperation by that of any socialist doctrinaire. The chairman of this committee recently had the pleasure, in the presence of that chief justice and before the Bar Association of his State, of denouncing such views of our institutions and the utterance of such views from such a source.

It is to be observed that the views of the Chief Justice of North Carolina, which the attorney of the Great Northern Railway Company takes pleasure in denouncing, are personal views on mooted questions of history and political science.

Literature

HORACE WALPOLE'S "TWIN WIVES."

The Berry Papers: Being the Correspondence Hitherto Unpublished of Mary and Agnes Berry (1763-1852). By Lewis Melville. New York: John Lane Co. $6 net.

Into the later correspondence of Horace Walpole, when the outlook of even that brave Epicurean began to darken with the shadow of the nearing end, there falls, as every good Walpolian knows, a fresh and kindly light from the old man's acquaintance with the Misses Berry. These two sisters, with their widowed father, had taken a house at Twickenham in 1788, and their friendship with Walpole soon ripened into the closest intimacy. He was seventy-one at the time of meeting; they were respectively twenty-five and twenty-four—"exceedingly sensible, entirely natural and unaffected, frank, and qualified to talk on any subject," as they appeared to the scrutinizing eyes in Strawberry Hill. They were his "twin-wives," his everything that is dear to a privileged "ancient"; and nothing is prettier in epistolary literature than this cynic's fond language of gallantry, and few things are finer than his appeal to the good sense of his friends to disregard the scandal—and how well he knew the sources and courses of guilty Rumor!—that soon began to buzz about their innocent intimacy. Their names would have been held in pleasant recollection were it only for their fragrance in Walpole's letters, and that still is their chief distinction. But Mary Berry, in particular, has other claims on memory; she was something of an author on her own account. Nominally to her father, but really to her care, Walpole bequeathed his manuscripts; and she was the editor of his Works as they appeared in five quarto volumes in 1798. Her other publications, whether original or editorial, are forgotten, save the "Extracts from the Journals and Correspondence," which issued from the press thirteen years after her death. These volumes, however, included only a selection from the papers left by her, and the volume now before us, from the busy editorial pen of Mr. Melville, is in the nature of a supplement to the earlier work.

Mr. Melville's gleanings consist mainly of letters to Miss Berry preserved in the British Museum, and among these the correspondence of the Hon. Mrs. Damer takes the first place, for bulk, if not for interest. Any one at home in Walpole's circle will be glad to know something more of Anne Seymour Conway, afterwards Mrs. Damer, Walpole's intimate friend and the daughter of the man to whom a number of his frankest letters were addressed. Some further information we get of her life—for instance, of a proposal of marriage which she rejected—and some acceptable light is thrown on her character; but her correspondence, as we now read it, is no nearer to literature than tons of such matter that are daily passing through the post; and it is so obscure from the intimacy of her tone as to be almost baffling to the reader. The interest becomes acute only when some passage brings out sharply the attitude of the writer or of Miss Berry to Walpole at the critical moment of Miss Berry's engagement. We already knew that Walpole, feeling himself old and gouty, acted towards these young women with all the exigency of a fond and petulant father, but this impression is happily strengthened by the present publication. "I was interrupted by Lord Orford," writes Mrs. Damer on one occasion. "He came complaining and tired, having been, he said, 'talked to death' [by] Lady C. Tufton at Mrs. Bute's last night, and is gone to the Doyleys'. The *child* has always a tendency to being fretful when you are not in the way to keep him in order, but I know not when I have seen him so little so, as [since] he came to town, which I hope may be set down to better health, for I am *sure* it cannot to less anxiety, less impatience, and less *fidget* about you." The tone of the writer is one of amused kindliness, but it becomes a bit acrid when Walpole's "fidget" was deepened to a querulous sulkiness by the dread of seeing his imaginary wife turned into the real wife of a younger man, and his comfortable habits outraged:

> I cannot be sorry [writes Mrs. Damer again] that Lord Orford shows his most unfair crossness to you now, because I know that it is there and exists in his breast, and, if *you*, by the most unlooked-for attentions, have not been able to extirpate the vile weed, it must grow stronger, and that, you may depend on it, it will, and increase by indulgence; were you to sacrifice all your best days to come and your whole existence to him, there would be no end to his encroaching fancies. This may sound harsh, but it is plain truth, and you, my own soul, have suffered enough in this vile world; try at least if you cannot recover a part of the heavy debt that is owing you. I do not, from your account, feel uneasy at his indisposition, as I rather conclude it over, and I am sure when I think of *what* his dinners are, and *how* he eats them, I wonder he and his cat are not sick together every day for their dessert.

There is a tradition that Lord Orford took his courage in his hands and himself proposed real marriage to Mary. Nothing in these new letters proves or disproves the story, though the absence of any direct reference to such a situation is strong negative evidence against it. As for Mary Berry's own romance, that is made clearer by the publication of several letters between her and the delinquent lover, General O'Hara. To spare Walpole and her sister for a while, and perhaps also from some uncertainty about her soldier's character, she refused immediate marriage and allowed him to go off as Governor of Gibraltar without her, where, after a manner not unknown among soldiers, he soon found consolation with other ladies. She was brave, but some of the light went out of her life. In 1844 she was able to write thus of the event:

> . . . All these circumstances combined in the most unlucky manner, crushed the fair fabric of my happiness, not at one fell swoop, but by the slow mining misery of loss of confidence, of unmerited complaints, of finding by degrees misunderstandings, and the firm rock of mutual confidence crumbling under my feet, while my bosom for long could not banish a hope that all might yet be set right And so it would, had we ever met for twenty-four hours. But he remained at his government at Gibraltar till his death, in 1802. And I, forty-two years afterwards, on opening these papers which had been sealed up ever since, receive the conviction that some feelings in some minds are indelible.

Why, one asks, did Mr. Melville print so few of the letters of this romantic episode, all of it apparently so creditable to his heroine, when he has reproduced the effusions of Mrs. Damer at such tedious length?

By all odds the most spritely letters he has recovered of Mary Berry's are those that she wrote to her sister from Paris, whither she had gone with Lord and Lady Hardwicke in 1816. There is not a great deal in them that is sufficiently salient to warrant quotation (unless it be her horror of Talleyrand—"Could you see him! such a mass of moral and physical corruption!"), but they are always clever and shrewd and affectionate. Far better as literature is the one long letter to Miss Berry from Mrs. John Austin, quite the best thing in the book.

Mr. Melville's editing does not inspire one with entire confidence. It is certain on the face of it that the printed text contains slips in the French that are not the fault of the writers, and this leads one to wonder how many other inaccuracies there may be which the reader has no means of suspecting. The notes are fairly full and judicious. The price of the book is out of all reason, simply exorbitant.

CURRENT FICTION.

The Copy Cat, and Other Stories. By Mary E. Wilkins-Freeman. New York: Harper & Brothers.

All the realism, all the terseness, of Mrs. Wilkins's ordinary vein is in these eight stories of New England village life; but in a majority the customary sombreness is palliated by idealism of effect, while fancifulness plays an unwonted part. The title story, with two others of child life, is almost sprightly in tone. In the remainder the characters are still frequently people of abnormal lives or perverted will, and the environment, cold, provincial, penurious, is still depressing; but the narratives somehow leave a flavor of sweetness. A theme of unusual difficulties is that of "Noblesse," in which a gentlewoman with superlative flesh, forced by poverty to travel with a cheap museum, wins the sympathy of a country landholder of similar obesity; he is unable to rescue her from her contract, and in his gallantry, seeing a crystalline, angelic soul under her bulk, assumes her place and shields her from the ordeal. "The Umbrella Man" is a like spir-

itual tragedy brought to a happy conclusion: a gentle old ex-convict, and a woman who has somehow wrecked her life without soiling her soul, meet in the country occupation by which they earn their bare livelihood, and from sheer loneliness and reciprocal sympathy unite their lives. The delicacy with which character is sketched in these tales is worthy of the author of "Evelina's Garden" and "By the Light of the Soul." Others are by no means so successful, falling back to a harsh monotony, unhappy and uninteresting—a monotony identical whether they are humorous or pathetic, and eloquent of the fact that the repressed lives with which Mrs. Wilkins so frequently deals cannot keep even a short story alive with incident. They amount merely to so many character sketches, placed against a landscape-painting.

The King Behind the King. By Warwick Deeping. New York: McBride, Nast & Co.

In this tale are present all the elements that go to the making of an "historical" novel that sins against nothing but history. Fulk Ferrers and Isoult of the Rose meet in stirring times. The Peasants' Revolt is brewing, and she, betrayed by her peers, has cast in her lot with a rebel band, headed by one Merlin, the Grey Friar—a scurvy lot, as she soon discovers; he, King Richard's half-brother, in the way of business as the Duke of Lancaster's Riding Forester, catches her in the act of replenishing the larder of her ragamuffin friends—and the play is on.

Taken prisoner by the gang, the idea occurs to them to make use of Fulk's resemblance to the King for their own purposes, at first with the connivance of Isoult—but we do not propose to tell the story here. Among the many exciting episodes is the scene at Mile End, where Fulk, personating his poor, cowardly half-brother, saves the kingdom, does infinite violence to Dame History, and, incidentally, some injustice to Richard II, who, we hope, was not quite so detestable a poltroon as he is here represented. Poor Isoult has a bad time among her ragamuffins, whom she has betrayed, partly for love of Fulk and partly for the equally valid reason that they smell vilely. A certain pot-valiant Guy the Stallion spends a good deal of time dragging her around by the wrist, and, when he wearies of the diversion, Merlin attaches her to himself in the same unpleasant way. The sojourn of Fulk and Isoult in the House of the Black Mere begins as an idyll and ends in a glorious fight, in which Isoult's arrows account for a goodly percentage of the enemy.

Love Insurance. By Earl Derr Biggers. Indianapolis: The Bobbs-Merrill Co.

In his second novel Mr. Biggers displays the same characteristics which marked his first, "Seven Keys to Baldpate," and just as that was transformed from a novel into a highly successful farce, so we may expect to see the present work presented in the dramatic form to which in theme and in treatment it seems adapted. Indeed, in its stage version this story will very possibly prove more acceptable than in its present form. Mr. Biggers's humor is not particularly subtle, and it is aided considerably by the interpretation of the living voice and by the slap-dash methods of farce. The situation, in the unfolding of which we are invited to participate, is farcical enough. Lord Harrowby, an impecunious elder son of an English peer, engaged to and in love with an American millionairess of great sprightliness and charm, decides, in the gambling spirit which has brought his progenitors to penury, to insure at Lloyds against any hitch occurring, not of his own making, to interfere with the wedding. A romantically inclined speculator writes him a policy; and, although he expresses full confidence in the honor of an English nobleman, it is felt that it may be well to send a trustworthy representative of the firm to San Marco, where the wedding is to take place, to keep an eye on his lordship, and, so far as may be possible, to see to it that no hitch occurs. The story concerns the adventures and perplexities of this conscientious servant of Lloyds. It is sufficient to say that no servant of that famous institution was ever surrounded by more troubles or surmounted them with more ingenuity; nor has any small place ever seen gathered together a greater array of rogues, grafters, and conspirators than met at the sleepy Spanish town of San Marco for the confusion of the British nobility and a British insurance firm.

The Laughing Cavalier. By Baroness Orczy. New York: George H. Doran Co.

It is no new thing for a picture or a statue to stimulate an author's fancy to the weaving around it of legends of his own creation. The Mona Lisa and the Venus de Milo have inspired more than one piece of fiction—and many more than a century of sonnets. But, so far as we know, Frans Hals's irresistibly debonair Laughing Cavalier, with the merry eye, the rakish cock of hat, and the insolent twirl of moustache, has never before been made the hero of a novel. Baroness Orczy has seen the opportunity and seized it. Furthermore, she has ingeniously linked her latest book with an earlier success, by making the Laughing Cavalier an ancestor of that delicious daredevil of the Revolution, "The Scarlet Pimpernel." In daredeviltry the ancestor is worthy of his illustrious descendant; indeed, the characteristics of the two heroes are so similar that Baroness Orczy is wise in her generation in making them of one family: one is tempted to think that here resemblance explains consanguinity rather than consanguinity resemblance. The attempt to repeat a success is always fraught with perils, and these the author has not escaped. Comparison is invited and the later book suffers by it. But the story, the scene of which is laid in the Netherlands in the days when plots were rife against the life of Maurice of Nassau, Stadtholder of Holland, is exciting and readable, and the character of the Laughing Cavalier, a penniless soldier of fortune who wins through a series of thrilling adventures to wife and fortune, is well limned, and for those who, like the Baroness Orczy, have the seeing eye, may all be read in the wonderfully expressive face that looks out on us from the canvas painted nearly 300 years ago.

The Wall Between. By Ralph D. Paine. New York: Charles Scribner's Sons.

This is a sort of tract, dealing with the position of the non-commissioned officer in the American army. The hero is a son who has sacrificed his reputation to save his father's memory, has left his Eastern home under a cloud, and after some drifting has enlisted as a private of marines. He is a gentleman and (almost of course) an ex-college athlete. When the action opens he has made his way by merit to the responsible office of quartermaster-sergeant; but he is still an enlisted man, and therefore inferior socially to any officer who holds a commission. The particular officer chosen as a foil is a lieutenant, whose father is a Congressman and whose place has been virtually bought. He is a cad and a coward, and has no chance at all with the author or the hero, not to speak of the heroine. Our Sergeant Kendall has just reenlisted when he is discovered by a classmate, a rich man, who sees nothing in the army distinction between officer and enlisted man. Kendall pays him a visit as an equal, and the trouble begins. There is the beautiful girl ready to fall in love with him. She is naturally related to a superior officer in Kendall's station. The lieutenant appears on the scene, aspires to the lady, and tries to put down the sergeant. But, of course, the sergeant is not put down, and the lady is not put out, by the discovery of his debased rank. All that remains necessary is a sufficient number of incidents and adventures to make the course of true love rough enough to be interesting. They are duly supplied by an experienced caterer for the juvenile palate, and include the prescribed bit of South American warfare, in which the hero distinguishes himself beyond praise if not beyond belief.

THE CAREER OF EDWARD DOWDEN.

Letters of Edward Dowden and his Correspondents. New York: E. P. Dutton & Co. $2.50 net.

The daughters of the late Irish critic, Edward Dowden, have brought together in a somewhat hasty manner his letters, with some of the replies from his correspondents. Mr. J. D. McQuisten has prepared an incomplete index, and Mr. W. K. Magee contributes an encomiastic preface. The collection is welcome. Dowden, the critic, with his ethical preoccupations, his imaginative conjectures, his elucidation of the structural ideas underlying various creative works, is well known. These informal utterances reveal his diffident but winning personality, throw light on his professional and literary interests, and are in themselves valuable as a

record of life-long absorption in the best that is known and thought in the world.

Though from Cork, Dowden was reared in ignorance of Irish traditions and Irish aspirations. He strongly opposed the centenary celebration of Tom Moore's birth. Until he was nearly forty he "did not even know of the existence of Meave and Deirdre and Cuchullain." He could sincerely add: "I am infinitely glad that I spent my early enthusiasm on Wordsworth and Spenser and Shakespeare, and not on anything Ireland ever produced." So thoroughly did he disbelieve in whipping the Irish "on to a national sentimentalism prepense" that he "gave much time during twenty-five years to resisting Home Rule."

This seeming perversity is of a piece with the devotion of his whole life. After a brilliant undergraduate career in Trinity College, Dublin, he at the early age of twenty-four became professor of English literature and oratory there. His professional duties, however, were a thorn in the flesh. By the end of the first decade he was writing, "I have been eating the sands of existence, my inward parts are filled with the east wind." He deplored so deeply the loss of time in preparing lectures that when Johns Hopkins offered him five thousand dollars he declined, writing his brother: "Evidently this is the Hercules choice of poverty or riches offered me [his salary at Trinity was at the time about eight hundred dollars] and I should think my three bairns would have an opener career for their talents in Yankeedom. But 'to found a school of English literature' in Baltimore would mean a life of teaching what I already know, instead of trying to know more; and I do not choose to gain the world and lose my own soul."

His was a devotion that suffered no flagging and no distractions. For a time, to be sure, he found "almost pure pleasure" in writing verse. But even in his thirties he confessed it "hard to write verse except in clear spaces of time, unvexed by other concerns." He later agreed with J. B. Yeats's criticism that all his poems had a furtive look, as if he were ashamed to confess himself a poet. His family and some of his friends liked to think of his as a creative soul stifled under the burdens of work-a-day routine, but the present record indicates that the greater passion swallowed up the less. He cared for no form of recreation. From the age of sixteen, when we see him tramping the English Lake District in sunshine and rain, until his second marriage at fifty-two, when he began spending vacations at seashore or in travel, he seemed incapable of relaxing his varied literary interests. His only genuine pastime was book-collecting. In that he had rare success. For two shillings he got the original edition of "Epipsychidion," and a few minutes later discovered an "Empedocles on Etna." He was the first to pick up a copy of Shelley's "Refutation of Deism." Some nine years later he purchased for twopence the copy of it which Shelley had presented to Mary Godwin. In telling contrast with his summary treatment of travel or his satire on golf is his crowing over such finds.

Not even his enormous reading was recreation. During a troublesome cold he once wrote: "I have indulged myself in a lazy fit of reading without a purpose, which I find delightful for a while." From boyhood he had turned all his perusing of books and essays to account in a succession of articles contributed to the English reviews. The curious feature of his labors is that, though he had facile sympathy with many differing souls in literature, he cherished no abiding passion. He is best remembered for his Shakespeare criticism, yet his works on Shakespeare he refers to without pride, and it is now evident that he never acquired a love of dramatic poetry. Of his first book he wrote in the summer of 1874: "My Shakespeare lectures get on very slowly, but they will in the end get written." While he finished them that autumn, he only partly liked them, and hoped "to turn to other things." He did plan very soon a "Mind and Art of Goethe," but publishers kept him busy with Shakespeare-editing the remainder of his life—commissions which he accepted with reluctance and fulfilled without enthusiasm. Editing the "Sonnets" he regarded as "stupid industry." When Kegan Paul urged him to become chief editor of a new edition of Shakespeare, he remarked: "Possibly I may if it looks promising for pot-boiling ends."

The great dramatist made him a citizen of the world, but his vows he paid to other authors. Southey was not one of these. He much preferred to do Coleridge for Morley, but was at length persuaded to take up Southey. As a piece of writing he was rather complacent over it, but once it was done his thoughts seldom returned to it. Indeed, the only undertaking he entered upon with whole-hearted eagerness was the life of Shelley. When Sir Henry Taylor, who had been mightily pleased with his Southey, procured him the invitation to become Shelley's biographer, with the private material of Sir Percy and Lady Shelley at his command, he shouted that he was more delighted than if he had been offered a bishopric. He wrote everybody about it, declaring he meant to do his best with so fine a theme. His enthusiasm was maintained by many discoveries. One reason, probably a weighty reason, for the "adoration" of which Matthew Arnold so unreservedly complained, is betrayed in a letter to his brother. "My crucial chapter, which I read for you, has given entire satisfaction to Sir P. and Lady Shelley. This, although it was more like a judge's charge than an advocate's speech. And I am pleasantly surprised." Yet after its publication he wrote Aubrey de Vere: "I shall . . . leave Shelley, from whom I can now win little more impulse or instruction."

That is the history of his life. An unquenchable thirst for things of the mind, which, no sooner had he quaffed deeply of one spring, would send him off in search of others which he had glimpsed in his explorations. Though one fountain might gush forth more beautifully than the rest, he was ever lured on by some distant gleam or plashing. This youthful freshness of outlook was accompanied by an unflurried judgment—displayed notably in the matter of Shelley's life. After Matthew Arnold's chastisement in the *Nineteenth Century* for January, 1888, he declared to his brother that he had "not felt the least inclination to reply to Matt," adding, shrewdly, "Matt's article will not be accepted, except by a portion of my readers, and no restatement of my position probably would alter their feeling." Still, the memory rankled: his reference to the article as a "chastisement" came twelve years later.

There was nothing combative in his temperament. These letters, on the contrary, tell of a diffidence concerning his own attainments that in so respected a critic is peculiarly winning. He had an increasing number of friends while he lived, and his correspondence, with its revelation of rare modesty combined with unwavering interest in the intellectual life, may win many, even of those who do not admire his criticism, to regard Edward Dowden as worthy of Mr. Magee's apotheosis of him as a "saint of culture."

STORIES FROM THE ORIENT.

Korean Folk Tales: Imps, Ghosts, and Fairies. Translated from the Korean of Im Bang and Yi Ryuk, by James S. Gale. New York: E. P. Dutton & Co.

The Korean authors from whom these tales are taken were born two hundred years apart. Yi Ryuk was a contemporary of Erasmus, and lived before the cruel invasion of his country by the Japanese Hideyoshi, when Korea was still far ahead of her neighbor in civilization and letters. Im Bang was a contemporary of Dryden, and lived in the period of national listlessness that followed the Manchu conquest. Some of the cleverest of these stories are not folk tales at all, but racy anecdotes with a moral to them. Yi Ryuk, indeed, is very fond of the moralizing anecdote. There is much humor in Im Bang's story of "The Resourceful Wife"; it is much racier than the better-known one of the Korean Lucrece, who, by cutting off her nose, spoiled herself for the King's harem. A lustful tyrant sat on the throne of Korea, and was in the habit of snatching from her husband any Korean lady who took his fancy.

In these days of trouble there was a young wife of a certain minister who was very beautiful in form and face. One day it fell about that she was ordered into the palace. Other women, when called, would cry, and behave as though their lives were forfeited; but this young woman showed not the slightest sign of fear. She dressed and went straight into the palace. King Yong-san saw her, and ordered her to come close to him. She came, and then in a sudden manner the most terrible odor was noticeable. The King held his fan before his face, turned aside, spat, and said, "Dear me, I cannot stand this one; take her away," and so she escaped undefiled.

How it came about was thus: She knew that she was likely to be called at any moment, and so had planned a ruse by which to escape. Two slices of meat she had kept constantly on hand, decayed and foul-smelling, but always ready. She placed these under her arms as she dressed, and went into the palace, and so provided this awful and unaccountable odor. All that knew of it praised her bravery and sagacity.

Though careful in details—we note only one error, *Chol-lo* (Brass Tiger) for *Chol-ho*, at page 96—the translator is careless as a stylist. He is often particularly at fault in the ambiguous use of "he," that pitfall for inept writers, and is sometimes positively ungrammatical, as in the use of "she" for "her" (p. 16), and of "genii" as a singular noun (page 57). Why does he so constantly use "Korea's" in place of the simpler adjective form "Korean"? Seeing that a first edition appeared many years ago across the Atlantic, some of these defects should have been removed. Weak as to diction, he fails also to suggest the Korean manner of life and thought. Some of his preliminary remarks to the stories are open to grave objection. For instance, take this note regarding a magician's power of metamorphosing himself: "The transformation of men into beasts, bugs, and creeping things comes from Buddhism; one seldom finds it in Taoism." Now, Buddhism has the doctrine or principle of transmigration, the passing of souls after death into other bodies according to a moral scheme of retribution or reward; but it is not associated as a system with the caprices of magic. Taoism descended into all kinds of magic and necromancy, but not through the influence of Buddhism. And what about the native Shamanism, preceding all these foreign cults? Again, the story of Charan, which leads the series, portrays a young man of birth, the only son of fond parents, as dancing with a pretty dancing-girl, on his sixteenth birthday, and "delighting the assembled guests. . . . They came out and danced like fairies." His father, the Governor, commanded that "from that day forth she be the special dancing-maiden to attend upon his son." And yet at the foot of this same page we are told that his parents objected to the friendship that grew up between the two, because to "have a dancing-girl before you are married is not good form, and will interfere with your marriage prospects and promotion." Finally, the love-lorn youth ran away from home and official duties to pass a life in disguise with the girl. The story needs explanation or alteration; as it stands, it seems out of focus with Oriental notions of dignity and decency.

The various snake, fox, magpie, and ghost stories are interesting, both in themselves and to students of comparative folk-lore. But the narrative frequently halts as if the translator had not quite grasped the original story. It is a pity that the good material he uses lacks the final cultural and philosophical finish that would give it a permanent place on the shelf.

Notes

In noticing "My Days of Adventure," by Ernest A. Vizetelly, we gave the publishers as Chatto & Windus, London. We should have stated that the book is issued in this country by Duffield & Co.

Henry Holt & Company announce the forthcoming publication of "Belshazzar Court," by Simeon Strunsky; "The Changing Drama," by Archibald Henderson, and the English translation of the second volume of Martin Anderson Nexo's Danish novel, which is entitled "Pelle the Conqueror: Probation."

"Water Reptiles of the Past and Present," by Samuel Wendell Williston, is announced for publication by the University of Chicago Press.

A. C. McClurg & Company announce the forthcoming publication of "Britton of the Seventh," by Cyrus Townsend Brady, and "The House of the Dawn," by Marah Ellis Ryan.

Paul Elder & Company will publish shortly: "Bohemian San Francisco," by Clarence E. Edwards; "Our Changed Conception of God," by Charles Sumner Nash; "Verses from Many Seas," by Fred Warner Carpenter.

Sorel's "Reflections on Violence" has been translated by T. E. Hulme and will be published shortly by B. W. Huebsch.

The Oxford University Press announces that the following volumes are in preparation: "A Glossary of Tudor and Stuart Words," by W. W. Skeat, completed by A. L. Mayhew; "English University Drama, 1540-1603," by F. S. Boas; "Map's de Nugis Curialium," edited by M. R. James; "Studies in the Odyssey," by J. A. K. Thomson; "Concise Dante Dictionary," by Paget Toynbee; "Catalogue of Coins in the Punjab Museum, Lahore," by R. B. Whitehead; "Music of Hindostan," by A. H. Fox Strangways.

Announcement is made by the American-Scandinavian Foundation that it has undertaken the publication of a series of Scandinavian classics in English translation. The two volumes of the series already announced are: "Comedies by Holberg: Jeppe of the Hill, The Political Tinker, Erasmus Montanus," translated from the Danish by Oscar James Campbell, jr.; "Poems by Tegnér: The Children of the Lord's Supper, Frithiof's Saga," translated from the Swedish by Henry Wadsworth Longfellow and the Rev. W. Lowery Blackley, with an introduction by Paul Robert Lieder. The Foundation also announces the establishment of a series of Scandinavian monographs, of which "The Voyages of the Norsemen to America," by William Hovgaard, is the first. The following classics are in preparation: "Master Olaf," by August Strindberg, translated by Edwin Björkman; "Poems and Songs of Björnson," translated by Arthur Hubbell Palmer; "Essays by Kierkegaard," translated by Lee M. Hollander; "Three Modern Icelandic Dramas," translated by the same: "The Prose Edda of Snorri Sturluson," translated by Arthur Brodeur; "Danish Popular Ballads," selected by Axel Olrik and translated by E. M. Smith-Dampier; "The Book of Little Brother," by Gustaf af Geijerstam, translated by Edwin Björkman.

The second series of Anatole France's "On Life and Letters" appears in a translation by A. W. Evans, published by John Lane as part of the complete works. These *causeries*, which were first printed in the *Temps* about twenty years ago, record the impressions and digressions of M. France's soul in the presence of the books of the day. For systematic criticism he avows his admiration and his incapacity. The best books, he holds, are those which set one to thinking of something else. Among these, presumably, are a French bibliography, which set him to thinking of a couple of old priestly quay-haunting bibliophiles of his acquaintance; Gazier's "New Illustrated School Dictionary," which set him to thinking of the weather and the time of year, and Renan's "History of the People of Israel," which plunged him into a revery upon the Noah's Ark and the illustrated Bible of his childhood. These illustrations perhaps exaggerate M. France's delightful irresponsibility as a reviewer. On sufficient provocation he can be both tart and systematic. There is neither deviation nor remorse in his demonstration that the novels of Georges Ohnet are "outside literature," in his exposure of Zola's "purity," or in his resentment at the symbolists for forcing him to disturb the dreams of life by attempting to understand them. To tell the truth, M. France was too much a lover of lucidity and distinction of style to be smitten with the younger generation. He is happiest when the work of a contemporary reminds him of a classic, and he can spend his critical virtue in describing his "pleasant astonishment before the beauty of things."

A recently published dispatch announces that M. France, now in his seventy-first year, has volunteered for the European war. Before accepting his sword the Ministry may well look into his previous military record as set down in "On Life and Letters," and consider how he is likely to spend his time in the trenches. "In 1870," he says, "we had gone to the war together, Fernand Calmette and I, as private soldiers in a regiment of the mobilized National Guard, under the orders of brave Capt. Chalamel. Side by side, wearing the cap with red piping and the brass-buttoned pilot jacket, we defended Paris as well as we could, but I must admit that we were soldiers of a special sort. I remember that, during the battle of December 2, having been placed in reserve under the fort of La Faisanderie, we read Virgil's 'Silenus,' amid the noise of shells falling into the Marne. Whilst the Prussian batteries sent white clouds of smoke afloat upon the hills on the horizon of the gray and bare country, we two, seated on the river bank, near the piled rifles, our heads leaning over a copy of Bliss's little 'Virgil,' which I have yet, and which is dear to me, were making comments upon that cosmogony, which the poet, by a delightful caprice, enshrined in an idyll." Since in this conflict, as we have been informed, the Prussians are fighting to defend their Virgils from the allied barbarians, the passage lends some color to the accusation that M. France is in sympathy with the enemy.

The fiction form adopted by Edward S. Curtis in his "Indian Days of the Long Ago" (Yonkers, N. Y.: World Book Company; $1) is not allowed to defeat the aim of the book, which is to give "a more intimate view

of Indian life in the old days." By this view is meant not merely the ways that all the Indians had in common, but also the less often presented divergencies among them, in dress and habits as well as in language. The little volume, which is attractively made, suggests the readers from which children nowadays learn in an interesting way more about the cave men than most of their parents will ever know from any other source. But it is not designed for persons quite so youthful, although it will be enjoyed by boys and girls who have passed the primer stage. The beauty and the value of its pages are enhanced not only by reproductions of photographs taken by the author and by drawings by F. N. Wilson, but also by musical scores of Indian tunes. The announcement of another book by the same author, with a similar aim, to be entitled "In the Days of Vancouver," moves one to envy young readers of the present day their opportunities in the way of books.

"The Girl Who Found the Blue Bird" (Dodd, Mead; $1 net) is the account of a visit to Helen Keller by Georgette Leblanc (Madame Maurice Maeterlinck). The translation is by Alexander Teixeira de Mattos. The record is surcharged with emotion, Madame Maeterlinck burying her observations under an avalanche of sentiment. Miss Keller emerges here and there, and stands momentarily distinct, to the great relief of the onlooker. The little book is an unimportant addition to what we might as well begin to refer to as Kelleriana.

"As far as the material available admitted, I have allowed Ouida to tell her own story"—thus writes Elizabeth Lee in the preface to "Ouida: A Memoir" (Duffield & Co; $3 net). And this is the best way. The material here referred to consists largely of extracts from the novelist's letters, together with occasional self-revealing passages from her published works. Ouida's place in literature has already been settled, and judgment passed, so that, while part of the present book is devoted to that phase of the subject, we shall deal, rather, with the author's account of Ouida, the woman. This will be found to bear out, in the main, the estimate more or less generally current. Ouida was a mass of apparent contradictions. Possessed of considerable political *flair*, she made herself a laughing-stock by posing as a power in politics: "Once in London I wrote what threw a bill out of the Commons, and you know how rare it is for a writer to turn votes in England." In 1885, writing to the Marchesa Incontri, *née* Galitzin, she says: "A very great English statesman, were there such a thing, would have seen the grandeur of an alliance which, giving Russia Constantinople, and taking Afghanistan for Great Britain, would have laid the foundations of a durable accord, and held the ambition of Germany in check." Perhaps! In any case few will deny the advantage to England of an earlier good understanding with Russia. Her humanitarianism was very real, but its expression often ridiculous. Her dog-cemetery at the Villa Farinola shocked the thrifty Italians as being both irreligious and wasteful. Her superheated espousal of the cause of the Italian peasant leads us to look for her always on the side of the under-dog—a locution which must have appealed to her. Yet, in 1881, she writes: "Ireland is in a frightful state; it wants military law." Again in 1882: "Arabi should have been shot in the twenty-four hours." Of the guilt of Dreyfus she was "convinced." She was anti-Chamberlain before she was pro-Boer—which she was violently enough until the "burghers" gave in, when she felt "an unmixed disgust and disappointment. I thought the Boers, at least, knew how to die, and would show the old Thermopylean spirit to the end"—this in spite of her frequent fulminations against war. Her personal vanity was shameless, as it was piteous. Intellectually she was no less vain, as witness her advice to Fisher Unwin: "Keep my book at the head of your advertisement lists; you have nothing to equal it." And to Tauchnitz: "I think you will find 'The Massarenes' worth ten thousand 'Trilbys.'" Perhaps, as our author suggests, much that puzzles us in Ouida's character may be explained as the result of a certain self-absorption which grew on her till she "came to regard herself rather as a heroine of one of her own books than as an ordinary woman living in an ordinary world."

Serious students of philosophy are sure to welcome the volume of "Essays on Truth and Reality" (Oxford University Press; $4.15 net), in which F. H. Bradley reprints, among other papers, his contributions to *Mind* for several years past. Most of the essays represent more or less, says Mr. Bradley, "the chapters of a book which I once intended to write." No new theses are offered; the present volume is rather a development and a defence of absolute idealism with reference to the issues that have arisen since the publication of the author's "Appearance and Reality" and is concerned especially with the recent discussion of the meaning of truth. It is impossible to give any brief summary of the argument of so subtle and discursive a thinker. "In this volume I have urged that what matters and what is ultimately good is the Whole, and that there is no aspect of life which, abstracted and set utterly by itself, can retain goodness. And on the other side I have insisted . . . upon the absolute, the unassailable, right of every aspect of life to its own place, function, and liberty." Such special rights are considered in essays, or appendices, on pragmatism, for which the author apologizes, and on radical empiricism, which he gladly acknowledges, and on some points in the philosophy of Bertrand Russell. Mr. Bradley has lost none of his skill as a dialectician, but his tone has become less rasping and more comfortable for the reader. Despite the fact that absolute idealism now stands with its back to the wall against all other schools of philosophy, he is able to say in his preface that "It is a satisfaction to me, when approaching the end of my own career, to note (whatever school or tendency may from time to time be in fashion) the increasing devotion amongst us to metaphysical inquiry. There has been, I think, a rise in the general level of English philosophical thought such as fifty years ago might well have seemed incredible."

The "Collected Essays of Rudolf Eucken," translated by Meyrick Booth (Scribner; $4 net), are for the most part a monotonous, yet melodious, reiteration of the theme repeated in all of the eight or ten works that have appeared in English translation in the last two or three years. Whether the title be "In Defence of Morality," "The Education of the People," "Pessimism," "The Reflection of the Age in its Concepts," or "Philosophical Parties," the story is the same: the dispersion of aims in modern life, the need of a creative and unifying spiritual movement. Yet there are some exceptions. The essay on "Goethe in his Relation to Philosophy" is an instructive piece of criticism; "Metaphors and Similes in Kant's Philosophy" is both curious and suggestive; while "The Importance of Great Thinkers" is inspiring and brings out well the element of individualism in Eucken's philosophy.

Since the individuality mainly in question is the individuality, *i. e.*, the teleological wholeness, of the world-order, "The Problem of Individuality" is a rather misleading title for the little volume containing Hans Driesch's four lectures before the University of London (Macmillan; $1). The reader will look in vain for a statement of what constitutes an individual, biological or social. What he will find is a brief and clear, if not perfectly systematic, statement of the meaning of vitalism and the argument for it. This shows that vitalism has not yet gone beyond the negative attitude of Driesch's early papers. All that he can show is that physics and chemistry will not account for life. But if life is clearly not a mechanical process, it should be possible to state its distinguishing characteristics. And it is possible that, if Driesch should address himself to the task, he would find it no longer necessary to dwell upon the irrelevance of the non-mechanical and the psychical.

Guglielmo Ferrero's new volume, "Between the Old World and the New. A Moral and Philosophical Contrast," translated by A. Cecil Curtis (Putnam; $2.50 net), is an attempt to set forth by means of dialogue the same contrast between older and newer conceptions of civilization which found expression in different form in his chapters on Ancient Rome and Modern America. The dignified formality of the Greek or Roman dialogue is entirely wanting. In a chance group of passengers sailing out of the harbor of Rio de Janeiro for Genoa a reference to New York as "the most beautiful city in the world, the model for the cities of the future, the 'Urbs' of the twentieth century," at once develops a clash of sentiments and ideas which, of course, prove irreconcilable, and continually find new material to work upon until the end of the voyage is reached. To relieve the pages from over-seriousness a thread, perhaps one had better say a good stout rope, of gossip runs through them, concerning a woman passenger whose external appearance of vast wealth is deftly seconded by stories put in circulation by her maid. One man on board knows her secret, and so the truth gradually takes the place of extravagant imaginations. She is the wife of an enormously wealthy banker, with an important social standing in Europe, as well as in both Americas, and is hurrying to New York via Europe on receipt of cabled information that her husband is quietly seeking a divorce in her absence. With a certain class of readers one fears that she may appear to be the *raison d'être* of the book. In the end, the tragedy of her life is put into the scales as possibly typical of a serious class of disadvantages inherent in the modern ideal of a "civilization without limits."

The absence of limits is the distinctive point, as developed in these dialogues, in

which the newer civilization differs from the old. The civilized nations of the Old World attained the various perfections which history sets to their credit because they were willing to work within well-defined limits. But, after the discovery of the New World, with its vast store of material resources, thus breaking the geographical limits of the past, men conceived the idea of sweeping away other limits as well. Quantity, material abundance, took the place of quality as the criterion of successful effort, and traditional conceptions which bravely threw themselves in the way of the new movement were but trampled upon for their pains. We have not room to detail here the way in which these problems are handled, from the varying points of view of the half-dozen characters brought into the discussion. Ferrero's own misgivings as to the success and permanency of a civilization unwilling to hold itself within any sharply drawn limits are evident to the reader, though it must be said that he allows no one of the speakers to put up a very logical, consistent, and effective argument for the qualitative rather than the quantitative theory of progress. To say that both sides of the picture are exaggerated beyond the bounds of fact is only to say what is almost inevitably true of any literary contrast of the kind.

Charles Silvester Horne was not only one of the most eloquent preachers of his day, but a philanthropist of the highest type, who manifested by his zeal in good works the sincerity of his faith. "The Romance of Preaching" (Revell; $1.25 net), comprising the eight lectures which he delivered before Yale University, for the Lyman Beecher Foundation—his last public utterances—offers convincing proof of his cultivation, his catholicity, and his rare spirituality. The title was happily chosen. To him the office of the preacher was the noblest and most fruitful of all human vocations, and his brilliant review of its history from the earliest ages to the present time has all the glow and fascination of the loftiest romance. To the vagaries of theology, well versed as he was in them, he pays little attention. Making no assertion of its literal infallibility, he sturdily upholds the Bible as the one sufficient and indisputable record of divine truth and the Gospel of Christ as the only philosophy of life that can insure the happiness of man now or his perfection hereafter. It is not necessary to follow the course of his narrative, but it should be said that his studies of the great prophets or preachers of the ages—from Moses and other Old Testament worthies through the apostolic period to the days of Athanasius, Chrysostom, Francis of Assisi, John Knox, Wesley, Whitefield, and more modern churchmen—are singularly able and discriminating. The true significance of his book lies not so much in its robust faith as in its contempt for the mystifications arising out of mere ecclesiastical creeds, and its insistence upon the divine brotherhood of man and the rights to which that brotherhood entitles him. In that respect, though his arguments have a religious and spiritual rather than a social or economic basis, Mr. Horne is in full sympathy with the best secular thought. In his eyes there is the potentiality of the ancient prophet in every preacher who is fully alive to the privileges and responsibilities of his mission. The need of the world, he proclaims, is a spiritual renaissance. Therefore he lays great stress upon the urgent need for a better equipped and a more spiritually devoted clergy. Nothing could be more fallacious, he argues, than the idea that a preacher, if sincere in his own belief, could afford to despise the resources of the highest culture. No weapon in the armories of literature or science is superfluous to the Christian warrior. Apart from its nobility of intent, and its practical common-sense, this book exercises a special charm by virtue of its grace and vigor of literary style, its rich and apt quotation, and its complete freedom from sentimental gush. The most hardened skeptic on the subject of divine inspiration could scarcely doubt either the wisdom or the practicability of its social philosophy.

To the *National Geographic Magazine* for September, Major-Gen. A. W. Greely contributes a suggestive account of the France of to-day, in which he treats of the every-day life of its people, mainly derived from personal impressions. Much useful information of the same character in regard to Belgium, "the innocent bystander," is given by Mr. W. J. Showalter. The concluding article is upon the German nation, in which the writer, whose name is not given, shows the recent marvellous progress of the people in agriculture, manufactures, commerce, and education. In the coming numbers, it is announced, there will be similar articles on Austria-Hungary, Great Britain, and other countries now at war. The admirable illustrations, 106 in number, are of great interest.

NOTES FROM ABROAD.

The social strain of the war is being felt in some of the London clubs. British born and bred members are objecting to the unpleasant experience of having to drink their coffee or read their papers in the same rooms with persons of German or Austrian origin, even though these unwelcome immigrants have long ago been naturalized. In one club, at least, the committee has sent out a notice to the latter class of members requesting them to refrain from visiting the club during the war. The result, of course, has been several resignations, and many indignant comments from victims who declare themselves "as good Englishmen" as any member of the committee.

The English universities open the new academic year under conditions that have had no parallel since the Civil War in the seventeenth century. Pembroke College, Cambridge, has only 65 undergraduates in residence, as against 274 last year. Cambridge, as a whole, is expected to number no more than about 1,500, out of a normal 3,500. Both at Oxford and Cambridge some of the college buildings left vacant by the enlistment of members of the University are housing wounded soldiers. The Vice-Chancellor of Oxford University, Dr. T. B. Strong, has announced that he intends to recognize military uniform as academic dress.

In the course of his speech on being admitted to office for the second year, the Vice-Chancellor—who is also Dean of Christ Church—made a kindly reference to the Germans who had come to Oxford of recent years in increasing numbers, both under the Rhodes trust and otherwise. Oxonians had welcomed them, he said, and loved them. They had never believed, and they did not believe now, that these men were spies, and that all their frank and direct intercourse with them was unreal. Dr. Strong spoke rather pessimistically as to the future. The two nations were at war on such terms that it was difficult to see how a time of real friendship could ever come again. If the catastrophe could have been prevented for a few years longer, it might have been averted altogether, for there might have been so many private friendships that the state of public war might have been impossible.

Gustave Hervé is that university professor whose picturesque expression of Socialism in the past brought him and his popular paper, *La Guerre Sociale*, into trouble again and again. His violent opposition to the nationalism which so often blocks the international action of labor led him to his most notorious utterance about "planting the flag in the dunghill." The explosion of war has cleared his thought. From the start, he reminded French Socialists in rude terms that their internationalism did not mean lying down under the German military heel, and that all their duty was to France that bore them. His tone has become that of Paul Deroulède's prophetic verse:

Strike for your Mother,
If you love her!

To Hervé as much as to any one is due the hearty union of Revolutionary France—Socialists and Syndicalists and Anarchists even—with all the rest of the French people in fighting as one man for their national existence. No one wields a greater power of speech; and he knows the part of sentiment in popular movements. Each day his paper prints a war song, giving no uncertain sound. The best one is not far from great poetry, with all its simplicity. It is signed "Silvain Pitt," an unknown and perhaps an occasional name, but surely of a true poet of France. The names on which he rings his changes will be recognized as those of places in which the bitter fight has been waged:

CHIMES OF VICTORY.

All names of France are beautiful!
Names of cities, names of hills,
Names of woods and villages,
Names of oaks and names of elms,
Names of families, names of towns,
Names of wines and cider too—
Of Brittany or Normandy,
Isle of France or Picardy!
Noyon, Guiscard, and Coucy!
Quertancourt! Lassigny!
Compiègne!
Compiègne!

Drink to the health of France, my friends!
Bordeaux, Burgundy, Champagne, and Cléry!
Friends of England, Friends of Russia,
Friends of Cracow and of Warsaw,
Each bit of earth snatched from the foe,
Washed in our blood, to us be dearer!
Montmirail! Luzancy!
Meaux! Manteuil! Château-Thierry!
Poland!
Poland!

Like us, glass to glass,
Heart to heart,
Ring, Bells—Cannon, thunder in the air
Without blame and without fear:
Ring for our kindred, ring for our friends!
Ring for the newborn and for those who marry!
Ring a second and a fourth, and the third of Picardy!
Ring for those who die at the front for their country!
For Liège and for Louvain, and for Brussels too,
For Compiègne and Maubeuge, for Rheims and for Nancy!
Saint-Quentin! Saint-Denis!
Senlis! Soissons and Corbie!
Péronne!
Péronne!
France is in danger!
If metal should fall,
O Bells and Chimes,

Down from your bell-towers
And turn you to cannon!
When our Country's risen again,
When new Easters we must sing,
To bells we'll melt you once again!
Blévancourt! Carlepont!
Sens! Tonnerre! Clermont! Dijon!
Argonne!
Argonne!
Châteaudun, Domrémy!
Lyons, Rennes, Strasburg, and Paris!
Versailles!
Versailles!

Science

FOODS APPROVED BY DR. WILEY.

How to Cook and Why. By Elizabeth Condit and Jessie A. Long. New York: Harper & Bros. $1 net.

1001 Tests of Foods, Beverages, and Toilet Accessories. By Harvey W. Wiley. New York: Hearst's International Library Co. $1.25 net.

Until a few years ago a cookbook was simply a collection of recipes, giving the ingredients of hundreds of classified dishes. For experienced cooks such a book was a help, but for beginners it was a most incomplete guide. It did not seem to occur to those who compiled these volumes that to put a book of recipes in the hands of a young wife, and place her in front of the stove in the expectation of having her at once prepare an edible meal for her husband, was as ridiculous as it would be to seat a girl at the piano with a collection of pieces before her and expect her to play them without previous instruction. In recent years several cookbooks have appeared in which the elementary principles of cooking were discussed, and now we are getting books in which there are no recipes at all, but only general information about foods and the different ways of preparing them for the table. The latest of these is by Elizabeth Condit, assistant supervisor in household science at the Pratt Institute in Brooklyn, and Jessie A. Long, instructor in cooking at the same institution. It is intended as a "first aid" to school-girls learning to cook and to housewives in general.

The authors have scant sympathy with the housewife who said in a tone of virtuous rebuke: "I give very little time to cooking. We eat to live only." Their appeal is to those who realize how greatly our health, efficiency, and happiness are dependent on the intelligent selection and preparation of our daily meals. What these pages attempt to answer is the question: "How can I plan the food of the family so as to give them the right foods rightly prepared at the least cost?" One of the principal lessons inculcated is the need of variety in American meals, and the writers explain how an ingenious housewife can cultivate the taste of children and adults, making them eager for vegetables and other foods previously scorned by them. Those who think—and there are many who do—that, largely for reasons of economy, they must have potatoes two or three times a day, are confronted with the statement that "macaroni, rice, cornmeal, carrots, offer practically the same material at less cost."

The chapter heading The Indispensable Vegetable, does not mean that the authors advocate a meatless diet, for another chapter is entitled Why Meat is Important. In speaking of seafood, they repeat the groundless charge that lobster is indigestible. A more serious matter is the amazing hopefulness regarding the quality of American butter, manifested on pages 140-141, in face of the Government authorities' discouraging observations on the subject. An epicure must object to the statement that fish, no matter how cooked, is made more appetizing by being served with a tart sauce. Much to be commended, on the other hand, are the remarks on hot bread, and why it is shunned by many. The gastronomic millennium will be near when Americans realize that "underdone bread is the cause of more than half the dyspepsia in the land." Among the other maxims one feels tempted to quote, as warnings much needed, are these: "It is not advisable for young children to eat the uncooked banana"; and "The housekeeper who goes to the market selects the best vegetables, while what is left goes to fill the telephoned order."

Dr. Wiley's new book is one which will be eagerly consulted by all those who, while willing to do their own marketing, do not always know what to buy, because of the many conflicting claims of excellence to be found in the advertising pages of periodicals. What are the best baking powders, the best flours, cereals, coffees, teas, and chocolates in the market? What canned soups, meats, fish, vegetables are free from objectionable preservatives and coloring matter? What candies and condiments are safe to use? These and similar questions regarding dried fruits, olive oil, butter and its substitutes, as well as regarding household remedies and disinfectants, soaps, tooth powders, perfumes, and other toilet articles, are answered briefly, the verdicts being based on careful chemical tests. The book does not attempt to cover all the brands and labels in the market, and it is not intended either as a white list or a black list. Those articles which were found most in accordance with the highest standards are starred. Others are marked with an N, denoting a non-committal rating between 76 and 84, while a third class comprises disapproved products, which are marked D. One should note, however, that it is explained, where necessary, that not a few of the best known foods and toilet articles are denied the star, not because they are not good, but because too much is asserted of them. By toning down their claims on the labels, the makers of these products can earn the star.

This is one of the ways in which Dr. Wiley has benefited the community. The tests have been made under his direction, and arranged by Anne Lewis Pierce, formerly of the Bureau of Chemistry, Department of Agriculture. They were first published in the *Good Housekeeping Magazine*, the manufacturers thus receiving a chance to win a star, or at least an N, by improving their products or modifying their claims before the lists appeared in book form. In an introductory chapter Dr. Wiley briefly describes the "Pure Food Battle" in Washington, which "was and is a struggle for human rights as much as the Revolution or the Civil War," being "a battle for the privilege of going free of robbery and with a guarantee of health." He explains that he finally resigned in order to leave a place in which "all the foremen had been my enemies," ready to "stab me in the back." Needless to say, there are some fierce thrusts at the Remsen Board, thanks to which "a food manufacturer may put a shovelful of benzoate into any quantity of food," besides continuing to use other preservatives the dangerous nature of which was pointed out by Dr. Wiley seven years ago.

HENRY T. FINCK.

Drama

"PYGMALION."

With strange foresight Bernard Shaw caused his "Pygmalion" to be brought out first in Germany and so made hay before the advent of the war-cloud. After profitable runs in that country and in London, it comes to New York at a time when his nonsense offers welcome relief. In business sagacity Mr. Shaw is as forward as in all other matters.

"Pygmalion" is indeed something more than amusing. Though lacking the verbal smartness of "Man and Superman," and the "go" of even "Fanny's First Play," it holds forth a promise implicit in none of his former pieces. It shows signs that his humor is mellowing. A whole series of impertinences which were formerly urged with a downrightness of serious argument now fall into subordinate positions, and receive the right emphasis to provoke unreserved merriment. So his favorite propaganda against middle-class morality issues from the lips of a "dustman," one below the station of middle class who thus may be treated with no more respect by the audience than that accorded to one of Shakespeare's wise fools. It would be splendid irony if we could believe that Shaw had accepted a lesson from the great master whom he pretends to contemn.

The question of Shaw's conscious intention in this respect need not be pressed. It is quite possible that he had no such design; that having a central theme with no direct bearings upon moral smugness, he chose to satirize this in a minor capacity simply that he might obtain delectable filling. But he is too shrewd not to observe the satisfactory result. There is thus a chance that his eyes may be opened to the real opportunity for his cherished attacks. Emphasis in such matters is everything. No dramatist should hope to uproot traditions of the most vital importance by means of a play or two. His best hope should be to cause certain, probably small, modifications, and these will not come from leaving his audiences no legs to stand on. At most, people will roar and forthwith settle back into their old ways as being the best at their disposal. But indirect satire injects stings without opening the author to the reproach of being a nihilist in sacred matters.

In a word, "Pygmalion" is the first of Shaw's plays which will appear to most per-

sons to be rightly centred. For its chief concern it has an object which may be riddled in the typical Shavian manner without offending decency. We have the diverting spectacle of a cockney flower-girl developing in six months into an almost perfect lady of fashion through the agency of a skilled phonetician who has taken her in hand. The ludicrous transformation, while losing none of its humor, perhaps gets an added bit of probability by presentation in this country, where mushroom growths are not unknown. Yet in any land it will be accepted as a clever bit of satire.

For the purposes of a play Shaw felt obliged to give some depth to a character whose interest for the audience lies mainly on the surface. In chance meetings with persons it is, after all, the superficial appearance that counts, and in the present drama what the spectators are concerned about is the extent to which a girl of pleasing looks must mend her speech in order to pass in an assemblage as a lady. Eliza's gradual improvement, together with the occasional "breaks" made in public, is in itself matter of sufficient amusement. It cannot but bring up the picture, in lesser degree, of the valiant struggle of many a "beauty" of humble origin who has waked up to find herself possessed of title. The world knows by this time the scandal of Eliza's "bloody," but it is merely the climax of slips which the author has so contrived as to give them both a diverting and a pathetic interest; for it is pathetic, too, in a measure, to see Eliza make such a brave showing at Mrs. Higgins's tea, all the "h's" going well.

If the play had contained no more than such a study it would have been complete enough. Yet, with an actress of emotional power, like Mrs. Patrick Campbell, at his command, the temptation must have been great to any author to suggest complications of a deeper nature. These are being prepared for, even while the audience is intent upon Eliza's verbal success. For it is evident that she cannot long dwell in the household of her bachelor preceptor, even though properly chaperoned by a housekeeper, without becoming amorously susceptible. This situation, to which is given the greater share of the final scenes, is handled with some skill. The upshot of it all is not the usual exchange of vows, but an indication given that each has learned enough from the other to set up a mutual regard which may lead to something in the future. Eliza makes it clear that the professor has left out of the reckoning all thought of soul, and that, in this regard—the greatest, after all—the experiment is a total failure. Nor has the professor suspected that he himself will in vital ways miss the unfolding chrysalis, when the process is complete. Altogether, it is a neat ending, and represents Shaw's typical concession, made in last moments of his plays, that his cocksure heroes are themselves vulnerable.

One is tempted to dwell upon this play; it brings out so singularly the special province of Shaw's best talent. A man said to be earnest in the radical doctrines he preaches, he can claim distinction as a critic solely as a tester of life's consistency. He goes about with his little lantern looking for logical leaks, and discovers many. How they are to be plugged he scarcely even hints, and usually they are too big for his own finger. Yet his demonstration that they exist is often thrilling, and is seldom without suggestiveness. With this limited capability, he might well confine his main subjects to the airy, as in the present play, and, so far as concerns stuff of more serious moment, insinuate it by the way. By such methods he has it in him to create works of sparkling felicity.

Mrs. Campbell gave an excellent performance of Eliza, and though, at least to an American, a flower-girl would seem to be a "slip of a thing," one often forgot Mrs. Campbell's maturer appearance in her splendid art. Particularly fine was her suggestion of depth and superior instinct in the final scenes. The danger of overdoing the emotional was nicely met. The part of Professor Higgins, which was taken in London by Sir Herbert Beerbohm Tree, was well cared for by Philip Merivale. Indeed, American audiences are fortunate to see him in the part. He has the required eccentric energy and lacks the peculiar mannerisms which Sir Herbert would doubtless have exhibited. F.

"A PAIR OF SILK STOCKINGS."

We fear that Mr. Cyril Harcourt, the author of the new play which Mr. Winthrop Ames presents at the Little Theatre, will not be disposed to plead with Sheridan, in his preface to "The Rivals," "an extreme inexperience and want of judgment on matters in which, without guidance from practice, or spur from success, a young man should scarcely boast of being an adept." From long experience in stage matters, Mr. Harcourt evidently knows the tricks of the trade, and his judgment as to which one is sure to please an audience is good enough.

The idea of a play within a play was popular two thousand years before Hamlet, and few stage extravaganzas nowadays dispense with it; so we have, in the first act of "A Pair of Silk Stockings," a dress rehearsal of a play at a house party. That a divorced husband and wife should meet on such an occasion is almost inevitable, and what more natural than for the repentant (though almost innocent) husband to seek and give an explanation by stealing, in act second, properly disguised, into his former wife's bedroom—only to find there another man, before her marriage an adorer of his wife, but now the accepted lover of the *ingénue* of the play? The young man, of course, got there by accident, and he and the wife gag and tie the husband, naturally supposed to be a burglar, and lock him up in the bath-room, whence he escapes before the accidental entrance of the *ingénue*, who is somewhat surprised at the presence of her lover. The third act unravels the knot, and the husband, who, as he meant no harm, never suspected anybody, displays triumphantly the pair of silk stockings with which the not wholly innocent pair (there had been an exchange of kisses) had tied his legs. This satisfies the *ingénue*, and apparently the audience, which obviously enjoys both the play and the acting.

It would, perhaps, be scarcely worth while to inquire how much laughter all this provokes, were it not that, in the case of plays of this kind, the degree of hilarity is almost the only criterion of popular success. Lessing, in speaking of a performance of Regnard's "Démocrite," said that the play was a mass of faults and absurdities, that the plot was barren and the dialogue insipid, that there were on the stage a lot of persons who had nothing in particular to do, and yet that the audience laughed—the critic as well as the most ignorant spectator. Hence it follows, Lessing remarks, that the play must have possessed general merit which atoned for its faults. The faults of "A Pair of Silk Stockings" are evident. Plot and characterization are both conventional, and the dialogue, though amusing enough in parts, is superficial and not particularly original. The outstanding merits of the production are to be found in the manner of its presentation. It is smoothly rendered by an exceedingly level and capable cast, in which are included Mr. Cyril Harcourt, Mr. Kenneth Douglas, Mr. Clayton Greene, Miss Caroline Bayley, Miss Hamley-Clifford, and Miss Sybil Carlisle. Whatever success the piece achieves will be due in no small degree to the efforts of these players and of those who fill competently the subordinate rôles. P.

"MR. WU."

"Mr. Wu," the play in which Mr. Walker Whiteside appears at Maxine Elliott's Theatre, is a grim production in an Oriental setting, but we recognize it as the same old friend of whose popularity there has been a notable revival this year. It is simply old-fashioned melodrama, with a touch of novelty supplied by the unfamiliar setting. There is originality, too, and a welcome consistency in the fact that all of the Chinese characters who cannot be expected to have an acquaintance with the English language converse in their native tongue—or at any rate in as near an approach to that inaccessible language as the ingenuity of the individual players suggests to them. Artistically the play suffers from the prevalent complaint of stellaritis. It is built up for the glorification of the modulated accents and impressive impassivity of the star, and the subordinate rôles are not characters at all, but mere foils for the principal character.

For Mr. Whiteside's performance of Mr. Wu there can be nothing but praise. He portrays admirably the dignified celestial of aristocratic birth, and the combination of Western culture with Oriental traditions is well suggested. The plot is simple and time-honored. Mr. Wu, a Mandarin of Hongkong and a graduate of Oxford, has a dear daughter who loves unwisely a young Englishman, Basil Gregory. The liaison is discovered, and the rest of the action is devoted to the vengeance of Mr. Wu, whose respect for his ancestors has constrained him to kill his erring daughter. Basil is kidnapped, and the business of Basil's father is subjected to a series of mysterious misfortunes. Finally the boy's mother appeals to Mr. Wu to use the influence which he notoriously exercises among the natives to recover her son. The mechanism whereby the arrangement is made that she shall come alone to his house, where her son will be restored to her, creaks a little, but it is necessary to lead up to the "big scene." The price of the son's freedom is to be the mother's dishonor—this is Mr. Wu's revenge. Naturally, so unpleasant a dénouement has to be averted, but the device by which a package of poison, intended for the mother as a last resort, is thrown through a window by a faithful maid, and is subsequently drunk by Mr. Wu (arrayed in robes of a passionate red), is of almost inconceivable clumsiness. Mr. Whiteside, however, dies a lingering and impressively realistic death; so this must justify the device.

It is all very blood-curdling and thrilling, but the objections that we have noted remain. And even granting that Mr. Whiteside is the whole affair, the play would be

a good deal more effective were the minor characters less incompetently acted. We must mention two exceptions: Miss Deirdre Doyle, as the mother, plays a part of considerable difficulty with distinction and restraint, resisting a temptation to rant which would prove invincible to an inferior actress, and Miss Antoinette Walker gives a pleasing performance in the first act as Nang Ping, Mr. Wu's daughter. One regrets that the ethics of the house of Wu demand her removal after this act. S. W.

The three little plays of J. Hartley Manners which were performed at a series of special matinées in this city some time ago now appear in book form (Dodd, Mead; $1 net). Two of them, "Happiness" and "Just as Well," do not, in their printed form, exhibit any special literary quality to entitle them to present consideration. Both have certain peculiarly theatrical merits, but the one is labored and unreal and the other an amusing but somewhat silly trifle. The third, and most ambitious, "The Day of Dupes," is well written, and, in a way, impressive, but perfectly incredible to human experience. It tells the story of a disillusioned courtesan, who, inheriting a fortune, after drinking the cup of pleasure to the dregs, realizes the bitterness of them, and, summoning her various lovers, representatives of wealth, politics, literature, and art, returns their gifts in full, and peremptorily dismisses them. The main point of the fable is contained in her rebuke to the artist who first seduced her from innocence, on the plea that all love should be free. He acknowledges that he has learned too late that his theory was wrong, that life at its fullest can only be attained by the perfect union of man and woman, but, when she asks him whether he is prepared to marry her, he balks. She makes the obvious retort that his inspiration had been won at the price of her degradation. Her homily is eloquent and firmly rooted in social philosophy and ethics, but in the circumstances lacks the requisite note of tragic sincerity. It comes from the life of a woman who was content to follow her profession until a stroke of good luck made her independent of it, and who, apparently, has been unscarred, in mind or body, by a long and dissolute career. Mr. Manners had a good dramatic motive, but he has weakened it incalculably by ignoring the facts of life for the sake of what he wrongly deems the exigencies of the theatre.

Writing of the performance of "The Impossible Woman" ("Tante") in the Haymarket Theatre, London, a critic says: "Perhaps the struggle for the affection of Karen would be more imposing if the girl had some marked individuality, if she gave you a clear impression that she was worth fighting about. But no, she is just a silly little goose, though Miss Hilda Bayley does contrive to make her a very dainty and winsome little goose. And Mr. Godfrey Tearle makes, of course, a very manly and handsome husband for her. But you don't care greatly about the young couple, for you know all the time that they are a mere pretext—a pretext for the exhibition of Mercedes. Miss Lillah McCarthy throws herself (throws is the word) into the part with a devil-may-care abandonment. . . . A fascinatingly repellent figure she makes of it, which is just, of course, what artistically had to be made of it."

Music

American composers will have a hearing at the Little Theatre this season. Its director, Winthrop Ames, has decided that all his musical programmes shall be made up of American pieces, and Rudolph Schirmer declares that he shall be glad to consider for publication the works that are selected. They must be arranged for Conductor Schenck's quartet, violin, 'cello, piano, and organ. Manuscripts must be sent to Elliott Schenck at the Little Theatre, not later than November 15, 1914.

The musical programme of the Institute of Arts and Science of Columbia University for the coming season includes the following: (1) Recitals by David Bispham, Oscar Seagle, George Harris, jr., and Miss Harriet Marple; and joint recitals by Mr. and Mrs. John W. Nichols, Mrs. Woods Bawden and Miss Josephine McCulloh, Prof. Cornelius Rübner, and Miss Dagmar Rübner, Mr. and Mrs. T. Foster Why, Mr. and Mrs. Philippe Coudert, and Mrs. Agnes Alsop Ward and Mr. Wilfred Edge; (2) concerts by the Marum Quartet, the Dethier-Durieux-Diller Trio, the Tollefsen Trio, the Russian Bayan Quartet, the English Folk-Song Quartet, the Elsa Fischer Quartet, the New York Vocal Quartet, and the Dannreuther Quartet; (3) lecture recitals by Prof. Daniel Gregory Mason, assisted by Mr. Edouard Dethier, "The Violin Sonata, Old and New"; Mr. and Mrs. Alfred Remy, "The Wagnerian Music-Dramas"; Dr. John S. Van Cleve, "The Romantic Movement in Music," and Miss Beatrice Wainwright, "Old English Songs of the Seventeenth and Eighteenth Centuries." There will be thirty-five musical events altogether, and the season's programme also includes lectures on art, literature, drama, and popular lectures on social questions. The Institute entered its second year Tuesday evening, October 13. Membership is open to all without requirements.

"Fireworks" is the title of a composition by the Russian "musical nihilist," Strawinsky, which made a sensation in London last season. It is to be one of the novelties of the New York Philharmonic Orchestra at its concerts in Carnegie Hall this season. Other novelties to be conducted by Mr. Stransky are: the "Sinfonietta" of Erich Korngold; Max Reger's serenade for two orchestras; Hadley's "Lucifer"; Novak's "Slavic Suite," and the "Endymion" suite of Hinton. Among local composers represented are three members of the Philharmonic Orchestra—Burke, Laucella, and Stahlberg—the pieces chosen being a "Meditation," an "Oriental Temple Dance," and a Funeral Rhapsody. Another local composer, Stojowski, whose music is much favored by Paderewski, will contribute a suite (opus 9). Paderewski himself will be represented at these Philharmonic concerts by the dazzling ballet music from his melodious opera, "Manru." Other quasi-novelties promised are: Tchaikovsky's "Variations on a Rococo Theme," for 'cello and orchestra (played by Leo Schulz); the overture to D'Albert's opera "Der Improvisator"; the "Roma" suite by the composer of "Carmen"; Debussy's "The Children's Corner"; Dvorák's superb "Scherzo Capriccioso," and D'Indy's symphonic variations from "Istar." There will also be special Wagner and Tchaikovsky programmes.

Among the soloists engaged are: Lucrezia Bori, Alma Gluck, Lucille Weingartner-Marcel, Julia Culp, Pasquale Amato, Fritz Kreisler, Efrem Zimbalist, Arrigo Serato, Jacques Thibaud, Leo Schulz, Eleanor Spencer, Germaine Schnitzer. Ferruccio Busoni, Ossip Gabrilowitsch, Carl Friedberg, and David Sapirstein. In addition, Kitty Cheatham has been engaged to entertain the little people at two concerts.

The Symphony Society of New York, Walter Damrosch, conductor, announces a series of eight Friday and sixteen Sunday afternoon concerts to be given in Aeolian Hall. The first concert will occur on Friday afternoon, October 23. The soloists at these concerts are announced as: Alma Gluck, Harold Bauer, Efrem Zimbalist, Olive Fremstad, Ferruccio Busoni, Fritz Kreisler, Elena Gerhardt, Schumann-Heink, Frank Gittelson, Josef Hofmann, Emilio de Gogorza, Leonard Borwick, Carl Flesch, Ossip Gabrilowitsch, Alexander Saslavsky, and George Barrère. Among the important works to be performed are: "A Comedy Overture," "The Pierrot of the Minuet," by Bantock; a tableau musicale, "Sadko," by Rimsky-Korsakoff; an overture, "Polyeucte," by Paul Dukas; an overture, "Cockaigne" (in London Town), by Elgar; "The Swan," by Sibelius; "Death and Transfiguration," by Strauss, and "Les Fêtes d'Hébé," by Rameau; also symphonies by Beethoven, Brahms, Mendelssohn, Mozart, Schubert, Schumann, and Saint-Saëns. Some of the important novelties include: "Islamey, Fantaisie Orientale," by Balakireff; "British Folk Music and Dances," by Grainger; "St. Francis Preaching to the Birds," by Liszt; "Daphnis and Chloe," by Ravel; "Le Festin de l'Araignée," by Roussel; "Scherzo," "Le Joli Jeu de Furet,'" by Roger Ducasse. A Brahms programme is announced as including the coöperation of Fritz Kreisler in the Violin Concerto, and a programme will be devoted to an illustration of the remarkable development of ballet music in France from the time of Rameau to Ravel. A programme of Bohemian music will include a Pastoral Suite by Dvorák, new here, and a novelty by Suk, who is considered the representative Czech composer living to-day. As the piano concertos of Chopin have not been heard in the concerts of the Society for several years, his E minor and F minor will be played by Mr. Hofmann and Mr. Busoni.

Philadelphia now boasts of one of the most notable philanthropic institutions in the country, Theodore Presser's Home for Retired Music Teachers. It was dedicated in the presence of a notable assemblage, and speeches were made by a number of persons prominent in social and musical circles, including Mayor Blankenburg. Maud Powell and David Bispham contributed to the musical entertainment, and also spoke briefly. The building, an imposing structure (pictured in *Musical America* of October 3), accommodates about one hundred persons. With the endowment it already represents an investment on Mr. Presser's part of half a million, which is to be increased to a million dollars. Before planning the home, Mr. Presser had gone to Milan to study Verdi's home for musicians. In his address he remarked that "the building of the home was made possible through the commercial support of music teachers during the past half-century. The day has now come for me to return to the music teachers,

in a measure, what belonged to them. In this home the music teacher will find a haven of rest, for there will be no caste or sect distinction. The humble teacher who has labored faithfully in a village is as welcome as the metropolitan teacher who once thrilled thousands in the concert room. . . . There are several hundred thousand music teachers in the United States, so that many such institutions are needed, and I hope to live to see some of them founded."

Finance

MARKETS AND WAR NEWS.

Commenting on the news from Belgium, an experienced member of the Stock Exchange remarked at his club, last week: "It has been curiously interesting, for those in touch with Wall Street, to see how, even in the fragments of markets which are now in operation, the trend is influenced, almost imperceptibly, by the war news." He meant that these markets had been moving adversely during the advance on Paris, had begun to get into tangibly better position when the retreat from the Marne occurred and while the Allied line was slowly pressing forward, but had fallen back into hesitating apathy when Antwerp fell.

Financial markets do not move because of impulsive feeling or individual sympathy. It apparently followed that they did not believe that the present war could be settled by German victories. Now, the financial markets may have been acting on erroneous judgment. History gives instances enough of wars which resulted very differently from what the average man in the street imagined when the fighting started. It is conceivable that, in the present case, the American community may for various reasons have been more attentive to the point of view at London than at Berlin. But these very possibilities make it interesting to inquire, what has been the attitude of such financial markets, in the early part of other wars whose results are now recorded history.

When the American Civil War began, a considerable part of the New York business community had been hoping that the North would make no resistance to secession. The political tension of that period reached its climax; Fort Sumter was fired on, and the response of the North was such as proved that the Government would meet the challenge of the South. The immediate response of the Stock Exchange was a vigorous advance. From that time forward, until April, 1865, the financial markets improved with every Union victory, and fell back with every victory—and there were a good many of them—by the Confederacy.

If the markets in the early stages of our Civil War correctly measured the prospects of the conflict, the markets of 1870 were even more accurate in their judgment of the preliminary campaigning of the Franco-Prussian War. Nothing could be more opposite than their attitude towards the German advance that year on Paris, and towards the similar advance last August. Beginning with the smaller initial German victories in 1870, all news of such successes caused a rise on the London Stock Exchange, though England's actual sympathy was largely on the side of France.

Our own markets, and the markets of the European Continent, broke violently during the early and serious English reverses in the Transvaal War. Had they believed in the possibility of a final victory by the Boers, the logic of the situation would have led to action precisely opposite. During the Russo-Japanese War of 1904, from the participants in which we were financially more remote than in any of the other wars referred to, Stock Exchange prices, in Paris as well as London, rose on each announcement of Japanese successes. The financial attitude in this respect, during the Balkan War, would be harder to determine; but in that case the paramount interest of the markets was, not whether Turkey or her Balkan antagonists would win, nor even how long the war itself would last, but whether the neutral European Powers could be kept from fighting when it ended.

So that past experience rather strongly indicates that the composite judgment of the financial community, on the outbreak of a war, is usually correct as to its probable results. It may be a good while before we shall know how the rule has fitted in this present war.

Abridged Spanish Grammar

By Everett Ward Olmsted, Professor in the University of Minnesota, and Arthur Gordon of Buenos Aires, formerly Assistant Professor in Cornell University. 358 pp. 12mo. $1.25.

Olmsted and Gordon's larger *Spanish Grammar* has been widely used, and has been found satisfactory in colleges that have ample time for the subject. But many institutions in which the time for Spanish is limited have called for a shorter grammar on the same general plan. The result is the present book, in which the essentials of Spanish grammar are presented. The lessons and vocabularies are considerably shorter than in the original book.

Henry Holt and Co. 34 W. 33d St. New York

WHO IS RESPONSIBLE?
Armageddon And After
By Cloudesley Brereton

16mo, cloth, 50 cents

A monograph by one of the educational leaders of England, which undertakes to show how Prussian tradition, starting with Frederick the Great, has succeeded in corrupting the Germany of to-day. The author takes the ground that the issue of the present struggle may be a great spiritual renascence or it may be the domination of the Huns.

HUNTER'S CIVIC BIOLOGY

By GEORGE WILLIAM HUNTER, A.M.
Head of the Department of Biology, De Witt Clinton High School, New York City.

$1.25.

A book which will teach good citizenship as well as biologic science. In this one year's course, for high schools, the emphasis is laid on the biological factors of the pupil's surroundings, and he is taught how to better the conditions. The subject is related to his everyday life and topics of interest to him are used for illustrative material. The technical terms are reduced to a minimum. Everything in the treatment is concrete and practical, with special attention paid to the economic phases of biology. The applications of biology and physiology to hygiene are fully treated, especially as regards foods, nutrition, and nerve control.

THE NEXT GENERATION

By FRANCIS GULICK JEWETT

A book designed to minimize the difficulties involved in teaching young people the fundamental principles of biology. Instead of arousing the reader to self-consciousness, each subject is so approached as to develop the scientist's reverent enthusiasm for life in all its manifestations. Nevertheless there is no avoidance of vital topics. The significance of germ cells, the development of the embryo, the transformations of the adolescent era, the importance of family health, the mutual responsibility of the sexes, the power of environment, the relentless force of the laws of inheritance, and the irresistible progress of evolution itself are all discussed in successive chapters of the book. 75 cents.

WAVES OF SAND AND SNOW

By VAUGHAN CORNISH, Doctor of Science, Manchester University. Pp. 378, 8vo; cloth. Illustrated; 88 photographs and 30 diagrams, and two maps. Price, $2.50.

A book of experiment and observation of the behavior of gravel, sand, and dust before the wind. It is a strange thing that waves, progressive and transverse, should be produced by wind on sand and snow, for the action of wind upon other loose bodies is of an opposite kind. Dr. Cornish is an acknowledged authority on the subject of wave action, and he believes that the coördinated study of all kinds of waves might lead to important developments of the periodic law governing the direction of moving bodies. Some of the important chapters, well illustrated, are On the Formation of Deltas; Sand Dunes; Clouds; Sand Waves in Tidal Currents.

THE LIFE AND TIMES OF CAVOUR
By WILLIAM ROSCOE THAYER. "A masterpiece of biographical literature." — *Boston Herald*. 2 vols. $3.00 *net*.

THE LIFE AND LETTERS OF MARTIN LUTHER
By PRESERVED SMITH. "This pen picture. . . . must long be regarded as the authoritative word." — *Boston Transcript*. 1 vol. $1.50 *net*.

GROUP B

William Cullen Bryant, by John Bigelow; Ralph Waldo Emerson, by Oliver Wendell Holmes; Washington Irving, by Charles Dudley Warner; Nathaniel Hawthorne, by George E. Woodberry; James Russell Lowell, by Ferris Greenslet; Henry Wadsworth Longfellow, by Thomas Wentworth Higginson; Edgar Allan Poe, by George E. Woodberry; Henry D. Thoreau, by Frank B. Sanborn; Walt Whitman, by Bliss Perry; John Greenleaf Whittier, by George R. Carpenter. Each 75 cents *net*

The Life of Rutherford B. Hayes
By CHARLES R. WILLIAMS. A full and intimate biography of the nineteenth President of the United States which exhibits him as a most interesting figure and throws a clear light upon his personality and career. The biography is based largely on Hayes's diary, which is full and rich, upon his correspondence, and other hitherto unpublished records. 2 vols. Illustrated. $7.50 *net*.

War's Aftermath
By DAVID STARR JORDAN and HARVEY ERNEST JORDAN. An authoritative study of the effect of the American Civil War on the quality of manhood in the South. The startling results revealed by this investigation are prophetic of what we may expect on an even larger scale from the present conflict. 75 cents *net*.

Open-Air Politics
By JUNIUS JAY. This unique pseudonymous book is absorbingly interesting, and provocative of serious thought. Probably no more suggestive discussion of syndicalism and allied topics has recently appeared. $1.25 *net*.

The Abolition of Poverty
By JACOB H. HOLLANDER. This authoritative and brilliant little book analyzes acutely the various causes of poverty and suggests a programme, not so much for its cure as for its prevention. 75 cents *net*.

The Life of a Little College
By ARCHIBALD MacMECHAN. A rich and human impression of life in a provincial college, of the temperament of the college girl, and likewise some stimulating essays on a variety of topics as the sea stories of Herman Melville, the Vanity of Travel, etc. $1.35 *net*.

A Beacon for the Blind
By WINIFRED HOLT. A vivid and readable biography of Henry Fawcett, the blind Postmaster-General of England, which should attract wide attention in this country as well as in Great Britain. Illustrated, $2.50 *net*.

The Joyful Heart
By ROBERT HAVEN SCHAUFFLER. A guide-book to joy for the sad, the stale, the bored, the tired, the listless, the discouraged, written with dash, humor, and originality. $1.25 *net*.

A Far Journey
By ABRAHAM MITRIE RIHBANY.
"Mr. Rihbany's book will stand with those of Jacob Riis and Mary Antin, an eloquent tribute to the efficacy of the American melting pot."—*Chicago Tribune. Illustrated.* $1.75 *net*.

Round the World in Any Number of Days
By MAURICE BARING. Mr. Baring, author of "Lost Diaries," "Diminutive Dramas," etc., has made within the last two years a leisurely voyage around the world, and here tells of his experiences and adventures in a pleasant, discursive fashion. Illustrated. $1.25 *net*.

Impressions and Comments
By HAVELOCK ELLIS. Observations on life in England and on the continent, reflections on books and art, and curious speculations on the subjects with which Mr. Ellis's name is usually associated. $1.50 *net*.

FICTION

THE WITCH
By MARY JOHNSTON. A fascinating romance of the days of Queen Elizabeth written in Miss Johnston's richest vein of imaginative insight. All the characters are strong and vital. With frontispiece by N. C. Wyeth. $1.40 *net*.

THE CLARION
By SAMUEL HOPKINS ADAMS. The story of a man who tried to run an honest newspaper. Full of fight, tingling with vitality. Incidentally an amazing revelation of newspaper methods by a veteran journalist. Illustrated. $1.35 *net*.

THE POET
By MEREDITH NICHOLSON. A love story of real charm.
"To read 'The Poet' is taking a walk over a good road on a bright morning; you wish the journey would never end."—*St. Louis Globe-Democrat. Illustrated.* $1.30 *net*.

THE STREET OF SEVEN STARS
By MARY ROBERTS RINEHART.
"A bright and human and refreshing little tale of two young lovers who starved and suffered and made merry for ambition's sake . . . a romance of Vienna's student quarter."—*N. Y. Times*. $1.25 *net*.

THE NIGHTINGALE
By ELLENOR STOOTHOFF. A deliciously entertaining account of the motor adventures of the irresponsible but irresistible Hilda. $1.25 *net*.

DIANE AND HER FRIENDS
By ARTHUR S. HARDY. Diane is a charming French woman, and the intersection of her affairs with those of M. Joly, a French detective, form the basis of a most fascinating series of adventures. Illustrated by Elizabeth Shippen Green. $1.25 *net*.

PRIVATE AFFAIRS
By CHARLES McEVOY.
"Much piquant writing about a middle-class London family, a temperamental daughter, and the theatrical life."—*Baltimore News*. $1.25 *net*.

The postage on each of the above is extra.

The Nation

VOL. XCIX.—NO. 2574 THURSDAY, OCTOBER 29, 1914 Reg. U. S. Pat. Office. PRICE TEN CENTS

Price Library Bar 21 514

THE BEST BOOK VALUE EVER OFFERED TO YOU

THE EVERYMAN ENCYCLOPAEDIA

UP-TO-DATE, COMPLETE AND THOROUGHLY RELIABLE

These volumes are strongly and uniformly bound, as befits books which will be in constant use. Sets in reinforced cloth and pigskin bindings are exceptionally durable in any climate.

The entire set can be placed in a foot of shelf room and in less than half a cubic foot of space in a bag or trunk.

An up-to-date, accurate, complete encyclopaedia—no bulk—no high cost—but six million words of essential information at the lowest price ever known, in twelve volumes of convenient size.

You can make it the basis of a rounded education, or you can turn to it at a moment's notice and find with the utmost convenience the facts you need compactly stated for immediate use. Ninety-nine times out of a hundred it serves you better than a cumbersome set of many volumes through whose long articles you have to search.

FOR DAILY USE THE BEST OF ALL ENCYCLOPAEDIAS

Prices: $6.00 Cloth Binding · $8.00 Reinforced Cloth Binding · $10.00 Leather Binding · $12.00 Quarter Pigskin Binding

The Set 12 Vols. in a Box

There should be a set in every boy's room, in every school room, on every library table or office desk. Send for a full illustrated description of the four bindings.

TIMELY BOOKS

Germany and England
By the late Prof. J. A. CRAMB
Introduction by the Hon. JOSEPH H. CHOATE. **Cloth, $1.00 net.**

Thomas Jefferson as Architect: Monticello and Shadwell

(Harvard Architectural Quarterly, Vol. II, No. IV)

By SIDNEY FISKE KIMBALL, A.B., M.Arch., Instructor in Architecture in the University of Illinois.

The discovery of the bulk of Jefferson's architectural notes and drawings in the collection of the late T. Jefferson Coolidge, Jr., and of several unpublished sketches in American libraries, makes possible for the first time something like a scientific appraisal of the first great American architect. This illustrated article adds new interest to the mooted purchase of Monticello as a national monument. *Price, 50 cents.*

UNIVERSITY OF CHICAGO PRESS
RECENT BOOKS

Important Books in Politics

Unpopular Government in the United States. By ALBERT M. KALES, Professor of Law in Northwestern University.

This volume by a prominent member of the Chicago bar is an especially timely book, presenting with great clearness and cogency some of the political needs of the country, particularly the necessity of the short ballot.

The first part of the volume deals with the rise of the "politocrats"; the second discusses various expedients for restoring the American ideal of democracy; while the third considers constructive proposals like the commission form of government for smaller cities, and the application of the principles underlying this form to larger cities and the State, and to the selection of judges. The book has already attracted wide attention and discussion.

270 pages, 12mo, cloth, $1.50; postage extra (weight 1 lb. 8 oz.).

American Political Science Review: "The work throughout displays exceptional powers of political insight and constitutional discernment."

The Courts, The Constitution, and Parties. Studies in Constitutional History and Politics. By ANDREW C. McLAUGHLIN, Professor of History in the University of Chicago.

A volume of peculiar interest at this time, when the courts and political parties are subject to general criticism. The discussion is especially significant as coming from a lifelong student of constitutional questions, whose work at the University of Michigan, the Carnegie Institution of Washington, and the University of Chicago is so widely known. The work discusses the power of a court to declare a law unconstitutional, the growth and essential character of political parties, the history of different theories of the Federal Union, and the written constitution in some of its historical aspects.

308 pages, 12mo, cloth, $1.50; postage extra (weight 1 lb. 10 oz.).

Harvard Law Review: "The style of these essays is easy and delightful, and their argument sane, thoughtful, and persuasive."

Other Important Books

The Evolution of Early Christianity. By SHIRLEY JACKSON CASE, of the Department of New Testament and Early Christian Literature in the University of Chicago.

The beginnings of the Christian movement are here studied from a wholly new point of view. By examining the actual religious situation in which the Christians of the first century lived, the author is able to shed fresh light on many parts of the New Testament.

390 pages, 12mo, cloth, $2.25; postage extra (weight 1 lb. 11 oz.).

Water Reptiles of the Past and Present. By SAMUEL WENDELL WILLISTON. Professor of Paleontology in the University of Chicago.

A comprehensive volume of great scientific importance, by the author of "American Permian Vertebrates," which has become a recognized authority in its field. The book discusses in sixteen chapters the classification and skeleton of reptiles, their age, the adaptation of land reptiles to life in the water, and the various orders.

256 pages, royal 8vo, cloth, $3.00; postage extra (weight 2 lbs. 5 oz.).

William James and Henri Bergson. By HORACE M. KALLEN, of the University of Wisconsin.

A striking presentation of the relation between the philosophies of William James and Henri Bergson, by Dr. Kallen. The book is particularly significant as coming from a former student and intimate friend of Professor James.

264 pages, 12mo, cloth, $1.50; postage extra (weight 1 lb. 5 oz.).

The Problems of Boyhood. Studies in Ethics for Boys of High School Age. By FRANKLIN W. JOHNSON, Principal of the University High School of the University of Chicago.

This book, prepared by the laboratory method, is the result of the wide and successful experience of the author. His book is the first in the field to start with a recognition of the boy's point of view.

160 pages, 12mo, cloth, $1.00; postage extra (weight 1 lb.).

The Weather and Climate of Chicago. (Publications of the Geographic Society of Chicago.) By HENRY J. COX and JOHN H. ARMINGTON, of the United States Weather Bureau.

The importance of this book is indicated by the fact that it is issued under the auspices of the Geographic Society of Chicago, and has been prepared by two of the best-known weather experts in the country.

396 pages, 8vo, cloth, $3.00; postage extra (weight 3 lbs. 1 oz.)

STUDIES IN MILTON AND AN ESSAY ON POETRY

By Alden Sampson, A.M. (Harvard University)

The right of publication in England has been purchased by Mr. John Murray, London.

Illustrated with a wood-cut by Timothy Cole, N.A., from the bust in clay of Milton, at Christ's College, Cambridge, England. 8vo. 320 pp., uncut—$2.00 net.

COMMENTS OF THE PRESS

"The appearance of this book seems to us of happy augury. . . . Mr. Sampson knows his Milton thoroughly, but he loves him even more thoroughly. He writes with the public in view, yet he never descends, either in style or in substance, to a presentation of his great theme that suggests thinness or smartness. On the contrary, fulness of reading and depths of loving meditation are evident on almost every page."—**The Nation, New York.**

"Discursive studies written by a careful Milton scholar in a spirit of enthusiastic appreciation for the pure quality of poetry, as far as possible removed from ordinary dry-as-dust criticism."—**American Library Association Booklist, Chicago.**

"If there should ever be a Miltonic revival, the Recording Angel will doubtless make a large credit entry under the name of Mr. Alden Sampson. His 'Studies in Milton and An Essay on Poetry' is easily the best thing of its kind that has yet been written of the Cromwellian poet. It is so good because Mr. Sampson's heart is evidently in his work. He is not merely a Milton student, but a Milton lover, and therefore he writes not only with knowledge but with reverence."—**The Argonant, San Francisco.**

"We take it as promising that such a volume as Mr. Alden Sampson has given us is sure and stimulating evidence of rapidly approaching grace and strength in letters. . . . Mr. Sampson, besides realizing the happier truths about Milton and the art and craft of the poets, brings some new lights to bear. . . . (His) estimate of this poet and of all makers of poetry is brilliantly suggestive. . . . Mr. Sampson with this timely book—admirably written, stimulating, and necessary—reminds us of the source of inspiration and spiritual refreshment which is ever in our hands."—**The Saturday Review, London.**

"There will always be room for a book like this inspiring essay, which studies Milton from the point of view of the most refined American culture of these days, a culture which, inheriting its philosophical traditions from the Concord School, and always valuing the finest monuments of English poetry with a reverence akin to that felt by modern men of learning for the masterpieces of the ancient world, has not a little in common with the specific genius of the greatest poet of Puritanism."—**The Scotsman, Edinburgh.**

"Mr. Alden Sampson's 'Studies in Milton' is one of those rare volumes of literary criticism the reading of which leaves us enriched not merely by the possession of the critics' ideas on their subject, but also by new and fresh knowledge of the subject directly. . . . It is a genuine study of the growth and development of Milton's genius and personality as manifested by the chronological order of his works, and the events of his life are only treated by Mr. Sampson in so far as they, directly or indirectly, actually influence his work. . . . The search through Milton's later works for a 'confession of faith' is an alluring task for critic and theologian alike, and Mr. Sampson is peculiarly fitted for the task and does it well. He proves every point by full and apposite quotation, and, to our mind, he has proved his case. . . . The unerring certainty and perspicuous clearness of Mr. Sampson's reasoned judgments upon the most sublime singer of English poetry."—**The Irish Times, Dublin.**

NOW READY

NOUVEAU COURS FRANÇAIS

By ANDRÉ C. FONTAINE, Assistant in Modern Languages in Boys' High School, Brooklyn, N. Y.

272 pages, with vocabularies, illustrated, 90 cents

This new beginner's course is eminently adapted to the acquisition of a practical, well-grounded knowledge of simple written and spoken French.

The reading matter has been selected with the present-day pupil's needs and interests always in mind and includes a concise résumé of French history: a description of Parisian life and geography; and discussions of many social and economic features of France.

The grammar places special emphasis on the proper use of past tenses and on familiarity with the idiomatic expressions of everyday life.

Scientific Method in Philosophy

Lowell Lectures for 1914

By HONORABLE BERTRAND RUSSELL, M.A., Cambridge, England. *Pp.* 246. *8vo; cloth, Price,* $2.00.

Our present philosophical age is one of bewildered groping, and according to Russell the time has now arrived when this unsatisfactory state of things can be brought to an end. He proposes to take certain philosophies as examples, and to show why their achievements have not been greater. Professor R. M. Wenley of the University of Michigan says. "Every student of philosophy must reckon with these Lowell lectures."

Did you ever read Stevenson? Or Thackeray?

If so—

THE BOOKMAN has something of very special interest to YOU.

In the October, November and December issues will appear:

On the Trail of Stevenson

In Scotland, in England, in France **By Clayton Hamilton**

The hills by the Firth of Forth, over which David Balfour walked to his uncle's, and thus came into the ken of a public which has since recognized him as one of the most enduring figures in English fiction; the little South coast village where the curtain is drawn up for "Treasure Island"; and a multitude of places mentioned in Stevenson's novels and essays, will be described as they really are.

For this series, Mr. Clayton Hamilton, author of "Materials and Methods of Fiction," is remarkably equipped. An enthusiastic student of Stevenson and a collector of Stevensoniana, he has visited every place in Europe where the wandering R. L. S. ever pitched his tent for more than two weeks, and has personally consulted nearly all of the surviving friends of the great romancer. Sir Sidney Colvin and Mr. Edmund Gosse have granted him access to all their unpublished data and memoranda; and Mr. Hamilton has also been personally aided in his study of Stevenson by William Archer, Henry James, Mrs. Fleeming Jenkin, Lord Guthrie, the late Andrew Lang, the late Alison Cunningham, and the members of Stevenson's household at Vailima. In the opinion of Sir Sidney Colvin, no other writer in America is so well equipped as Mr. Hamilton to speak with authority on the subject of Stevenson's life and art.

A Thackeray Portfolio

By Brander Matthews

A series dealing with a very extraordinary collection of Thackerayana made by Professor Brander Matthews. For many years, in England, on the Continent, and in this country, Professor Matthews has been assiduously gathering all the flotsam and jetsam of obscure anecdote and criticism dealing with the author of *Vanity Fair*. The result of this industrious watchfulness has been surprising. We assert unhesitatingly that the Thackeray portfolio will provide many surprises and delights to the best equipped and the most accomplished of American Thackerayans.

Special Offer to Introduce THE BOOKMAN to You

For 25 cents, the regular price of one number, we will send you, while the supply lasts, copies of THE BOOKMAN for three months, October, November and December, containing the articles referred to above.

THE CONGO AND OTHER POEMS
By VACHEL LINDSAY. Verse of striking originality and euphonious lyrical quality by "the new American poet." *$1.25*

EARTH TRIUMPHANT, And Other Tales in Verse
By CONRAD AIKEN. Narrative poems of modern life and lyrical verse of great power and originality. *$1.25*

VAN ZORN: A Comedy in Three Acts
By EDWIN ARLINGTON ROBINSON. A clever prose play by one of the foremost American poets. *$1.25*

BORDERLANDS AND THOROUGHFARES
By WILFRID W. GIBSON. New lyrics and drama by the gifted author of "Daily Bread," "Fires," "Womankind," etc. *$1.25*

ROMANCE
By EDWARD SHELDON. A brilliant and unusual play by the author of "The Nigger." *$1.25*

THE MODERN READER'S CHAUCER
The Complete Works of Geoffrey Chaucer. Put into modern English by J. S. P. TATLOCK and PERCY MacKAYE. New and cheaper edition. Illustrated. *Cloth, $2.00 net. Leather, boxed, $5.00 net.*

NEW BOOKS OF TRAVEL, DESCRIPTION, AND ILLUSTRATION

JAPAN TO-DAY AND TO-MORROW
By HAMILTON W. MABIE. A clear and definite description of the life and spirit of the Japanese, their ideals and future aims. Illustrated. *$2.00*

WITH POOR IMMIGRANTS TO AMERICA
By STEPHEN GRAHAM. Romantic, picturesque, and interesting travel sketches among migrating work-seekers to America. Illustrated. *$2.50*

NEIGHBORS: Life Stories of the Other Half
By JACOB A. RIIS. The last book of the famous humanitarian; a companion volume to "How the Other Half Lives." Illustrated. *$1.25*

PANAMA, THE CANAL, THE COUNTRY AND THE PEOPLE
By ARTHUR BULLARD (Albert Edwards). A timely, revised, enlarged and up-to-date edition of this standard work. Illustrated. *$2.00*

CALIFORNIA
By MARY AUSTIN. Illustrations in color by Sutton Palmer. A beautiful and charming guide in text and illustration to a lovely region. Colored plates. *$4.00*

THROUGH the GRAND CANYON from WYOMING to MEXICO
By ELLSWORTH L. KOLB. Introduction by Owen Wister. The most interesting narrative of travel and adventure ever written of this great scenic wonder. Richly illustrated. *$2.00*

OTHER NEW BOOKS OF SPECIAL IMPORTANCE

WAR AND INSURANCE
By JOSIAH ROYCE. "The latest of the famous Harvard philosopher's contributions to social uplift and human progress." *$1.00*

PROGRESSIVE DEMOCRACY
By HERBERT CROLY, author of "The Promise of American Life," etc. A keen analysis and historical survey presenting a consistent educational theory of the highest importance. *$2.00*

PROPERTY AND CONTRACT
By RICHARD T. ELY. Property and contract lucidly analyzed in their relations to the distribution of wealth. 2 vols. *$4.00*

FOOD PRODUCTS
By HENRY C. SHERMAN. A timely work on an important subject by the Professor of Food Chemistry Columbia University. *$2.25*

WHY IS THE DOLLAR SHRINKING?
By IRVING FISHER. A study of the causes underlying the high cost of living. *$1.25*

ESSAYS ON BOOKS
By WILLIAM LYON PHELPS. Another entertaining book by the author of "Essays on Modern Novelists," etc. *$1.50*

THE MAN OF NAZARETH
By FREDERICK L. ANDERSON. A work for the general reader on the modern problems of the life of Jesus. *$1.00*

THE CHRISTIAN LIFE IN THE MODERN WORLD
By FRANCIS G. PEABODY. A purposeful book emphasizing the applicability of Christian idealism to the conditions of modern life. *$1.25*

The GOSPEL of JESUS and the PROBLEMS of DEMOCRACY
By HENRY C. VEDDER. An important plea for a reconstructed theology. *$1.50*

VITAL ELEMENTS OF PREACHING
By ARTHUR S. HOYT. A helpful psychological analysis of human needs. *$1.50*

NEW YORK, THURSDAY, OCTOBER 29, 1914.

Summary of the News

An international question of some complexity has arisen between the United States and Great Britain as a result of the seizure by the latter country of three ships belonging to the Standard Oil Company. The ships concerned were the John D. Rockefeller, the Brindilla, and the Platuria. Sir Cecil Spring-Rice, the British Ambassador, announced on October 22 that the first-named vessel had been released on it being ascertained that the oil in her tanks was destined for the Danish Petroleum Company and that there is in Denmark an embargo on the export of oil. She was detained, the statement declared, because her cargo was only consigned "to order." The Brindilla was also ordered released on Monday, and it is expected that the release of the Platuria will follow. The situation in connection with these two ships is somewhat complicated by the fact that they have only recently changed from the German to the American flag, and the question has been raised whether the change is bona fide. That question, however, the British Government is understood to regard as a minor matter. The vital point is whether the oil which the ships carry is destined ultimately to find its way into the tanks of the German army at Kiel or the Zeppelin bases along the Rhine.

The question that is raised concerns the rights of neutrals with respect to what is known as "conditional contraband" of war. Oil is included under this classification. Conditional contraband, according to Article XXXIII of the Declaration of London, "is liable to capture if it is shown that it is destined for the use of the armed forces of a Government Department of the enemy State, unless in this latter case the circumstances show that the article cannot in fact be used for the purposes of the war in progress." The contention of the British Government is that imports of gasolene, illuminating oil, and oil fuel have shown a considerable increase in neutral states accessible to Germany since the commencement of the war, and the supposition is that supplies of this character have been transshipped from Copenhagen and other neutral ports to Germany. If this is so, it is apparent that there is some reason for the British action, and it is comparable with the course adopted by the United States in the Civil War, when the Supreme Court declared that vast quantities of supplies shipped from England to the neutral port of Nassau and transshipped for the use of the Confederate army were contraband of war. Nevertheless, the burden of proof rests with Great Britain. If the shipments of oil are genuinely consigned to private firms in Copenhagen or other neutral ports, then the exporters in the United States are clearly acting within their rights and the question is one between Great Britain and Denmark. The imposition of an embargo on oil by the latter country should serve to simplify the difficulty, which in any case, so far as this country and Great Britain were concerned, was bound to yield to an amicable settlement.

Acting Secretary of State Lansing announced on Sunday that assurances had been given by Sir Edward Grey, British Foreign Minister, that American cotton was not in the list of contraband and that its shipment would not be interfered with as such by the British Government.

The conference report on the War Revenue bill was adopted by the House on October 22 by a vote of 126 to 52, and was passed by the Senate and signed by the President on the same day. In the final stage of the bill amendments proposed by the Senate to increase the tax on beer from $1.50 to $1.75 a barrel, and imposing a levy of five cents a gallon on rectified spirits, were eliminated. Failure to substitute in lieu of these amendments Representative Underwood's proposal to restore the tax of two cents a gallon on gasolene, as contained in the House bill, will reduce the amount of revenue as estimated in the Senate bill at $105,000,000 to $90,000,000.

The adjournment of Congress, which was expected to follow immediately the passing of the War Revenue bill, was postponed from Thursday to Saturday of last week through a filibuster started by Southern Senators who were fighting for the passage of legislation to aid the cotton-planters. There was some talk of the President exercising his constitutional power and adjourning Congress, but the filibuster was abandoned on Saturday (it was reported, after assurances had been exacted that a measure for the relief of the cotton situation should have the right of way when Congress reconvened in regular session on December 7), and both houses adjourned.

It was made known by the State Department on Saturday of last week that on September 3 a note had been received from Count von Bernstorff denying emphatically that Germany, in the event of her success in the present war, would seek expansion in South America. On the following day the German Ambassador amplified the official note of his Government by making the interesting, but presumably unofficial, suggestion that the invasion of Canada by German troops would not violate the Monroe Doctrine. The suggestion, which has a pleasant academic flavor, is discussed in other columns.

As a result of negotiations with the British Government through the United States Embassy in London, the American Commission for the Relief of Belgium made arrangements for the shipment last Tuesday of 2,500 tons of cereals on a Dutch boat by way of Holland. Assurances have also been received that the exportation of other cereals already purchased will be permitted. Field Marshal von der Goltz, German Governor in Belgium, has given assurances to the United States Minister, Brand Whitlock, that foodstuffs supplied through the Committee shall be devoted exclusively to the use of the civil population of Belgium.

The situation in Mexico has remained somewhat inscrutable. It is apparent that Gen. Carranza has not taken in good part the decision of the Convention at Aguascalientes to constitute itself into a kind of commission of government for Mexico over the head of the First Chief. The latter is understood to have expressed a willingness to retire temporarily from political life provided that Villa and Zapata would sever all connection with the military forces of which they are in command, and that he himself should not be prohibited from becoming a candidate for election to the Presidency at the first election to be held in the republic. It is needless to say that there is not the smallest prospect of these terms appealing to Villa and Zapata. The arrival on Tuesday of twenty-eight Zapatista delegates presumably puts Villa's faction in control of the Convention, and there are said to be signs that the atmosphere in the Convention has cleared to some extent. The belief is expressed in some quarters that the resignation of Carranza will now be accepted whether he wishes it or not, and that Gen. Antonio Villareal, the chairman of the Convention, may be its choice as Provisional President.

Abortive uprisings on the part of the monarchists occurred at various places in Portugal, especially in the north, on October 20 and October 21. According to dispatches from Lisbon, on Friday of last week, the outbreaks were not of a serious character and were easily put down.

According to dispatches from Brussels to the Berlin *Lokalanzeiger*, the testimony of German and Belgian witnesses taken at the judicial inquiry into the destruction of Louvain, as was not wholly unexpected, shows that the citizens fired on German troops and were therefore, according to the *Lokalanzeiger*, entirely to blame for the razing of their town.

According to reports from Athens, the enterprising Essad Pasha, who recently set up a provisional presidency in Albania, last week addressed an ultimatum to the Government of Epirus demanding the evacuation of North Epirus, and, receiving no reply, ordered the invasion of the country. It is stated that after a fierce fight the invaders were repulsed with heavy losses.

The revolt in South Africa of Lieut.-Col. Maritz and his commando has apparently turned out not to be a particularly serious matter. According to dispatches from Capetown, Maritz's force of about 1,000 men has been completely defeated at Kakamas, Cape Province. On Wednesday, however, came the news that Gen. De Wet, in the north of the Orange Free State, and Gen. Beyers in the western Transvaal had raised the standard of revolt. The seriousness of the situation cannot at present be estimated, but the South African Government has taken energetic steps to suppress the rebellion.

The deaths of the week include: Robert Arthur, Dr. Bukk G. Carleton, Justice Edward B. Amend, Rev. Washington Frothingham, October 20; Julius Robertson, October 21; General Brayton Ives, Theodore de Joly de Sabla, Bernard R. Green, Prof. William F. Bradbury, October 22; Gen. Edward F. Winslow, October 23; Colin H. Campbell, October 24; Sir Charles Douglas, ex-President José Evaristo Uriburu, October 25; John Hull Browning, October 26.

The Week

Count von Bernstorff's assurance that Germany will not consent to waive her right to invade Canada because of the Monroe Doctrine need keep no one awake o'nights, either here or in the Dominion. A little trifle like the British fleet still stands in the way. But this harmless intellectual exercise of conquering oversea domain by fancy is being indulged in on all sides. There are no doubt Germans in plenty who firmly believe that their troops will enter London ere long. Was there not a rumor a little while ago that fifty armored lighters are being built at Kiel, each to carry 500 Prussians of the expeditionary force which is to hunt Kitchener in his lair as soon as the German submarines have disposed of Jellicoe's remaining ships? Do we not read that submarine transports are being built? In England the most popular game is still that of dividing up the German Empire. Seriously speaking, it is wise of the Germans to make it clear that they have not thought of seeking South American territory in the event of their conquering the Allies. There is a great deal of loose talk to this effect going the rounds—that we shall "have Germany on our necks if she wins." Every assurance which she can give that this will not be her policy, if it is based on something more definite than a scrap of paper, will be to her advantage.

How immense is the task of relieving the war-stricken in even England appears from the difficulty of organizing all the agencies of assistance, private and governmental. At their head stands the Cabinet Committee administering the Prince of Wales's—now the National Relief—Fund, which works through local citizens' committees formed in every district of 20,000 population. Government measures have been taken to prevent its plans overlapping those of the Soldiers' and Sailors' Families' Relief Association, and those of the Poor Law and National Insurance authorities. But there is already serious complaint that it has not availed of the knowledge and energy of the thousands of well-equipped societies which deal year in and year out with social and charitable problems, and which have been moved to redoubled effort by the crisis—the Charity Organization Society, the Church Army, the Board of Guardians, the Children's Aid Association, and so on. In many localities these have formed Bureaus of Personal Service to coöperate with the Cabinet Committee's organization; in others they have complained bitterly of the maladjustment of relief. In addition, there are bodies like the Queen's Employment Committee, with its fund to establish workrooms; and the disorganized activities of hundreds of localities in providing special road and building schemes, 600 of which were submitted for government approval between August 4 and September 21 alone. The country not only faces the present dislocation of employment, the care of widows and orphans, the congestion of hospitals, but must look forward to such tremendous problems as the re-absorption of a huge army into industry at the war's end—a process miserable and disheartening even after the Boer War.

Congress, which adjourned on Saturday, holds its record as the longest continuous sitting of the legislative body of the United States. Special and regular sessions combined, it has been at its post since April 7, 1913—about eighteen and one-half months, or 550 days. The most protracted regular session previously on record—excluding one which was interrupted by very lengthy recesses—was that extending from December 3, 1849, to September 30, 1850, or 302 days. It was occupied with the Compromise Measure, it heard four great speeches by Clay, Webster, Calhoun, and Seward, and there joined in its debates Benton, Hale, Douglas, Jefferson Davis, and Salmon P. Chase. No piece of oratory of the present session will rank with the Seventh of March speech. As for special sessions, there have been nineteen in the period from 1789 to 1913, lasting from ten days to eight months each—but very few over six months. Not many Presidents have cared to assume the responsibilities they involve. It is to be pointed out that but for the length of the first regular session of the Sixty-second Congress, December 4, 1911, to August 26, 1912, the longest in thirty years, the mark now set by the combined sessions would be still more striking.

The full report of Secretary McAdoo on the receipts from individuals under the income tax from March 1 to December 31, 1913, is in many respects surprising. The yield is certainly much less than most observers had expected. In his annual report to Congress a year ago, the Secretary predicted an income of $54,000,000 from individuals under the tax; and despite the manifest elements of uncertainty in any calculation, many thought that it should produce more. It was a heavy reduction from the yield of over $80,000,000 upon which the Congressmen who drew up the bill had counted. Last July, again, upon the completion of the task of collection, the Secretary issued another estimate to the effect that the receipts would approximate $31,000,000. Surprising as this was, the full returns now show the amount to be actually about $28,000,000. The Secretary's original estimate is almost halved, and that of Congress nearly cut in three. The number of returns is as disappointing as the aggregate revenue, for but 357,598 were made, though Congress, in its $80,000,000 estimate, had counted upon half a million. Yet it is to be remembered that all estimates were purely conjectural, the uncollected income tax of 1894 having offered no guide to the law's productiveness. The Internal Revenue Bureau promises a report upon the delinquents, of whom it is thought there are many; but the discrepancy between expectation and result is so great that delinquency can at most account for but a part of the miscalculation.

The formal announcement by the Treasury Department that the new regional banks will be opened November 16 foreshadows events with a highly interesting bearing on our troubled financial situation. It is now evident—as it was, indeed, to thoughtful students of the question when the new system was planned—that an important function of the regional banks will be that of leadership in matters of banking policy. Every one familiar with the history of our financial panics knew that on such occasions the existence of a powerful central institution, holding the ultimate cash reserve for banks of its district and exercising organizational supervision over them, would insure the maximum of efficiency in dealing with the crisis. The present situation could not possibly have been foreseen; yet no situation can be imagined in which precisely this centralized authority and power would be more urgently needed. Laborious voluntary effort of a few individuals or institutions has succeeded in organizing such "emergency relief movements" as the $100,000,000 fund contributed by New York banks to protect this city's foreign engagements, and the $100,000,000 fund for regulating the exchange market, in which the larger banks throughout the country joined. Now, in the same unofficial way, the problem of financing a partly unsalable cotton crop is being dealt with. It needs no argument to show how much more effectively all this could be done with the regional banks and the national board in full operation.

The rejection by the House, as well as the Senate, of the plan to relieve the cotton exigency by a $250,000,000 issue of Government bonds, cannot bitterly disappoint the South. Such action was foreshadowed from the beginning; while, in spite of all that the Georgia and Alabama members said of the "Macedonian cry" from their sections, it is hard to believe that the better judgment of a large part of the Southern people was not really against the proposal. The six Southern Governors who met recently to agree upon legislation limiting the cotton-growing area or encouraging other crops, took no desperate view of the necessity for Federal relief, and there are Southern newspapers that have opposed it. Part of the support it has had in Congress was sincere, but a large part was admittedly political. It must be hoped that any who believed in it received a clear lesson by the vote and the unequivocal debate in Congress, and that the South at large will understand that its best part is to help itself and not to come to Congress for special privileges. Congressman Glass, of Virginia, to whom much of the credit for defeating the bill is to be given, repeatedly emphasized his judgment that "we already have upon the statute book laws which, with the bills proposed by the Banking and Currency Committee, are sufficient to relieve the situation"; and everything now indicates the success of the proposed bankers' cotton pool.

We know that the Republican party cannot change its spots, because the Colonel has so stated. Only an academic interest, accordingly, attaches to Chairman Hilles's announcement that the plan proposed last December for reducing the Southern representation in national Republican conventions has been adopted, through its ratification by conventions in States that cast a majority of votes in the present Electoral College. The Convention of 1916 will have 89 fewer delegates than the Convention of 1912, and most of this loss will be in the delegations from the South. It is noteworthy that the South itself has accepted the reduction, Texas being the only State to vote against it; her loss will be sixteen delegates, twice the loss of any other State. The only Northern State to lose in representation is New York, and it loses but two delegates. Chairman Hilles is at pains to point out that "the system of unequal numerical representation, against which many States constantly contended, was the legacy of years and of political custom, and therefore not in any way identified with the Convention of 1912." Not a word about the real objection to it, that it stood in the way of an ex-President's ambition!

The American Bar Association disposed of the question of admitting negroes to membership by a resolution providing that in submitting lists of candidates for membership, the local councils shall give information as to the race, sex, and any other matters pertaining to the candidates that are required by the Executive Committee of the Association. This saves the Association from the stigma of drawing a racial line, even if it makes it possible to reject a candidate upon that ground alone. This action followed the adoption of a resolution submitted by Moorfield Storey, repealing the resolution of two years ago declaring that it was not contemplated that colored men should be admitted to membership. The Association is to be congratulated upon extricating itself from a most discreditable position, and one that had resulted in the resignation of a number of members.

Congressman Vare's attack upon Senator Penrose in the House, calling upon him to deny categorically the authenticity of the "information" from Penrose on which the Philadelphia *North American* bases charges concerning Vare's alleged use of bribes in 1911, revives a feud that will make Pennsylvania Democrats jubilant. The quarrel may be only temporary, for a general denial has already come from Penrose, and the Republicans will put forth every effort to reconcile the two leaders. The following of Vare is more personal than partisan; if Penrose cannot prove misstatement on the part of the *North American*, and Vare carries his resentment to an extreme, he should cut down the inevitable Penrose majority in Philadelphia by 40,000 or 50,000. The *North American* charges that, in an effort to help that journal defeat Vare's nomination in 1911, Penrose "made the most astounding and specific charges of corruption to which we have ever listened, bluntly naming as the corrupters . . . his own political and business associates." A few days before election, the mine is well sprung.

Instances of resort to the recall are so few that discussion of the device is still limited in the main to general considerations. California has just furnished an example of its use, however, which should be added to the list. Two years ago, at the last State election, a Senator was chosen by a narrow majority of the reform as opposed to the machine adherents. He took a firm stand at Sacramento against vice and kindred evils, not only upon general grounds, but also because of the approaching Exposition. The climax of his activity in this direction was reached by his introduction of a bill to abate the "redlight" conditions in San Francisco. A movement was started to recall him. The petition received the requisite number of signatures, and at the election he was defeated by an open champion of the interests that he had been fighting. The significant feature of the affair is that only half of the registered voters went to the special election; naturally, the interests antagonized were represented in good numbers. Of course, it was the duty of the citizens, if they approved of the course of their Senator, to go to the polls and vote to retain him. But it is matter of common observation that special elections do not receive the attention that is paid to regular ones. This particular election strengthens the position of those who hold that the recall tends to operate against the man in office, especially if he has been the exponent of a vigorous policy.

The notable celebration of the thirty-fifth anniversary of Thomas A. Edison's perfection of the incandescent lamp is gratifying evidence that Americans are beginning properly to take note of events in the lives of their men of science during their lifetime. Who can measure the world's debt to Mr. Edison for his development of the electric light and the complete revolution in illumination which it has brought about? The amazing thing about it all is that these electrical wonders, including the trolley-car and electric train, have become universal so quickly. The increase in comfort due to the incandescent light no one of the younger generation can understand, but if our cities could go back for even a day to the old gaslight, everybody would appreciate in fullest degree just what the "Wizard of Menlo Park" has accomplished in this field. As it is, the modest inventor will be grateful, no doubt, for the evidences of public appreciation so widely displayed. There is something inspiring in every phase of Mr. Edison's life, but best of all is his absolute devotion to his work, his refusal to splurge, or to be exploited, and his intense desire to confer other lasting benefits upon his fellowmen.

Time has still left the country a handful of forty-niners; but those who were connected with the picturesque early history of the West are fast passing. Of this the death of

a character immortalized in "Roughing It" has just reminded California. Calvin H. Higbie, civil engineer and miner, and long a partner of the humorist, figures in the story and in its dedication. There are two good reasons for believing that he was peculiarly fitted for companionship with Mark Twain. His life, in which he won and lost at least one large fortune, was full of hopeful, adventurous Americanism; and to Paine's biography of Clemens he was persuaded to contribute a few lines that betoken an appreciative spirit. Speaking of Mark Twain's enjoyment of the pleasures of a "great ball" at Aurora, he wrote:

> In changing partners, whenever he saw a hand raised he would grasp it with great pleasure and sail off into another set, oblivious to his surroundings. Sometimes he would act as though there were no use in trying to go right or to dance like other people, and with his eyes closed he would do a hoe-down or a double-shuffle all alone, talking to himself and saying that he never dreamed there was so much pleasure to be obtained at a ball. It was all as natural as a child's play. By the second set, all the ladies were falling over themselves to get him for a partner, and most of the crowd, too full of mirth to dance, were standing or sitting around, dying with laughter.

To have seen such days, and to have been chum to Mark Twain, a Western periodical explains, was not to have lived in vain.

The Hartford *Courant* is celebrating the completion of a hundred and fifty years of continuous existence under one name. In this respect, it has a unique place in American journalism. Founded on October 29, 1764, it has lived to see the end of the eighteenth and the nineteenth centuries and the opening of the twentieth. Yet this distinguished record does not make it the oldest daily newspaper in the country. The *Courant* started as a weekly, and did not become a daily until 1837, the year of Queen Victoria's accession. At that time, Boston, New York, Philadelphia, and Baltimore all had old daily newspapers. One of these, the *Pennsylvania Gazette*, which was owned for a while by Franklin, had been started as a weekly as early as 1729; the *Maryland Journal and Baltimore Advertiser*, now the *Baltimore American*, had its first issue in 1773; the New York *Commercial Advertiser* had been started in 1793 as the *Minerva* by Noah Webster, and the *Evening Post* had first seen the light in 1801. All of these, with the exception of the last-named, have undergone changes of name, and the oldest of them was absorbed by the Philadelphia *North American* in 1845—not the present enterprising sheet of that name, but its predecessor.

He who coins a word is greater than he who bombarded Rheims Cathedral. It must have been a genius who invented "to fashionize." It leaped from his brain when cotton became the craze. At least, we are told it is the craze. The Southern Society is going to dance in it. A perfectly new bride in her first attempt at matrimony will walk to the altar arrayed in it; the Women's New York Democratic Club, always by principle inclined to simplicity, will henceforth urge other women to wear it. "Pretty," "inexpensive," "lasting," "patriotic" precede the noun, even when purists write of the product of the South. But will all this endeavor, this praise, this wooing accomplish its purpose? Will the farmers rid themselves of the obnoxious stuff? There is one way, and only one, to "fashionize" cotton. If it is done by society, Hoke Smith may stop filibustering. But there must be no doubt as to its being the real Society. The amiable daughters of Queen Victoria wrapped themselves from crown to sole in Irish lace to further Irish industry, and the student of history will remember that one married the grandson of a shoemaker and another one of her Majesty's subjects, and that in time a large appropriation (see George Birmingham) had to be made for wharves on the Irish coast, where there was no necessity for wharves. Yet the daughters of the Queen were not Society. That body, tiny, exclusive, remote, has never lacked judgment or taste. It is to it the Southern farmer should cotton.

Nobody has a kind word for the Huns. The name is the last word in vituperation. England applies it to the Germans. Germany applies it to the Cossacks. Presumably the Austrians apply it to the Serbs, unless Vienna is held back by the thought that a very large part of the Hapsburg dominions bears the name of Hungary. The name is used loosely to denote every Asiatic enemy who from time to time has threatened the integrity of European civilization—Huns, Arabs, Turks. In this latter sense it is especially favored by the Kaiser's people, whose patriotic poets have drawn parallels between the great battle of 451 near Châlons, in which Attila was done for, and the battle of the Masur Lakes, in which von Hindenburg did for the Slavic hordes about two months ago. Thus, while the British use Huns as a sign of temper, the German nation characteristically imparts to the name a philosophico-historical significance. To be sure, the practice involves certain ethnographical difficulties. The battle of Châlons was fought in France; where is the appropriateness of the citation in a German mouth? So we must remember that the inhabitants of France in 451 were Franks and Goths—in other words, Teutons. If the Roman Aetius took part in the battle, the fact is overlooked in the heat of polemic. Actually there is a great deal of nonsense about this claim of one European nation or another to have served as the bulwark of western civilization against the Asiatic peril. At any rate, the Teutons are in no position to assert a monopoly. If one recalls rightly, it was a Visigoth—that is, a Teuton—by the name of Count Julian, who invited the Arabs into Spain. Historians now generally admit that it was the Byzantines—a race whom German patriot historians of the Houston Stewart Chamberlain type particularly despise—who did valiant service on the European frontier against the Saracen and Turk for a thousand years. It was a Slavic peril by the name of John Sobieski who shattered the Turkish power at the gates of Vienna. And Turkey to-day is a good friend of the Kaiser. Why drag in the Asiatic?

The dispatch from Petrograd that the Czar has assured the Russian Union of Abstinence that he "long ago decided to interdict for all time in Russia the sale of alcoholic drinks by the Government" scarcely means that one-seventh of the habitable globe will pass under permanent prohibition. Various measures, it is true, have stopped the sale of liquor in Russia since the war began; and Count Witte, uncompromising foe of the Government monopoly, hails the Czar's announcement as meaning that "naturally after the war is finished these measures should be developed in the direction of permanent prohibition." That radical steps will be taken to limit the consumption of alcohol is certain, for the Government showed months ago that it had taken to heart the evils growing out of excessive drinking. But to talk of absolute prohibition is to forget that drinking has for generations had its hold on the population, and that the taking over of control of the distilleries in 1895 was with the object of checking it. That object was forgotten, and the output of the distilleries has increased more than 10,000,000 gallons in the last five years. The best method of slowly bringing the liquor trade under control is probably that suggested by Count Witte: the abolition of the Government retail shops in favor of a careful license system, with the retention of Government control over the distilleries, so as to limit their operations.

BLUNDERING GERMAN PROFESSORS.

To the unbiassed it is plain that Germany has suffered grievously since the beginning of the war in her reputation as a seat of wisdom and the abode of scientific inquiry into the truth of all matters. To all who have profited by her learning and the instruction of her great teachers, this is a sorrowful thing. But it is precisely the German teachers of to-day who are producing a most unpleasant impression on this side of the water in their efforts to win American public opinion for their cause. Nowhere is there any evidence of a desire to undertake an unbiassed investigation of facts; nowhere proof of a philosophical examination of recent occurrences. Logic is thrown to the winds. We are treated to a flood of rhetoric and of unsupported statements. The assertions of the Allies are flung away as unbelievable, because they are from the Allies; the assumption being that the Germans alone are capable of telling the truth in this crisis, and that from the rest of the world there comes nothing but falsehood. The failure to deal with the fundamental moral questions from a detached, ethical point of view may be the inevitable result of the wave of patriotism that has swept over Germany, but it is none the less amazing. The world had a right, it seems to us, to expect better things, even if it could not hope for calmness in such a national crisis.

It really seems as if some of the professors who have rushed into print to defend Germany's cause are doing it quite as much harm as the enemy. Take, for instance, the appeal "To the Civilized World," published by ninety-three German *savants*, which has just reached us. Some of the most distinguished names in Germany are signed to it —Eucken, Haeckel, Fulda, Humperdinck, Sudermann, Hauptmann, Lamprecht, Kaulbach, Dörpfeld—every one notable in his field. Yet the appeal itself is discreditable to their intelligence, and is certain to react against their cause. We waive the fact that the English in which it is couched is grotesque, with merely one citation: "The iron mouth of events has proved the untruth of the fictitious German defeats, consequently misrepresentation and calumny are all the more eagerly at work." But their statement is marked by total absence of logic. Thus they state that "it is not true that we trespassed in neutral Belgium. It has been proved that France and England had resolved on such a trespass, and it has likewise been proved that Belgium had agreed to their doing so. It would have been suicide on our part not to have been beforehand."

Thus in the first sentence they deny what they admit in the last. As for their assertions in regard to France and England, no proof whatever is offered, or has been offered, from any source. The worst that we have discovered is the fact that England and France had planned how they would act if Germany did precisely what she has done. To say that it was a violation of neutrality for England and France to plan in advance how, if necessary, they would perform the duties put upon them by the treaty establishing Belgian neutrality is to insult the intelligence. But granting, for the sake of argument, that the contention is true, what does it boil down to? That Germany violated a law because some one else was going to. If anybody was going to murder Belgian neutrality, she was going to be first at the job. What a shocking position for moralists, for teachers of ethics and religion to assume! They had much better fall back openly upon the highwayman's argument used by the German Chancellor that he preferred the law of necessity to that laid down in a "mere scrap of paper."

Next we are told by our ninety-three men of light and leading that "it is not true that the combat against our so-called militarism is not a combat against our civilization, as our enemies hypocritically pretend it is. Were it not for German militarism, German civilization would long since have been extirpated." What are we to think of all the German teachings of philosophy and religion, if this is true? What kind of civilization is that which rests only upon force, and how valuable is it going to be in the long run? "Have faith in us," the appeal concludes. Faith, yes; but how can we have faith in their judgment hereafter? We could cite many similarly astonishing utterances from professors that have come direct to this newspaper, in which men of international reputation accept as facts matters for which no proof whatever is offered or can be offered. Were they to carry on their teaching or their scientific researches in any such manner they would be promptly expelled from their chairs.

But it is not only the professors in Germany who are injuring their cause. The British Government might well petition for Professor Münsterberg's release from Harvard, with the stipulation that he devote all his time to writing and speaking for Germany. There is Prof. Kuno Francke, of Harvard, too. Only a few years ago he was writing books showing a complete hostility to Kaiser, bureaucracy, and militarism. Now Germany in his eyes is almost beyond criticism. Then there is Prof. Eugen Kühnemann, an exchange professor from Breslau. In an address in Boston, the other day, his assertion that Germany ought not to have violated Belgian territory, but had to do it, called forth laughter from his audience and a pointed remark from the chairman as to the professor's irrationality. To this the agile professor promptly replied that "Americans did not seem to understand that life was always irrational"! That Americans could only hope to understand Germany if we were situated in America as Germany is in Europe was another of his contentions. In this crisis our learned German friends seem to fail to understand that the American is a reasoning animal who can recognize a logical absurdity when he sees one, and knows how to differentiate between an assertion and a fact. Germany, says Professor Kühnemann, is "very much satisfied with the state civilization has reached within her country"; and he adds, "German militarism is the concentrated power of self-defence against a world of enemies." Might her learned men not now take time to inquire whether all is well with a civilization that surrounds itself with a world of enemies?

THE CENSORSHIP ABROAD.

That the British censorship of the war news has reflected credit neither upon the intelligence of the officials nor upon their reputation for fair play is daily becoming more and more evident. It has plainly been controlled chiefly by a desire to conceal from the rest of the world the extent of any German successes, to blacken the enemy's character as much as possible, and generally to win the aid of public opinion in the United States by any means available. The censorship may not be responsible for a deliberate falsification of the official German dispatch of September 11, which was brought specially to our attention; but if it is not, this merely transfers the blame to the newspapers which printed the dispatch, or to the news association which supplied it. We have reason to believe that the German press is justified in asserting that this is not the only case in which official dispatches have been altered to German disadvantage. Major Redway, in the London *Globe*, has charged that "we must learn to look upon the manufacture of mendacities during the war as a heroic attempt to keep us going in the absence of truth." Mr. Herbert Corey, correspondent of the New York *Globe*, last week flatly charged that British censors were forging dispatches, and states that Hilaire Belloc

is protesting in a weekly journal that the censorship is steadily misleading the British public.

That the British reputation for manliness and square dealing towards an adversary is thus much impaired, is one of the saddest facts about the war. Englishmen have always been held up to our youth as model sportsmen; now it appears that when they enter into a great war they take unfair advantage. That the British public itself would never approve of this policy, we are certain; but thus far British protests have naturally dwelt much less upon the dishonorable side of the censorship than upon its stupidities. Of these there are no end. Thus Mr. Asquith's first recruiting speech was not permitted to cross the ocean save fragmentarily, on the perhaps correct, but none the less amazing, ground that it might hurt Great Britain abroad. Of course, being printed in full in London, it was in Germany in forty-eight hours and in New York a week later. Asquith's speech in Dublin announcing the arrival of the Indian troops that day, Mr. Corey declares, was permitted to be printed in Ireland, but not in England! Some of the official German dispatches were suppressed, so that the United States should not be aware of the truth, the censors being sublimely ignorant of the fact that the same dispatches were being received here daily by wireless.

Again, when the Associated Press filed the news of the Pope's note to the Cardinals urging upon them prayers for peace, it was at first suppressed, and then only a few lines permitted. The excuse for suppression was that if the millions of Catholics here and elsewhere learned of the Pope's desire for peace, it might interfere with the conduct of the war! The stupid half-pay colonel who so ruled is to be thanked for thus making it clear how antagonistic militarism is to the Church; but he resembled the proverbial ostrich. He quite forgot that mails from Italy reach this country. The censor in London apparently thinks, too. that we are not receiving the German newspapers as antidotes to his poison. He was for a long time not aware that the liberties he was taking with the Associated Press telegrams were being checked up here by the simple device of sending to New York the dispatches as filed with the censor. The discovery of any garblings or omissions was thus very easy. We sincerely hope that, in justice to itself, its members, and the reputation of American newspapers for honest reporting, the Associated Press will soon see its way clear to publishing the exact facts for the information of the American public, which has suffered by this London narrow-mindedness and folly. That conditions have improved the last few days is, it is to be hoped, a sign of a realization that wars are not to be won by misrepresentation or by permitting the other fellow's alleged atrocities to be dwelt upon while your own doings are suppressed.

That any ideal censorship could ever be worked out, we very much doubt, for it is founded on suppression, deceit, and concealment; but there are instances in which it has worked well. The difficulty lies in the censor's inevitable tendency to drift from things military to things political, as is the case in England to-day. In France, too, there has been grave complaint that the Government has erred, as in 1870, in not being frank enough with the public. The *Journal des Débats* has recently protested at the almost complete suppression not only of news, but of intelligent discussion of the military situation. In England it is suggested that the initial lack of popular interest in the war was due to the scarcity of news from the front. It is a fact that our own newspapers seem fuller than those in London, despite our remoteness. At any rate, it is difficult to keep men excited to the point of offering themselves for slaughter if there is no more thrilling news than the statement that on the twenty-seventh day of the Battle of the Aisne the British army was getting well-accustomed to digging trenches. In Germany, they have had a strict censorship, but have given daily official bulletins, which on the whole have proved trustworthy and bear no marks of a deliberate intent to deceive, though they very often suppress when things go badly, or at least try to palliate. Their correspondents in the field are, however, grumbling, as are their *confrères* in France and England. But the German Government does allow full discussion by experts, and some of these are usually highly illuminating.

ELECTION FORECASTS.

Both the New York *Sun* and *World* printed on Sunday elaborate forecasts of the results of the election next Tuesday. They relate chiefly to the control of the next Congress. That this will be retained by the Democratic party is conceded by both of the estimates. It will undoubtedly retain the Senate, probably increasing its majority there by two or three votes. But it is equally certain that the overwhelming Democratic preponderance in the House will be reduced, the only question being by how much. In the present House the Democrats have about 160 majority over the Republicans. But this was plainly in consequence of the highly exceptional conditions in the voting of 1912. The Progressive split allowed many Democratic Representatives to slip in who could not hope to be returned this year. But even with a reverting to something like normal party divisions this year, it would be an enormous task for the Republicans to win as many as eighty seats, which they would need to do in order to be in control of the next House. Neither of the forecasts admits the possibility that they can do it. A Republican gain of from fifty to sixty members is the best that can be done, according to these calculations. And they are borne out by the *Tribune's* Washington correspondent, who states that "conservative estimates" at the capital indicate that the Democrats will control the next House, though by a "substantially reduced majority." An averaging of the various guesses would give the Democrats a majority of from 25 to 50.

We ask no credence for these or any other figures. Carrying elections on paper and in advance is a harmless amusement, but does not beget certitude in the cautious mind. Too many beautiful election forecasts have been wrecked by the unfeeling event. What interests us in these attempts to read the book of fate is less the exact details—which are, obviously, of the kind that can be altered while you wait—than the methods of reasoning employed. These may seem to be less elusive than the figures given, but we are not sure that examination will show them to be so.

The first great postulate is that the Progressive vote is to vanish like the Cheshire Cat. Only by presuming on its virtual disappearance can the Republicans even pretend to hope that they will be able to capture the next House. But there are several uncertainties in this reckoning. The Progressives are not, indeed, everywhere active, yet in several critical States they are doing a good deal of campaigning. They may succeed in casting sufficient votes in a few closely contested districts to prevent Republican candidates from winning. It is the avowed aim and hope of Col. Roosevelt to "prove to the Republicans that they can't win"; and enough of his followers may be imbued with his spirit to make it certain that the Republicans cannot win at least the next House. Furthermore, the Republican prophets all take it for granted that all who voted the Progressive ticket two years ago, and who have since made up their minds to abandon that new-party movement, will

throw themselves into the welcoming arms of Republicans. But this does not necessarily follow. Not a few Progressives of 1912 were originally Democrats; and if they now "go back," it may be to their old party fold. And it is highly probable that many former Republicans who voted for Roosevelt two years ago will now, if they are to change party allegiance once more, quietly vote in support of President Wilson. It is easy to see how either one of these suppositions as regards the effect of the Progressive vote—much more, all of them together—may vitiate the election tables printed before the election.

Then there is another element of great uncertainty, as it affects the minds of voters, though the preëlection estimates deal with it as if it were absolutely a known quantity. We refer to the European war. It seems to be generally accepted as the salvation of the Democratic party. The Republicans say they are certain of it. But this may mean only that, in the event of Democratic success, they will say that they would have whipped the other party out of its boots but for the war. The process of thought, if such it can be called, is set forth at length in the *Tribune*. Four months ago, everything looked rosy for the Republicans. Times were not good, and the country was getting ready to give the Wilson Administration a severe rebuke at the polls. But then came the war to make business conditions "still worse." At that moment, however, the people altered their attitude. That they did so "illogically," the *Tribune* admits; but the melancholy fact is that all the trouble caused by Democratic legislation was at once swallowed up in the immensely larger troubles due to the war, and then general sentiment attributed the whole to "influences beyond the control of the party in power." Ergo, the party in power is not to be punished. Ergo, Republican hopes wither. Ergo, the war was a life-saver to President Wilson.

This little anticipatory essay in divining the popular heart is so confident as almost to carry conviction—especially as its conclusion goes counter to the political desires of the newspaper that produces it. And there are undeniably many surface indications in confirmation of it. We know that Democratic candidates for Congress are appealing for votes, less on their own merits than to support President Wilson. And in so far as this appeal is based on the feeling that the President stands for peace, has thus far kept this country out of war, and may yet obtain for the United States a leading rôle in securing peace in Europe, its force cannot be questioned. But the fact remains that nobody can predict what will occur on November 3. The very absorption of the people in the war has prevented political sentiment from declaring itself so plainly as it often does. The campaign has been rather spiritless; the registration does not imply keen interest and the result is more than usually on the lap of the gods.

AGE AND YOUTH IN POLITICS.

Col. Roosevelt spoke in Ithaca last Thursday, and the venerable ex-President White of Cornell paid him the compliment of going to hear him. A dispatch to the New York *Sun* gives this detail of their meeting each other:

> "I wish you were in the fight with us," said the Colonel. "You ought to be, for you stand for what is right and decent."
>
> Dr. White smilingly shook his head and remarked: "You will come back."

Mr. Roosevelt presently took occasion to declare in his address that he would "never go back," casting a meaning glance towards the wings of the stage where Dr. White was sitting. He added, characteristically, that what has to take place is that the Republican party must come forward. This leaves the situation, in our opinion, one in which a little skilful manœuvring could overcome the difficulty. If the Colonel were to march off obliquely—not "back," of course—and the Republican party would edge forward on a bias, the two might be surprised to find that they were together again.

That a kind of pathetic significance attaches to this passing encounter between Andrew D. White and Theodore Roosevelt, the dullest must feel. Long friends—still friends in everything but politics—their public ways have parted. Dr. White stands for the Republicanism of the old school and the best type. In the days of his political activity he was as forward-looking a man as Roosevelt himself. He was eminently the scholar in politics. With sufficient independence, he yet managed to work with his party, serving it and being honored by it. Now he is an old man. His age is eighty-two. Col. Roosevelt is—well, never mind what the year-books say, he is eternally a young man. He is one of Lowell's "incurable youth." So that the meeting between him and Dr. White was one between age and youth. In the act Col. Roosevelt showed how young he is by vehemently using the word "never." An English political sage has said that no one but a very young man will use the word "never" in politics.

Passing beyond the two persons in question, may it not be said that this exchange of greetings at Ithaca symbolizes the political forces that have wrought party estrangements? It would be absurd to denounce Dr. White as a reactionary. He is not that any more than Col. Roosevelt is, at heart, a Jack Cade. But the two stand for different ways of looking at public questions, and for different methods of attaining their desired goal. The contrast is not precisely that between the conservative and the radical. It is rather a question of temperament and attitude. On one side, we have the veteran of many a hard political fight, earnestly wishing to hold fast to that which is good. On the other, we see impatience, impetuosity, a certain touch of recklessness, insisting upon cutting loose from the past and making all things new in a day. Embody these two tendencies in thousands and tens of thousands of people, and do we not get pretty close to a good explanation of the splitting away of the Progressives from the Republican party?

The whole story is not told by adding up the years of a man's life. It is undoubtedly true that men incline to be more conservative as they grow older—though they might say that they were content with the triumph of the radical ideas of their youth. Mr. Bryce has spoken humorously of a Radical Club which was formed in England some fifty years ago. Every one of its flaming agitators that lived any length of time became a fine old crusted Tory. But the rule does not always work that way. Gladstone was a stern and unbending Tory until he was fifty. Then he became Liberal, and successively took up such novel political doctrines, down to extreme old age, that he came to be called the "Old Man in a Hurry"—in a hurry, that is, to revolutionize England before he died. It is not the calendar, but the spirit, that signifies. If Theodore Roosevelt lives to be eighty, can anybody imagine him warming his shrunk hands by the fire while he discourses on the degeneracy of the times and the inconceivable folly of upstart boys setting out to reform the nation?

Obviously, the hopes of any political party for the future must be pinned to its young men. It was long the boast of the Republicans that they were steadily attracting the pick of American youth. There was a decided break in this tendency in 1874-76, when there was such a turning of young men in our colleges and elsewhere to the hope of needed reforms through the Democratic party. Grover Cleveland

a larger following from this class than did Tilden. The Progressives have taken great and justifiable pride in the large proportion of young recruits who rallied to the Roosevelt banner. But if youth is ardent and aspiring, it also has a kind of impatience that easily lapses into instability and fickleness. Often it cannot face and endure the prolonged struggle. It wants short-cuts to victory; and if they are nowhere in sight, it is apt to fall away. And the ominous shrinkage in the Progressive registration and vote, all over the country, together with the lists of open desertions of the party, now so extended, indicates that the spell over the young men is being broken. The thoughts of youth are, indeed, long, long thoughts, but the thought of 1916, possibly 1920, with the leader steadily aging, is evidently a bit too long.

THE LIGHTER SIDE OF SCHOOL LIFE.

A series of sketches which the humorist, Ian Hay, has been publishing in *Blackwood's* under the above title, has more than anecdotal interest to those who can see in the boy the father of the man. The spirit of the English public schools has been the theme of energetic quarrelling; but between Rudyard Kipling, whose "Stalky & Co." our own Roosevelt denounced as brutal, and Dean Farrar, whose "St. Winifred's" and "Eric; or, Little by Little" touch depths of bathetic priggishness, "Tom Brown at Rugby" strikes a credible mean, and expresses, with books like "A Day of My Life at Eton" and Mr. Hay's sketches, what may fairly be taken as the characteristics of young Englishmen in those little republics. Mr. Hay expresses the dominant quality as a dislike for mental cleverness coupled with "worship of force of character." "It is not good form to appear deeply interested in anything, or to hold any serious views about anything, or possess any special knowledge about anything." The youth who can easily excel in sports and studies is admired, but the youth who excels by plodding is despised. There is Sparkleigh of the Sixth, for example, drunk the night before examinations, but prize-winner nevertheless. "On Sunday afternoons he would disappear upon a long country walk, ostentatiously exhibiting a cigarette case. In reality he sat behind a hedge in an east wind and translated Demosthenes." He is the man, also, who affects to fall asleep in class, but in reality is mentally pulling and polishing his Latin hexameters. Even more than he hates to seem to strive after intelligence and efficiency, the English boy hates to boast of what he has done.

These same qualities, but as real and not assumed, an American writer in the *Hibbert Journal* last year emphasized as distinguishing the mature Englishman—indifference and mental bluntness, growing out of an emphasis upon moral over intellectual excellences. It is at any rate clear that the young American's school life centres in very different ideals. The Briton calls his fellow who becomes a good cricketer by hours and hours of practice a "rotter." To the American, on the other hand, as to the Scotchman, success is far too important a thing to be jeopardized by false modesty. The competition is as overt as it is strenuous, in class and out of it. The rowing crew is assembled and practiced, under driving coaches, a year beforehand, and the football team works in field and gymnasium, night and day, until by practice it evolves a perfect combination. The American is too intent on his goal to understand the English pose, just as the English boy has a vague feeling that such pains are unsportsmanlike. This seriousness and democratic keenness of American school effort may even seem to expel all lightness and color from its life, but only to those who lack true perspective. Comradeship, love of a good time, the enjoyment of give and take, are as real in one part of the Anglo-Saxon world as in another. The American motto is simply "thorough," while the English foster passion for and pride in work silently. But there is probably a fundamental difference in the fact that the English boy has sought moral character, before and after Arnold, as much as the American has always sought a sort of business efficiency.

In some ways the spirit of school life is so identical with the national spirit that it is impossible to speak of its features as responsible for the graduate. Convention, for example, is a fixed element in the whole British social system; and no one can read Thomas Hughes without noting how strongly it checked intellectual initiative at Rugby. The most energetic character is the boy who has been identified as Dean Stanley, and it is not his mind, but his unconventional conscience and rare moral courage, that gave him energy. It is thus in school and out. The Briton minds his own business and dislikes undertaking a responsibility not his own. He is always a man who sticks to his own form; but his sense of duty is such that, like Arthur Stanley, when once convinced that a task is indubitably his, he will undertake it at no matter what sacrifice.

Chronicle of the War

The English and French critics who, rather more than two weeks ago, after the fall of Antwerp, saw the tide of German success at its flood and confidently prophesied that presently it would ebb, may, if they will, take this comfort to themselves in any event—that in a sense they are bound to win, for even should the German armies ultimately triumph the German experts, generals, and professors who wrote glibly of "the next war" will have been convicted of erroneous judgment. In the view of these experts the very cornerstone of German success in that hypothetical war was a lightning-like offensive which should crush the enemies of the Fatherland individually and before they could command their full resources. Failure to achieve this result would, according to the experts, involve failure of the German cause. Now, as we approach the end of the third month of the war, it is not too early, we think, to declare that the plan which von Bernhardi and other German military experts considered vital to success has failed. This does not, of course, mean that Germany is even within measurable distance of losing the war, but it would mean that if the German experts were right.

It may be well at this time to give a brief résumé of what has happened. After the preliminary stages of the war in Belgium, where the resistance of the Belgian army delayed the German advance for three weeks and gave the Allies much-needed time for concentration, the general advance on Paris began with the retreat of the British from Mons on August 24. By September 2 the Germans were at Creil, only thirty miles from Paris. Then Gen. Joffre launched the army of Gen. d'Amade against von Kluck's army on the German right. Simultaneously, as has since become plain, the army of the Crown Prince on the left was in difficulties. The battle of the Marne was followed by a retreat of the whole German army, lasting from September 5 to September 12, to the Aisne. The taking up of the defensive position between Soissons and Verdun may be considered to have marked definitely the termination of the first great German offensive. Desperate efforts were made at various points on the line to resume the offensive, but attacks were met with counter-attacks, and on the whole we may regard the fighting on the Aisne as having resolved itself into the maintenance of a powerful German defensive.

Meanwhile we have the caterpillar-like extension of the two lines of battle from Noyon in a northerly direction up into Belgium, the Allies making constant efforts to outflank the German right wing, the Germans constantly extending their line to keep pace with the Allied advance, and both sides ever bringing up new reinforcements. With the prospect of the Allied line creeping towards Antwerp and joining hands with the troublesome Belgian army in that city, the German General Staff abandoned altogether its original plan of a direct sweep from the Belgian boundary down to Paris, and by the commencement of the siege of Antwerp on September 28 we may date the initiation of a second great offensive movement. Antwerp must be taken as the preliminary to a dash down the coast to Ostend, Dunkirk, and Calais, and a second ad-

vance on Paris by way of Havre, thus cutting off the direct routes of communication with England. Antwerp was occupied on October 9, and Ostend on October 15. The dash on Calais and Dunkirk was undertaken simultaneously from Ostend and from Lille. The troops from the latter place, as we recorded last week, even penetrated as far as St. Omer, twenty-five miles east of Calais. There, however, they were checked and driven back to a point between Armentières and Lille. At the same time the portion of the Belgian army which had escaped from Antwerp, supported by the guns of British and French ships, held the line of the Yser, between Nieuport and Dixmude, while the British troops on their right drove a wedge into the German line by the occupation of Roulers.

Thus the situation stands at the present time. We learned from the official French announcement on Sunday that after desperate fighting the Germans had succeeded in crossing the Yser, and the Allied line has also been bent back at La Bassée, to the southwest of Lille, but at both these points the German advance has been checked and, as we write, no further progress has been made. Experience has taught us that a line may be bent far back without breaking. According to the latest information, the Allied line in this region is something in the form of the letter S, running from Nieuport, on the west of the Yser, to Dixmude, southeast to Roulers, southwest again to Ypres, due south to a point between Armentières and Lille. From there the line curves westward again and runs through points west of La Bassée and Lens, to a point east of Arras, where it resumes its southerly course to the bend of the line at Noyon. Between the Oise and the Argonne region, artillery duels are said to have resulted in substantial gains by the Allies. There have also been interesting developments in the Woevre district. There, to the north and south of St. Mihiel, a French gain of some ten miles is reported, and we learned from Sunday's announcement by the French War Office, which has not been contradicted from German sources, that the French artillery holds under its fire the road connecting Thiaucourt, Nonsard, Bruxerulles, and Woinville. This is an important item of intelligence, for this road from Metz to St. Mihiel is one of the two lines of communication for the latter place, the other running two miles to the north. Could the French also gain control of the latter route, the German forces at St. Mihiel would be cut off. Considerable French progress is also reported in Lorraine.

It is doubtless too early to assert roundly that the second German offensive in the west has failed, but at least it has not succeeded with the rapidity which the German experts have in the past considered essential; nor does there seem to be any good ground for supposing that the Allied lines will be unable to hold approximately their present positions for an indefinite period. They are only just beginning to feel the benefit of England's resources, and France has still troops in reserve which await only equipment. The initial advantage on which Germany counted, of throwing herself fully prepared upon enemies only partially prepared, grows less with every day that passes.

In the eastern field of operations not only is there a similar lack of any quick or decisive success for German arms to be recorded, but the armies commanded by Gen. von Hindenburg have suffered a very serious setback. Indeed, all that has so far been exhibited of Russian strategy and military organization tends to reverse completely the judgment that was pronounced after the Japanese war. It has shown itself as cautious but daring, and willing to take a great risk for sake of a commensurate gain. Only once have the Russian armies been seriously defeated; that was when Rennenkampf's army was caught by the astute von Hindenburg in the Mazur Lakes region of East Prussia and barely escaped annihilation near Tannenberg, on August 29. But even then the purpose of the incursion into East Prussia, which was partly to clear the right flank of the main army from the danger of a turning movement, but principally to relieve the pressure on the Allies in France, had been accomplished, and good generalship enabled the broken troops to reform and to recover some of the lost ground by the victory of Augustowo in the week ending October 2.

Clever strategy was also displayed in Galicia, where the task of the Russian army there was to clear the left wing and to dispose, if possible, of the Austrian army. By a retreat on Lublin the Austrians were lured on to defeat there, which paved the way for a second Russian victory at Lemberg and enabled the Russians, leaving Przemysl invested, to penetrate by September 25 as far as Tarnow. So far the "jump" had been on the side of the Russians. Their mobilization had gone forward with a rapidity that had upset the calculations of the German experts. By the end of last month, however, the German General Staff had readjusted itself to the unexpected development of affairs and in accordance with the accepted principles of German strategy decided on a strong offensive in Poland. The Austrian armies in Galicia, reinforced by German troops and apparently under German leadership, were reformed and again advanced in conjunction with the huge main army that went forward from the Thorn-Kalisch line to strike at Warsaw and Ivangorod. The Russian armies fell back along the whole line, except in the north, where the position on the East Prussian border was maintained, and retreated to a battleground of their own selection on the rivers Vistula and San. Warsaw was offered, as Lublin had been, as a bait to Gen. von Hindenburg, now the leader of the Austro-German armies in the East, and his troops pressed on over difficult, marshy country, through which communications were hard to maintain, till by October 13 the left wing was within eight miles of Warsaw. There they met a tremendous counter-attack and at the same time were exposed to an assault on the rear by cavalry which had been concentrated at the junction of the Vistula and Bug Rivers. The result was a severe defeat for the centre of the German army, which by October 23 had been driven back a distance of nearly fifty miles. The Russians are, as we write, in possession of Lowicz, Skierniewice, and Rawa. The position of the German forces at this part of the line must be considered as critical in view of the difficult ground which they must cross in their retreat, and it seems probable that no stand will be made till the natural defensive line of the Warthe is reached, a hundred miles east of the Vistula.

Foreign Correspondence

THE PRESS BUREAU — AN ARCHAIC ANOMALY — THE INDIAN TROOPS — TREACHERY IN SOUTH AFRICA.

By SIR HENRY LUCY.

WESTMINSTER, October 16.

The patience of the British public, upon occasion becoming phlegmatic, is strikingly illustrated in presence of the newly constituted, fundamentally un-British, institution of the Press Censor. Even if it were intelligently administrated the office would be objectionable. Its blunders are systematically ludicrous. To the wholesome indignation of the American press, it vexatiously delays, sometimes absolutely prohibits, transmission of costly cable dispatches conveying news that has for days been broadcast in the English press. It makes nonsense of dispatches from war correspondents hungrily picking up crumbs of news from the battlefields extracted from the wallet of wounded soldiers. Its stereotyped postscript runs to the effect that, while it does not take any responsibility for the news conveyed, it has no objection to its publication. Meanwhile the censor has moved his blue pencil all over the sheet, striking out the names of localities mentioned, including that of the correspondent's address, and obliterating whole passages at places where the narrative seems to be approaching its only interesting part.

The censor's greatest triumph has been the authorized publication of a wholly misleading account of the state of the British army just before the Allies victoriously turned upon the Germans and drove them sixty miles north and east of Paris, the censor adding a final paragraph of his own composition cleverly drawing the moral that if Britons are still determined never to be slaves they must really buck up and swell the flood of recruits. Next in succession to this great *coup* was the postponement for five days of publication of letters sent by special correspondents describing the arrival and enthusiastic reception of the Indian troops at Marseilles. What was the object of this strategy only Heaven and the censor know.

There is no doubt that this state of things, new in the history of England since the press was emancipated from the control of royalty and its parasites, is due to the initiative of Lord Kitchener. A great soldier, a born organizer of military machinery, he has the contempt for the public which finds its nearest parallel in modern times in the habitual attitude towards the public of the late Marquis of Salisbury. "What does the public want with descriptions of big battles, great achievements, and narrow escapes? I am looking after the war. Leave it to me. Occasionally when there is time and the news is safely stale the papers shall have half a column, or even a whole column, of bald facts related in a manner designed to give as little information as possible to the enemy—who, by the bye, having taken part in the affair recorded, must already know something about it."

Thus Lord Kitchener in fragmentary answer to complaints of muffling the press, depriving gallant soldiers of the just meed of praise, and, incidentally, checking the flow of recruiting, which in former times instantly responded to stirring accounts from the battlefield sent home post haste by Archibald

Forbes, McGahan, and other famous war correspondents.

It was popularly expected that, having arrived at Marseilles, the Indian contingent would forthwith proceed to reinforce Sir John French's hardly pressed little army. In accordance with Lord Kitchener's pet policy they have since vanished into earth or air. The latest whisper is that they were at Ostend. And now Ostend is evacuated. Anyhow, it is certain that the Kaiser knows all about them and their whereabouts, just as five days before the British public were let into the secret he learned of their arrival at Marseilles. The explanation of the delay in their getting to the front given me by a military authority is the necessity for bringing their horses into condition after a long sea voyage. He assured me this process would take at least a fortnight. But more than a fortnight has elapsed since the force disembarked at Marseilles. Moreover, a large proportion of it is infantry.

The treachery of the Boer commander of British troops in South Africa, who has gone over to the enemy, taking with him some of his officers and men, brings sharply home recognition of what might have happened in South Africa upon a larger scale but for the far-seeing statesmanship of Campbell-Bannerman and his colleagues in the Liberal administration that followed upon the overthrow of the ironically self-styled "Unionists." It is evident that the Kaiser's emissaries had for many months prior to the outbreak of war in Europe been busy intriguing to seduce the Boers from their allegiance to the British flag. When the proper moment arrived Col. Maritz was able to produce a warrant conferring upon him the rank of a general commanding the German troops. In his calculation of side-advantages that would assist him in his conflict with England, the Kaiser confidently counted upon revival of the Boer rebellion. Expectation has been realized in this individual case. The splendid outburst of loyalty on the part of our former enemy is response to the establishment of a state of things that Mr. Balfour passionately denounced, and which, had he at the critical time been still in office, would have been made impossible.

THE TURKS AND THE WAR—GERMAN SYMPATHIES—THE CAPITULATIONS.

CONSTANTINOPLE, September 30.

Will Turkey fight? I have been hearing that question, in various accents and degrees of interest, all the way from Persia to the Bosphorus. The way it was asked in Hamadan, whence I started in the fourth week of the war, made me wonder whether it would be possible to get through. For to reach Constantinople, which as the crow flies is a bit over a thousand miles from Hamadan, you have to travel nearer two thousand, through the Caspian, the Caucasus, and the Black Sea—unless you have time and money for the Bagdad route. But the Bagdad route was closed by reason of the Turkish mobilization, English ships were withdrawing from the head of the Persian Gulf, and the Turkish Consul was confidentially giving out that his people were about to occupy the Caucasus.

The Caucasus, however, as I presently had occasion to learn, is not unaware that Turkey would like to play Germany to Persia's Belgium. Not only did I myself see evidences of Russian military activity on the road to the Caspian, but Frenchmen with whom I afterwards travelled told me that Azerbaïjan was being fortified like a Russian frontier province. As for the Caucasus itself, I found it prepared to give the Turks a warmer welcome than perhaps they imagine—yet hospitable enough to a citizen of a neutral state, not unduly curious about his passport, and good-humoredly willing that he should see what he could of Cossacks bound for the Turkish frontier. They were chiefly to be seen in Batum, where the question of Turkey's fighting comes nearer home than in Tiflis or Baku. And how those Cossacks can ride! Batum lies just within the border, it has been Russian for barely a generation, and it still contains a large Turkish element. Such members of it as might be disposed to swell the armies of the Sultan were not finding it easy to get away, I was told, and there were steamers in the harbor that preferred to remain there rather than risk being held up in the Bosphorus or the Dardanelles. But two English ones left during my stay. And I myself found it possible to sail on the Italian liner which I had planned to take.

The next morning in Trebizond it was given a wandering impressionist to see something of the other side of the medal. My old friend the Turkish soldier was toot-tooting on the shore in the way known to him alone. And I must say that at close quarters he looked a very solid specimen. I did notice though that his equipment left something to be desired, especially in the article of boots. He was shod for the most part in the slippers or moccasins of his country, which are better for his feet than Government boots, but which in a campaign among mountains or in a hostile country would soon put him in a bad way. In Kerasund it was the same. In Samsun it was the same. In Inebuli it was the same. And on the fifth morning we arrived off the mouth of the Bosphorus, just behind a big French liner from Odessa, and were promptly stopped by a plunging torpedo boat. The Black Sea looked its name as we plunged with the torpedo boat in the long swell. Outcries, even tears, burst from the more apprehensive of our company, who expected to be thrown into chains or to be ordered back to Batum. As we continued to plunge, however, I wondered if the Turks might not be playing a favorite game of theirs which the French express so much better than we—of *épater*-ing the bourgeois. At any rate, I had a chance, for once, to discover the two rocky islets which gave rise to the myth of the Symplegades. I also wondered if a ruin on the European shore were the one falsely known as Ovid's tower. Then at last a tug slowly piloted the Frenchman into the Bosphorus and we followed at his heels. When I saw a sailing vessel or two beat in and out of the strait with apparently no reference to pilot or mines, I could not help asking myself whether the tug and its zigzag course were not another trick to *épater* the bourgeois.

Constantinople proved to be asking, with even greater interest than Batum, the question I had first heard in Persia. Some people find an answer to it in the omnipresent signs of mobilization. Martial law, which Batum had not yet thought necessary to declare, is in vigor. So is the moratorium. The War Office is filling its coffers, or at least a few of them, with service exemption taxes of $200 a man. And requisitioning goes gayly on. This is to the Turks an old diversion under a new name, and they practice it with a zeal which sometimes outruns military necessity. There may be reasons why Gen. Liman von Sanders, the German reorganizer of the army, should be using a motor-car taken from an Englishman, but it is less clear why the chief of police should roll through Stambul in another Englishman's car, or why the naval authorities should seize in an English shop the napery they required for a state banquet. I must say for them that they eventually consented to pay for their table linen. But there is no reason why minor military authorities should walk off with whatever happens to strike their fancy. And the major military authorities have made the great mistake of killing what little commerce still attempted to thrive. They proceeded to requisition all incoming cargoes of coal, rice, flour, sugar, salt, etc., paying for them if at all at prices below their actual first cost. The consequence is that no merchant cares to take the risk of importing further shipments, and the cost of living rises alarmingly. It is the more unnecessary because the crops were unusually good in Asia Minor this year. They are now rotting in the fields, thanks to the general mobilization at harvest time.

Another and more significant answer to the question of the day is the remarkable manner in which the Turks interpret neutrality. A story is going around Pera of a Belgian diplomat with whom a Turkish official condoled on the occupation of Belgium. The diplomat thanked the official and offered condolences in return. "But why?" inquired the Turk in surprise. "Because," replied the Belgian, "Constantinople is also in the hands of the Germans." Turkish sympathies are almost vindictively in favor of the latter, Turkish papers print none but news made in Germany, and the large German contingent in the army and the navy is daily swelled by new arrivals. Before reaching Constantinople I had imagined that the comedy of the Goeben and the Breslau had ended by the sale of the two ships to Turkey. I do not believe now that the Turks have bought them any more than they have bought the Tennessee and the North Carolina. The comedy is still on the boards, and no one need be surprised if the two fugitives open a new act of it by raiding on their own account. In the meantime they parade up and down the Bosphorus to *épater* the bourgeois. They fly the Turkish flag, but the arms of Germany are still emblazoned on their bows, and their German crews do not even take the trouble to wear fezzes. There are a few Turkish sailors and officers on board; but the admiral in command has categorically refused to increase the proportion of Turkish sailors to as much as 50 per cent., while on board the Goeben at least no Turk is allowed below a certain deck. And the agent who supplies them recently cashed in a local German bank a check for £2,000 signed by the German Ambassador. All of which looks very little as if they belonged to the Turks.

At first sight the Turkish attitude seems inexplicable to one who has been out of Constantinople for some time and who has known the old prestige of England in the Levant. Yet, after all, the case is comprehensible enough. The change began very soon after the revolution, when the new British Ambassador, Sir Gerard Lowther, who had been welcomed with extraordinary demonstrations of friendliness, refused to receive the leaders of the Committee of Union

and Progress and Progress before he had presented his credentials to the Sultan. The Young Turks became further embittered against him during the events which preceded the mutiny of 1909, and the attitude of the *Times* towards them completed the revulsion of feeling. And the Germans were not slow to turn the situation to their own advantage. Then the part played by Sir Edward Grey in the settlements of the Balkan War, and the recent sequestration of the two Dreadnoughts on which Turkey counted so much, exasperated public opinion against England, while she and her allies, who rule so many Moslem subjects, are accounted the arch enemies of Islam. It is universally believed that the triumph of the Entente would mean the partition of Turkey. Whereas the Turks seem to imagine that the Germans have no territorial ambitions in Asia Minor. They have a sentiment, too, towards the Emperor William, who is the only European sovereign of the first rank to have visited Constantinople. Then the military and Hebrew elements of the Committee have strong personal leanings towards Germany. And those elements control not only the press but the country. So it is not remarkable that the Turks sympathize with Germany.

That, however, does not necessarily mean that they will allow themselves to be dragged into the war. In the first place, it has been a surprise to them that the Germans did not take Paris as quickly as the Bulgarians took Kirk-Kilisseh. The attitude of Egypt and India, too, to say nothing of South Africa, has been even a greater surprise, accustomed as they are to their own relations with subject territories. And a third surprise has been Bulgaria's refusal to allow them free transit into Macedonia. Indeed, there are rumors of a new Balkan understanding which make them very uneasy. Moreover, they are beginning to realize that Russia is not altogether unprepared in the Caucasus, and it has also been pointed out to them very succinctly that if they go to war with Russia the English and French fleets in the Mediterranean are in a position to inflict incalculable damage upon them. But, most important of all, they are not ready for war. They have not had time to repair the losses of their last war, and their financial prospects are not brilliant. They lack uniforms, they lack boots, they lack tents, they lack blankets—and they lack rifles. Against Greece alone they might risk a war, but hardly against the world. It is extremely annoying to Enver Pasha, who is spoiling for a fight, and who thought at first that every one else was too busy to interfere with him. In the meantime he has helped his friends the Germans not a little by mobilizing, and by closing—or allowing them to close—the Dardanelles. He thereby cuts communications, however temporarily, between Marseilles and Odessa, and he forces the Russians to keep in the Caucasus an army which might be more profitably employed in the west. Still, what with his own chauvinism and the high-handedness of Admiral Suchon, things have come to such a pass that at any moment the country may be plunged into the war.

The calling out of the army probably has reference, as much as anything, to the suppression of the capitulations. That topic of interest is the only one which can hold its own in local gossip against the exploits of Admiral Suchon and the Goeben. The event offered, of course, the best, the most characteristic, of occasions to *épater* the bourgeois. The bourgeois was sufficiently *épaté*, but he had small idea what it was all about. Several hundred such as he, belonging chiefly to the guilds of the porters and lightermen, were ordered to march with flags to St. Sophia on the 10th of September and to shout. At least that was what one of them told a friend of his and mine. The lighterman added that he thought it was to frighten the guild of the bakers, who had raised the price of bread. A more amusing story is told of a demonstrator who gave out that the procession was to celebrate the fall of Catipoulasionne. Asked what Catipoulasionne might be, he replied that it was a town in France and that the Germans had taken it. *Se non è vero . . .* ! More authentic and very nearly as good were the answers received by a diplomatic acquaintance of mine. The first Turk of whom he inquired told him that the demonstration was in honor of the moratorium, while the second treated him to the surprising news that the Italians had taken Paris.

These anecdotes are interesting in more ways than one, as showing the popular attitude towards the war and how the Turkish man in the street takes for granted the status of foreigners in his country. For the rest, if his ideas on the capitulations are a trifle vague, I doubt whether the American man in the street could give him much light on the subject. The capitulations, so called from the term applied in mediæval Latin to articles or headings, are treaties made by the Sultans with Christian countries and renewed from time to time, whereby citizens of those countries resident in Turkey were exempted from Turkish law. Their houses were inviolable, they paid no direct taxes, and in judicial matters they were subject to their own courts. This state of affairs, inherited directly from the Byzantine Empire and indirectly from all the civilized nations of antiquity, was not a privilege extorted from the Turks. It was a natural corollary of their theocratic system of government, which regarded civil and religious law as one and which considered the infidel as lying outside its pale. But with the lapse of time, the gradual secularization of law in Turkey, and the very marked change in the balance of power between East and West, the advantage of the capitulations has come to rest chiefly with their Christian signatories. What the Turks particularly resent has been the exemption of foreigners from direct taxation, the right exercised by the European Powers to regulate Turkish customs rates, and the maintenance by the six Powers of their own post offices in Turkey.

One cannot blame the Turks for wishing to rule their own house and to put into their own pockets revenues which rightfully belong there. At the same time they seem to forget that the capitulations were not treaties imposed upon them by force, but instruments to which two parties were signatory; that there are solid historic reasons for their existence, and that to abrogate all treaties with all foreign countries except Persia is to put themselves into a singularly unhappy position. Least of all do they seem to realize that to suppress the capitulations entails a revolution more far-reaching than any they have yet dreamed of. For it necessarily means the complete and final secularization of law. And it is a question whether the Young Turks are strong enough to insist against the religious element of their own people that law and religion shall once for all be separated. We enter, therefore, upon a period the most interesting in recent Turkish history. It may be that the Turks will be able to carry off their *coup*. A simple disregard of precedent has sometimes been known to succeed magnificently. In that case the end will justify the naïve and high-handed means, and Turkey will at last become an orderly state. But let the Turks take note that it will become less Turkish, for then all elements of the population must necessarily stand equal before the law. On the other hand, Europe and America will submit to no such arbitrary and unjust treatment as the Turks have hitherto dealt out to their non-Moslem subjects. Of that also let the Turks take note.

HENRY GRISWOLD.

THE AMHERST ECLIPSE EXPEDITION IN RUSSIA—IMPRESSIONS OF THE WAR—A CLOUDY DAY.

KIEV, Russia, August 23.

(Delayed in transmission.)

It is easy to imagine that interest in the eclipse has taken second place. With a city full of soldiers—for Kiev is the centre of mobilization for southern Russia—science makes but a cold appeal. Soldiers occupy all public buildings, all empty apartments, and even the unoccupied rooms in private houses. Red Cross automobiles fly through the streets. All automobiles are requisitioned by the Government, and no private individuals are allowed even to buy gasolene. As I write, my ears are full of the squeak of new cow-hide boots on the pavement, the endless tramp, tramp, tramp of sad-looking soldiers. Just so they have been steadily marching past since 4 A. M.

When small boys leap fences and dash through flower-beds on the way to the Bibikovski Boulevard, we know that more prisoners of war are arriving, companies of Austrians hemmed in by a double row of Russian soldiers. Their officers are conveyed in carriages. A question that is much discussed in Kiev just now is what to do with these prisoners of war. Hordes of them coming in every day must be housed and fed. Can they be sent to help colonize Siberia, perhaps, in place of the exiles who are offering their services in defence of the country which has exiled them?

Characteristic of the kind of thing one is constantly hearing is the following incident, told by a gentleman whose estate is near the Austrian frontier. Hearing that Austrian troops were advancing in his direction, he drove off towards Kiev at full speed, four horses abreast. After twenty miles or so, a cloud of dust appeared to be overtaking him. His driver whipped up the horses and they raced madly on for miles. But the cloud of dust kept growing bigger and bigger. Suddenly a wheel of his carriage struck a rock, the carriage tipped over, and he was rolled in the ditch. When he could look up, he saw that the riders were Cossacks, two hundred of them, being pursued full tilt by at least six hundred Austrian dragoons. Just before they reached the spot where he lay, the Cossacks spread out in a single line, two hundred more Cossacks apparently rose out of the earth, where they and their horses had been lying concealed. They surrounded the Austrians, and after a few moments, of six hundred Austrians only sixteen were able to ride away. One imagines one has killed a Cossack. He may fall from his horse, but he will come up again on the

other side. A Cossack is armed with rifle, pistols, sword, and a leather thong attached to a stick, with a piece of lead at one end. With this deadly weapon he can rip up a fur coat at a single stroke.

Having occasion to go to the station last night, I saw the trains of dumb-looking cars with red crosses which had just returned from the frontier. They must have been more or less suggestive to the soldiers piling into the long train about to leave for Austria. Into each empty car climbed forty soldiers, and one second-class wagon was full of officers. They are dressed like the soldiers; only their epaulets indicate their rank. All were singing, even hurrahing, and they lifted their caps with a smile as they passed under an arc light.

In the middle of the night one can see trams full of cartridges being silently taken from one place to another. It is reported that the street-railway company is constructing specially designed cars for transporting the wounded from the station to the hospital —a grim comment on the number they expect to accommodate. The wounded are brought in mostly at night—sixteen hundred and fifty yesterday—these cold, clear nights of full moonlight. People meet them at the station and take them home in carriages. The University has been turned into a clinic. Red Cross flags are flying from half the houses, wherever wounded are being cared for. The jolly crowds in the streets are subdued to the rhythm of soldiers' feet. Young girls study the theory of nursing, though they may not yet be allowed to practice. The Red Cross is admirably organized here. The house of the Governor-General is the centre of the sewing-bees where scores of ladies are measuring out cloth, whirring on Singer sewing-machines, and giving garments already cut out to all sorts and conditions of women who volunteer to sew them up. When they are finished, they are done up in bundles and Red Cross wagons take them away. Anybody can help, though the services of dressmakers, who find it a dull season, are perhaps more acceptable than those of ardent ladies who sew up the garments hind-side-foremost. They have made seven thousand garments in ten days, coats and trousers open on the sides for the wounded. But they confess to being somewhat appalled by an order just received from St. Petersburg for 850,000 more.

As for the eclipse itself, in Kiev and the vicinity, the sky was cloudy and all expeditions were a complete failure. Professor Todd viewed the eclipse from Smela. His instruments had miscarried on account of the congestion of traffic caused by the mobilization, but he was able to rig up some jury instruments, and in Smela totality was shrouded in thinner clouds than elsewhere, so that, of six exposures made by Professor Todd, varying in time from one-half second to two seconds, four turned out fairly well, showing a good deal of detail of the inner corona. Unexpectedly the sky was clear in Norway and Sweden, across the Baltic Sea, in Riga, and as far south as Minsk. From Minsk to the Crimea it was almost totally cloudy, the precise section of the track which had best chances of being clear.

One interesting comment was that of a peasant, terrified at the approach of totality. He declared that an Austrian aeroplane was causing the damage—a somewhat modern phase of primitive superstition!

MILLICENT TODD.

Brown's Celebration

THE ONE HUNDRED AND FIFTIETH ANNIVERSARY OF THE FOUNDING OF BROWN UNIVERSITY.

As seventh of the nine pre-Revolutionary colleges in the order of foundation, Brown University has just paused to reckon up its inheritance and to renew its notes of obligation to the future.

This occasion, lasting from October 11 to 17, was, in the judgment of benevolent critics, peculiarly successful in giving well-rounded expression both to the early and to the developed ideal of Brown in its relation to all phases of public and private life. Historical data, both colonial and post-Revolutionary; the purely academic side; the drama, music, art; varied forms of social intercourse; the popular spectacle in the guise of parade and pageant, athletic contests, and folk-dances by school children, found their place in due proportion. And all this was preceded, as was fitting, by exercises emphasizing the religious basis of the University's foundation.

Three of the formal ceremonies took place in the stately and beautiful First Baptist Meeting House, built, as the records show, in the year 1775, "for the public worship of Almighty God and also to hold commencements in." The first commencement celebrated there took place in the year 1776.

The President of the University, in opening the festival with the University sermon, struck the keynote that was to pervade the whole celebration by his own "catholic and liberal" treatment of his theme. The unique charter of Brown University, as he showed, forestalled sectarianism by the catholicity of its allegiance to religion. The charter states: "Into this liberal and catholic institution shall never be admitted any religious Tests; But on the contrary all the Members hereof shall forever enjoy full, free, absolute, and uninterrupted Liberty of Conscience." Commenting on the charter, Dr. Faunce said: "Many colleges have obtained this freedom with a great price, but Brown was free born." The priority of Brown in blazing the pathway of religious liberty was, it may here be noted, generously emphasized by President Lowell and Mr. Taft, speaking for Harvard and Yale respectively, at the University dinner, which closed the celebration.

The Sunday sermon was followed by specific religious addresses on Monday. Dr. Burgess, Bishop of Long Island, spoke in Sayles Hall on "The University and the Christian Ministry," and Dr. Horr, president of the Newton Theological Institution, on "The University and Christian Missions." At another session President E. Y. Mullins, of the Southern Baptist Theological Seminary; President Isaac Sharpless, of Haverford College; President J. M. Thomas, of Middlebury College, and Bishop J. de W. Perry, of Rhode Island, discussed the educational history and ideas of their respective denominations. This feature of the programme was arranged because of a remarkable provision of the charter devised by the founders to exclude the possibility of sectarianism. In accordance with this the board of trustees consists of representatives of the four sects—Baptists, Quakers, Congregationalists, and Episcopalians—recognized in the early colony.

Three productions, open only to invited guests, were given of the first play performed in New England, "The Provoked Husband." For this a special setting, "In Colony Times," was written, making it a play within a play, which dealt skilfully with local names and events of the period. This admirable production was a distinct contribution to the tone of colonial reminiscence that pervaded the celebration. On Tuesday evening a torchlight procession reinforced this reminiscence. Narragansett Indians, Puritans, Quakers, French soldiers and sailors, Continental soldiers and soldiers of the United States army, Revolutionary and contemporary; gentlemen of the colonial period and of the early nineteenth century, undergraduates, and a long contingent of alumni, including college presidents, professors, judges, professional and business men, all wearing brown and white caps and gowns, made up an unexpectedly brilliant pageant. On the beautifully illuminated and decorated campus the procession disbanded by old University Hall, where the soldiers of Lafayette were quartered while the whole college was absent fighting the battles of the Revolutionary war. Candles burning in the small panes of the old building spread a mellow light of antiquity, reproducing the evening, as recorded in the Providence *Gazette* of 1790, when "the President and many others took a Walk on the College Green, to view the Illumination of that Edifice, which was done by the Students, and made a most splendid Appearance."* At commencement, a fortnight later, President Washington received the degree of LL.D.

At Warren, where, under the name of "Rhode Island College," Brown University in 1764 began its career, Dr. W. W. Keen, of Philadelphia, gave on Tuesday the main address in commemoration of the early colonial history of the institution.

Another feature, although technically independent of the University management, may be mentioned here. On three afternoons there was given by the citizens of Warren on the beautiful estate, Maxwelton, a pageant dealing with their local history: the Indian tribes and the early settlers; the arrival of the Welsh; the founding of Rhode Island College and its first commencement; Revolutionary episodes, introducing the King's troops, the burning of the boats, Lafayette and Washington, and other scenes.

*Cf. W. C. Bronson's new *History of Brown University*, p. 88, itself an important contribution to the present celebration.

The remainder of Tuesday was given up to the alumni. There were various class-reunion luncheons, and, before the evening parade, a large alumnæ dinner was held at the gymnasium of the Women's College, "affiliated" with Brown University.

On Wednesday occurred the first purely academic event, beginning with the procession of the senior classes, the alumni and alumnæ, the officers of the State and of the University, the faculty, guests, and delegates, with the usual display of academic costumes and preceded by the Sheriff, according to the ancient custom, with his sword and blue sash. The exercises in the old church consisted of an historical address by an alumnus, Mr. Justice Hughes of the Supreme Court, followed by the presentation of delegates. The address was an adequate presentation of the facts, setting forth the rise and growth of the institution and pervaded by a tone of filial affection and of justifiable pride in the services of the college to State and nation, and in its original stand for unimpeded liberty of conscience. The address, marked by a fine restraint, contained passages of eloquent beauty. Calling attention to the fact that Brown University has not the advantage (nor, he might have added, the dangers) of State endowment, Mr. Hughes said: "The roots of Brown are struck deep in Rhode Island soil, but the leaves of the tree are for the healing of the nations."

The presentation of delegates produced the usual beneficent impression of academic kinship. This was marred only in part by the present severance of human relations which kept away, with one exception, the delegates expected from Continental Europe, the Royal Frederick's University of Christiania, Norway, being represented by Prof. N. Wille. From the various parts of the British Empire, however, came thirteen delegates, representing the Universities of Oxford, Cambridge, Glasgow, Edinburgh, New Brunswick, Toronto, London, Durham, Manchester, New Zealand, Wales, and Queensland. More than one hundred delegates were welcomed from academic institutions at home. Many of the delegates brought formal greetings. Two of these were read—the address from Manchester and that from Rutgers College, which was next to Brown in the order of its foundation. In addition to the delegates more than fifty specially invited guests were present from South and North America.

On Thursday morning another procession formed and a large audience assembled to hear the University address by William Peterson, principal of McGill University, and to witness the conferring of honorary degrees. Dr. Peterson, long recognized as an eloquent exponent of the humanities, had obtained in advance the good will and attention of his distinguished and composite audience. His words reinforced the duties and the privileges of sound scholarship, especially with reference to an institution holding a middle place between the largest and the smaller colleges. There cropped out in his address more than a bare reference to the European war, as was perhaps inevitable under the circumstances, although not entailed by his academic theme.

Thirty-seven honorary degrees were conferred. They epitomized the University's catholic conception of its relation to the world. Executives and leaders in science, literature, medicine, law, religion, philanthropy, diplomacy, and statecraft were included. The one woman on the list, President Thomas of Bryn Mawr, the consistent champion, at every cost, of the most exacting standards of scholarship, emphasized also, in her person, the just recognition of the affiliated Women's College. The heads of the six colonial colleges, preceding Brown chronologically, by their acceptance of degrees, renewed the bond that united them despite centrifugal tendencies. In conferring the doctorate of laws upon Mr. Taft, Dr. Faunce referred with humor to his "promotion from the White House to the professor's chair," adding with felicitous exactness, "Retiring from the one amid universal expressions of good will, and welcomed to the other by all the scholars of the land." And with words aptly spoken at a time when academic men grieve at the defection from their high calling of former co-workers to preach the propaganda of ruthless Force, he thus conferred the degree upon John Bassett Moore: "Counsellor of our Government, teacher of that international law which, when it shall have might as it has right, will establish among the warring nations an enduring peace."

Of other features of the celebration a few words only can be said here. Music was provided for by daily organ recitals in Sayles Hall and by the rare pleasure afforded by the Mendelssohn Club, which, by special exception, courteously consented to come from New York to sing on Wednesday evening. The art collections of the Rhode Island School of Design, with an especial colonial exhibit, were thrown open by the courtesy of the trustees at a reception on the same evening. On Wednesday the University entertained its guests and alumni at luncheon and at an afternoon reception, and the Women's College, quick to assume its share of hospitality, gave a charming luncheon on Thursday between the conferring of degrees and the afternoon of games and dances on Andrews Field.

Finally, the University dinner, with which the fifth day closed, seemed to many of the participants to maintain and even heighten the high tone of the whole celebration. Dr. Keen, the toastmaster, skilfully guided with urbane wit the spirit of the occasion. President Lowell, Archdeacon Cunningham of Cambridge, Romulo S. Naón, Ambassador for Argentina; R. C. Smith, K.C., of Montreal; Mr. Taft, and President Faunce, each made a vital contribution to the dignity and brilliancy of the evening.

Even yet the celebration has not ended. From November until April the University will offer a series of open lectures by distinguished foreign and American scholars.

FRANCIS G. ALLINSON.

Brown University.

Poetry

THE SUPERMAN.

The horror-haunted Belgium plains riven by shot and shell
Are strewn with her undaunted sons who stayed the jaws of hell.
In every sunny vale of France death is the countersign.
The purest blood in Britain's veins is being poured like wine.

Far, far across the crimsoned map the impassioned armies sweep.
Destruction flashes down the sky and penetrates the deep.
The Dreadnought knows the silent dread, and seas incarnadine
Attest the carnival of strife, the madman's battle scene.

Relentless, savage, hot, and grim the infuriate columns press
Where terror simulates disdain and danger is largess,
Where greedy youth claims death for bride and agony seems bliss.
It is the cause, the cause, my soul! which sanctifies all this.

Ride, Cossacks, ride! Charge, Turcos, charge! The fateful hour has come.
Let all the guns of Britain roar or be forever dumb.
The Superman has burst his bonds. With Kultur-flag unfurled
And prayer on lip he runs amuck, imperilling the world.

The impious creed that might is right in him personified
Bids all creation bend before the insatiate Teuton pride,
Which, nourished on Valhalla dreams of empire unconfined,
Would make the cannon and the sword the despots of mankind.

Efficient, thorough, strong, and brave—his vision is to kill.
Force is the hearthstone of his might, the pole-star of his will.
His forges glow malevolent; their minions never tire
To deck the goddess of his lust whose twins are blood and fire.

O world grown sick with butchery and manifold distress!
O broken Belgium robbed of all save grief and ghastliness!
Should Prussian power enslave the world and arrogance prevail,
Let chaos come, let Moloch rule, and Christ give place to Baal.

ROBERT GRANT.

Correspondence

THE WAR THROUGH GERMAN SPECTACLES.*

To the Editor of The Nation:

Sir: Germany is honestly convinced that her cause is righteous. Never since the Lord God of Hosts went forth with the armies of Israel did a great nation declare war with a clearer conscience. Germany is the coming world-Power, and her rise will elevate the world's standard of civilization, art, and commerce. She has drawn the sword in the name of Culture, and she confidently prays that God may defend the right. The Kaiser used no hyperbole when he addressed his troops in these memorable words:

> Remember that the German people are the chosen of God. On me, on me as the German Emperor, the Spirit of God has descended. I am His weapon, His sword, and His vicegerent. Woe to the disobedient. Death to cowards and unbelievers.

There has been nothing like it since the days of Mohammed; but, for the Kaiser and for his Germans, it is a simple statement of fact; and, if we fail to appreciate the absolute sincerity of German conviction in this regard, we shall altogether fail to understand why Belgian neutrality was violated on the 4th of August, 1914. The assassination of the Archduke Franz Ferdinand, Austria's ultimatum to Servia, French and Russian mobilization; all these were merely proximate causes. The real, the fundamental reason of Germany's intervention was Germany's determination to impose German civilization on a reluctant world. Her duty, as she conceives it, is to overwhelm France, to incorporate Holland and Belgium, to break the power of England, and then, when all Europe is at her feet, to found a powerful German colony in Brazil and in the vast and fertile regions to the southward. A map of "Antarctic Germany," comprising at least these territories, has already been published, if not with the approval, at any rate with the tacit consent, of the Government. "After Europe, and especially England, has been reduced, Germany counts on the United States finding themselves isolated and unable effectively to assert the maintenance of the Monroe Doctrine." "Empire or Downfall—*Weltmacht oder Niedergang.*" That is Germany's watchword, iterated and reiterated in the pages of Gen. von Bernhardi. It is a dazzling vision, a splendid ideal, worth living and worth dying for; a regenerated world under German auspices. Neither is it devoid of ethical justification. "For, observe, this world-dominion of which Germany dreams is not simply a material dominion. Germany is not blind to the lessons inculcated by the Napoleonic tyranny. Force alone, violence or brute strength, by its mere presence or by its loud manifestation in war, may be necessary to establish this dominion; but its ends are spiritual. The triumph of the Empire will be the triumph of German culture, of the German world-vision in all the phases and departments of human life and energy, in religion, poetry, science, art, politics, and social endeavor."

And how shall Germany spread this civilization of hers except by the sword? How shall she find room to expand? Must she rest content to be suffocated within her narrow boundaries while thousands of her sons are forced to emigrate and are lost forever to the Fatherland? England, unwarlike and sated with conquest, sprawls across the Old World. In the New, the United States, with their ridiculous Monroe Doctrine, have locked and barred the doors against her. Must the greatest of all the nations be satisfied with crumbs because she has come late to the banqueting hall? Perish the thought! "The whole realm of human knowledge," says Gen. von Bernhardi, "is concentrated in the German brain"; "the dominion of German thought can only be extended under the ægis of political power, and, unless we act in conformity to this idea, we shall be untrue to our great duties towards the human race." "We must not hold back in the hard struggle for the sovereignty of the world."

That is the mission of modern Germany and that the doctrine taught unceasingly in all the schools and universities of the Empire. Lord Palmerston once described Germany as "that damned land of professors," and it is still the professors who mould the aspirations of the German nation. Before and during the blood and iron age, Virchow, Treitschke, and Mommsen were the field marshals of German thought. Their ideals still survive. Their successors have never ceased to expound the doctrine that the Germans are the *Urvolk* to whom the great heritage belongs, and, even in affairs of state, their influence is not excelled by that of any other caste. Professors of divinity and history are among the favorite councillors of the Kaiser. "It is from Harnack, Delitzsch, and Pfleiderer, the theologians; from Wagner, Schmoller, and Bernhard, the political economists; from Schliemann, Meyer, and Delbrück, the historians; from Haeckel and Ostwald, the philosophers; from Zorn, Kohler, and von Liszt, the jurists, that modern, mighty, material Germany derives its chief intellectual inspiration." Schools, art, letters, the drama, even religion itself, have become "mere feeders and dependents of the dominant political system." From the cradle to the grave, the German is taught by those he reverences most that the spread of German power and German civilization is his first and greatest duty, the neglect of which would be treason to the Fatherland. And in all this there is nothing contrary to the highest dictates of an enlightened conscience. "Christian morality is, personal and social in its nature; it cannot be political. Its object is to promote morality in the individual, in order to strengthen him to work unselfishly in the interests of the community." The old Machiavellian doctrine is as true to-day as it was in the sixteenth century, for surely it must be admitted by every good citizen that "where the bare salvation of the Fatherland is at stake, there no consideration of justice or injustice can find a place, nor any of mercy or cruelty, or of honor or disgrace; every scruple must be set aside, and that plan followed which saves its life and maintains its liberty."

As to the actions of the state, they "cannot be judged by the standard of individual morality." The be-all and end-all of the state is power, and, therefore, it is obvious that "of all political sins the sin of feebleness is the most contemptible; it is the political sin against the Holy Ghost." "He who is not man enough to look this truth in the face should not meddle in politics." Thus too, war, if necessary for the well-being of the state, must be waged relentlessly. War is "an indispensable factor of culture in which a truly civilized nation finds its highest expression of strength and vitality." "Without war, inferior or decaying races would easily choke the growth of healthy budding elements, and a universal decadence would follow." Πόλεμος πατὴρ πάντων. It is no exaggeration to speak of "the idealism, the blessing of war." Such are the teachings of Treitschke and of Bernhardi. Ever since the consolidation of Germany with Prussia, this "Religion of War" has been persistently propagated by the whole official and educational machinery of the Empire. In the belief of modern Germany,

> Force rules the world still,
> Has ruled it, shall rule it;
> Meekness is weakness,
> Strength is triumphant;
> Over the whole earth
> Still it is Thor's-day.

And this recrudescence of those elements in the German character which puling pacifists consider barbarous was foretold by Heine over three-quarters of a century ago:

> Christianity—and that is its highest merit—has in some degree softened, though it could not destroy, the brutal German joy of battle. When once the taming talisman, the Cross, breaks in two, the savagery of the old fighters, the senseless, Berserker fury of which the northern poets say and sing so much, will gush up anew. That talisman is decayed, and the day will come when it will piteously collapse. Then the old stone gods will rise from the silent ruins and rub the dust of a thousand years from their eyes. Thor, with his giant's hammer, will at last spring up and shatter to pieces the Gothic cathedrals.

The prophecy has found its fulfilment in Rheims and in Louvain; but no true German will grieve for that. "In the business of war, men must not regard the massacres, the burnings." War is "divine in itself, and as needful and necessary to the world as eating or drinking or any other work." Shall Germany cease to preach the gospel of German civilization for the sake of old cathedrals and palaces? Rather let her go forward to victory in the mighty name of Culture. The old stone gods have risen to fight beside her. Surely she will have her reward.

"DR. GRAVES" AS HISTORIAN.

To the Editor of The Nation:

Sir: "The Secrets of the German War Office," by "Dr. Armgaard Karl Graves, Secret Agent," is so extraordinary a book that every reader in lack of external evidence seeks for internal evidence as to its credibility. "Dr. Graves" describes himself, page 4, as one who, ever fond of study, had taken his degrees in philosophy and medicine in one of the old classic universities of Europe before reaching his twenty-second birthday; and yet this same scholar, in discussing, page 230, the importance to an army of quickness of motion, ascribes to it much of the success of *"Hannibal's campaign against Cæsar."* Are we to judge his knowledge of modern history by his ignorance of ancient?

RUSSIA, GERMANY, AND THE BALTIC.

To the Editor of The Nation:

Sir: In England we are deeply grateful to you for your articles upon the causes which have led to the present terrible war. But you have not given enough prominence to the circumstance that the semi-official press of Germany has during recent years advanced a pretension to make the Baltic a German *mare clausum.* Consider what this means. The ever-growing commerce of North and Central Russia, of Siberia and Russian Asia, if it follows the great circle, can only reach the ocean through the Great Belt or the Kiel Canal. So long as Germany controls these entrances of the Baltic, she has her clutch upon the throat of her great rival and can throttle her whenever and as often as she likes. It is evident, therefore, that if the Russians win, they will put an end to so intolerable a situation by instituting some sort of condominium with Germany over the approaches of the Baltic, and what would best please the Danes would be a powerful Russian garrison along the north bank of the Kiel Canal. After Germany's cynical violation of her own guarantee of Belgian independence, no pledge given by her to respect Russia's right of egress and ingress would suffice. She would treat it as a mere scrap of paper, the moment it suited her to do so.

German publicists during the past few weeks have denounced England as the arch-breaker of treaties and chief violator of the territory of small states. They furnish no examples, but there is a significant contrast between their treatment of Belgium now and our treatment of Portugal in the Transvaal war. Had we chosen to violate Portugal's neutrality and advanced through the harbor of Lorenzo Marques, we could have struck direct at Pretoria and have ended the campaign in a few weeks. Would modern Germany have shown the same scrupulous respect for the rights of a weak state like Portugal? I am far from justifying the Transvaal war, which I believe we might have avoided if we had set the Duke of Devonshire or Lord Salisbury, and not Chamberlain, to negotiate with Krüger; but I do maintain that in respecting the neutrality of Portugal we set an example which Germany might well have followed. The modern German, alas, imagines he has a divine right to flout and oppress the weak. I was visiting the other day the German patients in our military hospital and asked some of them what they thought of the Belgians, and this was the answer I got: "We do not complain of the French fighting us, for they are our *Erbfeinde,* and you English have a good cause of quarrel with us; but why were the Belgians so ill-natured as to shoot at us? We were not at war with them." This answer, made with the utmost naïveté, exactly renders German popular feeling on such matters. They cannot understand that any weak nation should hesitate for a moment to make itself a doormat for the Prussian heel.

Again let me express my appreciation of the stand you have made—like your President, Dr. Wilson—for the upholding of a moral standard between states and for respecting treaties solemnly made.

Fred. C. Conybeare.

BERNARD RICHARDSON GREEN.

To the Editor of The Nation:

Sir: A distinguished figure has dropped out of the activities of Washington with the death of Bernard Richardson Green. His tall, spare form, gentle dignity of bearing, strong features, and firm but kindly eyes, made him a marked man in any assemblage, and his character and career, familiar to the great body of his fellow-citizens at the capital, amply accounted for the esteem in which they held him. A native of Massachusetts, and a graduate of the Lawrence Scientific School of Harvard University in the class of 1863, he was one of a small group of young engineers whose services the Government requisitioned at that stage of the Civil War for the construction or reconstruction of its fortifications on the New England coast. This employment brought him into contact with the engineer officers of the army, and thus largely shaped his future, for thenceforward he remained associated with their corps almost as closely as if actually a member of it. No higher tribute could be paid to his professional competency or his personal tact than the fact that these exacting critics were continually summoning him to assist in the solution of some especially perplexing problem, or to take the helm of some enterprise which had failed of accomplishment in other hands.

A notable instance was that which, in 1877, made him a permanent resident of Washington. Supervising Architect Mullett had spent himself on the State, War and Navy Department Building, and Col. Casey, later Chief of Engineers, had been detailed to finish it. Mr. Mullett's ambition to diversify the public architecture of the city had led him into the adoption of an unfortunate design, and Congress had hampered the progress of the work by requiring that it be done piecemeal. Thus the Government had become involved in contracts both labyrinthine and extravagant, and matters were in a seemingly hopeless muddle when Col. Casey called in the aid of Mr. Green. His grasp of the situation was so masterly that, by revising a specification here, changing an order for material there, rearranging the programme of work somewhere else so that the gangs would not get into one another's way, and mercilessly cutting red tape and reducing expenditures on every hand, he succeeded in saving for the Government some $2,250,000 from the amount the building would have cost if its construction had continued on the former basis.

Another of his famous undertakings was the completion of the Washington Monument, which had languished for a whole generation, and over which a multitude of counsellors were in controversy. It appeared that not sufficient attention had been paid to the adaptation of the ground on which the unfinished pile had stood for so many years, for sustaining the weight of a stone shaft 555 feet high. Some advisers urged the abandonment of the original plan, and the capping of the Monument at the point it had then reached, or with only an inconsiderable addition. Others pleaded for the razing of the work already done and the rearing of a new monument on a better site. Brought into consultation at this juncture, Mr. Green suggested a device for inserting under the existing structure a new concrete base of such solidity that nothing short of a convulsion of nature could disturb it. His plan was bold, and not without its serious elements of peril, but it proved entirely wise and practical. With laying out the surroundings of the shaft, also, Mr. Green had a great deal to do; so that to-day the Monument owes largely to his cleverness both its structural strength and the æsthetic effectiveness of its approach.

From the Monument he was almost immediately called to the chaos at the new Library of Congress. The design had been made and remade, altered and touched up so many times, and Mr. Smithmeyer, the architect, had had to submit to so much interference from Congress and its agents in his long struggle to get the thing started, that a thorough reorganization had become necessary. Mr. Pelz, formerly a partner of Smithmeyer, superseded him as architect, and the responsibility for the construction as a whole was committed to Gen. Casey, who refused to touch it unless he could have a free hand. This pledge given him, his first act was to summon Mr. Green, for whom a position was soon specially created, with the title of Superintendent of the Library, and he continued to fill it till his death. In this case his triumph over political contractors and material-men was as noteworthy as in his first department building experiment. Setting a day when Congress might look for the finished edifice, and an outlay to which he believed it could be held down, he carried out both promises, and even turned back a little money to the Treasury.

The incidents here cited are only a few of the more colorful in a career crowded with interest. Not only do a half-dozen fine public buildings in Washington bear testimony to his resourcefulness and good judgment, but his fame spread abroad so that he was subject to appeals from all over the country for advice in local emergencies. In spite of his incessant activity, which in the presence of a problem treated sleep and meals as negligible items, he cherished throughout his life a love of music that found expression in the promotion of artistic enterprises of some magnitude in Washington.

Had it been left for Mr. Green to tell his own story, it would never have been told, for no more modest man has been known to Washington within the memory of the present writer. The loss the American people have suffered in his death will not be generally realized till some fresh exigency arises demanding for its settlement a combination of expert technical skill, incorruptible honesty, and an administrative efficiency amounting to positive genius.

Washington, D. C., October 24.

Literature

A SHAVIAN CLEOPATRA.

The Life and Times of Cleopatra, Queen of Egypt. By Arthur E. P. Brome Weigall. With maps and illustrations. New York: G. P. Putnam's Sons. $3.50 net.

Charles Oman, in an entirely praiseworthy attempt to dim the halo which a school of imperialistic historians has thrown around the head of Julius Cæsar, spoke of him as ready to lapse, at the age of fifty-four, into undignified amours with "a clever and worthless little Egyptian princess." The passage only proves that, however well Mr. Oman understood the defects of Cæsar, he had never really comprehended the significance of Cleopatra. Various writers have made more or less serious efforts at the problem, but few really interested readers, one imagines, would admit that its difficulties have been satisfactorily solved.

That such a result is to be found in the volume of Mr. Weigall, no careful student will expect after reading the few pages of his Introduction. He is going to give an interpretation of events almost entirely new, we are informed, and admittedly open to discussion; but so far as concerns specific reference to original evidence on which alleged new interpretations are based, in the way of footnotes or otherwise, "the sooner this kind of jargon of scholarship is swept into the world's dust-bin the better will it be for public education." Any reader, he tells us, who doubts his interpretation "may easily check my statements by referring to the classical authors." These, we are assured, may be found in any big library, and consist of Plutarch, Cicero, Suetonius, Dion Cassius, Appian, Strabo, Diodorus Siculus, and a baker's dozen more, to whom he adds a few modern names, notably not including the volume of Adolf Stahr and the discriminating treatment of Cleopatra in Gardthausen's "Augustus und seine Zeit." Of course, it is nonsense in Mr. Weigall to suggest that "any reader," or even one reader in a hundred, could apply any adequate test as to how accurately his book is based upon these authorities when specific references to the original passages involved are given only spasmodically, and even then with no apparent concern for relative importance. It is, of course, open to any man to publish his views on Cleopatra or any other ancient character for popular reading without providing the apparatus necessary to a feasible test of those views. When he pretends, however, to be upsetting the work of previous scholars, and then girds at the only really available means by which any considerable number of his possible readers might test his views, he comes perilously near to putting himself out of court before his case is fairly opened.

Mr. Weigall's Cleopatra, at the time of her dramatic secret introduction into the presence of Julius Cæsar, is simply "an unmarried girl of some twenty-one years of age against whose moral character not one shred of trustworthy evidence can be advanced," a harum-scarum little thing, happy-go-lucky, a dare-devil even, irresponsible, and so on, but, be it carefully remembered, with nothing really bad about her. This simple-minded little innocent, Cæsar, with his long and varied experience in the arts and wiles of a wicked world, immediately proceeds to lead astray. All this of a daughter of the Ptolemies, heir of the social and moral traditions of Alexandrian court life, at the remarkably tender age of twenty-one years. There is far clearer insight in Gardthausen's delicious summing up of that fateful night when, wrapped in a rug for concealment, she was carried into Cæsar's presence and the bundle unrolled before his astonished eyes: "Sie kam, er sah, und sie siegte." No, the confiding little innocent, cruelly betrayed by the practiced seducer, is no more the real Cleopatra than is Oman's "clever and worthless little Egyptian princess."

It is not worth while to follow Mr. Weigall through point by point and indicate where he seems to be plainly wrong, probably right, or simply questionable in his deductions. We must protest, however, against a method of "reasoning" which may fairly be symbolized thus: A was possibly B, and there is no trustworthy evidence that B was not C: therefore A was indisputably C. It would be hard to find a book of serious intent in which "must have been," "might have been," "possibly," "probably," and other such symbols of lack of evidence are so persistently made the cornerstones of imposing structures of alleged certainty. Even in a single sentence one finds a *possibility* that Cleopatra, when she met Cæsar, had already gone through a formal marriage with her brother in accordance with the provisions of their father's will, a *high unlikeliness* (in spite of well-known custom to the contrary, be it added), that this was anything more than the emptiest formality, and finally an *entire absence of any reason to doubt* that she was still unwedded.

In chapter vii, "must have beens," strewn almost as thick as poppies in a Sicilian wheat field, lead up to the conclusion that this young queen, but recently so tender and unsophisticated a victim of Cæsar's seductive art, became so perfect a persuader in her turn that the whole idea in Cæsar's mind of a world-empire, with himself at the head, was of her instigation. When Cæsar undertook to reform the Roman calendar he decided, "very probably at the Queen of Egypt's suggestion," to invite some of the Alexandrian court astronomers to his aid, and out of this probability, within a dozen lines, it becomes "not without interest to recollect that but for Cleopatra some entirely different set of months would now be used throughout the world." In the author's mind Cleopatra was of the purest Macedonian Greek, to the very core. He is quite sure that she spoke of the Egyptians of the interior as "confounded niggers," and also that everybody in Rome "must have known that she had not one drop of Egyptian blood in her veins." This pugnacious certainty forces one back to the fact that her own father was but an illegitimate scion of the Ptolemaic line, the composition of whose blood can hardly be safely analyzed in the absence of evidence, to say nothing of earlier marital vagaries among the Egyptian Ptolemies.

The goal to which Mr. Weigall comes in the end is that Cleopatra's ambitions, awakened after her harum-scarum, happy-go-lucky, dare-devil, irresponsible, unsophicated days had closed, finally had their realization in a government in which what we commonly call Roman Emperors were, so far as the consciousness of Egypt was concerned, primarily Egyptian Pharaohs, ruling certain oversea dominions centred in a river called the Tiber. And if Cæsarion, her son by Julius Cæsar, failed to get his rightful inheritance, the claims of legitimate descent were at least fairly met by the fact that Augustus and his line went back to Julius through legal adoption. All this is interesting, but the reader who wishes an adequate conception of Cleopatra, really a great and accomplished woman, will go rather to writers who have more respect than Mr. Weigall for careful historical method.

CURRENT FICTION.

The Revolt of the Angels. By Anatole France. Translated by Mrs. Wilfrid Jackson. New York: John Lane Co.

Philosophic pessimism is here expressed in impious persiflage, and political satire in a fantastic burlesque. The author conceives the guardian angels of men infected, in wandering about the pavements of Paris, with a divine discontent, throwing off their allegiance to Ialdabaoth, the Most High, assuming mortal vices, and plotting here a revolt against Heaven in which their bomb-making activities cause the police a good deal of perturbation. If they are prudent, their leader, Arcade, remarks, they cannot fail to take Ialdabaoth by surprise. "He foresees everything, but in order to leave us our free will he acts towards us absolutely as if he foresaw nothing. . . . The obligation which he has undertaken, to reconcile with his prescience the liberty of both men and angels, throws him constantly into inextricable difficulties. He never sees further than the end of his nose. He did not expect Adam's disobedience, and so little did he anticipate the wickedness of men that he regretted having made them." Neither the victory of the fallen angels nor their defeat would satisfy M. France's doctrine of the negative tendency of all things. His rebellious archangel falls into a dream, in which he images his triumph, and perceiving that it would but put a new God in Heaven and a new Satan in Hell, while the condition of mankind remained the same, chooses to remain below. Here at least he can complete the emancipation of humanity from its old deity. The non-supernatural aspects of the book are two:

an ironic handling of the Minister of Justice who would so manipulate a discovery of the angelic bomb-making as to procure for himself the reputation of saviour of the Republic; and a disagreeable stripping of the social vices of certain Parisians whom the guardian angels in their original function attended. The translation, as in the others of this series, is correct enough, but gives little sense of the felicity and delicacy of Anatole France's prose.

The Lone Wolf: A Melodrama. By Louis Joseph Vance. Boston: Little, Brown & Co.

That very active and versatile and still young performer, Mr. Louis Joseph Vance, has, after his single excursion into realism, returned whole-heartedly, or at least high-spiritedly, to that land of romantic adventure in which he has made himself a popular guide. Up to this time he has written, according to his own classification, one novel, eight romances, and three extravaganzas. The subtitle of his new story seems to knock at the door of a fourth category. He uses the word melodrama, we suppose, not to belittle his work, but to place it. A melodrama is a deliberately conventional form of moral romance. Character in black and white, atmosphere in cloud and flame, action vainly struggling with the mandates of poetic justice—these are chief requirements.

It is now recognized that much skill is needed to employ this form at its best. Mr. Vance's story is really too slight to fit the term. It differs little from several of the earlier tales which he calls romances. Its general tone is of adventurous comedy. Its chief claim upon the august name of melodrama would lie in the conversion of the hero and the confusion of the villain and his accomplices, and an attempted infusion of serious "heart interest." The hero, to be sure, would have been disqualified as such in old-fashioned melodrama, by his profession; but we have got beyond the point of expecting heroism to set out from virtue. Many recent plays of the kind (for example, "The Master Mind," which has recently scored so marked a success) adopt the crook frankly as a new type of hero.

"The Lone Wolf" is understood to be the greatest and most mysterious member of the under-world. He operates in both continents, where his methods are recognized, but his identity remains unknown even to members of his own profession. He has magical skill in opening safes without cracking them. The real beginning of the action finds him returned to Paris from a sensational *coup* in London which has put him in possession of some famous jewels belonging to a Parisienne. Scotland Yard is in pursuit; and at the same moment "the Pack," an organization of criminals more properly known as the "International Underworld Limited," identifies him as "the Lone Wolf," and attempts to force him to membership in their order.

The adventures that follow are neither more nor less plausible than is necessary in this kind of fiction. A great many thrillingly absurd things happen in rapid succession. A certain novelty lies in their happening after the "Lone Wolf," having met a girl, determines to reform. She is nurse to the consumptive Bannon, arch-villain, and the leader of "the Pack." Not until the very end do we discover that she, as well as Bannon's secretary and attendant demon, is in the pay of Scotland Yard. She remains our heroine by resigning to become the wife of the Lone Wolf, who by that token is lone and a wolf no longer. The fatal weakness of the tale as melodrama is that this gentleman of crime and mystery is from the outset simply that good-humored and athletic and harmless young gentleman who has figured as hero in so many of Mr. Vance's blithe yarns.

The Presentation. By H. de Vere Stacpoole. New York: John Lane Co.

Whatever the highways or byways, we are generally pleased to have met Mr. Stacpoole. This time it is in the Paris of Louis XV. The "Presentation" is, of course, that of the royal mistress, which Choiseul, backed by the whole Faubourg St. Germain, is straining every resource to prevent. The "hairdresser" conspiracy is on, and the arrangements for stealing the favorite's coach, gown, and coiffeur are well under way—when the Comte de Rochefort intervenes. Mr. Stacpoole's Rochefort is possessed of all the virtues and recklessness of his position, a punctilio which is no less effective for being somewhat *vieux jeu*, a sense of honor intelligible even to us of a feebler age, and a sturdy common-sense which, in the end, extricates him from his troubles. Involved in his adventures is Lavenne, an agent of the Minister of Police, who, while investigating the death of the King's dog, Atalanta, uncovers the villany of Comte Camus, and exposes his whole bag of tricks, especially a poisoned rose—this in defiance of the latest scientific opinion. Then there is Ferminard, the best actor and the worst dramatist in Paris, who, impersonating the Comtesse de Bearn, presents Du Barry to the King. Last, but not least, we have Javotte, a servant of the Du Barrys, who stands between Rochefort and his foes—not forgetting the aforesaid punctilio—loves him devotedly, though at first hopelessly, and, in the end, is carried off as his wife to the country and "people who know how to value worth." We are not telling the story—which indeed has mostly been told before, though not all in the same book. What is original about it is largely in the telling and in a certain daintiness of touch which Mr. Stacpoole has made peculiarly his own.

Big Tremaine. By Marie Van Vorst. Boston: Little, Brown & Co.

The proud Southern gentleman of the old school, the prouder Southern matron, the faithful black mammy, the noble old estate now far gone on its way to the hammer, the fair and high-spirited daughter of the South, the hero under a cloud—these are among the familiar and, as it begins to seem, almost inevitable materials of Southern romance. Miss Van Vorst's handling of them is neither perfunctory nor inspired. In one respect at least she varies from the formula—the hero's cloud does not consist in his quality of poor white or Yankee. But, alas! he belongs to that order of hero who has deliberately blasted his life by shouldering the crime of another. Very recently "The Wall Between," of Mr. Ralph D. Paine, has given us opportunity to rub up our ancient acquaintance with him. That paladin of marines undertook to protect the name of his dead father by sacrificing his own future. "Big Tremaine," as a boy, has done the same kind of thing by his brother. Let us examine the curious ethics of this typical romantic situation. The brother is a thief and a hypocrite, but he is his mother's favorite son. He is also about to marry the girl to whom Tremaine himself has been secretly engaged. He has stolen ten thousand dollars in cold blood, and is perfectly willing that his brother stand the blame. But it is understood to be a noble thing for the good brother to sacrifice himself for the bad, in order that two women may be fooled into a false idol-worship. The worthless brother has learned his superficial lesson. He becomes a judge, and remains the idol of his mother, though his wife sees through him. Then he dies, and the black sheep of the Tremaines, who has won distinction and wealth in South Africa, returns to rescue the family estate, to win his mother's respect and love in spite of her, and in the end to be altogether rehabilitated, with the special premium of the hand of the only girl he has ever really loved. That he is chiefly a fool who has paid the penalty of his folly is far enough from the mind of the creator of that strong, dark, taciturn, mysterious, altogether heroic male, Big Tremaine. Apart from its inherent absurdity, this story has merits of detail beyond the customary romance of the type.

THE ARGENTINE.

The Amazing Argentine, a New Land of Enterprise. By John Foster Fraser. New York: Funk & Wagnalls. $1.50.

The development of our commercial relations with Latin America has received a tremendous impetus since Germany, our closest competitor, has perforce withdrawn from the field. The newspapers are full of "articles," but they contain such elementary information regarding possibilities for trade in South America that one surmises a very large number of Americans have only recently waked up to its existence. Fortunately, during the last few years far-sighted publishers have foreseen just such a demand for information, and books, particularly on the Argentine, have been fairly plentiful. Mr. Fraser's is one of the best, if not the best, that we have seen. Using for illustrations very good and somewhat unusual photographs, the author has taken the trouble to place them so that they illustrate the text.

Mr. Fraser is an experienced traveller, and has breadth of view, keen power of analysis, and a ready pen. He is perfectly willing to see both sides of the shield. The Argentines most hospitably entertained him, as they do so many other visitors, but he was not blinded by their banquets, nor did he feel placed under obligations to overlook their defects. His one idea is to give a faithful picture of this marvellous country which, thanks to its rich soil and good climate, seems destined to have an even greater growth in the near future than it has had in the past.

Here is Mr. Fraser's picture of the Argentine citizen:

He has no pride of historic race. When he makes money and visits Europe it is not to find the ancestral home in Spain or Italy. It is to have a good time in Paris. . . . The Argentines are a dignified people, keen, alert, successful, ostentatious, pagan—a people that has a destiny and knows it. . . . There are Argentines, who would be offended if refused the name of gentleman, who think it excellent sport to walk in the Florida in the evening and mutter obscenities to every unprotected woman who passes. Buenos Aires is the most immoral city in the world. . . . Ostentation is one of the stars of life in the Argentine. Appearances count for everything. You must have a motor-car, even though you have not the money to pay for it. . . . Argentina is a land without ideals. Religion is at a discount, and as yet nothing worthy of the world's note has been produced in art or literature. There is no national conscience. It is a country for money making.

As regards the attitude of the Argentine towards the Monroe Doctrine, Mr. Fraser is very frank and fully alive to the real situation, which a recent distinguished American traveller has tried to gloss over. The Argentines believe, says Mr. Fraser, that

the Monroe Doctrine is but a design to permit the United States to become the ruling factor in American higher politics, if not to extend her sphere of authority the entire length of the continent. . . . Both in Argentina and Brazil, when I conversed with public men, I was given to understand how deep-seated is this dislike of the United States.

There is annoyance at the manner in which President Woodrow Wilson has lectured the Latin Republics of America for granting concessions to European syndicates for the development of their countries. . . . This over-lordship, this placing of the Latin Republics in a position of tutelage to the great Republic of the north, is denounced and repudiated by every Latin-American public man.

Mr. Fraser believes that the Argentine attitude towards foreigners may be summed up as follows:

They accept the English because in round figures five hundred millions of British capital in gold have aided in developing the country. They dislike the citizen of the United States because the big brother Republic of the north patronizes them, and they need nobody's help. They have a contempt for all other Latins beneath the Isthmus of Panama, particularly the Brazilians.

The Argentines probably will not like this very frank and keenly observant Britisher, but he has succeeded in writing a thoroughly satisfactory description of their country. And it is highly significant that in his closing chapter he is able to say with conviction:

Having some acquaintance with the great business countries of the world, I say unreservedly that if I had a son, and intended to put him into commerce in the hope of his making a fortune quickly, I would have him taught Spanish and send him to South America.

THE ISLE OF OPPORTUNISM.

Democracy in New Zealand. By André Siegfried. New York: The Macmillan Co. $1.75 net.

M. Siegfried's resemblance to De Tocqueville is unmistakable. De Tocqueville, to be sure, was expansive and stately, while Siegfried is succinct and familiar; but there is the same calm judgment, the same excellent sense of proportion, the same keenness in noting the metes and bounds of the forces under survey. While it cannot be said that, taken for all in all, they are of equal authority, one need have no hesitation in pronouncing "Democracy in New Zealand" a memorable production.

Though written nearly ten years ago, it appears now for the first time in English. Mr. E. V. Burns has made an agreeable translation, and Mr. William Downie Stewart, of Dunedin, New Zealand, contributes an admirable introduction. When M. Siegfried visited New Zealand the late Mr. Seddon was still, to all appearance, in the zenith of his power—the idol of the small holders and workingmen. Under his leadership the Liberal-Labor coalition seemed to have found the secret of political immortality. The workers were content to merge their political identity in a party which yielded them all they demanded. As practical men they realized that, while they remained merged in the Liberal party, their influence was, perhaps, all the greater because the exact strength of their vote was unknown, and that, as their success was conditioned by the support of the rural class, it would be a blunder to exchange a bird in hand for two in the bush. At the present time the Labor party is in process of being organized as a distinct political party. One branch of it is distinguished by the very characteristics which M. Siegfried noted as being almost entirely absent in the make-up of the New Zealand worker—that is, class-consciousness and the espousal of revolutionary Socialism. The other branch represents the trade unions in their political capacity: its members are, in fact, Fabians.

Yet, when everything is said, time has not impaired the value of this work. It still gives us a "profound insight into the spirit and character of the New Zealand democracy, into the constitution of political parties, and into the attitude of New Zealand towards Imperial problems." It pictures the New Zealander in his essentials. He has not carried his European atmosphere to the Antipodes; he is unmistakably a "colonial," he talks of the mother country with a contemptuous pity; yet the dormant Englishman is still there. At one moment, as circumstances impel, he throws ancient traditions to the wind; at another, he shows himself a lover of ancient forms and established hierarchies, "more than half a snob," and in his way almost a conservative. English at heart, environment has made him a thoroughgoing opportunist of cynical caste.

Ten years ago M. Siegfried said that the absence of revolutionary ideas was striking. In view of the I. W. W. propaganda, culminating in the great strike of some months ago, this is not quite true to-day. But in the main the statement holds good. New Zealanders have pushed the application of Socialism farther than any other people, but M. Siegfried contends that it is not Socialistic doctrines which inspire them. The English, and *a fortiori* the New Zealanders, have nothing of the theorizing of the French, or the dreaminess of the Germans. They reck little of general ideas and great principles. It is true that occasionally, when talking for effect, they will invoke pompous formulæ, but without attaching much importance to them, and simply because they make a good show on programmes and in speeches. The truth is that they have not enough vigor of mind to draw up a reasoned and coherent basis. Even if they could, they perhaps would not do it, for they do not feel the need. More than any one, they have the art of taking questions successively, and they are only interested in solving them as they arise. It is needless to ask whether the working classes of New Zealand, in dictating the laws which have made the colony unique in the eyes of the world, were Socialists, communists, collectivists, or anything else. They had recourse to the state, not in virtue of a conscious creed of state intervention, but because, being masters of a parliamentary majority, they could do exactly as they pleased with the state. They surrounded themselves with laws protecting labor, not for the pleasure of the thing, but because they desired to get for themselves as good a place in the sun as possible. Thus government became, in the opinion of every one, a special providence.

Seddon died in 1906. His party continued to hold office until 1911, when it was disastrously crippled, the final break-up occurring in 1912. Its place has been taken by the party that was in opposition when M. Siegfried visited New Zealand. But the downfall of the Liberal-Labor Government was not wholly due to the departure of Seddon. Even before his death the small landowners and the workingmen, the double basis of his power, were gradually tending asunder. The small landowners were growing prosperous and conservative, and the workingmen were being seduced by the success of the Independent Labor Party in Australia. Moreover, the general trend of public opinion was changing. There was a more or less conscious desire to call a halt and make a valuation of the results that had been secured.

The change in public opinion since M. Siegfried wrote the work before us has perhaps been most apparent in connection with the Arbitration Act, which in recent years has not been so effective or so universally esteemed as it was ten years ago, and the question of land nationalization, which has also assumed quite new aspects. But if by reason of these things the people of New Zealand no longer feel the same confidence and self-assurance in legislative panaceas that M. Siegfried attributed to them in 1904, there is nothing to show that, as a whole, they are less opportunistic in spirit. We can perhaps get no better inkling of the trait which M. Siegfried seems to think most distinctive of the New Zealanders than the remark of a workman discussing immigration: "There is a cake to be divided; let us be as few as possible when the division comes." We suspect, too, that to their cynical opportunism may be traced their "Yellow Peril." The moral danger from the presence of the Chinese is what the New Zealanders, like the Australians, are most inclined to place in the foreground, and M. Siegfried thinks that this is no mere pretext to hide the ill-feeling with which a disturbing and dangerous competition fills them. Yet he adds that by the side of the moral danger there is an economic danger, "which causes much greater alarm in Australasia." He thinks that the Englishman who said that the Chinaman was hated as much for his virtues as for his vices was not entirely wrong. The Chinaman is too successful, and that is the principal grievance against him. In the cynical words of a Wellington baker before a commission of inquiry: "We all know that the Chinese are a very industrious race, and that is just why we are against them."

New Zealand was the first Australasian colony to give women the right to vote. This, we are told, was entirely a matter of chance, of circumstance, and of personalities. The feminist movement, without having any deep roots, sprang up almost suddenly, and, it might be said, to the astonishment of everybody. It would be labor thrown away to search for fundamental reasons going to the very heart of things; for Mr. Reeves himself, who, if any one, holds a brief for the New Zealanders, says with cruel irony: "There are no doubt excellent reasons for giving women the right to vote, but these are not what determined John Stuart Mill." M. Siegfried's view is that New Zealand came across a group of men and women determined to realize the idea of woman suffrage, who, after a few unsuccessful efforts, at last managed to overcome the indifference of the many and the opposition of the few. While this may not be called opportunism, it certainly is its twin-brother.

We glimpse the same feeling when we study New Zealanders' attitude to Australian Federation. Though their supreme satisfaction with themselves has no doubt had a great deal to do with keeping them out of the Federation, there is reason to suspect that their decision has been based largely on the economic consideration, Will it pay? The working class, whose word was law when the subject of union with the Australian states was broached, asked, "Will this scheme result either in increasing wages or in lowering the cost of living?" The farmers, the merchants, the manufacturers, likewise viewed the matter from the point of view of their individual interests. With equal decision they all rejected the idea of federation.

In striking contrast to this distrust of Australia is the unlimited confidence which New Zealand has accorded to England. For the latter she has reserved all her devotion, all her favors, all her gratitude. In this attitude, which is spontaneous and sincere, sentiment coincides with interests; and we should entirely misunderstand the New Zealander if we did not see in him under his colonial varnish a real Englishman in race, in heart, and in mind. Such was M. Siegfried's estimate of him ten years ago, an estimate which the events of the last three months have fully justified.

Notes

Little, Brown & Co. announce for immediate publication "What Germany Wants," by Edmund von Mach.

"The River," by Ednah Aiken, will be published on Saturday by the Bobbs-Merrill Company.

McBride, Nast & Co. announce the forthcoming publication of "The Captain of His Soul," by Henry James Forman.

Charles Scribner's Sons announce the publication this month of a volume containing four plays by Sir James M. Barrie, "Pantaloon," "The Twelve Pound Look," "Rosalind," and "The Will."

The Century Company announces for publication next month "Design in Landscape Gardening," by Ralph Rodney Root; "The French Revolution and the Napoleonic Period" by H. G. Bourne, and "Abroad at Home," by Julian Street and Wallace Morgan.

Mr. William Roscoe Thayer is preparing the authorized life of John Hay, for the American Statesmen series. He will be grateful if any persons who have letters of Secretary Hay will communicate with him. Address, 8 Berkeley Street, Cambridge, Mass.

The Folio American State Papers (Foreign Affairs), which ceased in 1828, have fair indexes; and an index to the annual diplomatic correspondence, which begins in 1861, has been published. The period between these dates, however, has been without such guide. The first step towards filling the gap is taken by the publication of Part I, A to H, of an index to our documents relating to foreign affairs from 1828 to 1861. This section is a huge volume of nearly 800 pages by Adelaide R. Hasse, chief of the public documents division of the New York Public Library. It is published by the Carnegie Institution of Washington. The thoroughness of the plan that has been adopted for the Index is indicated by the statement that, in addition to the entry of every paper and also of its writer, every subject handled in this mass of material is listed, even when this means several entries for a single paper. The entire collection of items is arranged in one alphabet, in the manner of the ordinary library catalogue, but the arrangement of individual entries under any head is, as one would expect, chronological. The usefulness, not to say need, of such an index may be judged from the fact that the entries under a topic of so recent and important discussion as "Clayton-Bulwer Treaty" fill more than eight columns.

"The Woman's Who's Who of America" (American Commonwealth Company; $5 net) is a compilation full of surprises. There is, on the one hand, no name so distinguished that one may be sure of finding it, and, on the other, none so obscure that one may predict its omission. A cursory examination reveals the following absences: Grace Ellery Channing, Mary Antin, Elsie Clews Parsons, Anne Morgan, and Lizette Woodworth Reese; while at the same time many of those who are enrolled appear to have achieved fame by merely being graduated from a college. For all that, the book is useful, whether regarded as a book of reference in the ordinary sense or as something like a national directory of club and college women.

If the report is true that familiar histories are usurping the place of fiction in popular favor, a corresponding appropriation of methods would be natural. Memoir-making, as a rule, addresses itself pretty frankly either to lovers of gossip or to lovers of romance. The chronicler in this kind who does not leer is prone to ogle. The writer of "Old Court Life in Spain" (Putnam; $2.50 net) adopts an almost voluptuously romantic style. What she has to write about is not really "court life" in the common and alluring sense. She has simply taken the most striking figures and incidents out of old Spanish history, and dressed them in fustian. Her style is the sentimental-exclamatory: "How great is Spain! How mighty!" she begins. "From the rugged mountains of the Asturias, their base washed by stormy waves, and the giddy heights of the Pyrenean precipices—an eternal barrier between rival peoples—to the balmy plains of the South, where summer ever reigns! A world within itself, with a world's variety!" Her anecdotes, which range from the sixth century to the sixteenth, are cast largely in the form of dialogue—such dialogue as would not have shamed Amadis of Gaul or the great Don himself. That, for example, is an eloquent scene between Bernardo del Carpio and Alonso the Chaste. Bernardo is anxious to learn who his parents are:

"Great God! whence am I sprung? The very beasts have dams that suckle them, and is Bernardo alone deprived of the common claims of nature?"

No answer came from the king, no sign, no yielding. Bernardo's question had struck him to the quick.

"As you pray for mercy, sire, speak one word," urged Bernardo, the trembling of his lips telling what he suffered. "Are father and mother dead?"

"Both to me," was the stern answer. "The mortal spark of life can never reanimate the soul dead in sin. Question me no more, audacious youth. And think not, because my blood runs in your veins that I will favor your ambition. Rather have I called in the stranger to occupy the throne. Now you

know my mind. Were I dead, my spirit would stand as with a flaming sword to shut you out."

"Then sweeter far than life and honour and glory come death!" exclaimed Bernardo, throwing up his arms. "From this day I am a desperate man. My sword is to me the staff of life, bloodshed and carnage the food on which I live! Come now over the grey heights of the mountains the Frankish host, and I will meet them as never mortal did his country's foes!"

If there are readers whose souls do not echo to this strain, the book is not for them.

Richard Curle, the author of "Joseph Conrad: A Study" (Doubleday, Page; $1.25 net), who has written two volumes of tales and a book about George Meredith, is more zealous than discreet. His facts, he says, have Conrad's authorization; and a list here set down of Conrad's ships and the books inspired by them, is said to have been "scribbled from Conrad's dictation." Nevertheless, we suspect that Conrad's personal connection with the book and its author may have been of the slightest, limited, very likely, to a casual "interview" or so. It is impossible to believe that the author of "The Mirror of the Sea" has deliberately encouraged the critical assiduities of an admirer so injudicious. To begin with, his facts are very few. If there were anything which readers of Conrad might have been grateful for, it would have been a filling in of that tantalizingly fragmentary outline of the novelist's life afforded by his two volumes of reminiscence. Mr. Curle affects to think this a matter of small account. He rehearses very briefly the familiar items about Conrad's life at sea, and dismisses the twenty years that have followed his retirement from the sea with the remark that "from henceforward his life is mainly the history of his books, and does not concern us." In truth, what really interests this commentator is his commentary. He has a high sense of the importance of his task. He begins with the assumption that little or nothing of value has been written about Conrad, and that it remains for himself to reveal a master to the world. Further, he thinks Conrad is comparatively little read, and that most people who read him misunderstand him. "It seems to me," he laments (or exults), "that the really poetical and thrilling things in Conrad are largely ignored, and that they are ignored because most of the critics are upon the 'wrong tack.'" Mr. Curle's proposed office is to set these false critics right by supplying a true criticism. This is a perfectly respectable thing to attempt; unluckily the author goes about his work in a manner both bumptious and patronizing. It is one thing for him to put his fellow-critics in their places, and another for him to pat his idol on the back; we get the impression that he is really trying to boost Conrad! As for the substance of his criticism, it offers little that is either fresh or sound. Striking it is in spots, in the paradoxical manner of the passing hour. For the rest, Mr. Curle has an irritating habit of calling attention to the importance of what he is about to say, proceeding to utter something perfectly clear and obvious, and then lamenting that he has probably been talking over the reader's head: "I know I put my case roughly. Such impressions are often only highly sensitive reactions and as such quite beyond positive proof. A parrot cry is easy to lay hold of, but a mental attitude is like a will-o'-the-wisp." As nearly as we can make out from this book, Conrad is an unsuspected genius, a master of English style, a realist, a romancer, a psychologist, a pessimist, remarkable for his atmosphere, his irony; and so on. And Curle is his prophet.

The third volume of Kluchevsky's "History of Russia," translated by C. J. Hogarth (Dutton; $2.50 net), covers the period from the extinction of the old dynasty in 1598 to the beginning of the reign of Peter the Great in 1689. The admirable qualities of Kluchevsky's work have already been commented on in the *Nation* (October 2, 1913). In his treatment of seventeenth-century Russia the topics that will most interest western readers are the development of serfdom, the rise and fall of a primitive sort of Parliament in the Muscovite state, and the gradual penetration of European ideals into that state. Unfortunately, the translation of this volume is no whit better than that of its predecessor. Two quotations from the first chapter will illustrate the extreme caution with which Mr. Hogarth's version must be used. Of the following sentence it is hard to make even sense:

New Europeanised Russia was, for four or five generations, a Russia merely of Guards' barracks, Government offices, and country houses; the latter leading to the first and the second through an easy course of scions through native schools or exotic *pensions*, whence she received, in exchange, retired brigadiers in uniform (p. 8).

The original, though clumsy, is at least clear:

New Europeanized Russia was for four or five generations a Russia of guards' barracks, government offices, and country houses of the gentry: the last [the country houses] guided their young lads to the first and the second [the barracks and offices] by means of an easy transforming process [literally, distillation] in native [literally, home-grown] schools or exotic *pensions;* and in place of these young lads they received back from them [the barracks and offices] retired brigadiers in uniform.

In the following passage Mr. Hogarth not only obscures but reverses the sense of the original:

But before that accession came about, the Muscovite Empire experienced an upheaval which shook it to its foundations, and gave the first, and a very serious, check to the onward march of the ideas of which the majority of State orders built upon the extinction of dynasties stand most in need (p. 13).

Kluchevsky's words are as follows:

But before that accession came about, the Muscovite Empire experienced a terrible shock, which shook its deepest foundations. This also gave a first and a very painful impulse to the movement of new ideas, ideas that had been absent in the state order built up by the extinct dynasty.

The resemblances between the Babylonian and the Hebrew myths and ideas have often been described. What Prof. Morris Jastrow proposes in his "Hebrew and Babylonian Traditions" (Scribner; $2.50), as he explains in his preface, is to set forth the differences between them. This point has not been ignored by other writers, but Jastrow's treatment is more detailed than is to be found elsewhere. The volume shows admirable mastery of the material; the analyses and interpretations of the Babylonian mythical stories are particularly interesting. Four points are selected for comparison: the story of creation, the Sabbath, the life after death, and the ethical standard. In these, the author holds, though the two peoples began with about the same mass of myths and religious and moral conceptions, the Hebrews finally passed far beyond their neighbors in elevation and religious effectiveness of thought. As the Babylonian national life was extinguished by the Persian conquest in the sixth century (B. C. 539), and the subsequent religious career of the people is a blank except in the elaboration of the astrological-theological astral cult, comparison between them and the Hebrews as to other conceptions can be made properly only in the period ending with the conquest; we do not know, Professor Jastrow observes, what Babylonia might have accomplished if its national development had not been violently interrupted—it was the group of great prophets (a body unknown in Babylonia) that established in Israel the conception of a moral government of the world—only, Yahweh's care was confined to Israel, the welfare of other peoples was not considered.

In the two histories of creation in Genesis we see, says Jastrow, how far the Hebrew view, under the influence of ethical monotheism, diverged from the earlier conception common to the two peoples. In the first chapter of Genesis particularly, the one God, quite divorced from physical phenomena, accomplishes creation, not as an artificer, but by a word—he is a spiritual being. As for man, his rôle, according to the Hebrew, is to have dominion over the lower animals; a Babylonian inscription declares that he was created to worship the gods. Dr. Jastrow thinks the Hebrew the nobler conception; but the Babylonian may have in mind that the cult of the divine Powers is the most important thing in life, and that man's task is to be its custodian. The remarkable Hebrew development of the Sabbath is clearly brought out by Jastrow. This day, originally a lunar period (the day of the full moon), a time of transition, it is here called, of doubt and danger, when the favor of the gods was to be sought, was divorced from lunar changes in the later Jewish period and transformed into a season of rational religious devotion—an epoch-making step for the organization of public and private religion. The future life had no attraction for the old Semites, Babylonian and Hebrew; the historical question is when the doctrine of ethical immortality was adopted by the latter (it is first distinctly stated in the first century B. C. in the book of "Wisdom," and, as some think, in Ps. xlix and lxxiii). Dr. Jastrow regards it as a natural evolution of Jewish thought, helped on by Persian and Greek influences. Finally, as to the ethical development, the ethical codes of Babylonians and Hebrews were virtually identical, the divine Powers favored moral goodness, and the blessings sought were chiefly national and physical; but in the later Jewish writings we have a more definite sense of sin, desire for moral purity, and the hope of spiritual communion with God. Scattered throughout the volume are illumining expositions of customs and ideas, the whole forming a picture of the pre-Christian Semitic religious life; note, for example, the discussions of the pessimism of Gen. iii and the skepticism of Job and Ecclesiastes. The ethical idea finally reached by the Jews, says Jastrow, was perfection of character as the end of existence.

As a manual for college use "A History of Philosophy," by Frank Thilly, professor in Cornell University (Holt; $2.50), possesses two important advantages over any other work of available size: it is more encyclo-

pædic as a whole and more systematic and complete in its exposition of individual philosophical theories. But it suffers from the defects inevitable to so comprehensive a plan in that the treatment of many minor writers is too summary to be very illuminating, while the greater philosophers, notably Plato and Aristotle, hardly receive adequate interpretation. There are some defects, also, that are not inevitable. As a piece of exposition, the book is no more than a good example of mechanical work. Although the writer intends to consider the thinker as well as his times, his point-by-point analysis hardly takes account of the personal motives and conflict of motives, such as the conflict of considerations presented by the complex relations of form and matter to Aristotle and by Berkeley's subjective and objective idealism, which give unity to the very contradictions of a philosophical system and make it personally intelligible. And the style is rather colorless and loose. Thus "the scholars of the church found in this basal conception [realism] a splendid *buttress* upon which to rest their entire intellectual and ecclesiastical structure" (168). Only a pragmatist could say (365) that Puffendorf "introduced natural law into Germany." It is a little disturbing to find Socrates replying to a quotation from Ovid, and prosaically false to think of Plato's *Eros* as the "love of truth." There is a notable rise in vigor both of style and of thought at the point where, as a conclusion to the "History," the author appends his admirable address before the Philosophical Association in defence of rationalism.

For the moment our interest in American achievements on the Isthmus is almost entirely overshadowed by our concern in matters transatlantic. It is doubtful whether many readers will care to find the time to read "Panama and the Canal: the Story of Its Achievement, Its Problems, and Its Prospects," by Willis J. Abbot (Dodd, Mead; $2 net). We have already had a number of books on Panama, and there appears to be no particular excuse for this one. Apparently every author who has a chance to cross the Isthmus is stirred up to write and make words. It is easy to get quantities of good pictures, and after watching the laborers "make the dirt fly" and being courteously treated by Col. Goethals's polite assistants, there are few more agreeable tasks than to sit down and tell about it. It must be said in fairness that the present volume is very comprehensive and omits little which the curious reader desires to know of a voyage to Panama and what may be seen after one arrives. It is gossipy and readable, but hardly worth reading.

"Big Business" a few years ago preferred to keep as much as possible in the dark. Its ways were devious, and it had no desire to court public opinion. Evidently recent events have changed all that, for here is the first volume of a series entitled The Romance of Big Business. It is called "Conquest of the Tropics: The Story of the Creative Enterprises Conducted by the United Fruit Company," and was written by Frederick Upham Adams (Doubleday, Page; $2 net). Why Mr. Adams, who has heretofore been known to fame as the author of "The Kidnapped Millionaires" and "The Bottom of the Well," should have been selected as the apologist of the United Fruit Company, is a little difficult to see, although there may be a subtle connection here. Perhaps it was felt that a romanticist would do more justice to this colossal and well-managed enterprise than a more sober historical writer. It must have been rather hard on the novelist to have to close his book with a categorical interview with the President of the Company, but Mr. Adams's account of the President's "frank answers to my rather pointed questions" is a little bit too disingenuous. The volume is well illustrated, and ought to be widely distributed by the United Fruit Company. The most interesting part of the book is the romantic rise of Minor C. Keith, that pioneer of so many broad-minded and successful efforts to develop Central America.

Science

DOMESTIC MEDICINE.

Black's Medical Dictionary. By John D. Comrie. New York: The Macmillan Co. Fifth edition, illustrated. $2.50.

This is not a dictionary in the sense of a lexicon, but is rather an abbreviated compendium of medicine. As the author states, it occupies a position "somewhere between that of a technical dictionary of medicine and one intended merely for the domestic treatment of commoner ailments," and it is hoped that "district nurses, teachers, clergymen, and professional men generally, shipcaptains, colonists, business men, and others" may find the volume useful. To aid in this use of the book the preface is followed by a page printed in red, which gives the titles to be examined in case of accidents, drowning, poisoning, and so forth. An examination of some of these titles shows a very satisfactory treatment. Thus, "bandages" are treated in ten pages, with seventeen illustrations; under "bites," those of the dog, serpents, spiders, and smaller insects are described, and the treatment is briefly outlined. In none of the articles is much attention given to diagnosis, for, as the author states in his preface, diagnosis is a highly technical matter which lies entirely in the province of the medical man. It is difficult, however, in view of this statement, to understand why four of the thirteen full-page colored plates should be devoted to the reproduction of the rash of chicken-pox, German measles, measles, and scarlet fever, respectively. These pictures can have only one object—to aid in diagnosis without the help of a physician. This is a dangerous thing under any circumstances, but most unfortunate in the group of contagious diseases here represented, because of the attendant neglect, in the absence of a physician, of isolation and quarantine, so important in preventing their spread. Any factor which tends to discourage that exact diagnosis upon which depends rational treatment and, in the case of the infectious diseases, the prevention of disease, is to be condemned. It is doubtful, therefore, no matter what benefits may accrue to the smaller group represented by "ship-captains" and "colonists," whether the larger public is benefited by the encouragement which the book offers to "home" diagnosis and treatment. Certain it is that it would be better for "district nurses, teachers, clergymen, and professional men generally" to depend upon a physician than upon the brief descriptions of treatment offered in this dictionary.

As a lexicon the work is disappointing in its treatment of modern scientific medicine. A cursory survey shows no mention of the words Anaphylaxis, Metabolism, Purins, Chromosome, Lipoid, Hook-worm disease. Adrenalin is given, but nothing is said about its physiologic action; the few paragraphs on Immunity might have been written twenty years ago; and the treatment of Vaccines, other than that for smallpox, is most fragmentary.

It is evident that the book is not intended for physicians; it is of no value, because incomplete, to the general student who wishes an exact definition of a medical word or a description of a medical procedure, and, in that it encourages the treatment of the sick without trained medical aid, it is of doubtful value to the general public. As for the "ship-captain" and the "dwellers in remote districts," they can procure in two volumes modern scientific treatises on medicine and surgery which together total less of weight and bulk than the volume under discussion.

In the opening article of the *Geographical Journal* for October, Capt. F. M. Bailey describes his exploration on the Tsangpo or Upper Brahmaputra, the least known and most inaccessible region in the world. He succeeded in unravelling a problem which has troubled geographers for more than fifty years by proving that the tremendous waterfall by which, according to the lamas, the Tsangpo breaks through the Himalayas is non-existent. Another interesting problem, whether there are one or two continents at the South Pole, is discussed by Griffith Taylor, senior geologist to Capt. Scott's expedition. Among other results of his researches is the conviction that "between 2,000 and 3,000 feet represents the thickness of the ice-cap" that covers the land. In "Some Rough War Notes," Prof. L. W. Lyde gives a brief but clear and suggestive statement of the geographical characteristics of the various sections of the field of war.

Dr. Bukk G. Carleton, surgeon and author of many medical books, who died on October 20, was born in Whitefield, N. H., on November 11, 1856. He was educated at the Littleton, N. H., High School, and received his medical degree from the New York Homeopathic Medical College in 1876. For a year he was in the medical department of New York University. He was pathologist for the Homeopathic and Metropolitan Hospitals from 1877-81, visiting physician from 1881-95, and since then one of the hospital's surgeons, and also surgeon for the Department of Public Charities. Dr. Carleton was demonstrator of anatomy at the Homeopathic Medical College 1879-80, and had been consulting surgeon of the Hahnemann Hospital since 1897. He had been professor of medical ethics and clinical urology since 1910 at the New York Homeopathic Medical College and Hospital and visiting surgeon at Flower Hospital since 1902. He was president of its medical board 1906-7. Dr. Carleton had been consulting surgeon of Grace Hospital, New Haven, Conn., since 1906

Drama

"THE SALAMANDER."

It seems probable that in dramatizing his novel, Mr. Owen Johnson felt obliged to relinquish his original conception of the Salamander. Though on the programme of the play he is careful to state that "in ancient mythology the Salamander was a creature that could live in fire without being burned," his Dodo Baxter is something more and less than this. One fails, indeed, to see how the heroine of the novel could be transported bodily into an emotional drama. In the former she is a recognizable type, a creature akin to Robert Herrick's grafting society women, though found in a lower stratum. The Salamander is on and off the stage, acting when dire need requires and staking all on the pique of her prettiness. In return for flowers and dinners from fashionable men about town, she gives only an unfulfilled promise, and even cashes in her gifts at the firms from which they come. If she is not burnt by this haphazard play, it is because she has too many admirers at once to allow her emotions to become concentrated. However Mr. Johnson may have depicted this class in his novel, he was at least dealing in actual persons who are probably to be seriously reckoned with in a city like New York.

But in a play, because of its artistic sharpening, this particular material becomes most difficult to handle. Dodo Baxter, living in rooms with others who are true to the type of the book, stands out from them not solely because their traits are excessively developed in her, but mainly because of a difference in quality. Some of the scenes in which her three admirers visit her hold forth a promise of much intensity. Sassoon, the rich married roué, may be dismissed as one true to the demands of the novel. But Judge Massingale, who gives up wife and home to convince her of his love, and Lindaberry, whom she later marries, leave her far from indifferent, and in moments with them she becomes a weak edition of Camille, and the audience cannot, any more than her lovers, understand what she is intended to signify. This is both bad art and bad psychology, though the difficulty in the way of making her anything else is, as we have pointed out, almost fundamental.

The difficulty was manifest in the acting of Miss Carroll McComas, who had the principal part. In the presence of the real Salamanders, who, by the way, were well picked, especially Miss Francine Larrimore as the illustrator's model, she seemed at a disadvantage, probably because she felt the necessity of indicating constantly some earnest of deeper emotion to come. Hence she wore a partly tragic air where simple shallowness would have served better. But in the larger scenes she was often adequate, though even here she seemed to sense, even while indulging in it, that tragic despair exceeded the bounds of the original conception. The three men, as played by Orme Caldara, A. E. Anson, and Albert Bruning, were not unconvincing. Mr. Bruning, as Sassoon, saved as well as was possible a scene which in its outspokenness is offensive. It is to be hoped that such scenes may disappear from the American stage; but if they are here to stay, our playwrights might practice a manner which contrives to suggest without being blatant. A good word should be spoken for the restraint of Miss Beverly Sitgreaves, who played the part of Dodo's confidante. F.

"BIG JIM GARRITY."

It is too bad that an experienced actor like John Mason was not provided with a better play than that now running at the New York Theatre. That "Big Jim Garrity" is melodrama of the frankest sort might have been much in its favor in this season, when a certain relaxation is noticeable in dramatic performances. Melodrama, in particular, has been tried out repeatedly, and there was hope that from these experiments some one successful piece might emerge. War has reduced the whole world to a mood which is most aware of the fundamental facts of life and death and right and wrong—a mood, in a word, which is almost specially prepared for the obvious morality wherein melodrama *par excellence* is accustomed to deal. But a good melodrama is not the easy thing to write that one might suppose.

"Big Jim Garrity," for instance, is poorly constructed. Though the plot is fairly simple, it is resolved not so much by the exigencies of the action as by gratuitous admissions on the part of the actors, nicely timed to keep the play going. To any discerning person it is clear from the start that John Dexter, railway owner of California, who is soon revealed to the audience as Big Jim, an escaped convict, with nineteen years yet to serve, could never have committed the murder for which he was sentenced. His whole character points the other way. And the audience is intent upon seeing him, exculpated, to be sure, in the end, but for the time being carrying on a masterly struggle with the villain who is trying to keep him under. In Dr. Malone, the real murderer, who has, in addition, inflicted the morphine habit upon Dexter's wife, he seems at first to have a worthy foe, and promise is given of a solid encounter. The introduction as butler of a former prison-mate of Dexter's, and as maid of the woman who loves this rascal, also holds forth promise of interesting complications. But they are short-lived. Such a coward is Dawson that a threat from one of Dexter's big fists would have made him divulge at any moment enough to incriminate the villain. The struggle becomes half-hearted. For this reason, "Big Jim Garrity," though seeking sensation and thrills in gunplay and the use of morphine and chloroform, is not a little tame. The acting was well above the level of the play. F.

"KICK IN."

Willard Mack's play, which A. H. Woods presents at the Longacre Theatre, is a tragedy, not in its substance, but in its incidence. It demonstrates the tragedy of lost opportunity, for it is at least a season, perhaps two or three seasons, too late. Under the most favorable circumstances, when use had not blunted or custom staled our appetite for "crook" plays, it might have passed muster. But familiarity has had its familiar effect. We know exactly now how gruff, burly, deep-voiced policemen behave on the stage; we could ourselves assist at "sweating" a recalcitrant witness at headquarters, and were we so unfortunate as to be in the witness's place, we flatter ourselves that we could parry neatly some of the officer's most deadly thrusts—certainly we should not fail to discomfit him and raise a laugh from the audience by inquiring after the health of his wife or mother. There may have been a time when some of our deepest emotions were aroused by hearing a police official warn a shivering witness not to "pull any of that raw stuff," but if so it was long ago, and such is the callousness of the human heart that the spectacle of a reformed crook hounded by police persecution to further crookedness no longer moves either fear or pity.

"Kick In" is merely a "crook" play of the familiar type, but of somewhat inferior construction, having for its motive the difficulty experienced by a man once convicted of crime in rehabilitating himself in the face of police suspicion, and the curtain goes down on the time-honored but hardly plausible solution—the hard heart of the police official moved to temporary pity by the thought of his little children. The cast is competent and does what is possible with the unpromising material. A clever and careful piece of characterization is Miss Katherine Harris's interpretation of the young daughter of a lodging-house keeper. John Barrymore's impersonation of the unfortunate hero, Chick Hewes, persecuted by fate and the police, would be more plausible did he emphasize the reformation more and the crook less. S. W.

"Mary Goes First," in three acts and an epilogue, by Henry Arthur Jones (Doubleday, Page & Co.), which has been played with great success in London and is to be seen here next week, is, as Clayton Hamilton rightly says in a preface, a genuine comedy. Moreover, it is, in its way, a model of constructive skill. Starting from an incident of the most trivial nature, it develops a series of amusing dramatic situations, in perfectly logical fashion, by a close observance of the inter-relationship between character and circumstance, and reaches a final solution of the resultant complications in a way that is natural, simple, and human. The story of the plot, which in itself is a matter of very little consequence, need not be told at this time. In view of the coming representation, it might not be altogether fair to do so. The true value of the piece lies in the excellence of its literary and theatrical workmanship, in the nice consistency of its characterization, and its general fidelity as a study of middle-class society in the neighborhood of a big English provincial town. Incidentally it furnishes some lively satire upon current practices in law and politics. All the personages are sketched with firm and facile touch. If not original in design they are delightfully true to type. Chief among them, of course, is Mary Whichello, the sharp-tongued, aspiring and indomitable little woman, who, having long enjoyed the leadership of her own set, won by unfailing tact and activity, finds herself suddenly robbed of her precedence by a knighthood conferred upon the husband of a despised rival, who was only a grocer's daughter. A gibe which she flings at this detested object is the source of the whole dramatic imbroglio. She is an engaging little creature, alive and feminine in every fibre. Equally lifelike is her easy-going, golf-loving husband, who is unwillingly involved in her tea-cup tempest and all sorts of perplexities, but is, nevertheless, compelled by her strategy to supply the means of the triumph, which she generously forgoes. The striving young lawyer, of elastic principles; the stupid, pompous knight and his unlucky spouse—the feeble, emotional butt of

Mary's witticisms; the old country attorney; the junior liberal "whip," and the eminent metropolitan physician are all recognizable portraits and are woven into the scheme with admirable ingenuity. Whether a play so completely English in its motive, its coloring, and its references, so entirely free from any kind of theatrical sensationalism, and so dependent for success upon its veracity, its humor—which is largely local—and the superior quality of its dialogue, will meet with full appreciation when submitted to the judgment of an ordinary New York audience, remains to be seen. But it will afford an hour's hearty enjoyment to any intelligent reader and is entirely worthy of the reputation of its able author.

Arrangements are going forward by which Julia Arthur will make two reappearances upon the stage, one in Boston in November and one in New York in December, for the benefit of actors' families made destitute by war. She will act in "Mercedes," T. B. Aldrich's powerful little tragedy, and she will be supported by William Courtleigh, Madame Cottrelly, Ernest Glendinning, and Forest Robinson.

When "Drake" has run its course at His Majesty's Theatre in London, Sir Herbert Tree will produce the First Part of "King Henry IV." In it, of course, he will resume the part of Falstaff, which he first played at the London Haymarket in 1906. It will be interesting to note how much his conception has matured in twenty years.

Art

With the fifth and sixth volumes, Mr. John Murray completes the authorized revision of Crowe and Cavalcaselle's "A History of Painting in Italy" (Scribner; $6 net, each). Dr. Tancred Borenius, who had shown his mettle in the three volumes on Northern Italy, has assumed editorial supervision over these last two volumes of the six on the Central Italian schools, and his work here is better than that of his predecessor—more succinct, judicious, and accurate. According to the plan of the edition, his part is limited to additional notes, sometimes corrections of the original text, more often additions from the literature of the fifty years which have elapsed since this classic work was first published. Where much correction is necessary, as, for example, in the lives of Signorelli and Perugino, the procedure forces upon the reader a bewilderment of adjustment of text to notes, but this was inevitable in the very nature of the enterprise. One could wish for some typographical device by which material corrections to such a standard text might be made in the margin or inset at the place to be corrected. Such a plan would save a reader's eyes and temper. However, one must, on any terms, be grateful to publisher and editor for this careful revision of a standard work. In general, Dr. Borenius has made a pretty clean sweep of all relevant material, but, like all European critics, he is insufficiently informed as to American collections. Within the field of these two volumes, New Haven would have furnished a very important Ridolfo Ghirlandaio and a good Pietà from the shop of Fra Bartolommeo; the Johnson collection, Philadelphia, no less than three Signorellis; the Metropolitan Museum, examples of Sano di Pietro, Bugiardini, Benvenuto da Siena, and Lorenzo di Credi. It is strange indeed that the editor of such a work should appear to be ignorant of the existence of the very necessary and authoritative *Bulletin* issued every month by the Metropolitan Museum, in which all important acquisitions are duly reproduced and discussed. The similar publications of the museums of Worcester, Chicago, and Boston might also have been consulted to advantage. These omissions are, after all, venial, and the volumes, attesting a sound and cautious scholarship, should long remain standard.

Volume V is devoted to "The Umbrian and Sienese Masters of the Fifteenth and Sixteenth Centuries." It begins with Pietro della Francesca and ends with the followers of Perugino. On the way such great estrays as Gentile da Fabriano come in. The whole Sienese-Umbrian field has been the object of constant investigation for fifteen years past. In no period was a thoroughgoing revision of the original "C & C" more necessary, and the editor has acquitted himself with credit of a task at once difficult and delicate. The final volume, which treats of the Florentine and Sienese painters who stand on the verge of the Classical Renaissance, for instance, Pietro di Cosimo, Granacci, Fra Bartolommeo, his partner, Albertinelli; Andrea del Sarto, Fungai, Pacchiarotto, Peruzzi, has required less overhauling whether as to fact or critical opinion. After fifty years, the estimates of Crowe and Cavalcaselle need very little shading or reversal. One can only regret that their great work stopped short of Michelangelo and of such very personal followers as Pontormo and Bronzino. There still seems to be room for a couple of supplementary volumes, which should carry the general history of Italian painting in Rome, Venice, Florence, Parma, and Bologna, at least to the death of Titian. Crowe and Cavalcaselle's "Raphael" and "Titian" fill this need only in part. Should the publishers venture to extend this classic work, they evidently would have in Dr. Borenius an entirely competent supplementer.

A good book to take to the farmhouse for guidance in experimenting is "The Craft of Home Made Rugs," by Amy Mali Hicks (McBride; $2). It is essentially a manual for amateurs, with practical suggestions for making floor covering and hangings from household left-overs and cast-offs. That the home-fashioned rug in skilful hands, animated by good taste and sense of design, may be a very artistic product, has been abundantly shown in the past fifteen years. The author gives an invaluable chapter on dyeing and good technical descriptions of the braided, scalloped, knitted, crocheted, hooked, needle-woven, and loom-woven types of rug. She is rather liberal in her attitude towards the re-use of machine-made fabrics, urging that "it is wise to work fundamentally and thoroughly, but if we cannot do so with absolute thoroughness we must do so as conscientiously and well as conditions will let us." One wishes that she had given a recipe for knotting the drawn rug. This can be done to great advantage of the wearing quality. While mentioning the rug-making industries at Cranberry Island and Chocorua it would have been just to give credit to Mr. and Mrs. Douglas Volk for the pioneer enterprise of the kind, that at Centre Lovell, Me. With possibly a few other minor defects of this character the book is, nevertheless, one of the most useful of its kind yet published.

Finance

THE TURN FOR THE BETTER.

A series of incidents, at the opening of this week, has pointed to decided improvement in the peculiar situation into which this country's financial and business enterprise had been thrown by the European war. These incidents comprise the announcement that our new banking system will be formally established in a fortnight; England's declaration that the sea is open for export, even to hostile countries, of non-contraband articles, such as cotton; largely increased purchases of materials here by Europe; disappearance on Saturday of the deficit in New York bank reserves; evidence that the bankers' coöperative plan to finance the portion of our cotton crop which the war might make unsalable was progressing satisfactorily.

To close observers of the markets, this turn for the better in the situation did not come unheralded. Inasmuch as the dilemma which has confronted this country since July has had primarily to do with the problem of international finance and trade, it was altogether logical that the foreign exchange market should give the first sign of what was going on. Exchange on London, in the week when Germany's declaration of war was plainly impending, rose to the extraordinary rate of $7 in the pound sterling. In a normal market, it cannot rise above 4.89½, because at that figure it is profitable to export gold and draw exchange against it. The $7 rate at the end of last July measured the frantic haste of financial Europe to draw at any price on its American credits, to strengthen a home position where the impending war seemed to threaten general bankruptcy. The war began; London relieved its own situation by a series of unprecedented financial expedients.

Yet it continued to draw heavily on New York, and exchange rates, even at the opening of this month, stood at the quite abnormal level of $5 in the pound. In the well-known language of Lombard Street, the exchanges were moving heavily against us; and the extent of that adverse movement seemed to measure the depth of our financial predicament. About a week ago, the rate began to fall. Three or four days ago, the movement in our favor became extremely rapid. On Monday, for the first time since the third week of July, exchange on London, at 4.89, reached a familiar and normal level.

So striking a reversal of position, in the market most sensitive to the present drift of affairs, suggests a review of the actual situation. Our particular difficulties, which developed during the second month of war, were four in number. We were cut off from access to the supplies of European capital which our markets habitually use; so much so, that even renewal of existing loans was doubtful. We were threatened, or believed ourselves to be, with prodigious realizing sales of the mass of American securities held in Europe, and, for that reason, dared not

reopen our Stock Exchange. Our export trade was heavily cut down, despite the large grain shipments, by the collapse of the European demand for certain of our staple products, notably cotton. Finally, our banks were doing business on a basis of emergency banknote issues and clearing-house loan certificates, and their cash reserves were almost as far below the legal ratio to deposits as they were in the panic weeks of 1907.

The problem how far our markets, and our industrial undertakings, as a result of the war's huge requisitions on European capital resources, will have to dispense with the usual assistance from that quarter, is still unsolved. It is not yet clear how much the absence of this European capital will affect our country's business situation. The facts, however, which stand forth without dispute, are that, despite a natural preliminary hesitation, we have maintained our credit by exporting gold in large amount to meet pressing liabilities in the foreign markets, and that meantime the United States, alone of the great financial nations, is proceeding with its own accumulation of capital, purely for use in peaceful industry.

Nor can the question be described as settled what the attitude of European holders of American securities would be, if a free market were to be opened here on which they could be sold. But the assumption that enormous liquidation would at once ensue is pure conjecture. Financial Europe is no longer in the state of panic which prevailed last August; the Government borrowings have not disturbed its markets; its banking houses are not confronted with insolvency, and at least a considerable motive must exist among them to keep a substantial part of their investment funds in a field where financial undertakings are in no respect directly jeopardized by war.

These are the more obscure considerations in the situation. In the export trade and the bank position, we have something more tangible to observe. Our excess of merchandise exports over imports in September was less by $31,000,000 than in 1913. But if our cotton exports had been only half as large as they were the year before, the total export excess would have been fully as great as in the previous September. Now, last month's weekly cotton exports by us to Europe averaged barely one-ninth of the 1913 figures, whereas the weekly average thus far in October has been nearly one-third of a year ago. This recovery cannot fail to be stimulated by the wider opening of European markets hitherto shut off, if not through the suggested taking of cotton by the London banking community as security for advance of capital from there.

As to the home banking situation, we have still to reckon with the mass of emergency banknote issues, the outstanding Clearing House loan certificates, the unsettled loans on Stock Exchange collateral, and the unusual burdens assumed in financing, first New York city's foreign debt, next the requirements for export gold, and finally the cotton trade's position. But we can also see that, in the face of all these handicaps, the New York banks have restored their surplus reserve, and that not only they, but the national banks of the country as a whole, now actually hold in their reserves more gold than they held a year ago.

BOOKS OF THE WEEK

FICTION.

Browne, A. C. The Prophet's Wife. Benziger Brothers. $1.25 net.

Behavior

AN INTRODUCTION TO COMPARATIVE PSYCHOLOGY

By JOHN B. WATSON, Professor in Johns Hopkins University.

xii+439 pp. 12mo. $1.75.

This volume, an elaboration of eight lectures given at Columbia University during the winter of 1913, is designed as a text-book to be used both independently and as supplementary to text-books on general psychology. It endeavors to give a systematic presentation of the behavior of selected and representative animal forms as bearing upon human psychology. It thus differs from the more recent publications on animal psychology, which have been either a detailed presentation of experimental results or reviews of a large mass of experimental data.

Henry Holt and Co. 34 W. 33d St. New York

WAR TALK

Is Unconvincing Unless Backed Up With Understanding

WHO IS RESPONSIBLE? Armageddon and After!

By CLOUDESLEY BRERETON. *Cloth. 16mo. 50c.*

A book by one of the educational leaders of England, which undertakes to show how Prussian tradition, starting with Frederick the Great, has succeeded in corrupting the Germany of to-day.

THE REAL "TRUTH ABOUT GERMANY"

From the English Point of View

By DOUGLAS SLADEN. With an appendix, Great Britain and the War, by A. Maurice Low. *Cloth. 12mo. $1.00.*

An analysis and refutation of a series of unfounded and incorrect statements contained in a monograph recently issued in Germany under the title of "Truth About Germany," with full text of the monograph.

THE SURVEY

NATIONAL JOURNAL OF SOCIAL SERVICE

Industrial Conditions — Civic Progress — Municipal Problems

THE SURVEY is a weekly magazine for all those who believe that legislation, city government, the care of the unfortunate, the education of children, the work of men and the homes of women must pass muster in their relation to the common welfare.

In the Industrial Department the work of the Federal Industrial Relation Commission is fully covered. Notable developments in the adjustment of relations between employer and employee, to secure for the workers safety, health and good wages, are reported.

The Department of Common Welfare is a weekly review of the latest achievements in the fields of civics, education, sanitation, housing, health, child labor, probation and other court work, and all movements of social progress.

THE SURVEY is first and always an open forum for free discussion. In its pages, particularly in the Communication Department, radical and conservative, idealist and cynic, meet on an equal footing and thrash out their differences.

The price of THE SURVEY is $3.00 a year, or we will send to any reader of THE NATION a six months' trial subscription for $1.00.

THE CHALLENGE OF FACTS AND OTHER ESSAYS

By the late William Graham Sumner, LL.D.
Professor of Political and Social Science, Yale University.

Edited with an introduction by Albert Galloway Keller, Ph.D.

The title essay of this volume is one of Professor Sumner's most powerful and characteristic utterances which is here published for the first time. Uniform with "War and Other Essays" and "Earth-Hunger and Other Essays."

8vo. Cloth binding. Gilt top. 450 pages. Price, $2.25 net, delivered.

MEMORIALS OF EMINENT YALE MEN

A Biographical study of Student Life and University Influences during the Eighteenth and Nineteenth Centuries.

By the REV. ANSON PHELPS STOKES
Secretary of Yale University.

"Here is a little library of the choicest kind of biographical literature, which not only the Yale brotherhood, but all the intelligent men and women of our country, may read with both profit and delight."—*The Hartford Courant.*

Library edition. Royal 4to. Cloth binding. Gilt top. 2 volumes. Vol. I, 368 pages; Vol. II, 439 pages. Index. Boxed, per set, $10.00 net. Limited edition on English hand-made paper. With reproductions of rare early prints of Yale College. Boxed, per set, $25.00 net, delivered.

CICERO OF ARPINUM

By E. G. SIHLER, Ph.D.
Professor of the Latin Language and Literature in New York University.

This important volume is designed to be a full and comprehensive biography of M. Tullius Cicero. It is the result of years of study, of patient research, and of ripe scholarship by a classical historian of note both in this country and abroad.

8vo. Cloth binding. 487 pages. Bibliography. Index. Price, $2.50 net, delivered.

SCIENCE AND RELIGION: The Rational and the Superrational

By Professor CASSIUS J. KEYSER, Adrian Professor of Mathematics at Columbia University.

"Particularly is this little book worthy the attention of every man and woman at all interested in the relationship between religion and science. . . . We hope that thousands will read this splendid book."—*The Labor World.*

12mo. Cloth binding. Gilt top. 80 pages. Price, 75 cents net.

THE FALCONER OF GOD AND OTHER POEMS

By WILLIAM ROSE BENÉT

Popular approval of a poet of the present day follows not upon court favor, but upon the slower—but probably better-founded—praise of critics and fellow poets. Mr. Benét's work has received the encouragement of a number of those best able to judge his merits, among them William Stanley Braithwaite, Joyce Kilmer, Louis Untermeyer, Henry L. Mencken, Edward C. Wheeler, Alfred Noyes, and Nicholas Vachel Lindsay.

12mo. Cloth binding, 122 pages. Price, $1.00 net. Limp lea. binding, $1.50 net, delivered.

WILD LIFE CONSERVATION IN THEORY AND PRACTICE

By WILLIAM T. HORNADAY, Sc.D.
Director of the New York Zoölogical Park.

This book contains the story back of Dr. Hornaday's other books, such as "Camp-Fires in the Canadian Rockies." Like all his work, literary or executive, it illustrates his profound knowledge of animals and his warm love for them—an affection which, without wasting itself in sentimentality, has spurred him to an active campaign for the preservation of birds and beasts. An interesting feature of the book is a chapter on private game preserves, by Frederic C. Walcott, owner of a successful reserve in Norfolk, Conn.

12mo. Cloth binding. 230 pages. 14 illustrations. Index and bibliography. Price, $1.50 net, delivered.

ESSAYS ON MILTON

By ELBERT N. S. THOMPSON, Ph.D.
Assistant Professor of English at the State University of Iowa.

Each essay in itself treats some single phase of Milton's poetry or prose—his claim, for example, to the title "the last of the Elizabethans." But, taken together, the essays trace the steady growth of Milton's literary life to its full fruition in "Paradise Lost" and show in all his efforts the same intellectual and moral forces.

12mo. Cloth binding. 217 pages. Index. Price, $1.35 net, delivered.

CONCERNING JUSTICE. By LUCILIUS A. EMERY

"This is a very able little treatise dealing with justice in its relation to positive law, both constitutional and legislative, and its application to human rights as administered by the courts. Though classic and profound, it is so devoid of technical terms that laymen as well as members of the legal profession will derive pleasure and profit from following the author's clear statements and cogent reasoning."—*Kennebec Journal.* *12mo. Cloth binding. 150 pages. Price, $1.35 net, delivered.*

NATHAN HALE, 1776 BIOGRAPHIES AND MEMORIALS

(REVISED AND ENLARGED EDITION)

By HENRY P. JOHNSTON
Professor of History at the College of the City of New York.

One of the most attractive heroes of our Revolution is here drawn by one who is held an authority on that period of history and who has further especially interested himself in the career of Nathan Hale for many years.

8vo. Boards. 265 pages. 4 illustrations, Index and Appendix. Price, $2.35 net, delivered.

THE EAST I KNOW

By PAUL CLAUDEL
Translated into English by Teresa Frances and William Rose Benet.

Paul Claudel was for many years in the French Government Service in Cochin China. "The East I Know" is a translation into English of his "La Connaissance de l'Est." It is a series of word pictures of life in the Far East written by a poet whose individuality and originality are bound to make a profound impression on American as they have already done on Continental readers. The translators have captured with complete success the author's exquisitely delicate feeling for words which give the color and soul of the East with poetic modulation yet unmistakable truthfulness.

8vo. Board binding. 199 pages. Price, $1.50 net postpaid.

SOME TEXTUAL DIFFICULTIES IN SHAKESPEARE

By CHARLES D. STEWART
(Published under the Auspices of the Elizabethan Club.)

The work is planned to clear up the famous cruxes which have remained unsolved in Shakespeare's plays. Light is shed on forty of the most perplexing passages, beginning with the notorious "Runaway's Eyes" in "Romeo and Juliet."

Mr. Stewart's work is alike scholarly, literary, and interesting. It will be a boon to Shakespeare scholars and a fascinating study to those who read and are familiar with Shakespeare's plays.

12mo. Cloth binding. 230 pages. Index. Price, $1.35 net, delivered.

VOL. XCIX.—NO. 2575 THURSDAY, NOVEMBER 5, 191[illegible] Reg. U. S. Pat. Office. PRICE TEN CENTS

Important New Macmillan Books

Mr. Rabindranath Tagore's New Book

THE KING OF THE DARK CHAMBER

By RABINDRANATH TAGORE, Nobel Prizeman, 1913, Author of "Gitanjali," "The Post Office," "Chitra," etc.

The most careless reader can hardly proceed far into these inspired pages without realizing that he is in the presence of holy things—of *an allegory of the soul such as has not before been told in the English tongue.* . . . All his treasures will not be revealed to the reader at first glance. . . . Happy will be those readers whom the King of these pages does not elude. If they read the book and cannot find the King, let us assure them that the trouble is with their own discernment; for the King is really there, and Mr. Tagore is telling us the truth about him. **$1.25**

Mr. John Masefield's New Volume of Poems

PHILIP THE KING, AND OTHER POEMS

By JOHN MASEFIELD, Author of "The Tragedy of Pompey," "The Everlasting Mercy," "The Daffodil Fields," etc.

"Mr. Masefield's new poetical drama is a piece of work such as only the author of 'Nan' and 'The Tragedy of Pompey' could have written, tense in situation and impressive in its poetry. . . . In addition to this important play, the volume contains some new and powerful narrative poems of the sea—the men who live on it and their ships. There are also some shorter lyrics as well as an impressive poem on the present war in Europe which expresses, perhaps, better than anything yet written, the true spirit of England in the present struggle." **$1.25**

Mr. James Stephens's New Novel

THE DEMI-GODS

By JAMES STEPHENS, Author of "The Crock of Gold," "Here Are Ladies," etc.

"To define this new story by Mr. James Stephens is not easy. . . . Without question it is a remarkable book, written with all the power of delineation, the delicate humor and keen insight into human nature that distinguished Mr. Stephens's previous works—'The Crock of Gold' and 'Here Are Ladies.' . . . The surprising incidents that occur, and the interesting characters that are met . . . are described in a most fascinating manner. . . . The reader will not willingly put down the book till he reaches the end." **$1.35**

Mr. H. G. Wells's New Novel

THE WIFE OF SIR ISAAC HARMAN

By H. G. WELLS, Author of "Tono-Bungay," "The Passionate Friends," etc.

"Mr. Wells is supremely the modern novelist. . . . He is not merely abreast of the times. . . . He has repeatedly shown himself uncannily able to keep in advance of the crest of the wave. He is a writer of brilliant parts. . . . His latest novel is filled with wisdom and scintillates with wit. Sir Isaac as a man has in him the red blood of a vital character in fiction." **$1.50**

Mr. Algernon Blackwood's New Novel

INCREDIBLE ADVENTURES

By ALGERNON BLACKWOOD, Author of "Jimbo," "Pan's Garden," etc.

"Algernon Blackwood is one of the strong personalities among the younger writers of the day—a man who ranks with James Stephens and Masefield for sheer originality of genius. He is master of a style of great beauty, admirably adapted to the needs of his wholly individual purpose. 'Incredible Adventures' is a book such as no other man could conceivably have written—a book for those who wish to escape from the beaten path of commonplace fiction of the day." **$1.35**

Mr. E. V. Lucas's New Novel LANDMARKS

By E. V. LUCAS, Author of "Mr. Ingleside," "Over Bemerton's," etc.

"When one recalls 'Over Bemerton's,' 'London Lavender' and 'Mr. Ingleside,' one immediately thinks of the host of charming personalities that figure in these stories and of the delightful incidents in which they play, all colored by Mr. Lucas's humor and originality. . . . In 'Landmarks' is all that one expects from a Lucas volume, while in addition it has the special interest of an unusual construction. . . . Episodes of every kind—serious, humorous, tender, awakening, disillusioning—are narrated, each one beginning as abruptly as in life. In none of his previous work has he been so minute in his social observation. It is reported that it was while watching a moving picture that Mr. Lucas had the idea of adapting its swift selective methods to fiction." **$1.35**

Mr. Herbert Croly's New Book

PROGRESSIVE DEMOCRACY

By HERBERT CROLY, Author of "The Promise of American Life," etc.

"One of the most significant books in the past decade was Herbert Croly's 'The Promise of American Life,' and the importance of the conclusions at which Mr. Croly arrives in that work lends special interest to his new volume, 'Progressive Democracy.' . . . It traces the changes that have taken place in democracy up to the present time, and while a keen and thoughtful discussion of modern tendencies, is also a lucid forecast of future desirabilities." **$2.00**

Appleton's Newest Books

New Fiction

ANNE FEVERSHAM
By J. C. SNAITH, *Author of "Broke of Covenden."*

Piqued by her punishment for sauciness, Anne Feversham elopes with Heriot, who is falsely accused of a graver crime against his Queen. Disguised, they join a troupe of players, but they are discovered and brought before the Queen for trial. Exciting events follow, and things look grave for the culprits. The climax, however, is both original and charming. The author has drawn a splendid picture of the Elizabethan period. $1.35 *net.*

ACHIEVEMENT
By E. TEMPLE THURSTON, *Author of "Richard Furlong."*

The story of an artist whose character develops under the influence of different women. His trials, temptations, ideals and triumphs are described, showing that each man as he works is subject to feminine influence, whether he works for a woman or in despite of her. A true picture of studio life in London, and peopled with real men and women worth knowing. $1.35 *net.*

THE HIDDEN CHILDREN
By ROBERT W. CHAMBERS, *Author of "The Reckoning."*

A glorious romance of the American Revolution, with the scenes laid in upper New York State. The author has more than kept his promise to continue his splendid series of historical novels in this, the best story he has written.

"Altogether this is a capital story of adventure."—*New York Evening Post.*

Illustrated by A. I. Keller. $1.40 *net.*

SELINA
By GEORGE MADDEN MARTIN, *Author of "Emmy Lou."*

Business life with its many problems looms dark for this little heroine, but her sturdy determination to succeed no matter what happens not only helps to solve her own problems, but those of many other young girls who are entering business for the first time. The book is full of amusing episodes and is treated in the same wholesome and witty manner which made "Emmy Lou" so delightful. *Attractively illustrated with many pen-and-ink sketches by Herbert D. Williams.* $1.30 *net.*

KENT KNOWLES—Quahaug
By JOSEPH C. LINCOLN, *Author of "Cap'n Dan's Daughter."*

This is the quaintest and most romantic of all Mr. Lincoln's novels. Readers of Mr. Lincoln's Cape Cod stories will find a real delight in this new volume in which the author sends two of his most interesting characters to England because the Doctor orders it for one. A genuine love story develops and in the telling of it Mr. Lincoln gives us new evidence of his versatility in presenting a romance of great vigor, his most ambitious work. *Illustrated by J. N. Marchand.* $1.35 *net.*

AMERICANS AND THE BRITONS
By FREDERICK C. DE SUMICHRAST.

A timely book discussing the differences between American and British social order: The American Woman; Education; Foreign Relations, and many other important subjects of interest to all English speaking people. The author is a strong believer in Democracy, though he sees many faults in it, and these he discusses frankly, with a hopeful outlook for the future. *Cloth.* $1.75 *net.*

INSURGENT MEXICO
By JOHN REED.

This is the true story of the Mexico of today, showing the peon in war and in peace; intimately portraying the character of this little understood people and their leaders; describing many of the scenes along the march of Villa's victorious army, and offering to the reader the only up-to-date and accurate account of the Mexican situation available. $1.50 *net.*

THE DAWN OF CHRISTIANITY
By ALFRED W. MARTIN, *Author of "The Life of Jesus."*

An account of the various forces that helped to advance Christianity from its narrow provincial environment to the place of one of the great religions of the world. *Cloth.* $1.25 *net.*

RURAL CREDITS
By HON. MYRON T. HERRICK, *formerly Ambassador to France.*

The author's exhaustive study of credit conditions among farmers is the basis of this work, which discusses rural credit from every angle. *12mo* $2.00 *net.*

RETAIL SELLING AND STORE MANAGEMENT
By PAUL NEYSTROM.

A valuable work for the retail store manager, or salesperson, taking up in detail the problems of the retail store and the various activities with which salespeople are closely connected. *12mo.* $1.50 *net.*

RAILROAD ACCOUNTS AND ACCOUNTING
By WILLIAM E. HOOPER.

This book analyzes the ends which accounting attempts to accomplish according to the comprehensive system of uniform accounting which has been formulated by the Interstate Commerce Commission after five years of serious investigation. *In preparation.* $2.00 *net.*

MONEY, CREDIT AND BANKING
By JOHN THOM HOLDSWORTH.

Covering the origin and development of banking in the United States from 1792 to the present day. The new currency legislation and its effect on banking and credit systems is also discussed. *In preparation.* $2.00 *net.*

FUNDAMENTALS OF PLANT BREEDING
By JOHN M. COULTER, *Head of the Department of Botany, University of Chicago.*

A popular work written to show how new and desirable plants are developed. It gives the latest information on plant breeding, making it invaluable to farmers, florists, gardeners, teachers, and every one concerned in raising plants of any kind. *Illustrated.* $1.50 *net.*

War Books

THE WAR IN EUROPE
By ALBERT BUSHNELL HART, *Professor of the Science of Government, Harvard University.*

Dr. Hart carefully analyzes the race hatreds, national rivalries and other causes which brought about the war, the psychology of the war, the questions of neutrality, the methods of modern warfare, the probable outcome, and the effect upon the United States. A fair and impartial book from the American point of view. *Cloth.* $1.00 *net.*

THE WAR AND AMERICA
By HUGO MÜNSTERBERG, *Professor of Psychology, Harvard University.*

In this authoritative work on the great European War, the noted author, who is at home alike in Europe and America, shows one side of the war, its real motives and issues and their important meaning for our country. There are specially interesting chapters on the Kaiser and the German point of view. *Cloth.* $1.00 *net.*

ALBANIA
By WADHAM PEACOCK.

In his new and timely book Mr. Wadham Peacock tells of the different races inhabiting the country now known as Albania, shows the causes of their antagonisms, tells the history of the country and gives an opinion of its future. It is an informing, authentic volume on a little known country which is really the key to the whole European situation. All who would keep posted on current events will find this volume on the Balkan situation invaluable.

Illustrated, 8vo. $2.50 *net.*

FRANCIS JOSEPH AND HIS TIMES
By SIR HORACE RUMBOLD, *for twenty-five years British Ambassador to Austria.*

The best biography of the aged Austrian ruler which has been written. It is in fact more than a biography, it is a political history of Austria for the last seventy-five years. A very timely and important work by a famous diplomat. *Illustrated,* $4.00 *net.*

THE RACES OF EUROPE
By W. Z. RIPLEY, *Professor of Political Economy at Harvard.*

This is the standard sociological work on the European peoples, showing in minute detail the different characteristics of the Teutonic, Alpine, Mediterranean, Slavic and other races and explaining their social and racial problems. Any one who wishes to get at the bottom of the present situation should read this book. *Over 235 Pictures and 85 Maps.* $5.00 *net.*

Postage is extra on all net books

By GEORGE C. THOMAS, Jr. Elaborately illustrated with 96 perfect reproductions in full-color of all varieties of roses, and a few halftone plates. Octavo, handsome cloth binding. $4.00 net. Postage extra.

The rose-lover and the rose-grower should be keenly interested in this beautiful and comprehensive book on roses. The exquisite illustrations and general attractiveness of the volume make it a practical gift book for any one interested in flower culture. As a text-book for the amateur gardener, it will at once take a permanent place, both for its practical arrangement and adaptation to ready reference, and for the explicit and authoritative instructions given covering every phase of the subject.

THE PRACTICAL BOOK OF PERIOD FURNITURE

Treating of Furniture of the English, American Colonial and Post Colonial and Principal French Periods.

By HAROLD DONALDSON EBERLEIN and ABBOT MCCLURE. With about 250 illustrations in color, doubletone and line. Octavo. Handsomely decorated cloth. In a box. $5.00 net. Postage extra.

A practical book for those who wish to know and buy period furniture. It contains all that is necessary to know about the subject under one cover. By means of an illustrated chronological key (something entirely new) one is enabled to identify the period to which any piece of furniture belongs. In the text, the details of shape, material, ornament, etc., are all explained most systematically and in a manner suited for ready reference.

OUR PHILADELPHIA

By ELIZABETH ROBINS PENNELL. Illustrated by JOSEPH PENNELL. (Regular Edition.) 105 illustrations from lithographs. Quarto. In a box. $7.50 net. (Autographed Edition.) Signed by both author and artist, with ten additional lithographs. Special buckram binding in a box. $18.00 net. Carriage charges extra. (This edition limited to advance subscribers.)

An intimate personal record in text and in picture of the lives of the famous author and artist in the city whose recent story will be to many an absolute surprise—a city with a brilliant history, great beauty, immense wealth. Mr. Pennell's one hundred and five illustrations, made especially for this volume, will be a revelation in their interest and as art inspired by the love of his native town—the greatest he has yet accomplished.

COLONIAL MANSIONS OF MARYLAND AND DELAWARE

By JOHN MARTIN HAMMOND. Limited edition, printed from type, which has been distributed. With 65 illustrations. Octavo. In a box. $5.00 net. Postage extra.

This volume is uniform in style and price with others in the Limited Edition Series—"Colonial Homes of Philadelphia and Its Neighborhood," "Manors of Virginia in Colonial Times," and "Historic Homes of New Jersey"—all of which are now out of print and at a premium.

OXFORD

By ANDREW LANG. Illustrated in color by George F. Carline, R.B.A. Crown quarto. Cloth. $3.00 net. Edition de Luxe, limited to 350 copies. $6.00 net.

LONDON

By SIR LAURENCE L. GOMME, F.S.A. With many unique illustrations and plates specially reproduced by photogravure. Octavo, $2.00 net.

THE MYSTERY OF THE ORIENTAL RUG

Including the Prayer Rug and Advice to Buyers.

By Dr. G. GRIFFIN LEWIS, author of "The Practical Book of Oriental Rugs." Frontispiece in color and 30 full-page plates. Octavo. Cloth. $1.50 net. Postage extra.

This charming volume supplies the want of a thoroughly interesting, moderately priced book on the Oriental Rug, full of pictures, mostly showing what beautiful rugs can be bought at the shops to-day at a price within the reach of any average householder. The book is compact with information and no one should buy rugs without its aid.

UNUSUAL WORKS OF TRAVEL.

A WOMAN IN CHINA

By MARY GAUNT. Fully illustrated. Octavo. Cloth. $3.75 net.

The author of "Alone in West Africa," which was probably the most successful travel book of 1912, has here written a book of thrilling interest. Unknown China lives in her pages of vivid description.

THE NIGHT SIDE OF JAPAN

By T. FUJIMOTO. Fully illustrated. 8vo. $2.50 net.

A CAMERA ACTRESS IN AFRICAN WILDS

By M. GEHRTS. With 40 illustrations and a map. 8vo. $3.00 net.

A NATURALIST IN MADAGASCAR

By JAMES SIBREE. With 40 illustrations and 3 maps. $3.50 net.

ESSAYS POLITICAL AND HISTORICAL

By CHARLEMAGNE TOWER, LL.D. Former Minister of the United States to Austria-Hungary. Ambassador to Russia and to Germany. 12mo. Cloth, gilt top. $1.50 net. Postage extra.

Essays upon vital subjects by one of our greatest figures in the diplomatic world will demand instant attention. Mr. Tower knows whereof he speaks when he treats such subjects as "The European Attitude Towards the Monroe Doctrine," "The Treaty Obligation of the United States Relating to the Panama Canal," and "Some Modern Developments of International Law." The book will be widely read for its important revelations in the light of the present disturbed conditions.

THE TRUE ULYSSES S. GRANT

By GENERAL CHARLES KING. 24 illustrations. Octavo. Buckram. $2.00 net. Half levant. $5.00 net. Postage extra.

This new volume in the True Biography and History Series is the work of a writer peculiarly fitted to deal with Grant. Not only Grant, the general, but Grant, the man, and Grant, the president, are treated with the same regard for truth that characterizes all the volumes in the series.

SHAKSPERE AND SIR WALTER RALEGH

By HENRY PEMBERTON, Jr., M.A. Including also several essays previously published in the New Shakespeareana. Illustrated. $1.50 net. Postage extra.

All those who are in any wise interested in the greatest problem in English literature, *i. e.*, the Shakespearean authorship, must neeessarily consult this book, which presents the picturesque and tragic figure of Sir Walter Raleigh as the true author.

HEROES AND HEROINES OF FICTION

Modern Prose and Poetry

By WILLIAM S. WALSH. Crown 8vo. Half Morocco. $3.00 net. Postage extra.

Mr. Walsh has compiled the famous characters and famous names in modern novels, romances, poems, and dramas. These are classified, analyzed and criticised and supplemented with citations from the best authorities. A valuable, interesting reference book, for the journalist who must make an apt allusion, for the teacher who must answer multitudinous questions, for the librarian who must place characters, and above all for the general reader who enjoys coming face to face with the old friends of rhyme and story.

THE AMERICAN BEAVER

By A. RADCLYFFE DUGMORE. With 92 photographs from life, and drawings by the author, and 11 diagrams. Octavo. Cloth, $2.50 net.

Mr. Dugmore's "Wild Life and the Camera" and "The Romance of the Newfoundland Caribou" have both received the Certificate of High Commendation from the "Camp Fire Club of America." Few people possibly realize that the American Beaver is one of our most interesting native animals. Mr. Dugmore tells everything worth knowing about them, and this new work will delight all who have the good fortune to read it.

TWO CHARMING GIFT BOOKS.

BETTY'S VIRGINIA CHRISTMAS

By MOLLY ELLIOT SEAWELL. Illustrated in color, with page decorations, artistic cloth binding. $1.50 net. Postage extra.

A captivating picture of Southern life of ante-bellum days. Betty wins the reader on the first page and holds him to the last, while the story has the true Christmas spirit of dancing, merry-making, song and sport.

OUR SENTIMENTAL GARDEN

By AGNES and EGERTON CASTLE. Illustrated in color by Charles Robinson, who has also designed the head and tail pieces and decorative lining papers. Crown Octavo. Cloth. $1.75 net. Postage extra.

This book is a sheer delight, filled with the whims and fancies of garden-lovers. The authors have caught the note of family life in a picturesque old English dwelling, where grown-ups and children live largely out of doors, and where birds and animals and bees and flowers become of a most human comradeship.

A NOVEL OF UNUSUAL DISTINCTION.

THE THREE FURLONGERS

By SHEILA KAYE-SMITH. Frontispiece. $1.25 net. Postage extra.

"Her story is written with such sincerity of feeling and appreciation of moral beauty and contains so much human truth that the author deserves warm commendation. An achievement worth while."
—*New York Times.*

PUBLISHERS **J. B. LIPPINCOTT COMPANY** PHILADELPHIA

The Nation.

NEW YORK, THURSDAY, NOVEMBER 5, 1914.

Summary of the News

Returns of the elections held on Tuesday show a large decrease in the Democratic majority in the House. The full returns are not in as we write, but the figures indicated are: Democrats, 223; Republicans, 199; Progressives, 11; Socialist, 1; Prohibitionist, 1. The Democratic majority, which in the present House is 163, will thus be reduced to 11, and possibly, when the returns are complete, to less. In the representation in the Senate there is virtually no change. In New York, Connecticut, and Pennsylvania there were Republican landslides. In New York, District Attorney Charles S. Whitman (Republican) was elected Governor by a plurality estimated at 133,000 over Gov. Martin H. Glynn (Democrat). The deposed Governor, William Sulzer, ran third, polling more than twice the votes cast for the Progressive candidate, Frederick M. Davenport. James W. Wadsworth, jr. (Republican) was elected to the Senate by a plurality of 80,000 over James W. Gerard (Democrat).

The long-postponed decision of Turkey as to her attitude in the war was apparently taken on October 29, when Turkish torpedo-boat destroyers entered the harbor of Odessa on the Black Sea and sank a Russian gunboat. Sebastopol has also been bombarded by the Turkish fleet, assisted by the German cruisers Goeben and Breslau, and reports on Monday stated that Turkish troops, which had long been concentrated on the frontier, had crossed into Egyptian territory.

All this would appear to the simple understanding indistinguishable from a state of war; but the situation, as we write, is far more complicated and peculiar, though not uncharacteristic of Ottoman methods of diplomacy. On Friday of last week an ultimatum was sent to Turkey by the Allies demanding explanations of and reparation for the activities of the Turkish navy, and also disarmament of the two German cruisers and the dismissal of their crews. In reply to this ultimatum the Turkish Grand Vizier appears to have tendered his profound regrets for what has occurred, without, however, suggesting any reparation or alluding to the question of disarmament. Meanwhile, diplomatic relations between the Porte and the Allied countries have been severed, and we may accept Turkey's entry into the war on the side of Germany as an accomplished fact.

The interest of Ottoman intervention lies mainly, as we point out elsewhere, in the effect that it will have upon the position of the other Balkan states and of Italy. It may be taken as probable that Greece will join the Allies. Apart from her historic sympathies with France and England, her material interests, the retention of the Ægean Islands and of Salonica, make it imperative for her to throw whatever resources she has in the scale against the possible victory of Turkey. The position that will be taken up by Bulgaria and Rumania is not so clear. A dispatch to the London *Times*, dated November 1, which professes to be well informed, has already announced the neutrality of the former country. There have been constant rumors of a secret understanding between Bulgaria and Turkey, but even if Bulgaria entered the war against the Allies, and the German cause should prove victorious, it seems not improbable that she might find herself, at the final settlement, so far as any territorial expansion was concerned, ground between the upper and the nether millstones of Austria and Turkey. On the other hand, there is her natural hostility to Servia and Greece, the legacy of the last Balkan war, and her resentment against Russia to disincline her to an alliance with those countries. It is possible, therefore, that in the preservation of neutrality Bulgaria may find the solution of her difficulties. Meanwhile, she is prepared for eventualities, and the mobilization of her second-line troops is reported.

Public sentiment in Rumania has been described as strongly in favor of the Allies, and it is hard to conceive of any presentation of the Turco-German case that should change it, or of the Rumanian Government making a decision that would involve the country in war on the unpopular side. So long, therefore, as Bulgaria shall remain neutral there would appear to be no pressing reason why Rumania should enter the war. The case of Italy is different. As a result of the success of the Teutonic Alliance and Turkey she would be threatened on all sides, in her hard-won colonial possessions of Africa by a recreated Ottoman Empire, in the Adriatic by a powerful Austria-Hungary. The importance which Italy attaches to her interests in Albania was emphasized only last week when she occupied the Island of Saseno, commanding the port of Avlona. It is certainly not mere coincidence that almost simultaneously with the entry of Turkey into the war, the Cabinet of Signor Salandra should have resigned, and the balance of probability is well reflected in the insurance rate of eighty guineas per cent. offered by Lloyds against a declaration of war by Italy on one of the great Powers before the end of November. As we write, the Cabinet has not been reconstituted, but there appears to be a movement on foot for the formation of a coalition government, made up of strong men from all parties.

In consequence of a peculiar and none too creditable agitation in a section of the press, Admiral Prince Louis of Battenberg on Thursday of last week resigned his position as First Sea Lord of the British Admiralty. Prince Louis of Battenberg has been a British subject for forty-six years and has served the navy with faithfulness and distinction, owing the high position to which he had attained not to his royal connections, but to his own distinguished merits. He was, however, born in Austria, and on this ground the yellower section of the British press has clamored for his removal. He is succeeded by Lord Fisher, who is regarded as, more than any other man, responsible for the fleet as it is to-day and who thus returns to the post which he held from 1904 to 1910.

The rebellion in South Africa headed by Gen. Beyers and Gen. De Wet has not apparently assumed serious proportions. The Government appears to have taken vigorous action and to have received the support of the overwhelming majority of the Dutch population. Dispatches from South Africa on the subject are somewhat obscure, but the forces of Maritz and of Beyers seem to have been decisively defeated and broken up, and a dispatch to the London *Daily Mail* on Monday stated that an armistice of five days had been arranged with De Wet "presumably in order to arrange peace."

Rehearing on the application of Eastern railways for a general increase in the freight rate was concluded before the Interstate Commerce Commission on October 30. The Commission was expected to consider the case this week, and an early decision was looked for.

Criminal indictments were returned on Monday against twenty-one directors and ex-directors of the New York, New Haven & Hartford Railroad. Those indicted are charged under Section 2 of the Sherman Anti-Trust law with "having combined and conspired together with numerous other persons to monopolize commerce consisting in the transportation business."

As a result of consultations between Sir George Paish, on behalf of the British Government, and representatives of the United States, it is understood that a plan has been agreed upon, subject to the approval of the British Government, which will provide a solution of the question of foreign exchange. It is thought that Great Britain will not demand an immediate payment of current and accruing obligations of American business firms, but will provide for acceptances of sixty or ninety days, in which interval the balance of trade may turn in favor of the United States, thus obviating to a considerable extent the shipment of gold abroad.

Another of New York's periodic prison scandals has come to light with the investigation ordered by Gov. Glynn into the administration of Sing Sing by Warden Thomas J. McCormick, who has been suspended. Evidence has tended to show that unusual privileges have been granted to David A. Sullivan, a convict who is serving a term for assisting to wreck a bank in Brooklyn. Sullivan, it is stated, has been allowed to roam about the countryside in an automobile with the warden and has even been permitted to enjoy the night life of Broadway. Mr. McCormick, it may be added, before his elevation to the wardenship of Sing Sing was a plumber, and doubtless an excellent one. The connection, however, between skill in plumbing and the extremely difficult and delicate task of administering a prison is somewhat obscure, save to the seeing eye of the politician.

The deaths of the week include: Dr. Robert Lilley, October 29; Brig.-Gen. John Simpson, October 30; Lieut.-Gen. Adna R. Chaffee, John P. Lyman, Peter S. G. Mackenzie, November 1.

The Week

The outstanding fact about the result of the election in the country at large is that our national psychology has not changed. How far it might be possible that the profound impression made upon the nation by the character and ability of President Wilson would save his party from the experience which has invariably attended every party in a similar situation could not be known until the vote was taken; but it was, of course, inevitable that the Democrats would lose a very large part of the lead they had won two years ago. It turns out that their majority in the House has been completely, or almost completely, wiped out, and that in a number of the most important States of the Union they have suffered decisive defeats. This is what has always happened to the party in power when the country has suffered seriously from business depression; and in this instance there entered another factor of very great importance, the return to the Republican ranks of almost the whole body of Progressives which had deserted them in the extraordinary flare-up of 1912. That the party should have come so near holding its own as it has is evidence of soundness and strength, and gives sufficient ground for it to face the national contest of 1916 with courage and self-confidence. What the alignment of parties in that contest will be, it is too early to forecast; and, so far as one vital element in the Democratic victory of 1912 is concerned—the presence of a Progressive ticket in the field—the party will have to reckon on this playing an insignificant rôle. On the other hand, the country may by that time be in the full swing of prosperity, and the Opposition be thus deprived of its biggest card.

Even Mr. Roosevelt's opponents must have a kindly feeling towards him these days. With ex-President Taft, they are quite "reconciled" to what happened to him on Tuesday. Yet they have one justifiable complaint left. He refuses to make any comment on the elections. But how, if he keeps silent, are we to know what they signify? We have come to depend upon him to explain everything that occurs. Upon only one subject does he decline to enlighten his fellow-countrymen, and that is his own defeat. "Not a word." And this from a man who has endless words on every other conceivable topic! On that, he leaves unguided citizens to form their own opinion. Of course, they will make sad mistakes, without his aid to right understanding, but as at present advised, and trusting only to their own feeble lights—and the election returns—they will conclude that Theodore Roosevelt received a terrible blow on Tuesday. All his exertions in the campaign were futile, and every prediction of his fell to the earth. As a political leader, his fortunes are at their lowest ebb. Subject to correction from Oyster Bay, this is what the whole country is saying.

Hope of an eleventh hour—or rather a thirteenth hour—prevention of the inclusion of Turkey in the array of warring states has all along been of the faintest. Mere apology could not, of course, have been accepted as wiping out the acts of war, on a considerable scale, for which Turkey had, whether deliberately and of set purpose or not, made herself responsible; and, on the other hand, the demands made by France and England, requiring the dismissal of the German officers of the Goeben and the Breslau, and the internment of those warships for the remainder of the war, were such as it was hardly possible to expect Turkey to accede to. To say that the Ottoman Government has been between the devil and the deep sea in all this is to put the case too favorably for its unfortunate position. Whatever it might itself desire, supposing that were as clear as noonday, it could not act upon without an overshadowing sense of its weakness in relation to either of the two mighty leagues that are contending for the mastery in Europe. But, so far from its own purpose or desire being clear, it is suffering from internal division that reduces it to a condition bordering on paralysis. Turkey seems to have drifted half-unconsciously into the war, but it is no longer possible that she will be able to extricate herself from it, and it does not seem likely that she will be equal to playing a part of real significance in its development.

Throwing the bars across an ocean gateway of something like three hundred miles—that is what Great Britain's determination to close the North Sea amounts to. After to-day the northern entrance into the North Sea, from Iceland south through the Faroe Islands and the Hebrides, will be lined with a chain of British mines. Neutral commerce for northern Europe must pass in through the Straits of Dover and make its way through a lane of British warships to the vicinity of Holy Island, off the Northumberland coast near the Scottish border, whence the route—"if possible"—will be northeast to Cape Lindesnaes, the southernmost point of the Scandinavian peninsula. This step, according to the British Admiralty, has been forced by the planting of German mines off the north coast of Ireland, evidently from neutral ships. But if mines can be planted from neutral ships, it is plain that even the route designated by the Admiralty along the east coast of Great Britain must be carefully watched. So that actually neutral commerce will henceforth be passing through a gantlet of British ships sharply on the lookout for such desultory mischief as the dropping of an isolated mine or two. The patrol duty now exercised by the British navy will grow closer than ever. But, on the other hand, the navy will be largely released from patrolling the three hundred miles of sea from the Scotch coast to the Scandinavian peninsula, since the chain of mines from the Hebrides to Iceland will serve just as effectually to keep German ships from making a dash into the open.

In deciding to bar the way into and out of the North Sea except by the Straits of Dover, the British Admiralty has probably foreseen that dissatisfaction will be aroused among the smaller neutral nations of North Europe, notably Norway and Denmark, whose fishing interests seem bound to suffer. If the whole of the North Sea becomes a military area, a menace to peaceful navigation except along well-defined lanes, the difficulties under which the fishing industries of the Scandinavian countries have been carried on will increase enormously. A very large part of Norway's fisheries, the total value of which is probably twenty million dollars a year, is carried on off the coast of Iceland. This, apparently, must suffer. A second ground of irritation will come with the closer supervision that will be exercised over neutral commerce. Great Britain has been looking askance at Norwegian trade, which, it suspects, is largely a shipping trade for the benefit of Germany. Now that neutral ships must all pass through the British cordon in the Straits of Dover and the Channel, there will undoubtedly be exercised a closer right of search, with consequent discontent in the countries affected.

The growing spirit of bitterness between Germans and British which is to be one of the saddest heritages of the world war is illustrated by the resignation of Prince Louis of Battenberg from the British Admiralty, because of his German birth and ancestry. That the Government should permit so able an officer and so unusual a personality to retire under fire can only be ex-

plained on the ground that it has found itself so shaken by the press campaign against Mr. Churchill, and the public impatience with Jellicoe's correct policy of watchful waiting on the North Sea, as to make necessary some compromise. The cruellest rumors have been afloat about Prince Louis; it has been openly said in London that he was a prisoner in the Tower at the moment when he was working day and night at the Admiralty, and his nephews were offering their lives for the country in France. Really, if a man of this type is to be forced out of service by blind popular suspicion because of his birth, one wonders if somebody will not begin to recall how much German blood King George himself possesses and to remember that he is a first cousin of the Kaiser as well. It all bears an unhappy aspect; and so far from allaying the Admiralty's troubles, is bound to create in thoughtful people's minds an impression of weakness at the point where England was supposed to be strongest. If Battenberg can be forced out now, would not Churchill have to go if a serious disaster were reported?

A counterpart to the press campaign in England against Winston Churchill is seen in the bitter criticisms of the German Chancellor printed by Berlin newspapers. Referring to these, the *Frankfurter Zeitung* expresses its surprise that they should have evaded the "rigorous military censorship." This is very nearly an intimation that the attacks on Bethmann-Hollweg are permitted, if not inspired, by the Government. It certainly would be very unfair to the Chancellor to seek to hold him responsible for what has befallen Germany. It is true that the diplomatic negotiations before the war, especially with England, were wretchedly conducted by the German Foreign Office. Open-minded Germans have admitted this. They have doubtless recalled with a sigh the warning uttered by Bismarck in his old age, when he said that "not only military equipment" but a "correct political eye" would be required to guide Germany "through the currents of coalitions to which we are exposed." That correct political eye was wanting in Berlin, during the last week of July, but the Chancellor was not the man chiefly to blame. He was the Kaiser's personal appointee, answerable only to him, and the final decisions were taken out of his hands. One thing for which Bethmann-Hollweg is now assailed in Germany is said by the *Frankfurter Zeitung* to be "his views in regard to Belgium." We presume that the reference is to the Chancellor's frank admission to the Reichstag that the invasion of Belgian territory was a violation of international law. If he had only had an opportunity to consult with our own Professor Burgess, he would have discovered that the neutrality of Belgium had no warrant in law or treaty!

A most welcome announcement is that made by the Rockefeller Foundation, of its plans for the relief of the non-combatant sufferers in the war-stricken countries of Europe. The immediate shipment to Belgium of food supplies to the value of nearly $300,000 is but a first instalment of the great work contemplated. That the succor extended to destitute and starving human beings, though directed by no partiality as between the nations affected, will in the main go to Belgium for a long time to come, may be regarded as practically certain; and this not only because the suffering there is most widespread and the need most urgent, but for another reason even more vital. In all the other countries, the resources of the nation remain comparatively intact, and accordingly help, though not in adequate measure, is sure to be forthcoming in great quantity from the fellow-countrymen of the sufferers. In Belgium, almost the whole land has felt the devastating scourge of the war, its industries have been paralyzed, and a large part of the land laid waste by fire and sword. If the Belgians are to be saved from starvation it must be through help from other countries. In taking hold of this great labor of mercy, the Rockefeller Foundation has gone about its task not only upon the large scale which its financial resources make possible, but with that intelligence, foresight, and care which mark its operations generally, and which have characterized in general the philanthropic activities initiated by Mr. Rockefeller, thus vastly increasing the amount of good accomplished.

The one drawback that might possibly exist in the making of this great contribution is, as a matter of fact, non-existent. Were it not for the appalling extent of the need, the fact that the Rockefeller Foundation had taken hold might serve to make ordinary contributors feel less called upon to help. In reality, however, great as may be the sums which the Foundation will devote to the purpose, they will fall far short of supplying even the most desperate needs, not to speak of providing in anything like sufficient degree for the relief of those sufferers who are in sore straits though not in downright danger of starvation. It is upon our country that the duty and privilege falls of providing help upon a scale corresponding to the requirements of this world-wide calamity. All that we shall do, though we do our best, will go but a small way towards alleviating the unspeakable distress of millions of innocent human beings. Let every person contribute according to his means; and let the result be such, not only in its total but in the multitude of the persons participating, that we shall be able hereafter to look back upon the record with satisfaction.

That "Truth crushed to the earth shall rise again" we all believe; but if "Error, wounded, writhes with pain," he manages to put on a very cheerful face during the process; and though he "dies among his worshippers," he is apt to be an unconscionable time about it. Professor Taussig recently took the trouble to trace as far back as possible the foolish remark about the tariff which has been ascribed to Lincoln and exploited in protectionist quarters for a number of years past. It is usually given in some such form as this: "I do not know much about the tariff, but I do know this much—when we buy goods abroad, we get the goods, and the foreigner gets the money; when we buy goods made at home, we get both the goods and the money." Its first appearance in any form, so far as Professor Taussig was able to discover, was in the *American Economist*, nearly thirty years after Lincoln's death; and the most diligent inquiry has failed to elicit any authority whatever for the statement that Lincoln ever said anything of the kind.

The prompt action of the Department of Agriculture in stopping the shipments of cattle and hogs from five States—Pennsylvania, Ohio, Illinois, Indiana, and Michigan—is thoroughly justified by the rapidity with which the foot and mouth disease spreads, and must meet the approval of all experts in Western live stock. From a sporadic outbreak in Michigan in August, the disease has now reached widely separated sections of the Middle West; were "stockers" and "feeders" shipped as usual to the great centres at Chicago and East St. Louis and thence distributed, the contagion might run a course far more disastrous than that in the British Isles a year ago. By closing the Union Stock Yards and interdicting all shipments, Federal inspectors can isolate the communities in which it has appeared, and kill or treat all the live stock therein. Meanwhile, adjacent but unaffected localities may be opened to the market. Hardship must for a time be wrought, for some markets predict

a meat shortage, and virtually all a rise in prices. But the situation requires drastic measures, and the more drastic are the first steps the sooner all restrictions may be removed.

The report of the Federal Public Health Service that pellagra is not a communicable disease, but is "dependent on some yet undetermined fault in a diet in which the animal or leguminous protein component is disproportionately small," has not received publicity commensurate with its importance to many sections. It should have the effect of virtually ending the long controversy on the origin of the disease, for it reinforces a similar recent report by the Italian National Investigation Committee, and the opinion of the majority of independent inquirers; while in any event it points clearly to the preventives. Physicians and social workers are advised to give over looking for agents of infection. So simple a step as a general introduction of dried legumes into the dietary of the South ought to eradicate pellagra from the country. The commission does not guarantee that a well-balanced ration will cure advanced cases, but it lays emphasis on the duty of State and private agents to increase the consumption of proteins as an infallible precaution. Proof that the disease is not hereditary does not, of course, affect the fact that the offspring of pellagrous parents are frequently defective mentally and physically. This has made the problem one of great sociological importance.

Bryan's failure now and then to carry Nebraska, and even his own city of Lincoln, has been the fruitful subject of Republican jest, but as an illustration of the proverbial position of the prophet in his own country it is far outdone by the report that La Follette has failed to draw audiences in Wisconsin. Janesville, according to the statisticians, supplied an audience of seven out of its 15,000; Beloit did better, 200 of its 17,000 turning out to listen; but at Kenosha, a city of 25,000, only 30 left their less entertaining occupations to hear their master's voice, while the speech scheduled for Racine was omitted, owing to the small attendance. For this failure, La Follette had an explanation. He had not been sufficiently advertised! This explanation will surprise the country more than the lack of auditors, for the impression in these parts at least has been that the mere rumor in a Wisconsin town that La Follette was coming was enough to send the entire population to the public square. It would be rash to base an opinion of the Senator's popularity upon the size of his audiences in the places named. But, coming as it does after the recent defeat of his candidates in the Wisconsin primaries, this inattention upon the part of a once enthusiastic constituency will be widely heralded as an ill omen for his reëlection campaign two years hence.

The special recall election in Portland, Oregon, last week, in which the attacked Mayor and Commissioners secured a two-to-one majority, has disclosed a notable discontent with the workings of the recall provision. Since the State voted in 1908 to make every public officer, including judges, "subject to recall by the legal voters of the State or of the election district," its cities have frequently been harassed by restless groups intent upon forcing a satisfied majority into a new political agitation. The present futile election was brought about by a small minority moved by nothing more important than the ambition of their leaders, who might as well have waited until the next regular election. It cost the city $25,000, and aroused so little interest that but half the voters participated —there having been fears before the election that this indifference, despite the remarkable lining up of sound civic elements behind the present officers, might result in their defeat. Factitious contests on vague charges of "incompetence and extravagance" may yet disgust the State with the whole recall law.

Every meeting of the Commission of Fine Arts which Congress provided in 1910 causes regret that it was not established twenty years ago, for the benefit not merely of Washington, but of other cities which, as Baltimore has just done, might have sought its advice. In the session just ended the Commission inspected plans for eight memorials to famous men—statues to Washington, John Sullivan, and Matthew Maury in the capital, to De Lesseps and to "Universal Peace" at the Canal Zone, and to Gen. Lawton and Admirals Porter and Wilkes at Arlington—which would once have been eight opportunities for small or great artistic mistakes. It also simplified the designs for a new building for the Interior Department, and inspected twenty-seven historical paintings—portraits and battle pictures. Like some millionaire buying books by the yard, Congress would once have purchased these pictures without reference to their artistic merit. The Commission is a guarantee that our capital, by increasing degrees one of the finest in the world, will be saved from such errors as in London are a stock argument for a Ministry of Fine Arts.

A variant of the Los Angeles plan for furnishing free legal assistance to the poor in civil cases, as well as "public defenders" to the accused in criminal courts, is disclosed in the report of eighteen months' work by the new Conciliation Court of Cleveland. Dealing only with petty cases, it allows the parties a free statement, and depends largely upon the effect of letting the litigant "have his say." The judge, having brought out the essential facts, seeks to effect an amicable adjustment of the differences; and is stated by the *Survey* to have thus disposed of 5,884 cases out of 6,184 filed. As in Los Angeles, most cases relate to the attempts of workmen to collect small sums, or landladies small rents. Such conciliation courts are stated to have existed in Scandinavia for a century; but the novelty of the Cleveland institution is in giving a fair legal remedy at no cost. It is to be noted, as an example, along with our juvenile and domestic relations courts, of the growing desire for "a socialized jurisprudence."

The Wall Street Business Men's Association has revolted against our Yankee-written Revolutionary records. This promises not only to show up the lying Clio again, but to make history itself in what may be called the battle of the historical societies. The call for local mobilization is backed by the statement that eighty Massachusetts organizations, doubtless led on by Mr. Worthington Ford and Mr. Adams, will try to repel any proof that New York was not a city of "Tories and Treason." According to the Association, the difficulty is that Boston has always cornered the supply of historians. It is unbelievable, for example, that Bancroft did not know that the battle of Golden Hill antedated the Boston Massacre; that the first revolt against the tea tax occurred in New York, and that the earliest plans for the Union were laid on May 23, 1774, in the Old Merchants' Coffee House. He plainly disregarded these facts out of local patriotism. Fiske, in later days, perpetuated this story of Boston's preëminence in his widely popular books. Two difficulties must be met by the Association: the tenacity of historical tradition once it gains a general footing, and the eternal jealousy of other cities towards new claims. Ex-Gov. Pennypacker has just published a new book asserting Philadelphia's claim to the first tea-party; and amid such conflicting voices the world will probably go on crediting it to Boston.

RACIAL PREJUDICES AFLAME.

Not the least of the dreadful evils entailed by the world war is the awakening of race prejudice in quarters where it has never existed, and its reawakening in others where it had been gradually yielding to the slow processes of time and the still slower spread of the teaching of the brotherhood of man. In an atmosphere of peace and good will alone can Christian doctrine gain ground. Let war break out, and we not only cease to love a group of our fellowmen, but we endow them overnight with the blackest of characters. Harmless Spaniards become torturing fiends in the twinkling of an eye. Yesterday they seemed endowed with the traits of honesty, thrift, and industry; to-day they are such monsters in human form we wonder how we could have let any of them enter our harbors and settle among us. So to masses of the Allied nations, the Germans they praised yesterday for many admirable and very human qualities have become as devils incarnate. And the Germans in multitudes are just now asking themselves how it is that they were unaware of the abominable character of the British, of whom they have been happy to harbor so many thousands these last four decades.

But it is not merely national prejudices whose recrudescence we are now witnessing. It is the more subtle, and infinitely more dangerous, race prejudice with which we have to deal. In Germany, for instance, there has up to this time been no such thing as color prejudice. Chinese and Japanese men of learning and military officers have married into German families as a matter of course. An American negro could travel anywhere in Europe and have the unique experience of being treated on his merits as a human being. This has all been changed as by a magician's wand. The dragging into the war of Japanese and Indian troops by Great Britain and of black troops from Africa by the French has given rise to the bitterest outbursts in the German press. For the first time the hateful word "nigger" has found its way into print there. Cartoons of astounding malice treat particularly of the Japanese. Thus the chief organ in Germany of an oppressed race makes the pictured suggestion that the Japanese remaining in Berlin be imprisoned in the chimpanzee cages of the Zoölogical Garden, "no matter how much the chimpanzees may object." The intensity of the German bitterness against the English grows day by day, and a chief means of fanning the flames is the statement that England has brought in the "mongrels of civilization" to break down the high culture of a pure race, of the same stock as her own.

For the moment this has overshadowed the race question which was foremost in the first few days of the cataclysm—the charge that this was a concerted Slavic movement against the civilization of Europe was the first German explanation of the "Russian attack." As every one knows, the friction which led Servia and Austria to fire the deadly train is at bottom racial—the Slavs including Croatians, against the Austrian Germans; and this historic racial strife has now flamed up as never before. Into it all is now to be injected the Mohammedan problem; at least the entrance of Turkey into the hostilities on the side of Germany makes possible a tremendous religious explosion throughout the East. If the Turkish ally should make it awkward for Germany to assert that she is defending European culture, that ally also renders it easy for Germany's opponents to declare that she has called to her aid the historic enemy of Western culture and of Christianity. The next few days will show whether or not the war-ravaged Balkans are again to be trampled by marching hordes, burning, devastating, murdering as they go, for the third time within a trifle over two years. If they are, the race hatreds of that unhappy portion of the globe will grow to a proportion and an intensity almost to defy healing.

If the long-promised holy war should come in Egypt and elsewhere, it will easily take on a racial form, for it will be not merely Mohammedan against Christian, but the Anglo-Saxon and the Slav against the Turk, the Egyptian, and the natives of India and black Africans as well—a hideous prospect, indeed, for the twentieth century of Christianity! There is but one race which bids fair to gain a little from it all—the Jewish. If the Czar, so often faithless, keeps his word this time, there may be a great change for the unhappy Jews among his subjects. Having been permitted to die for the Little Father only as private soldiers, they are now to furnish officers for the slaughter, and there are intimations of other distinctions and privileges. In Germany, too, some bars of race seem to have been let down in the war; and the Czar has held out hopes of a Polish re-nationalization as well.

Here are perhaps some brands to be snatched from the burning—but what trifles, if we survey the whole world! We were just beginning, by greater knowledge of one another, through our race congresses, through the awakening of the East, through the strengthening of international bonds by trade, by the travel of thousands, by the interdependence of business everywhere, to get to know and respect one another. Now we see, by reason of the accursed system of European alliances and armaments, the whole work checked, if not undone. Dying antipathies are warmed back to life with new and deepened intensity; the whole world is thrust back to the Middle-Age state, when every people feared every other, like a thief in the night; when to be a stranger of different customs and habits was to be a barbarian, to kill whom was justified. Everywhere that men are different it will be easy now to arouse hatred and scorn and enmity. The brotherhood of man, the fundamental teaching that one should love one's neighbor as one's self—these are for the hour mere subjects for mocking and flouting by those who believe that man's mission is only to kill and burn. But this can be only for the hour. The doctrines of brotherly love and of Christian peace have survived as great cataclysms and gone steadily on to wider conquests by the nobility of their ideals. They are certain in the end to overthrow all enemies and to unite in one friendliness the Slav and the Teuton, the black, the yellow, and the white alike.

ENTER THE BALKANS—AND ITALY?

The reasons that would impel Turkey to enter the war on the side of the Teutonic Allies are comprehensible enough. The astonishing thing is that Constantinople, after blowing hot and cold for three months now, should cast in her lot with Germany at a moment when the Kaiser's fortunes are as low as they have ever been. If Turkey had entered the war in the first week of September, when her ancient enemy, Russia, was still staggering under the terrible defeat administered by Von Hindenburg at the East Prussian lakes, when Von Kluck's army was almost within cannon shot of the Paris fortifications, the step would have been easily explainable. Or if Turkey had joined in only two weeks ago, when German armies were striking into Poland, when Warsaw was almost resigned to a surrender, when the Russian armies in Galicia were falling back before the Austrians even more rapidly than they had advanced, the step would have seemed natural. But that the Porte should throw down the gage precisely at the moment when German armies are in full retreat in Poland, when Austrian armies are beginning to sag back once more towards

Cracow, when Russia's victory is unquestionably stirring the Slav spirit in the Balkans to new confidence—that is not so easy to account for.

We must assume that passion rather than a cold balancing of reasons has forced the decision at Constantinople—the traditional hatred and fear of Russia, the fresh memories of the Slav triumph in the recent Balkan War, and the desperate argument that, since triumph of the Allies would in any case mean the downfall of Turkey in Europe, one might as well go down fighting. But passion alone would probably not have brought about the step at the present moment if not for German pressure, direct and indirect. By direct pressure we mean the probable threat that, unless Turkey came into camp, the Kaiser would abandon her cause, and thus make her ruin certain. In the way of indirect pressure there would probably come the promise of military assistance through a strong Austrian demonstration against Servia. But more important perhaps in influencing a decision at Constantinople would be the representation of the general war situation in a light highly favorable to Germany. It is easily conceivable that the German defeat in Poland may not have been fully appreciated at Constantinople when war was decided on; that conditions in India were described as ominous for Great Britain; that the withdrawal of Russian troops from middle Asia was represented as offering an opportunity for a Turkish attempt against Russian Armenia and the Caucasus; and, finally, that Turkey's lead would be followed by other Balkan and Mediterranean nations.

What possible combination justifying the momentous step she has taken could Turkey have foreseen? Of Servia and Greece there can, of course, be no doubt. Turkish action ranges almost automatically against her the two Balkan nations which have profited most by her recent defeats, and which will divide the bulk of future profits at Ottoman expense. The uncertain quantity is Bulgaria. There, we may imagine, the traditional hatred against the Turk has been overlaid by the smarting memory of defeat—and treacherous defeat, as Bulgaria sees it—by Servia and Greece. But whereas Bulgaria would have no hesitation in turning on her former allies in a localized Balkan war, she may well hesitate when it comes to entering the lists against Russia, the great protector of the Balkan Slavs, Russia, which created modern Bulgaria, and which even in defeat must retain its historic rôle in the Balkans. That Bulgarian sentiment cannot be swung solidly against the Czar is indicated by the fact that her most distinguished soldier, Dimitrieff, is now with the Russian armies in Galicia. There enters finally the case of Rumania, only the other day in the field against Bulgaria. Against Rumania, one imagines, Bulgarian sentiment must be fully as violent as German sentiment against Great Britain, since Rumania joined hands with Servia and Greece against Bulgaria without provocation, and wrenched away a heavy slice of Bulgarian territory. Thus the Balkan problem stands: Turkey could hardly have gone in without being persuaded that Bulgaria would join. Bulgaria could hardly go in against Servia, Greece, and Rumania, and may have been persuaded that Rumania, too, would be on the side of the Teutonic Alliance.

But assuming that German diplomacy has succeeded in persuading Turkey that Bulgaria and Rumania might be found on her side, what becomes of Italian neutrality? At Berlin it will have been recognized that the latest move in the Near East must bring Italy perilously near to the verge of conflict. And if Italy enters the war, on what side will she be? It is not difficult to show that even if the question of anti-Austrian sentiment be left out of the reckoning, Italy's practical interests point to coöperation with the enemies of Austria. A victorious Austria would be more formidable than ever as a rival to Italian aspirations across the Adriatic. A victory for the Teutonic Alliance, with Turkey as a member, would endanger Italy's recent conquests in North Africa. It is conceivable, of course, that the Teutonic Alliance has made handsome offers to Italy: the promise of immunity in Tripoli, of accessions in North Africa at the expense of France, of aggrandizement in the Ægean, and who knows?—in the case of a British *dćbâcle*, Malta, Cyprus, might be the prizes dangled before the eyes of Italy. But always there is the factor that these promises, which would have been of value when German armies were carrying everything before them, can hardly be effective now that German armies are held stalemate in the west and beaten in the east.

ALL MUGWUMPS NOW.

"A Vote Against Penrose is a Vote for the Republican Party." This is the title of a pointed little editorial which appeared last week in the New York *Tribune*. This paper recalled with justified satisfaction the fact that it "was prompt to urge the Republicans of Pennsylvania to vote against their corrupt and debasing leader." Even more remarkable is the aggressive fight which the Philadelphia *Public Ledger* made against the Pennsylvania Republican boss. The *Ledger* is almost fanatical in its advocacy of a high tariff, but this did not prevent it from carrying on, in the very citadel of protectionism, a most energetic campaign against Penrose. Like the *Tribune*, it steadily maintained the view that the defeat of this leading Republican candidate would be not an injury, but a service, to the Republican party throughout the country. In a recent editorial it quoted with hearty approval the words of Senator Norris—who, though a Republican, was stumping Pennsylvania against Penrose—to this effect. "The candidacy of Mr. Penrose," says the Nebraska Senator, "is doing untold injury to the Republican party in all parts of the nation, and nothing would help the party more, in my judgment, than his defeat on November 3." And, so far as its own State was concerned, the *Ledger* summed up the case in the declaration that "the Republicans of Pennsylvania can better afford a temporary defeat than a permanent degradation."

Now, this is precisely the doctrine for which the Mugwumps of forty, and thirty, and twenty years ago fought in season and out of season. It is the doctrine which earned for them all sorts of contemptuous epithets. The stalwarts, the thoroughbreds, the red-blooded men, the genuine Americans, had no use for any such effeminate notions of politics or government. It might be all very well for silkstockings, and mollycoddles, and damned literary fellers to be squeamish about a Quay or a Platt; but the plain people, and the practical men, and indeed everybody who had any real contact with the life of this great and lusty young nation, knew that you had to have parties, and parties had to have leaders, and you had to let the leaders do their own work in their own way. It is true that Mr. Curtis, and Mr. Schurz, and the Mugwump leaders generally, professed to be champions of the people against the men who were in politics for "what there was in it"; but that notion was like the rest of their academic dreaming. And so the country went on, year after year, doing just that thing which the opponents of Penrose—and of bosses of similar stripe in other States—are now so effectively, and in such great numbers, fighting against. With few exceptions, the "better element" was kept in line for the bosses. The principle on which they acted was the opposite of that which we have just quoted from the *Ledger;* in lining themselves up behind a Quay, or a Platt, or a Gorman, they virtually declared that their

party could better afford permanent degradation than temporary defeat.

How profound and sweeping has been the change that has come over public sentiment in this respect is but very imperfectly shown by such developments as those now conspicuous in Pennsylvania, in Illinois, in Wisconsin, and other States, notable as these are. What does show it in its true character and importance is not so much the extent of the manifestation as the nature of the appeals that are made by the opponents of the bosses. The Mugwumps of the seventies and the eighties and the nineties attacked the boss system primarily as an outrage against the first principles of honest and rational government. That this was necessarily an outrage against the people and a profound injury to their vital interests was to them self-evident; but it was a long time before the people could be got to take much interest in the issue. Now, "the people against the bosses" is the cry, all along the line. It is as "the enemies of government by the people" that Senator Norris attacks the supporters of the Pennsylvania boss. Nobody ever dreams of disposing of the opponents of Penrose in Pennsylvania, or Sullivan in Illinois, or Barnes in New York, by calling them weaklings or academicians. Most remarkable of all, the Progressive campaign this year, throughout the country, took on almost exclusively the character of a fight against bossism. All the rest of the issues of the 1912 Armageddon were in abeyance. The "party of the people" bothered very little about social justice, the initiative and referendum, or anything else except the attack on bossism. If one were to judge of its objects by the news of the present campaign, one would be led to the conclusion that the slogan "Let the people rule" had been replaced by the merely Mugwumpian cry of "Down with the bosses."

If we turn from the Progressive party to its chief, all this comes out with greatly added point. In the days of the Mugwump movement, Mr. Roosevelt occupied a unique position as a representative of the doctrine on which the bosses' immunity rested. Unlike the general run of straight party men, he was a vigorous advocate of reform, and especially of civil service reform. But, so far from recognizing the principle that a party "can better afford a temporary defeat than a permanent degradation," he persistently acted on the view that conformity with the existing order was the paramount duty of party men. He was anxious to change that order, no doubt; but any man who went the length of outright resistance was in his mind an unpractical doctrinaire, who would never accomplish anything. In the crucial struggle to save the nation's standard of the Presidency in 1884, he supported Blaine; when he was Governor of New York, he recognized Platt as a coördinate power in the Government; when brave men in Pennsylvania were making a determined and hopeful effort to shake off the disgrace of Quay, they got no countenance from President Roosevelt; even towards Addicks he maintained an attitude of "friendly neutrality." What language would the Colonel find strong enough for such a record on the part of any public man towards the bosses of to-day? What condemnation would be adequate to characterize their treason to the people? And who can say how much of the real grievances of the people—our giving away of franchises, our neglect of conservation, our slowness in taking up great measures of social betterment—might have been avoided if the doctrine of the Mugwumps had found, three or four decades ago, such acceptance as it is now enjoying?

ANOTHER PENSION YEAR.

The lately published annual report of the Commissioner of Pensions is noteworthy for two things: the rapid decrease in the number of pensioners, and the marked economies in administration he is able to record. The period, long foreseen, when there would be a sudden slump in the number of Civil War pensioners, is now at hand. Thus, in 1909 the percentage of loss by death among these veterans on the rolls was 5.2 per cent. It has steadily risen each year since, until now it is 7.3 per cent., with every prospect of a further rise. There was a total shrinkage in the pension roll of 39,174 during the last fiscal year; of these no less than 33,025 were Civil War soldiers pensioned under various acts. Of the others stricken from the rolls, 249 were survivors of the Mexican War and 424 widows of Mexican War veterans. There are still 4,699 women drawing pensions because their husbands took part in the Mexican War, concluded sixty-five years ago. Fortunately, the country is not to face a new class of Mexican War pensioners, as appeared probable at the time of the occupation of Vera Cruz.

Going further back, there are still 170 widows of veterans of the War of 1812 on the rolls, and the tenacity with which they cling to their pensions is illustrated by the fact that only twenty-nine died during the period covered by the report. The survivors and soldiers' widows of our Indian wars showed a decrease, in the one case from 1,066 to 915, and in the other from 2,330 to 2,182. Two groups of pensioners usually grow, those whose claims are due to service with the regular army and those who figure on the lists because of the war with Spain; but this year there is a decrease in the latter. Gen. Shafter placed 16,000 troops on the firing line in 1898; to-day there is an army of 28,910 pensioners as a result of that, and of the service of the fleet, and later of troops in the Philippines, where there were at one time as many as 70,000 under Gen. MacArthur. Of these 28,910, 24,250 are ex-soldiers; the rest are widows or dependents, the list showing a net loss of 105 during the year. The list of pensioners who have gained this consideration as a result of service with the regulars is 18,958, a gain of 395; this figure being, of course, exclusive of the retired lists of officers and men. That the pensioners of the war with Spain will show a slight growth year by year is to be expected on the basis of our experience with other wars, great and small; 2,763 mothers of the 1898 soldiers, 428 fathers, and 225 children are now being, in part, supported by the Government.

Since 1892, when the total number of pensioners was 999,446, the number has steadily decreased, until it is now 785,239, a loss, chiefly by death, of 214,107. But while there has been a steady decrease in the total number of pensioners ever since 1892, the cost to the country has steadily risen, so great being the increases in the amounts granted by reason of recent legislation, until this year. The Commissioner's report before us would, therefore, be notable if only for the fact that he records a drop in pension expenditure from $174,171,660.80 to $172,417,546.63. He asserts that the maximum has been reached and that the decrease in cost to the taxpayer should steadily continue. Commissioner Saltzgaber also reports that he has reduced his force by 145 employees without disturbing the old soldiers or widows of soldiers, but he adds "with great travail." The acts of May 11, 1912, and March 4, 1913, have greatly curtailed the work of the Bureau, and the Commissioner warns his subordinates that other sweeping changes must be made next July; from now on, the Pension Bureau, if we do not go to war again, will steadily sink in relative importance. Yet it has expended since 1866 alone $4,461,094,380.45 for pensions at a cost of $125,871,965.64.

In only one respect is the report unsatisfactory. It does not show sufficient effort to purge the roll of frauds and unworthy pensioners. Thus, there are now only sixty-two special examiners in the field, and but fifty-

nine new cases were presented by the law division of the Bureau to the Department of Justice for prosecution on account of offences against the pension laws. Forty-one indictments were found, and there were thirty-one convictions during the year, eighty cases being still in the hands of the Government attorneys. Of the four civil suits, two were won by the Government, and the sum of $967.32 was recovered, but, as every one who has made any study of the pension rolls knows, this is an absurdly small figure. Enormous sums have been fraudulently obtained from the Government, and many thousands of dollars are probably still wasted, but the Commissioner records the recovery of his beggarly $967.32 as if it were in any way in proportion.

Finally, he makes a just and excellent plea for the Bureau of Archives, which this journal has so frequently urged, and so many departments are demanding. It is not only because of the need of centralizing all the Government records, with the vast economies which this would bring about, but because of the necessity of having a fireproof structure to contain them. The Commissioner has done admirably in rearranging the Revolutionary War archives, and in protecting them from the destruction which menaced them. In the course of this task it was discovered that the total number of soldiers actually pensioned for service in our War of Independence was but 52,504. The Commissioner is also at work on a card index and flat filing of claims and documents growing out of the War of 1812—a work of great value. That he should feel, because of these two undertakings, the need of a Federal hall of archives ought to carry great weight with Congress.

MUSIC AS AFFECTED BY THE WAR.

Musicians are always among the first to be called upon to aid the needy, but in these calamitous times not a few of them are obliged to live up to the maxim that charity begins at home. This is especially so in the countries involved in the war; and even in some that are not directly concerned, like Switzerland, Italy, and Holland, the situation is not much more favorable. In France and Austria the opera houses and concert halls are nearly all closed, or else converted into hospitals or places for the distribution of food. Many thousands of singers and players are thus thrown out of employment, without being able, as in times of peace, to earn an extra penny by teaching, for which there is little demand. Viennese journals call special attention to the distress among the *Volksmusiker*, many hundreds of whom have been honorably earning their living, but who are now reduced to the status of street musicians and beggars.

In Berlin and a few other German cities the situation is somewhat better. Opera houses are open and performances are given regularly. But the prices of admission are only a fraction of what they were, and the singers and players receive about one-half of their usual emoluments, which never were large. Some of the leading choral associations of Berlin announce a few concerts, but Nikisch will conduct only half-a-dozen orchestra programmes. In Leipzig, however, he will preside over the usual number of Gewandhaus concerts. Being a great admirer of the music of Russia and France, he is not likely to banish the composers of those countries from his programmes. In Paris, the venerable Saint-Saëns has pronounced sentence of exile on Wagner, but when the war is over the French will not be likely to indulge in any chauvinistic folly of this sort, were it only because without Wagner it is impossible to make operatic ends meet. France is the only country that so far records a serious loss, by the death of Albéric Magnard, the eminent composer, who was executed for having, as a civilian, fired on the German invaders. The report that the baritone, Vanni Marcoux, was killed has proved false, like the same report concerning the great Austrian, Fritz Kreisler. He was only wounded; unfortunately, he may return to the front.

In England most of the autumn festivals and operatic projects have been abandoned, and it is said that all touring soloists have cancelled their contracts, with the exception of Clara Butt, who has promised to turn over all her receipts to charity. At first there was a disposition to boycott German music. This caused the Germans to express derisive regrets that they could not retaliate, there being no English music to ban. Better counsel promptly prevailed in London; what had Bach and Beethoven, Schubert and Wagner, to do with the present war? But there is such a thing as being too magnanimous and Germanic, according to one of the critics, who remarks concerning the prospectus of the Classical Concert Society that "really, one might be in Berlin, so completely is the scheme out of touch with contemporary conditions."

In Canadian cities the war seems to have cast its blight on most musical societies and enterprises; touring artists speak of cancelled dates. It does not seem at all likely that Montreal will have its own opera company, and if it does, it will not be able to borrow singers from Boston or Chicago, for both these cities have abandoned their operatic enterprises. For this the war has been held responsible; but there are reasons for believing that the financial condition of these institutions made the directors welcome an opportunity to call a halt—temporarily, at any rate. The early departure of the Century Company from New York does not appear to have any connection with enforced economies due to the war, for the audiences have so far been larger than they were last year, in consequence of a decided improvement in the quality of the performances.

Alone of all the great operatic institutions in the world, our Metropolitan Opera House will carry out its programme precisely as if the globe had remained at peace, except that two of the singers (not of superlative importance) will not be able to come back. There were rumors in Germany that we were to have no German opera, because of the prevailing American attitude towards the European belligerents; but the only ground for doubt was that it was believed that those two indispensable Wagnerian artists, Otto Goritz and Albert Reiss, would be unable to return. But Reiss, who was a prisoner in France, has been released through the intercession of the French Embassy in Washington, while Goritz, when he cabled the order giving up his apartment in New York, which alarmed his friends, simply meant to change his residence! On Monday the steamer Canopic arrived in Boston with a precious cargo of singers, seventy in all, among them Bori, Farrar, Destinn, Hempel, Urlus, and Caruso. Fancy what the loss of this steamer, which also held the greatest of Italian conductors, Toscanini and Polacco, would have meant to the musical world!

Concerning two others of the world's leading conductors, Muck and Stransky, there was doubt until a few weeks ago whether they could return. Fortunately, neither of them was needed in the army. In the matter of personnel, also, neither the Boston Symphony nor the New York Philharmonic has suffered any serious damage. Both announce, moreover, an increased subscription list, as also does the New York Symphony Society. The Oratorio and Musical Art Societies will be heard as usual, and so will the Kneisels and the Flonzaleys. Of touring singers, violinists, pianists, and other givers of recitals, we shall have a superabundance, for obvious reasons; so that, altogether, the present season promises to be exceptionally bountiful and alluring.

Chronicle of the War

That Turkey will drift into the war through the agitation of chauvinists at home and the gentle persuasions of Germany abroad seems, as we point out elsewhere, beyond a doubt. It is also unquestioned that Germany has exerted every effort to win over this new ally. Germany, therefore, must attach considerable importance to the military assistance which she expects the Ottoman forces to render. It becomes interesting, then, to inquire in what way Turkey can be of use to her allies. With the coöperation of Bulgaria, the way would, of course, be opened to an attack on Servia, and Austria would automatically be relieved of the harassment of the Servian and Montenegrin forces in her Bosnian province. Without that coöperation, it is difficult to see how the land forces of Turkey can enter the struggle in Europe. The only point at which Turkey touches Russian territory is at the natural barrier of the Caucasian Mountains between Batum, on the Black Sea, and Mt. Ararat. Here is a defensive position which Russia could maintain indefinitely without affecting appreciably the strength of her armies on the Prussian frontier. We may assume, therefore, that no serious offensive is contemplated at this point. On the other hand, Russia might well spare forces to make a demonstration here.

The only other point at which the Ottoman Empire touches the territory of one of the Allies is at the frontier of Egypt, 150 miles east of Port Said and the entrance to the Suez Canal. Here Turkish troops are already reported to have crossed the frontier, and it is obviously to the effect of a successful invasion of Egypt that Germany looks for valuable service on the part of her ally. On this point, therefore, we may assume that the most serious efforts of the Turkish army will be concentrated, in the hope that, with the coming of the Moslem hosts, the Mohammedan subjects of Great Britain in Egypt and India will be stirred to revolt, and that a "holy war" will ensue. From all the information from British sources that has come to hand, it seems extremely doubtful whether these pious aspirations of Germany and Turkey will be realized; but, putting that question aside, the prospect of Turkey accomplishing an invasion of Egypt in any force appears not to be too promising.

The army has been in process of reorganization since the recent wars with Italy and the Balkan Confederacy, and it is difficult to give even approximately its precise strength. Furthermore, most reports agree that it is seriously lacking in equipment. Its peace strength, however, is stated to be 230,000 men, comprised in forty-three divisions, giving 5,000 men to a division and 10,000 to a corps. On a war footing we may probably put the corps at about 15,000 men. For the invasion of Egypt only a fraction of the total strength of the army could be employed. The European forces must be kept where they are to watch events in the Balkans. A considerable army, comprising most of the Anatolian troops, must be concentrated on the Caucasian frontier to repel a possible invasion by Russia; indeed, already reports declare that 300,000 men are assembled on this frontier. But whatever the number of troops considered necessary to defend this line, there they must be kept, for there are not the railway facilities in the Ottoman Empire for the rapid concentration of forces at a threatened point. For the invasion of Egypt it appears highly improbable that more than two army corps at the most will be available. These will be the forces in Yemen, which are commonly employed against the chronically rebellious tribes of Arabia. We may, therefore, put the possible invading army of Egypt at between 20,000 and 30,000 men. Against these there are the British army of occupation, numbering in normal times some 6,000 men, and the native army, numbering 17,000. These numbers have no doubt been considerably augmented since the war started by the dispatch of second-line troops from England, and by the colonials, who are reported on the line of the Suez Canal.

The Turkish navy may possibly exercise more influence. At present, with the cooperation of the German cruisers Goeben and Breslau, it is superior in armament to the Russian fleet in the Black Sea. Against this superiority in armament, however, must be set a numerical superiority on the side of Russia. At the end of 1913 Russia's Black Sea fleet consisted of six pre-Dreadnought battleships, two protected cruisers, twenty-five destroyers, sixteen torpedo boats, and fourteen submarines. The Turkish fleet, deprived of the new Dreadnoughts Osman and Reshadieh, appropriated in their yards by England at the beginning of the war, consists of three old battleships (one launched in 1874), two small cruisers, three torpedo gunboats, and a number of small gunboats, eight destroyers, and nine torpedo boats. The German battle cruiser Goeben, however, of 22,400 tons, armed with four torpedo tubes and ten 11-inch, twelve 5.9-inch, and twelve 3.4-inch guns, is by far the most powerful vessel in either fleet, the most powerful of the Russian battleships being only of 12,480 tons, and armed with four 12-inch, eight 6-inch, and four 4.7-inch guns.

The naval fighting, so far as Turkey is concerned, must apparently resolve itself into a duel with the Russian fleet in the Black Sea. The combined French and British fleet in the Mediterranean is sufficiently strong to bar egress from the Dardanelles and to destroy what units are at present abroad in the Ægean. Hence the Turkish fleet can hardly take part in the threatened blockade of the Suez Canal and at the same time Turkey will find it impossible, if she desired to do so, to transport her European troops by sea to Asia Minor to participate in the invasion of Egypt, just as in the Balkan war the Greek fleet played an important part in preventing the maritime transportation of troops from Asia Minor to Europe. There have been rumors that the Allied fleet would attempt to force the passage of the Dardanelles in order to bring aid to the Russian fleet in the Black Sea. Such an attempt is not beyond the bounds of possibility, but it is improbable. Whether it will be made or not depends no doubt upon the condition of the fortifications of the Dardanelles. Before the war these were strong, but were armed with antiquated guns. It is probable, however, that since Germany has taken so absorbing an interest in Turkish affairs the obsolete guns have been replaced by more effective weapons from Essen, and in that case to attempt to force a passage would be an extremely hazardous enterprise.

In neither the western nor the eastern areas of warfare is there anything of momentous importance to record. In the west there has been the ding-dong battle with which we are familiar, either side making slight advances at various points along the line, but leaving the general front of battle virtually unchanged. Thus the line, from Nieuport south to Noyon, and thence west to Verdun, with slight deviations at different points, remains virtually as we described it last week. The fighting that has taken place during the past week on the line Nieuport, Dixmude, Ypres, Armentières is described as the most severe of the entire war. South of Ypres the Germans have made slight progress, having occupied the village of Messines, which is reported to have changed hands four times in the course of twenty-four hours. On the other hand, the Allies have advanced on the line of the Yser, the left bank of which has been abandoned by German troops. The dikes at this point were cut by the Belgians at the end of last week and the district inundated; this compelled a German retreat, which appears to have been effected with great loss. Poelkapelle also is reported in the Belgian official statement as having been surrounded by the Allies, and emphasis is laid on the importance of this position as being the centre of the network of communication of roads and railways between Dixmude, Ypres, Roulers, and Thourout. This information, however, would seem to indicate that the wedge which the Allies had driven into the German line as far as Roulers had been pushed back slightly, as Poelkapelle is some eight miles to the west of Roulers.

In the east the German retreat in Poland, following a defeat in the general engagement on the Vistula, has continued, and, as we stated last week, it appears improbable that the retreat will be halted until the defensive line of the Wartha River is reached, close to the Posen frontier. The Russians seem to have penetrated as far as the line Lodz, Petrokow, Kielce, from which points the Germans are retreating in the direction Kalisz, Czenstochowa, and Cracow. The main German army is thus retreating in a southwesterly direction and leaving a gap of some 125 miles between itself and the army of East Prussia on its left. On the East Prussian border there has been a renewal of the German offensive, the army there evidently making desperate efforts to relieve the pressure on the forces in Poland. So far, however, according to dispatches from Petrograd, all attacks have been successfully repulsed. The gap that is left between the two armies is an obvious source of danger. If the Russians can conduct a sufficiently vigorous pursuit and if they have the necessary reinforcements, and there seems no reason to suppose that they have not, there is the possibility that they may be able to detach forces northwards to outflank the German army in East Prussia. In Galicia the Russians appear to be conducting principally a defensive campaign, having doubtless weakened their forces there to increase the pressure on the German centre in Poland. Vienna has reported victories between Sambor and Turka, but Petrograd declares that an attempted sortie from Przemysl has resulted in the capture of 4,000 prisoners.

Foreign Correspondence

THE OSTRICH AT THE WAR OFFICE—PREPARING FOR THE INVADER—THE RESURRECTION OF BELGIUM—A NEW DRINK FOR TOMMY ATKINS.

By SIR HENRY LUCY.

WESTMINSTER, October 23.

Fullest recognition is given to the administration of Lord Kitchener at the War Office, a business method that leaves no flaw in the systematic supply whether of men, guns, ammunition, food, or drink. All the same, the public is irritated at the ostrich-like futility that marks his policy, in large matters and in small. At any turn of events, he is prone to bury his face in the sand and think nobody secs him. The latest development of this unfortunate tendency is forthcoming in his treatment of Sir John French's anxiously awaited dispatches. On Monday last, being October 19, they were published in the morning papers, occupying two complete pages. The reader observed with consternation that the first, covering the operations of the British army from August 21 to August 28, was dated September 7. The second, describing the continuance of the retreat on Paris up to the momentous midday of September 6, when the signal was given to take the offensive, was dated September 17. On October 8 Sir John French, taking up his pen with new pleasure, gave a graphic account of the defeat and pursuit of the German army and of the battle of the Aisne up to the last day in September.

What the bewildered public wants to know is why these pages of history should have been secreted in pigeon-holes at the War Office while the country was hungering and thirsting for news, the dissemination of which from non-official quarters was rigorously forbidden. The only conceivable answer is that, in accordance with his habit, Lord Kitchener was afraid of giving information that might be useful to the enemy. It is probable that long before October 19 the Germans knew all about the halt in the prolonged retreat of the Allied armies and the sudden assumption of the offensive which took place on September 6.

The War Office has, within the last few days, taken proceedings significant of the situation. It has addressed to the Urban and Rural Councils throughout the kingdom a circular marked "Urgent," requesting them to ascertain what labor would be available in their several districts in case of necessity for (1) digging trenches, (2) clearing away trees, (3) rough timber work. It is necessary, the circular states, to have a complete organization, and to know the names and addresses of all men willing to undertake this work, should emergency arise. The men, of whom a great number might be needed, would be engaged for three days, and would receive double the ordinary rates of pay. They would be required to assemble at a stated rendezvous within a few hours of receiving notice, and would forthwith proceed to the section of work allotted to the Council in the immediate neighborhood. The labor would be carried out under the direction of a Royal Engineer officer. Tools would be provided for those who do not possess them. It is added that, "to prevent anything in the nature of a scare, it is well to mention that the contingency of the men being called upon is at present happily remote. But it is neecssary to be prepared without delay." Forms were enclosed, with the request that they should be returned not later than Monday last.

Reading day by day of the desolation and levastation of what but yesterday was the fair and fruitful field and garden of Belgium, one recalls a verse quoted by Stevenson in his delightful "Travels with a Donkey." Passing through the country of the Camisards, a little more than 200 years ago the scene of butchery only excelled in these modern days, he recites the verse:

> We travelled in the prints of olden wars
> Yet all the land was green;
> And love we found and peace
> Where fire and war had been.
> They pass and smile the children of the sword.
> No more the sword they wield;
> And O how deep the corn
> Along the battlefield!

We in England possess the sites of old battlefields fought in the Wars of the Roses, and later between Royalists and Roundheads. Some of them now are towns or hamlets. In others still afield the fructifying influence hinted at in the last two lines of the verse has worn itself out. By and by, when Kaiser Wilhelm is a fugitive and Germany a republic, Belgium will bloom again.

> And O how deep the corn
> Along the battlefield!

An example of petty revenge taken by the Germans against harmless and helpless Englishmen is supplied by the experience of Mr. Yerburgh, the popular Member for Chester. Three months ago, at the bidding of his doctor, he, accompanied by his wife, repaired to Nauheim, a German watering-place extolled for its treatment of heart disease. When war was declared he proposed to return home, but found his way barred. The normal period of the Nauheim "cure" is three weeks. Mr. and Mrs. Yerburgh were compelled to stay for nearly three months, their visit being prolonged amid circumstances especially detrimental to folk suffering from a weak heart. A week ago announcement appeared in the London newspapers that they had arrived at Zürich, and people wondered that, after their unpleasant experience, they should not hurry home. Explanation is forthcoming in a letter received yesterday from Mr. Yerburgh. He writes that, after repeated solicitation, he and his wife were permitted to leave Germany only upon their giving an undertaking to proceed to Switzerland and remain there for three weeks. Why this condition was imposed is beyond the range of average comprehension. Mr. Yerburgh, writing from Vevey, whither he removed from Zürich, says his parole will expire on Sunday, when he hopes to commence his journey home. Meanwhile, the strain of his daily life during the past eleven weeks has told severely upon a state of health for whose recuperation he in a luckless moment sought the "cure" at Nauheim.

Among the latest war news is a message from the Far East announcing that the Crown Prince of Japan has presented to the British troops operating with the Japanese before Tsing-tau a supply of sake. It would be interesting to know what Tommy Atkins thinks of this form of liquid refreshment. My recollection of personal acquaintance made with it during a visit to Japan is that it tasted something like the washingout of a sherry decanter. The sturdy farmer, asked how he liked a nip of old brandy served in a liqueur glass, said he would "tak some more in a moog"!

The national Japanese drink would have to be served out to Tommy in a bucket before he realized the homely feeling of "getting forrader."

THE LATE COUNT ALBERT DE MUN—AN APPRECIATION OF HIS PLACE IN THE LIFE OF FRANCE.

PARIS, October 10.

"To-night, when I have written these lines, I shall lie down to sleep with hope in my heart. By the time they are being read, may I wake to enthusiasm."

Last Tuesday, as he was finishing his daily article at Bordeaux, the seat of Government, in time to telegraph it for next morning's *Echo de Paris*, Albert de Mun wrote these words. Of his three sons who are fighting at the front for their country, one who was supposed to be lost or a prisoner had suddenly reappeared on a mission to Government, and was able to dine with his father. Rumors of decisive victory were in the air. During his sleep, the heart ailment which for twelve years had kept the great orator from speaking in Parliament—except once—quenched the life which was still strong in him.

It is something more than a power of speech that disappears with Count Albert de Mun, although that, too, is noteworthy. He was a French gentleman belated in a society that has little use for Frenchmen of his type. His quality was aggravated by the conscientiousness of his adherence to the traditional Christianity of France. And he passed over the heads of dominant politicians and men of money to workmen traditionally hostile to his class and found understanding and sympathy among them. Speaking of his death and the works that follow him, the ultra-revolutionary Gustave Hervé says with his usual frankness: "Perhaps on this ground of social justice—when the war is over—we may be able to meet Catholics in the way."

With the leaders of politics, the Royalist Count de Mun was esteemed for his talent and integrity; but they could not understand his "rallying" to the Republic at the bidding of the Pope. In the present effort at a National Government which should represent the whole nation, it was proposed to name him a Minister without portfolio as has been done for Jules Guesde, the Socialist leader who is equally refractory to the capitalist Republic. Somehow the project fell through; but it can scarcely have been Prime Minister Viviani's fault, for he has been a known admirer of the aged leader of the Right, as Gambetta was when the young Royalist Count was the only orator of Parliament able to cope with him in eloquence.

Perhaps the kind of Republic which is passing with a war that found it unprepared will merge in the swelling Social Democracy that has the likeliest chance of uniting Frenchmen of all classes when war is over. Of this, by strangely mingled heredity and by life and conviction, Albert de Mun was the natural precursor. His ancient though petty feudal title was from a knight's fief in the Pyrenees; and through the Counts of Navarre he was descended in right line from Clovis, the first Christian King of the Franks, and from Louis the Twelfth, the last of the French Kings before Renaissance and

Reform and Counter-Reform brought in absolute monarchy. His great-grandfather was the eighteenth-century *philosophe* Helvétius, with his wife the closest Paris friends of our American Franklin. His grandfather was the Marquis de Mun, who was Napoleon's chamberlain, but so representative of a class that the Restored Bourbons made him a peer of France. And his father, by marrying a daughter of the Count de la Ferronaye, who was so long French Ambassador at St. Petersburg, made him a descendant of the Rostopchin who withstood Napoleon at Moscow. In the classic "Sister's Story" of Mrs. Augustus Craven, who was Albert de Mun's aunt, this very French and very modern family has been portrayed for the edification of many generations. The Broglies and Haussonvilles, with their nobility mingling in the blood of the Swiss banker Necker and his daughter Mme. de Staël, are not more varied in descent. Only George Sand, with her wild ancestry—royalties of Saxony and Marshal Maurice, romantic Koenigmarcks and Rousseau's pupil Dupin—has surpassed it.

When Albert de Mun grew up, he embraced the military career and went at once from his training at Saint-Cyr to the campaigns of Algiers. His strong mental acquirement and sturdy moral character are an instructive comment on the fairness of the type of officer of the Second Empire which has been foisted on the world. He came back to fight for the existence of France against Prussian invasion, and won the Legion of Honor fighting at Metz. He was attached to the staff of Gen. de Ladmirault during the repression of the Commune. It was then, while guarding the lonely galleries of the Louvre and communing with a fellow-officer, La Tour du Pin, of like ancient origin and modern temper as himself, that he found his way; and this he never left until death. The two thought and talked of their people's hurt and found it in the neglect, the isolation, the parking aside from the rest of the community of the laboring masses.

In spite, perhaps because, of the Socialist Revolution of 1848, which the Second Empire had suppressed to the general satisfaction of the French people whose society is based on property-holding, such thought and talk were bold in the reaction of the days that followed the Commune. Count de Mun has persisted in them and more than once has needed the protection of the Pope from scandalized ones of his own religion. In 1875 he resigned his commission in the army—he was captain of Cuirassiers—to give himself entirely to the work of Catholic workmen's clubs. The next year the Bretons sent him to Parliament, and there, with only a year or so of intermission, they have kept him faithfully. In the Dreyfus affair, he stuck to his army traditions, to the offence of many on both sides.

It would be difficult to form an exact opinion of the extent which the movement inaugurated by Albert de Mun and La Tour du Pin among French workmen has taken. It has not the relief of politics to make it known, and, like all popular movements in which religion is a leading force, it runs deep with little froth and scum at the surface.

Four years ago, when the railway workers of France were supposed to have begun the general strike expected to revolutionize society, these Catholic workmen's clubs suddenly blocked the way. They were but a fraction, but they brought to light the portentous fact that the Syndicalists who were to lead the new Revolution are also but a fraction of the labor world; and that labor, in its own interests, is unwilling to separate itself sharply from the rest of the community. Even the Syndicalists have shown a respect for these religious clubs unwonted in their usual hostility to the "yellows." The present outbreak of war, with its struggle for the life of all, has thrown all Frenchmen into the one melting-pot. Perhaps, as Gustave Hervé says, they may all yet meet on Count de Mun's common ground of social justice.

Once only in recent years had Albert de Mun tried to speak as of old in Parliament. His voice was muffled, but he found much of his old vigor and all the respect of his fellow-members as he warned them against the German danger. His voice was overborne—it was in 1911—largely by that of Jaurès, who alone with him represented the old, ample Parliamentary eloquence. The strength of Count de Mun was in his plain, resonant, winning sincerity. Some of his speeches, which gained him a seat in the Academy, will be read when the politics of the time have entered into history; for they are prophetic words of one who looked forward and not back in the movement of humanity.

S. D.

The Civil War is generally held accountable for the preponderance of women in the teaching profession in America. The European war may possibly have a similar effect in the Old World. In London, at any rate, the enlistment of nearly 1,000 male teachers has caused so great a shortage in the staff of the Council schools that the educational authorities have had to allot a considerable proportion of their female teachers to the boys' side. As many of the students in the training colleges have also joined the colors, the innovation is likely to be permanent.

The war is beginning to affect the habits of Londoners. Now that the lights everywhere are turned so low, to discourage Zeppelins, the town has become far less attractive after dark. People are, therefore, much less inclined to come up from the suburbs in the evenings for the sake of amusements. Two of the most popular theatres, recognizing this change, have set the fashion of giving their matinées six times a week and their evening performances only twice—the exact reverse of the usual proportion.

L'indépendance belge may have disappeared for the time, but *L'Indépendance Belge* is still active and vigorous. Driven from Brussels to Ghent, and thence to Ostend, it has now found refuge in London. It has settled in the Whitefriars newspaper district, where it publishes an edition every evening. Practically the whole of the editorial staff has taken part in the migration. The first London issue, published on October 21, contained poems by Emil Verhaeren and Maurice Kufferath, and a message of greeting from Mr. Asquith. A good circulation is expected among French-reading Englishmen, but the paper will, of course, serve mainly the interests of the crowds of refugees. An Antwerp paper, *La Métropole*, whose offices were burned by the Germans, will carry on its work through an arrangement with the London *Standard*, which has placed at its disposal a page of each day's issue.

French Fiction

CERTAIN TENDENCIES WHICH STORY-WRITERS ARE PRETTY SURE TO FOLLOW AFTER THE WAR—THE CONTRAST OF FRENCH FICTION BEFORE THE WAR.

PARIS, September 30.

"You should have seen the moon before the war!" was American humor's way of saying to the next generation that the War of Secession had wrought universal change. It is much the same for novels published in France less than two months ago. Even in fiction, life will never again be as it was before. It is foolish to prophesy before war is over; but it may be said now, and it may be reasoned out from the books latest published, that the thoughts of the men who are being subjected to this strain and all their literature are bound to follow soon certain lines of tendency, and not others.

The first is towards pure Socialism, that is, towards a remaking of human society from within so that all sorts and conditions of men shall stand or fall together as they have been doing all through this war; and this will lead to forgetfulness of the dividing Radicalism which is already so discredited in its effects, and of Pacifism which now seems but puling, and of Social Service which has all along been scarcely more than a class religion. Any fragmentary good that may have existed under these deluding labels will be caught up in the resistless stream, on which extreme Conservatives will be the first to embark. The second sure tendency is towards traditional religion; and this need not be opposed to the first, just as pure Socialism in France has hitherto kept itself independent of political opposition to religion.

It is discouraging to have to express by such abstract labels the very real movement of individual minds and feelings as disclosed in fiction-writing, which is the most personal of literature. And it is disappointing not to be able yet to affix names belonging to what we have always accounted Progress and Civilization—freedom from the oppression of great nations and militarism; liberty of individuals and individual associations as against that all-absorbing association called the state; and self-government in the town-meeting sense of our primitive American anarchy which, with all its passing failures, has borne so brave a crop of human well-being. How far these, too, will enter into the tide of patriotism, sure to flow from these weeks of a war that threatens the existence of France, no one can tell; but the beginning of sane tendency is already apparent in the "Regionalism" of these late French books. Some, of course, are indifferent to space and time or of the already past.

"L'Œil clair" is a posthumous series of sketches and dialogues by Jules Renard, whose "Poil de Carotte" was hailed as the New Literature twenty-five years ago by such outside students of France as Professor Byvanck of Leyden. In the revolution of

these few years, this literature, with all the narrow perfection which Jules Renard gave to it, seems weary and old. He was a close Realist of short spread, an instantaneous photographer of his village, and with violent village prejudices, humorous and without general views of life or man or the world or anything. And, except for a certain jerky adequacy of expression, his literature has the same worth that village photography has in art.

"Dix Sept Histoires de Marins" is another volume of short stories, by the naval officer who writes under the name of Claude Farrère. His stories are, naturally, of sailors—"all round the Horn"—and, as often as not, they thrill and grip and start a sob. They are partly of death and heroism and partly of loves—more and more like Maupassant and less like Pierre Loti. The generation after the war may still read of sailors.

"Nigelle," by G. Franay, whose writing for *la jeune personne* has already been crowned by the French Academy, tells of Danish country life, with a deal of Hans Andersen in it. "Autour d'une Fortune," by Louis Noël, is a real sort of story that could only have happened before the war. A grocer has made a fortune and retired to a country town to enjoy it. "Around the fortune," local Freemasons and clergy wage what hitherto has seemed to be their endless war. The curé manages to fill the emptiness of the retired grocer's soul by getting him elected to Parliament, and so wins the credit of the fortune for—was it the church or his party? And shall this still be a typical story of French life in a year to come? The same author has a pretty story, "Le Trésor des Précy," of a good young girl in need who discovers a treasure hid by her ancestors during the Revolution. It "can be put in any hands."

"Nous, les Mères . . ." is a close study of women by Paul Margueritte, a man. "We mothers" are those whose children have been married away from them. It is not the story—as old as Mother Eve—of the difficult life together of two women, each differently dependent on the one man who is son of this and husband of that. Ages ago, American mothers were persuaded that Fanny Fern's lively description of a daughter-in-law's experience must be real; and Thackeray, in Clive Newcome, quite exhausted the son-in-law's possibilities. The French writer observes the mother's situation; and she tells the story of her years as she reasons herself into a life apart from the children who leave father and mother and cleave to wife or husband. It is a more reasonable and more refined world than the English or American writer gave; and, for a great part of the story, there is a delightful grandmother looking on with the philosophy of age at the inevitable readjustments of each generation as it follows another. The mother ends her story in relative peace—and entire loneliness:

> It is a year since I fled from Paris. . . . I have undergone my crisis and it was atrocious, like that of the Fathers of the Desert. . . . My children are grown; they no longer need me. My task to bring them up is over. All I could do for them, I have done. Nothing is left me but to love them—with space and time between us. If experience could be taught to others, instead of each one acquiring it at her own risk and peril, I would persuade women like myself to give without expecting to receive. This is the mother's privilege, as sad as it is noble. . . . We wish too much that those we have brought forth should resemble us! Perhaps I have tried to be a guardian too long; my children saw only a yoke in my sheltering embrace. The love which I wished they should give back to me in morsels—after all—do they not owe it, by the law of our species, whole and entire to their own children? Why did I not resign myself sooner?
>
> Yes, I have done well, the reality shows me so, and it is my reward. No doubt, they forget me a little, though Nicole [the daughter] writes me oftener than her brother and always insists I must go to live with them. Julia [the daughter-in-law] is "correct" and sends me on stated occasions news of her Fred. I am no longer of use and so they neglect me. It is so, but is it not so for everybody? And am I then the only mother who sees her children following the bent of their character and developing according to their own tendencies, good or evil?
>
> I take my part where I can do nothing. You get used to everything. The benefit of being far away is that I feel much less painfully that which once filled me with pin pricks and stabbed me to the heart at every stroke. Not to see *them,* no longer to keep fixed ideas stirring, to avoid every cause of disagreement—of that I now taste the melancholy privilege and the toneless comfort.
>
> More yet, my points of view have changed; and while my idea of life and of good and evil remains the same, I become more indulgent, I feel that I am better. Has a new truth unsealed my eyes? No. Is it only that my mind is freed from all that hindered it from thinking under irritation? Yes. I ask myself if I have not often been a little unjust and partial. . . . But one truth has been borne in on me—since I have renounced others as well as myself—I no longer look on them and I no longer look on myself as I did before. I have compassion on the reciprocal wretchedness of creatures taken up with vain cares and tormented by imaginary ills, whereas they ought to think only of understanding and loving each other.

This object-lesson for many women and some men is worked out in a swift story told in the usual clear-cut style of this novelist, who began and is now again in active army service.

"Le Retour dans la nuit," by M. Piéchaud, a new author, has also no particular timeliness. Like so many of these last days, it is a story of sad endurance, told with the simple perfection of language that touches most. Pierre is without a mother from childhood and grows up between the devoted but methodical professor who is his father and a faithful old servant. Man-grown and ready for the world's life, he learns that his mother had left her husband and is alive. He earns her forgiveness and reconciliation, only to become blind—and so, for man's true honor, breaks with the love on which he had counted for himself.

Three novels by Jacques de Gachons figure in the list of books crowned by the French Academy, for the Prix Capuran—"Le Chemin de sable," "Vivre la vie," and "Dans l'Ombre de mes jours." With "La Vallée bleue," which appeared in the Academician-training *Revue des Deux-Mondes,* they represent with some completeness the mind of an interesting author contemplative of French life in Paris and the provinces—as it was but yesterday. Everywhere is the spirit of endurance and sacrifice in the love of one's own. Such love, from the family, must extend to the *Patrie* in whose national life the family is the unit. Those who now suddenly find that they have underrated French patriotism might have guessed the truth if they had read such books in which, however, no Nationalism is made to intervene. There is a particularly good "father," worthy pendant of Paul Margueritte's "mother," who works on silently for inobservant rather than thankless children till the night comes when no man can work.

News for Bibliophiles

A NEGLECTED ENGLISH POET ON THE BATTLE OF OSTEND.

I take a particular pleasure in unearthing a beautiful verse in a neglected poet; it seems to me that his poor shade must be consoled and rejoice to see his thought understood at last; I am making a rehabilitation; I am rendering justice, and if sometimes my eulogy of certain obscure poets may appear undue to some of my readers, let them remember that I am praising them for all of those who have set them down lower than their desert, and that undeserved scorn provokes and justifies excessive panegyric.

These are the kindly phrases in which Gautier excused himself for praising François Villon, whose reputation, not many decades ago, was still but ill-assured. They occurred to me when the extraordinarily spectacular events of the past weeks' war in Flanders recalled suddenly to mind certain forgotten verses, now peculiarly appropriate, written by an English poet, Cyril Tourneur, who at most later hands has received less than justice. They give us a picture of the Battle of Ostend, and, save that the monitor and Zeppelin are unmentioned, might serve as a poetic description of the battle raging to-day on that harried Flemish coast.

If there has been one event which might be counted upon to stimulate, if it does not bewilder, the imagination of the poet of war, it was the attack on the Belgian littoral from sea and shore and sky at Nieuport and Ostend. Yet I am much mistaken if poetry is to be enriched by any description which can much surpass that written over three centuries ago by this sadly neglected dramatist.

Critics never vouchsafed to Tourneur an independent literary existence. He was almost entirely disregarded by the older generation, and it seems likely that the fact that Hazlitt once linked his name with Webster's will prove to be his everlasting misfortune, and that, like Ulysses and Diomede in Dante's ball of fire, they will pass on to-

gether. Tourneur has become merely the tail to Webster's comet. The ordinary reader doubtless imagines that Webster and Tourneur were collaborators like Beaumont and Fletcher, and yet there is no evidence to indicate that they ever fashioned a play in common. An elegy by Tourneur on the death of Prince Henry was printed by the bookseller Welby in a volume containing poems on the same theme by Heywood and Webster, but apart from an assumed similarity of genius, there was between the two contemporaries no other relationship. Yet Symonds included them both in a single volume of the "Mermaid Series," and now in the "Cambridge History of English Literature" C. E. Vaughan devotes one chapter ostensibly to both, but in reality almost entirely to Webster.

Upon what evil days Tourneur has fallen we may judge from the treatment here accorded his sombre and tragic muse. A single perfunctory page, out of its projected eight or ten thousand, is assigned to Tourneur, and the author hastens on to devote his time to Webster. Even more pathetic is the pitiful showing in the bibliography. The very inadequate edition which seems to have been somewhat hastily thrown together by Churton Collins at the beginning of his career (1878), remains the last word in the way of a text, though Symonds made a show of collation for the sections reprinted by him. Sadder than all this, in the way of special critical articles, the compiler could muster but one; and that by Swinburne. But it was as impossible for Swinburne to write discriminating criticism as it was to write immelodious verse. In dealing with the lesser Elizabethans, when he had exhausted all other superlatives, he began to compare his man with Shakespeare and to suggest possible superiorities. It was to this method that he had recourse here in order to save himself from anticlimax; but the very excess of his hyperbole provokes not attention but a smile. Yet the fact that, save for the unusually arid article by Thomas Seccombe in the "Dictionary of National Biography," the field should have been left to Swinburne undisputed—it was likewise he who contributed the Britannica article—is a reflection on the critical acumen of some of our Elizabethan specialists; for there are qualities, and especially flashes of superb poetry, in Tourneur which cannot be matched in the more pedestrian pages of Heywood or Middleton or Massinger, the lengthy discussion of whose work has blunted the nib of many a scholar's pen.

In any case, the fact remains that Swinburne alone seems to have challenged the ghost of this gloomy and lonely contemporary of Shakespeare who could have said with one of his fellow-dramatists:

> My soul like to a ship in a black storm,
> Is driven, I know not whither.

How slack, or, rather, how comparatively non-existent was the interest in Tourneur we may judge also from the fact that until Mr. Gordon Godwin pointed out the references to him in the Calendar of State Papers in the *Academy* of May 9, 1891, we knew absolutely nothing about his life. Like his works, his career was shrouded in darkness. We know now that he was born probably in 1575, and died in 1626, and that he spent some time in the Low Countries; for on December 23, 1613, he was granted forty-one shillings upon a warrant signed by the Lord Chamberlain "for his charges and paines in carrying letters for his Majestie's service to Brussels." The rest is silence, or is told in broken bits in the plays and poems. A "Funerall Poeme, Vpon the Death of the Most Worthie and True Souldier Sir Francis Vere Knight," who incidentally is celebrated as the hero of Nieuport and Ostend, would seem to indicate that he enjoyed the patronage of that house; and later relationship with other members of that family seems to confirm this. It may well be, therefore, that he had himself seen the fighting on the Flemish coast in 1600-1604, which he describes so strikingly in the passage I am to quote.

It is taken from "The Atheist's Tragedie," published in 1611, and is to be found under the quaint Latin rubric, "Actus Secundi, Scena Prima," which opens characteristically with "Musike. A Banquet. In the Night." It is told by Borachio, who is disguised as a soldier and is announced as returning from Ostend. He is asked by D'Amville to give the news, and begins:

> The enemy, defeated of a fair
> Advantage by a flatt'ring stratagem,
> Plants all the artillery against the town;
> Whose thunder and lightning made our bulwarks shake,
> And threatened in that terrible report
> The storm wherewith they meant to second it.
> The assault was general. But, for the place
> That promised most advantage to be forced,
> The pride of all their army was drawn forth
> And equally divided into front
> And rear. They marched, and coming to a stand,
> Ready to pass our channel at an ebb,
> We advised it for our safest course, to draw
> Our sluices up and mak't impassable.
> Our governor opposed and suffered them
> To charge us home e'en to the rampier's foot.
> But when their front was forcing up our breach
> At push o' pike, then did his policy
> Let go the sluices, and tripped up the heels
> Of the whole body of their troop that stood
> Within the violent current of the stream.
> Their front, beleaguered 'twixt the water and
> The town, seeing the flood was grown too deep
> To promise them a safe retreat, exposed
> The force of all their spirits (like the last
> Expiring gasp of a strong-hearted man)
> Upon the hazard of one charge, but were
> Oppressed, and fell. The rest that could not swim
> Were only drowned; but those that thought to 'scape
> By swimming, were by murderers that flanked
> The level of the flood, both drowned and slain.
>
> D'AMVILLE. Now by my soul, soldier, a brave service.
>
> MONTFERRERS. O what became of my dear Charlemont?
>
> BORACHIO. Walking next day upon the fatal shore,
> Among the slaughtered bodies of their men
> Which the full-stomached sea had cast upon
> The sands, it was my unhappy chance to light
> Upon a face, whose favour when it lived,
> My astonished mind informed me I had seen.
> He lay in 's armour, as if that had been
> His coffin; and the weeping sea, like one
> Whose milder temper doth lament the death
> Of him whom in his rage he slew, runs up
> The shore, embraces him, kisses his cheek,
> Goes back again, and forces up the sand
> To bury him, and every time it parts
> Sheds tears upon him, till at last (as if
> It could no longer endure to see the man
> Whom it had slain, yet loth to leave him) with
> A kind of unresolved unwilling pace
> Winding her waves one in another, like
> A man that folds his arms or wrings his hands
> For grief, ebbed from the body, and descends
> As if it would sink down into the earth,
> And hide itself for shame of such a deed.

We need make no apology, surely, for quoting the lines on the discovery of Charlemont's body by the shore, for they are justified by the fact that Charles Lamb loved them and quotes them with particular approval in his "Specimens from the Dramatic Poets." It is only fair to say that the description of the battle which, so far as I know, has been altogether disregarded, is better than much of the work of this sullen genius, who seems to have plunged into horror and darkness in a blind search for light. Either we are mistaken in our estimate or it is also better than many a passage much more frequently quoted. It is in such excerpts that Tourneur is at his best. They are but flashes in this "thunderstorm of a play." He seemed to live in darkness like a hooded hawk; but once he saw the light its effect was dazzling. That "The Atheist's Tragedie" has grievous faults as a play and that it is far less satisfactory than "The Revenger's Tragedie," his only other extant drama, which preceded it in publication though probably not in date of composition, is not to be denied. His genius was fitful and his inspiration gusty, and he fails here to redeem even with the angry beauty of his verse the jumbled stretches of his extraordinary narrative. But when it comes, his light is lightning and doubtless, in the words of his fellow Elizabethan, the time has not yet arrived when critics can afford

> To fill an hour-glass with his mouldered ashes.

Deeply preoccupied, or rather obsessed as he was, with the question of the existence of evil, it is also characteristic of the dramatist's perverse temper that this most beautiful description should, in the next scene, prove to be a fraudulent invention designed merely to deceive by the despicable Borachio. Tourneur prefers to attack the moral problem from the reverse side, and evidently took a deeper satisfaction in showing what a goodly outside falsehood hath than in declaring the splendor of truth.

If the fighting of the past few weeks may momentarily revive an interest in this three-century-old description of the battle of Ostend, it is also, under all the circumstances, well to consider the question whether Cyril Tourneur's work does not possess, even in the stiff competition of the Elizabethans, sufficient distinction to win for him a more honorable and independent place in English literary history.

Poetry

FRANCE.

Half artist and half anchorite,
Part siren and part Socrates,
Her face—alluring fair, yet recondite—
Smiled through her salons and academies.

Lightly she wore her double mask
Till sudden, at war's kindling spark,
Her inmost self, in shining mail and casque,
Blazed to the world her single soul—
Jeanne d'Arc!

PERCY MACKAYE.

Correspondence

PROFESSOR DARMSTAEDTER REPLIES.

To the Editor of The Nation:

Sir: Prof. Arthur O. Lovejoy has made, in the *Nation* of September 24, a quite unjustified attack on the honor of German scholars. He says that the statements of the pamphlet, "Truth About Germany," are false, but he has not tried to prove his assertions. On the contrary, there is now ample documentary evidence for the statement that France and England planned to attack Germany by the way of Belgium, and that Belgium was a member of the Entente. Mr. Lovejoy points to the negotiations concerning the Servian affair, and especially to the communications of the Russian Government of July 30 and 31, and to the declaration of Sir Edward Grey of July 31. He says that on the same day, with these pledges before it, the German Government sent ultimata to Russia and France. I don't discuss the real value of the Russian and the English communications—the Russian proposition involved a humiliation of Austria—but Mr. Lovejoy forgets a central fact: the total mobilization of the Russian army. Is that "historical objectivity"? Paul Darmstaedter.

Professor in the University of Göttingen.

Göttingen, Germany, October 16.

ENGLAND'S VIOLATION OF NEUTRAL TERRITORY.

To the Editor of The Nation:

Sir: Will you allow me to correct an important misstatement made by Dr. F. C. Conybeare in your issue of October 29? He writes: "There is a significant contrast between their [the Germans'] treatment of Belgium now and our treatment of Portugal in the Transvaal war. Had we chosen to violate Portugal's neutrality . . . we could have struck direct at Pretoria and have ended the campaign in a few weeks. Would modern Germany have shown the same scrupulous respect for the rights of a weak state like Portugal? I am far from justifying the Transvaal war . . . but I do maintain that, in respecting the neutrality of Portugal, we set an example which Germany might well have followed." As a matter of fact, England did violate Portuguese territory by moving troops through it at that time. This fact is noted by Sir Thomas Barclay, writing on "Neutrality" in the Encyclopædia Britannica, and is called by him "an unfortunate precedent of taking advantage of the practical powerlessness of neighboring states to commit a violation of the law of nations."

Surely there was never such a case of the mote and the beam as we now see in England's attitude. This self-styled "defender of the rights of small nations to exist" but a dozen years ago beat down and annexed two free republics in South Africa. I am far from justifying Germany's invasion of Belgium, but of the two crimes England's is the blacker and more wanton. As a friend to both Germany and England, I note that this war, which has raised the former to a high pitch of heroism and devotion, has debauched the honor of the latter. No suppression of the truth, no falsehood is too mean for the English papers, headed by their Official News Bureau, to blacken the character of her enemy. While her leading writers—H. G. Wells and others—not satisfied with having odds of three to one in men and resources, come to us pleading for our help in underhand and inhumane ways, they complain of German efforts to present their case to us as something unfair and wrong. Germany's "campaign" in this country has been unobtrusive; all that I have noticed is that our papers are full of letters by Englishmen, and that English firms are advertising everywhere that they will send "Germany's infamous proposals" and other partisan literature to any address at nominal cost. This is legitimate, but let us at least have a fair field for all. Preserved Smith.

Poughkeepsie, N. Y., November 1.

To the Editor of The Nation:

Sir: In your issue of October 29, Dr. F. C. Conybeare, of Oxford, England, after contrasting the German treatment of the Belgians with the British treatment of the Portuguese in the Boer war, continues: "Had we chosen to violate Portugal's neutrality and advanced through the harbor of Lorenzo Marquez, we could have struck direct at Pretoria and ended the campaign in a few weeks. Would modern Germany have shown the same scrupulous respect for the rights of a weak state like Portugal?"

It is a matter of record that just as soon as the British had landed enough troops in Capetown to keep the Boer armies and agents out of Cape Colony and relieve Ladysmith and Kimberley, they did move upon the flank of the Boers through Lorenzo Marquez. The Boers protested to the civilized world, and especially to America, against this breach of neutrality, but, owing to the lack of organized publicity, could not keep up the clamor of protest which seems necessary for the maintenance of international sympathy. The Portuguese were too much cowed or too partisan to speak.

This act of the British was moreover the second violation of neutrality in their relations with the Boers. The first was the Jameson raid, an enterprise of pure piracy. This raid was a treacherous armed invasion of a friendly country, with the avowed intention of bringing about annexation to Great Britain. Jameson and his accomplices were taken prisoners. The Boers, who legally would have been justified in lining the conspirators up against a wall and shooting them, chose the more courteous method of delivering them to the British for punishment. The British, instead of punishing, lionized them as patriots and heroes, thereby nationally ratifying their conspiracy. It was manifest from that time on to all who had read the history of the growth of the British Empire, and particularly to the poor Boers, that the British, with that amazing naïveté of theirs, which never recognizes its real purposes for the mist of sanctimoniousness it spreads over them, were vaguely but unalterably bound for the subjugation of another free and capable race.

After the destruction of the national identity of the Boers, the British, in conjunction with the Russians, by a less red-handed but equally flagrant breach of neutrality, strangled Persia when it was just beginning, under the able and unselfish administration of an American, Mr. Morgan Shuster, to get on its feet. It would be well for Dr. Conybeare, and for many Americans who are forgetting that America is not only politically but racially distinct from Britain, to read Mr. Shuster's account of this most recent ruthless undoing of a neutral country, in "The Strangling of Persia." It is strange how silent has been our press, which assiduously drags out every extreme saying of every extreme and irresponsible German writer to make out a case against Germany, upon Mr. Shuster's illuminating and authentic story.

It would also be well for Dr. Conybeare to ponder the continued exaction of the pound of flesh which was the reward of the opium war, made upon a neutral and helpless nation. Great and cruel as is the misery visited upon the Belgian people, it is trifling in comparison to the destruction of life and happiness which has been, and *still continues* to be, the result of the opium crime.

The British, as a nation, are always willing to regret, as does Dr. Conybeare, in speaking of the subjugation of the Boers, their past offences—as willing to regret as they are unwilling to restore the unholy fruits of those offences. It is one of the mysteries of psychic life that their profitful regrets should roll forever tracelessly from the oily coat of their national conscience. Martin Schuetze.

The University of Chicago, October 30.

GERMANS PLUNDERING IN FRANCE.

To the Editor of The Nation:

Sir: During the recent battles of the Marne, the German Crown Prince, in command of his army, passed two nights in the Château de Baye. The state in which his visit left the unique collection of art objects made by the late Baron de Baye during remote explorations of twenty-eight years has been described by the Baroness:

> All the numerous glass cases in a gallery one hundred and fifty feet long were broken and pillaged. Arms and unique jewels and medals have been stolen; precious vases and chiselled gold cups stolen; all the magnificent presents with which the Czar honored M. de Baye in remembrance of his art explorations in Russia, stolen also. In the special museum of 1812, admirable icons, tapestries, miniatures, and the like have been stolen. And souvenirs—the things dearest to the heart—have been taken with the rest. The rarest pieces of furniture and pictures had been boxed up, with a choice that astonishes in a vandal; but, in the precipitate retreat, the last cases were abandoned.

This is the fact—an "enormous" fact, as it is characterized by Edouard Clunet, whose mastery of international law is as well known in England and America as in France and all Europe. He has examined the fact in its judicial aspects under the forty-sixth and forty-seventh articles of the Fourth Convention of The Hague, with the preliminary sanction of the third article:

> The belligerent party, violating these articles, shall be held to an indemnity—and shall be responsible for all acts committed by persons forming part of its army.

These articles were signed by Germany with the other nations on the eighteenth day of October, 1907—barely seven years ago. I am not competent in matters falling under the international laws of war; and what is going on fosters skepticism as to the binding force of such laws. Moreover, it is hard to see what responsibility can cover the plunder and destruction of a collection made with so many years' labor under favorable circumstances that can never be found by other archæologists.

I knew these collections at first hand during their formation. Each year, on his re-

turn from exploration, Baron de Baye invited me to visit his latest finds and explained them with his complete knowledge of primitive decorative art. In fact, he came on the obscure peoples of far-away Russia just as they were issuing from age-long isolation, when a thousand years in art is as one day, into conventional designs too often made in Germany."

I remember, in crude embroideries and laces, ornamental treatment of the cock's comb and other animal forms that might have been found in the mummy cloths of ancient Peru. There was pottery of the nineteenth century which, in process and design, still continued the prehistoric. Among survivals of primitive tribal religions, there were the changeless Byzantine designs treated by hand processes as old as the Scythians of Cyrus. Beside these, the Baron pointed tragically to embroidery or leather stamping in designs evidently copied from models of our commonplace primary school publications.

Such a collection, from latest survivals adding to our knowledge of the steps forward in earlier art, ought surely not to have been taken even by military Philistine culture as a thing to plunder for bright, ill-understood baubles. It was the desire of the Baron de Baye to hand it over entire to some French state museum, where its interest from fresher use of the eyes of men might be caught back in our uninteresting uniformity. It is wrong-headed to consider the enthusiasm of such as he a criticism on the accession of rude races to a higher, if more level, civilization.

> This tract which the river of Time
> Now flows through with us, is the plain.
> Gone is the calm of its earlier shore.
> . . . . . .
> And we say that repose has fled
> Forever the course of the river of Time.
> That cities will crowd to its edge
> In a blacker, incessanter line;
> That the din will be more on its banks,
> Denser the trade on its stream,
> Flatter the plain where it flows. . . .

Baron de Baye had wandered far afield in archæology and travel before he settled down to Russia in Europe and Asia. Prehistoric Scandinavia, barbarous art in Hungary, and Congolese industries were described by him in turn from collections which endless curiosity and private resources allowed him to gather—to be dispersed by the new cultured vandals.

> But what was before us we know not,
> And we know not what shall succeed.

Paris, October 15. D.

AN APPEAL FROM FRANCE.

Mon Cher Confrère: Un miracle s'est accompli. La France consent à d'énormes sacrifices: elle les supporte avec une résolution calme et fervente, confiante qu'elle est dans ce sort des armes, qui n'est pas douteux. Grâce à l'active participation des armées britanniques et belges, grâce au soutien lointain mais efficace des Serbes et des Monténégrins, grâce au formidable choc des Russes, grâce à l'appui du Japon, le succès final apparaît certain aux armées de la République d'occident. Déjà, dans les ténèbres épaisses, commence à luire la lumière. Quelque dure, quelque longue que soit la lutte, la victoire d'ores et déjà nous est acquise.

Sans doute, de nombreuses fautes furent ommises par nos armées et nos chefs, vouons le, au début de la campaigne. La lutte n'est pas du tout ce que nous pensions qu'elle serait. Nous n'y étions donc pas preparés; il a fallu y former nos soldats sous le feu même de l'ennemi.

D'autre part, l'offensive que nous avons dû méner en Belgique n'était pas prevue dans les plans de notre état-major. D'où son échec. Car il y a eu un échec. Sachons le reconnaître. Mais il y a eu également une victoire, peu après, qui racheta les erreurs et qui constitue pour nous des promesses infinies.

Mais nous ne pouvons point ne pas vaincre; car il y a une Justice immanente; car il faut que triomphent les champions de la Civilisation violée et du Droit offensé. Ne le voit-on pas, en effet? De plus en plus cette guerre européenne s'affirme sainte! C'est une nouvelle croisade pour la Liberté.

Car il ne s'agit plus de l'ultimatum autrichien! Ce n'était là qu'un prétexte machiavclique et fallacieux. Si les pangermanistes ont trainé l'assassinat de l'archiduc héritier Ferdinand, c'était pour ranimer l'antique fureur de François-Joseph contre les Serbes. Et François-Joseph, incapable d'évaluer la presente situation de son Empire, n'a point encore compris qu'il avait été la dupe stupide du butor auquel il s'est soumis. La déconvenue de ses partisans sera grande, lorsque la lumière aura complètement vaincu les ténèbres. Et l'on verra alors que l'Allemagne avide s'est ruée sur la France, à l'abri de ce monstrueux prétexte, comme le lion sur l'agneau. Elle était consciente de sa force, et ne se doutait pas que ce véritable attentat au Droit et à la Liberte souleverait contre elle la croisade unanime des nations civilisées.

A tous les peuples européens la liberté sourit, que sulvra la Paix des siècles. Volci déjà reconstituée la Pologne, par l'émouvant et juste appel du Tsar à la Liberté. Un mouvement tcheque, que j'assiste personellement de tout mon pouvoir, se dessine très net. La Bohême à son tour sera libérée avec les peuples slaves. C'en est fini de l'oppression des tyrans germaniques. Cette guerre sainte présente ce caractère effrayant d'un véritable cataclysme ethnique, d'une convulsion naturelle et nécessaire des races et des peuples asservis, opprimés, froissés dans leur plus intime amour-propre national par d'inecssants ultimata!

Encore une fois, l'étendard sanglant est levé! Cette guerre est une croisade, dont la France sera l'héroine. La nation avide de paix qul avait fermé les yeux sur tous les abus, qui s'était toujours montrée hospitalière à ses pires ennemis, à tel point qu'elle avalt fait la rapide fortune de leur commerce et s'était laissée conquérir par leur perfide infiltration, cette nation abominablement trahie est le symbole vivant et douloureux d'une oppression infame et inacceptable en ce slècle. Elle a courageusement donné le signal de la révolte, selon l'héroique tradition de ses ancêtres, pour continuer l'œuvre grandiose que ceux-cl avaient entreprise en 1789, pour réaliser enfin l'union équitable et pacifique des peuples civillsés, et pour faire loyalement et définitivement triompher, après les drolts de l'individu libre, ceux des peuples égarès et des races fraternelles. Cette guerre est une croisade pour la liberté, répétons le. La France a remporté la premiére victoire du droit sur la force. Les autres suivront, inévitablement, pour l'Eternité.

F. Jean-Desthieux.
(Directeur de *Nos Provinces.*)

Chartres, Octobre 16.

"ARGUMENT FROM GERMANY."

To the Editor of The Nation:

Sir: Your correspondent, Mr. Jacques Mayer, of Munich, asks you to print "some views concerning that country [England] and its people, possessing peculiar significance in these dreadful days." Matthew Arnold is cited for his description of English society as "An upper class materialized, a middle class vulgarized, a lower class brutalized." What would Matthew Arnold have had to say about the Germany of to-day? Might he not have found evidence that it had been materialized, vulgarized, and brutalized by the teachings of Nietzsche, Treitschke, and Bernhardi?

Mr. Mayer quotes some bitter language of Heine about England. Why does he not quote Heine on Germany? Heine was a German himself, but no Englishman can have any objection to the poet's opinions of the two countries being published side by side. The fate of Louvain and Rheims lends a new interest, a prophetic significance, to the following language used by Heine eighty years ago:

Christianity—and this is its highest merit—has in some degree softened, but it could not destroy, that brutal German joy of battle. When once the taming talisman, the Cross, breaks in two, the savagery of the old fighters, the senseless Berserker fury of which the northern poets sing and say so much, will gush up anew. That talisman is decayed, and the day will come when it will piteously collapse. Then the old stone gods will rise from the silent ruins, and rub the dust of a thousand years from their eyes. Thor, with his giant's hammer, will at last spring up, and shatter to bits the Gothic cathedrals.

Your correspondent gives what purport to be extracts from "The Crown of Wild Olive." One of these is as follows:

And take also your English vice—the vice of jealousy which brings competition into your commerce, treachery into your councils, and dishonor into your wars.

Now, if we turn to Ruskin's lecture on "Traffic" in "The Crown of Wild Olive," we shall find that the supposed extract above written is not what Ruskin said. The original passage is as follows:

And take also your great English vice—*European vice—vice of all the world*—vice of all other worlds that roll or shine in heaven, bearing with them yet the atmosphere of hell—the vice of jealousy, which brings competition into your commerce, treachery into your councils, and dishonor into your wars.

This is a very different thing from the garbled version given by Mr. Mayer. The quotation might be continued with advantage. Consider whether the passage applies more accurately to modern England or to modern Germany in the light of the remaining clauses:

—that vice which has rendered for you, and for your next neighboring nation, the daily occupations of existence no longer possible, but with the mail upon your breasts and the sword loose in its sheath.

We should be grateful to your correspondent for referring us to the authority of Ruskin, for Ruskin has given a character sketch of the German which is well worth considering "in these dreadful days." It will be found in "Fors Clavigera," Letter XL, and is as follows:

For blessing is only for the meek and merciful, and a German cannot be either; he does not understand even the meaning of the words. In that is the intense, irrecon-

cilable difference between the French and German natures. A Frenchman is selfish only when he is vile and lustful; but a German, selfish in the purest states of virtue and morality. A Frenchman is arrogant only in ignorance; but no quantity of learning ever makes a German modest. "Sir," says Albert Dürer of his own work (and he is the modestest German I know), "it cannot be better done." Luther serenely damns the entire gospel of St. James, because St. James happens to be not entirely of his own opinions.

Accordingly, when the Germans get command of Lombardy, they bombard Venice, steal her pictures (which they can't understand a single touch of), and entirely ruin the country, morally and physically, leaving behind them misery, vice, and intense hatred of themselves, wherever their accursed feet have trodden. They do precisely the same thing by France—crush her, rob her, leave her in misery of rage and shame; and return home, smacking their lips, and singing Te Deums.

How that last touch has persisted to our day!

R. W. SHANNON.

Regina, Sask., October 15.

LUTHER AND MILITARISM.

TO THE EDITOR OF THE NATION:

SIR: In the article "The Lust of Empire," which was published in the *Nation* of October 22, "P. E. M." endeavors to show by a quotation that Martin Luther is partially to blame for the so-called German militarism. His quotation is taken from Luther's essay, "Can a Soldier Be in a State of Salvation?" and is so brief that it conveys a false impression. Luther in order to give force and power to his thoughts often expresses them in extreme and striking statements, which, quoted out of their context, misrepresent him. I feel certain that "P. E. M." had no sinister motive. Most likely, he has never read the remarkable essay from which the quotation is taken. I am sorry that this new misrepresentation of the great reformer has gone out into the world. In order to undo to some extent the false impression which has been created, I give your readers a translation of the whole paragraph, which is as follows:

Finally, we must not regard in the office of the soldier, this, that it destroys, burns, fights, and etc. This is what the narrow inexperienced eyes of children do, which only see that the physician cuts off the hand and saws off the leg, but do not see or notice that he is concerned in saving the whole body. For we must look upon the office of the soldier and the function of the sword with manly eyes, wherefor it slays and commits such horrible deeds, for then will it prove itself to be a divine office as needful and useful to the world as eating and drinking and any other work. The fact that some abuse the office, slay and beat wilfully without necessity, is not to be charged to the office, but to the person. Where is there an office or work, or ever so good a thing which wilfully wicked people do not abuse? Such people are like a mad physician who would cut off a man's hand wilfully without necessity, yea they are a part of that general strife and discord which must be suppressed by just war or sword, and coerced into peace, as everywhere it comes to pass, and has come to pass that they are beaten who began war without necessity. For in the end they cannot escape God's judgment, to wit, his sword.

Luther regarded the office of the soldier and war as necessary for peace and protection. He writes in this same essay, "What is war but punishing injustice and wickedness? Why do we war but because we want peace and obedience?" Mr. Roosevelt and his armed fist expresses Luther's idea exactly.

In conclusion, I take the occasion to add in reference to the article that I cannot see why the lust of empire is a crime for Germany and not for England and Russia, why the invasion of neutral Belgium on the part of Germany is worse than the betrayal and division of neutral Persia by England and Russia, or the present violation of Chinese neutrality. It seems to me it's the old story of whose ox is being gored.

J. FREDERIC WENCHEL.

Washington, D. C., October 23.

TO THE EDITOR OF THE NATION:

SIR: The real point is—and this I might have stated more specifically—that the sentence is used by Bernhardi to justify the present spirit of militarism. Nor can I see that the context modifies its application in any essential point. The militarists also believe that war is "a divine office" for "saving the whole body," and admit that it may be abused.

P. E. M.

Princeton, N. J., October 30.

A SUGGESTION FOR THE RED CROSS.

TO THE EDITOR OF THE NATION:

SIR: Crossing Ireland on the way to the Aran Islands this spring, I found myself delayed in a little provincial inn, and there observed what impressed me as a very curious though extremely practical custom. Whenever I entered the coffee-room I would find in front of my plate a small and rather battered tin box in which a hole was roughly pierced, large enough to admit of a copper penny. I observed that every man who breakfasted or dined there left a penny beside his plate, and knowing how inevitable the small tip is in these districts, I was surprised to see the waiter collect these pennies and drop them in the box. A short time afterwards I was forced to spend a dreary Sunday in another one of these little inns, and observed the same proceeding. Upon inquiry I was informed that every commercial traveller is bound by an unwritten law at every meal to leave one penny and no more behind as a contribution to the support of the orphans of commercial travellers. The custom is absolutely universal in Ireland, and no attempt is made to conceal or disguise the box.

Now, of course, this is crude, but it is also certainly obtrusive, and in it there is, I think, the germ of a large practical movement which might be inaugurated without expense in this country for the benefit of Red Cross work. The presence of this box before you is a social compulsion in Ireland. It is absolutely impossible to avoid it, and yet the slight toll it involves works no hardship to any one. In a time of great emergency such as the present, might we not waive the crude appearance of this little box, and introduce its use generally as an unwritten law while the war lasts? With cordial coöperation, the opportunity for every one to assist the Red Cross work in this way is almost unlimited.

EDWARD J. O'BRIEN.

South Yarmouth, Mass., October 26.

RICHARD M. MEYER.

TO THE EDITOR OF THE NATION:

SIR: By the recent death of Prof. Richard M. Meyer, of the University of Berlin, Germanic studies lose one of their most distinguished representatives and many former American students a personal friend. Professor Meyer, who was in his fifty-fifth year at the time of his death, was a native of Berlin, and most of his academic career was passed in the University there. His reputation was established twenty years ago by the publication of his critical biography of Goethe, for which he received a prize offered by a Leipzig society. This work is still one of the most valuable aids to the study of Goethe, though its reputation has been somewhat overshadowed by the similar work of Bielschowsky. In 1900 Professor Meyer published his "Geschichte der deutschen Literatur des Neunzehnten Jahrhunderts," his longest and probably his best book. In the first edition of this exhaustive work the author made the grave mistake of arranging his material by decades with the birth-years of the individual writers as the determining factor. The work was, however, thoroughly recast in a later edition, and one may now enjoy the excellent detailed criticisms in which the book abounds, while preserving at the same time a rational perspective. The author's "Grundriss der neueren deutschen Literatur" forms a serviceable bibliographical pendant to this work. It is probable that Professor Meyer's volume on Nietzsche (reviewed in the *Nation*, March 5, 1914) will be remembered as the most important of his other books.

Professor Meyer was also active in the older fields of investigation, but here, I am inclined to think, with less success. Certainly such books as "Altgermanische Poesie" and "Altgermanische Religionsgeschichte" failed to impress greatly the learned world. Indeed, Professor Meyer once admitted to me that he did not undertake such work *con amore*, but rather to broaden himself and to escape the imputation of being a mere bellettrist. His prime interest was modern literature in its widest phases. Yet the charge of dilettantism could not be brought against him.

In spite of the amount and quality of his work, Professor Meyer never received the highest academic honors. He remained until the end an "ausserordentlicher Professor," a grade beyond which he would have found it impossible to rise in a Prussian university without abjuring the Hebrew faith in which he had been brought up and to which he adhered nominally for reasons of family pride. It was known among his friends that he revolted with inward indignation against this unjust restriction; yet his disposition did not become soured, nor was his outward bearing ever anything but frank and cheerful. He was a good lecturer, notwithstanding certain mannerisms such as an unusually rapid utterance and a too marked rhythm of intonation. His courses were always well attended and enthusiastically praised. But, what is rarer, he succeeded also in coming into very close touch with the maturer and more serious of his students outside the classroom. He and Frau Meyer were in the habit of keeping open house on five afternoons a week, on which occasions their home in Vossstrasse was a rendezvous where students were cordially welcomed and were often privileged to meet many interesting people of the non-academic world. Such intimate personal relations between professor and student are uncommon enough in the larger German universities of to-day; it is to be feared that they will not soon be reproduced under such delightful auspices.

W. K. STEWART.

Hanover, N. H., October 21.

Literature

PARNELL AND MRS. O'SHEA.

Charles Stewart Parnell: His Love Story and Political Life. By Katharine O'Shea (Mrs. Charles Stewart Parnell). 2 vols. New York: George H. Doran Co. $5 net.

There are some private disgraces which are public calamities. Such was the case of O'Shea *v.* O'Shea and Parnell, in November, 1890, in which Capt. W. H. O'Shea sued for divorce from his wife on the ground of her adultery with Charles Stewart Parnell. The scandal which at once exploded tore the Irish party asunder, drove Parnell into frantic but vain efforts to retain his leadership, and undoubtedly hastened his death. One would think that the sad business might have been left with that. But Mrs. O'Shea—she was Mrs. Parnell for a brief period—has chosen to lay the whole thing open. Over the initial question of the good taste of this performance one need not pause. It simply is frightful in the woman with whom Parnell was infatuated, and with whom he lived in guilt for years, to publish all the private letters of his contained in these volumes. Botanizing on a mother's grave is nothing to this. Another might have done it, fifty years from now, but she herself! True, she informs us that she has kept back something: "just a few of the little messages of my husband's love . . . I must keep for my own heart to live upon." But in the most amazing and, in our judgment, unforgivable way she has broken lock and seal as if there were nothing that the many-headed beast were not entitled to know.

Ah, but she had a high public motive. She desired to vindicate Parnell—by proving that he was not a "victim" of an unscrupulous woman, but sinned with his eyes open. She also desired to vindicate herself, apparently thinking that she owes this to her son. She even seems to wish to vindicate Capt. O'Shea! Such moral obfuscations attached to Parnell's *liaison* with Mrs. O'Shea, and the world-echoing suit for divorce, from the first. When Parnell, after the revelation, went to meet the Irish members of Parliament, to fight it out, one of them was asked if the Chief betrayed any sense of having done wrong. "Not at all," was the reply; "he treated us all as if somehow we had committed adultery with his wife!" This is hardly an exaggeration of the topsy-turviness which marks these volumes. It is impossible to accept the point of view here taken, whether as regards Parnell's attitude, or Mrs. O'Shea's, or her husband's, without feeling that all logical distinctions—we will not say moral—are obliterated. It is not a matter to be argued. One perceives it, or one does not. If one does, one shudders and passes.

On a single point in the sorry mess may a word be ventured. Mrs. O'Shea would have us believe that, till the very end, Capt. O'Shea did not know the nature of her relations with Parnell, maintained for years. Parnell's child he thought to be his own. The intimate association he was aware of, yes, but considered it pure friendship based on a community of political interest. Now, to this it may be said not alone that if Capt. O'Shea did not know that his wife was Parnell's mistress he was the blindest of mortals, ignorant of what hundreds knew, but that the view cannot be reconciled with many of the unwitting betrayals in these pages. We will not press the fact that as far back as 1881 Capt. O'Shea found Parnell's portmanteau in his wife's rooms, and sent Parnell a challenge to fight a duel. That was patched up; and deceit skilful enough might have allayed those early suspicions. But what are we to infer from the letter which the Captain wrote to his wife when Parnell would not find him a seat in Parliament, that he "meant to hit back a stunner"? That he had packed his shell with dynamite in order to "send a blackguard's reputation with his deluded countrymen into smithereens"? This was in 1885, and did it not threaten the divorce suit of 1890? Shortly afterwards, Parnell did find a Parliamentary seat for Capt. O'Shea, forcing him upon reluctant Galway. Against this Mr. Biggar, among others, angrily protested, and made speeches in Galway asserting that Mrs. O'Shea was Parnell's mistress, and that the Galway seat had been given him as a "hush-gift." To be sure, Capt. O'Shea declared, five years later, and after Parnell was dead, that "no statement made by the late Mr. Biggar could have affected my mind." The reason was that the man was such a general slanderer! But is this credible? And what did Mrs. O'Shea mean by writing to her husband in 1887, in reply to a complaint by him, that "the only person who has ever tarnished your honor has been yourself"? What did the Captain himself mean by writing the same year to his wife's solicitor about the "reports being wide and strong as to her relations with Mr. Parnell"? As a final plea after the event, we find Capt. O'Shea protesting that if Parnell could have proved "connivance," he would have won the divorce case. But put this beside Parnell's resolute refusal, recorded here, to fight the matter in court: "No, Queenie. What's the use? We want the divorce. . . . We have been longing for this freedom all these years."

What a set! exclaimed Matthew Arnold of another group given to marital irregularities, and with some such cry must we pass from the "love story"—the tense tragedy of which we do not deny—to the public aspects of Parnell made clearer to us by Mrs. O'Shea's reports, comments, and documents. His relations with Gladstone early involved her. She was used as a go-between, in the days when it was important for both Parnell and Gladstone not to meet openly. Mrs. O'Shea admits that Gladstone's manner to her was always "charming." To her, he referred to Parnell only as "your friend." But she asserts that he had long known the truth. "For ten years Gladstone had known of the relations between Parnell and myself." Whether for such a period or not, it is highly probable that Gladstone did know. John Morley virtually admits it. Gladstone, he says, would not set himself up as a judge of the private lives of politicians. But when the private scandal blazed on the heavens, then, as we know, he had to act. For this Mrs. O'Shea denounces him as a hypocrite. She quotes Parnell himself, at the time of the divorce case: "They are afraid of shocking Mr. Gladstone." This was his sarcastic reply to her passionate question: "Why does it matter more now? They have all known for years." But Parnell, though he raged at the hypocrisy of the English "wolves," howling for his blood, had been clear-sighted enough years before to see exactly what would happen. "Over and over again had Parnell said: 'Once we get Home Rule through, Ireland is safe, and we [meaning himself and Mrs. O'Shea] may be happy in the sight of all the world; but till then I fear these English hypocrites.'" So he was not really surprised, though he pretended to be. And he did not especially blame Gladstone. His frequent name for him in private was the "Grand Old Spider." And when he was once at Hawarden, seated next Miss Gladstone at dinner, he said when she asked him who was the greatest actor he had ever seen: "Your father, undoubtedly."

The hiding of Parnell's political strength is often hinted at in these pages. His cold energy and inflexible will appear frequently, as his attitude towards this or that colleague, or the changing aspects of his cause, is revealed. He knew his problem; he knew the Irish people, and how to lead them. It might be said of him, as of another, that they held him up on their necks, for his heel was there. He would brook no opposition from within his following. "As long as I am leader, they must be tools, or else they must go." And his mystery, his frequent long disappearances, his ignoring of engagements, his absenting himself from meetings at which he had promised to speak—all were parts, not only of his personality, but of his deliberate plan. When asked a direct question face to face, by an Irish leader, he was capable of making no answer at all. When leaving an audience in the lurch, he would not even telegraph an explanation or a regret. "You do not learn the ethics of kingship, Queenie. Never explain, never apologize"; adding, with his rare laugh: "I could never keep my rabble together if I were not above the human weakness of apology." There are many such lightings up of Parnell's character in these volumes; and therein resides their true value.

There can be no doubt that Parnell's passion for Mrs. O'Shea was overmastering to the point of being terrible. The same drive of will, recking not of consequences, which he put into his public work, he carried into this infatuation. At the time of their first meeting, Mrs. O'Shea accidentally dropped a rose. "He picked it up, and, touching it lightly with his lips, placed it in his buttonhole. This rose I found long years afterward done up in an envelope, with my name and the date, among his most private papers,

and when he died I laid it upon his heart." Evidently, the man was intense in his illicit love. And he found, or thought he found, happiness in it. But when he lay dying he might well have made his own the words of one of old: "Draw thy sword and kill me, that men say not of me, A woman slew him."

CURRENT FICTION.

Wintering Hay. By John Trevena. New York: Mitchell Kennerley.

John Trevena's earlier novels, "Furze the Cruel" and its immediate successors, suggested Mr. Phillpotts in other matters than their setting. An eye and a tongue for the grandeur and beauty of a natural scene in which human figures have their place—these the younger celebrant of Dartmoor seemed to have in common with the elder; something, too, of his kindly Olympian humor, his smiling appreciation of the littleness and dearness and fundamental wholesomeness of man. There was, to be sure, only a hint of the latter, and it has quite vanished from Trevena's later work. Even at the outset he wandered perilously near the line that divides what is grim from what is morbid. His realism lacked the balance-wheel of health which has protected the realism of Mr. Phillpotts in the most desperate conditions. Often a young author (Trevena is not very young, but his authorship may still be called so) grows into such health. This one appears to have lost all chance of it. The confused fanciful melancholy of "Bracken," its misdirected or undirected ardor of imagination, its moral impotence, are to be found again, if less repellently, in "Wintering Hay." The bits of symbolism—the Green Way found by young, dreaming Cyril, and lost with his innocence; the fir tree which is his Christmas gift from the pixies and which he profanes—suggest an idealism which the tale leaves thin and insubstantial.

The plot, the basis of it at least, is such as Mr. Phillpotts might have chosen. The boy Cyril, fresh from the Green Way and bearing his mystical gift, comes upon a worthless cottager beating his mistress, and strikes him down. The man is known to have a weak heart, but Cyril's blow is the direct cause of his death. Flinching from the scandal sure to attend a public explanation, Cyril, with the reluctant assent of the woman, buries the body, and plants his fir tree over it. Then what to do with his life? Phillpotts would have answered the question directly and courageously, if at length. His Cyril would have been a man, to begin with, responsible in some sort to himself and to his fellow men. This Cyril is a coward and a weakling. The fact of his crime does not prey upon his mind; his fears are merely pusillanimous. If he abandons the pure girl who loves him, and becomes drunkard, thief, and libertine, it is not because he despairs of himself. He is simply a poltroon, morally flabby from the beginning. Therefore he is not interesting, either as murderer, thief, or as the successful author he is alleged to have become. His creator appears to admire him in his final rôle of hermit, complacently withdrawn to the bosom of Nature. The past does not trouble him. "The gentle scholar, who had forced himself into the world of human beings to end the poacher's life, hasten the inevitable death of his kindliest friend, and drive out the girl-wife to be murdered, the man who could not harm a living thing, the man who taught morality and courage, had come to peace, and reached perfect happiness with what was most beautiful in present life: Nature, clad in working wonders, lying in light and loneliness upon the land."

With which burst of vague alliteration we are glad to part company with Cyril.

The Honorable Percival. By Alice Hegan Rice. New York: The Century Co.

With "A Romance of Billygoat Hill," Mrs. Rice disappointed many of her admirers. It was an attempt at a novel of a too familiar order. It lacked the lightness and spontaneity of her natural work, such work as is instanced in the present little volume. She needs little in the way of material. The Honorable Percival himself is a thoroughly conventional figure, the stage Englishman of birth, monocle and all. He hardly emerges from the type, but that is evidently because Mrs. Rice does not think it worth while to have him. He does very well as he is, being chiefly valuable as foil and victim of the irresistible "Bobby." That young lady is connected also with a type, the charming and irrepressible, the impossible and irresistible American maiden of literary tradition—a Daisy Miller to date. But she easily transcends the type, a personality as real as Mrs. Wiggs herself. Her exuberance, her easy ways with men, her abandon to the joy of the moment, her casual dress and unladylike manner, her heart of a strong woman half-hidden in the body of a lively girl, her deep-lying poise and justified confidence in herself and in all men—if these qualities belong to the type, Mrs. Rice has invested Bobby, as though without effort, with an individual charm. To that charm, the Honorable Percival falls a victim, but in vain, for Bobby's heart is firmly planted in Wyoming. Only Mrs. Rice would have thought of the novelty of denying her heroine the privilege of becoming mistress of Hascombe Hall, hereditary seat of the Earls of Westenhanger. But indeed it is easier to fancy beautiful Bobby free on her Western range than anchored to any seat whatever.

Night Watches. By W. W. Jacobs. New York: Charles Scribner's Sons.

When Mr. Jacobs's stories first appeared, they were a pure joy. He had made his own a field hitherto unexploited—the waterside of the Thames, the slow-moving barges of the English canals, the tramp vessels that progress in leisurely fashion from harbor to harbor of the British coast. It was a new atmosphere and a new kind of humor that he revealed, and so long as it remained fresh and spontaneous it was delightful. "The Skipper's Wooing" was extravagant and the reverse of subtle, but it was extremely good fun. There have been signs recently that Mr. Jacobs has fallen victim to his popularity and to his own facility in ringing the changes on the same characters, and this impression is confirmed by the present volume. The sketches in "Night Watches" are not unamusing, but they lack spontaneity—and it is time that the night watchman was relieved.

The Scarlet Wagon. By Claude M. Girardeau. New York: Henry Holt & Co.

If Mesopotamia is a blessed word, Scarlet is an ominous one. But in this story there is nothing more lurid than the well-controlled machinations of the villains who stole the treasure. We owe them thanks. Had they not stolen it, it could not have been buried on the Delaware coast. Little Bob Scarlet could not have learned its whereabouts by chance and by a Spanish memorandum; nor could he have become the hero of the rescue, a rescue involving a midnight ride to a cemetery, a kidnapping, a girl conspirator, and other attractions. If these be not enough to tempt a reader, there is a complete, separable story of the domestic life of Bob; of his washwoman mother, his beachcomber father, his fat and grimy little brother, his disintegrating wagon, and his collapsible horse. To some readers this will be the real half of the story, recalling the school of fiction in which Mrs. Wiggs and Hopkinson Smith's lady hauler are shining figures. The story is appropriately dedicated "to all the nieces and nephews of the Bedtime Brigade," who will hear gladly the tale of a miniature conspiracy.

The House of Deceit. Anonymous. New York: Henry Holt & Co.

Here is a book just published but written (if one may rely upon the argument of internal evidence) before the Robert Elsmere school of fiction vanished from the stage—in other words, before sociology replaced theology as the background of respectable British novels and the excuse to the serious for their very existence. In those days your English-made story had a way of transmuting itself into a sectarian tract, just as nowadays it often turns out to be the innocent envelope of a socialist petard. This particular tale begins to fade into a tract about two-thirds of the way through, but only emerges at the last line in its true character—as a warning to Anglicans not to go over to Rome. It was written, anyhow, before the days of automobiles—which puts it back a full decade and more.

What is notable about the book, however, is the quality of that part of it which is not tract at all, but solid British fiction. The figure of the fervent young mountebank, the protagonist, is as horribly human as one of Mr. H. G. Wells's shop assistants, and not less modern in essentials, though the career mapped out for him is carefully modelled on the original which furnished Mr. An-

thony Hope's forgotten Quisante. Beginning a smug, prayerful youth in a celluloid collar, he narrowly escapes ending as Prime Minister, after marrying the daughter of a rich and rigid pillar of non-conformity, whose portrait furnishes further striking evidence of the author's understanding of certain of his countrymen. There is a young woman, also, of a station in life not far removed from that of Mr. Bernard Shaw's Covent Garden flower-girl in "Pygmalion." This young woman's picture is fit to stand alongside almost any of the same type that have been done of late by specialists in London slum life. Moreover, all these persons, and others, are linked into a story which commands the reader's respectful interest—at least till near the three-quarter post. One is tempted to sum up by saying that the author (a fairly well-known writer who chooses in this case to remain anonymous) might have written a real novel if he could only have forgotten his principles long enough to get the story done.

THE REFORMING SPIRIT.

Spiritual Reformers in the Sixteenth and Seventeenth Centuries. By Rufus M. Jones. New York: The Macmillan Co. $3 net.

Students of the Protestant Reformation have generally been far too much occupied with the great organized reform movements and have given far too little attention to those other tendencies of the time which have left no permanent religious-social structures behind them. The "successes" of the reforming spirit have naturally drawn the admiration of mankind; its "failures" have excited pity, perhaps even sympathy, but they could be left to the chapter of religious curiosities. Recently, however, we have been reminded with increasing frequency of the great importance of precisely these less imposing phenomena in determining the long result. The followers of Caspar Schwenkfeld in this country are presenting in monumental form the original material of their gradually disappearing group. We had occasion not long since to call attention to Prof. H. C. Vedder's interesting study of the Reformation with its especial emphasis upon the contribution of the Anabaptist wing, and now Prof. Rufus M. Jones, of Haverford College, presents a volume of sketches of what he calls "Spiritual Reformers in the Sixteenth and Seventeenth Centuries."

Dr. Jones has already won favor by his studies in Mysticism and in the history of the Quakers in America, and this volume may be regarded as an incident in his researches; for he holds out the promise of an early continuation of his previous work on the Quakers. He brings to his task unusual qualifications, unusual especially in a writer identified, as he is, with the religious group he is attempting to describe. It is a great temptation, to which writers under similar conditions have often fallen victims, to present the set of ideas that immediately concern them as the supremely important, even as the only important, phases of the movement they illustrate. Dr. Jones is not misled by his natural sympathies. He recognizes that the Reformation was more than a purely religious affair. To make it practically effective its great leaders, Luther, Calvin, Knox, had to take into account all the elements, social and political, needed to produce positive new constructions to take the place of the old. To this end compromises of many kinds were inevitable. The question was not as to the ideally and ultimately best, but, above all, as to what would work without sacrifice of the essentials.

The efforts of the new builders were, therefore, directed quite as much, sometimes even more, against what they called the radicals or the fanatics of their own party as against the defenders of the old establishments. These "radicals" included among others the group which Dr. Jones classifies as spiritual reformers. Taken as a class, they were either indifferent to organization in religion or positively opposed to it. They sought their final sanctions, not in any authority whatsoever, not even in a written Word, but in a fundamental and essential relation between the individual human soul and the God who was the ultimate source of all truth as of all being. It was a part of their conception of God that he should be always revealing Himself to the enlightened understanding, and this revelation is what they meant by God's word. Scripture they gladly included as a part, but only a part, of this divine word.

The resemblance of such ideas to what is commonly called mysticism is obvious; but Dr. Jones makes clear with great delicacy of analysis that the two are not the same thing. Historically, mysticism tended to become either scholastic in its refinements of definition or simply ecstatic in its rejection of all intellectual process. Mysticism busied itself with the methods by which divine truth could be attained. Dr. Jones's spiritual reformers believed that the "Light" was always ready to shine in upon the heart as soon as the way was opened for it by the receptive attitude of the believing individual. They cared little for history, their use of Scripture was often wildly capricious, their theology was the reverse of subtle. Their whole interest was absorbed in making real on earth the moral teaching and the spiritual insight which they found in the record of the life of Jesus. To bring this directly to the consciousness of others by showing them how simple was the way of enlightenment was their only substitute for the mechanisms of both the ancient and the "reformed" organizations.

In an introduction of fifty pages written with perfect clearness and often with great beauty of expression Dr. Jones sets forth these general characteristics of spiritual religion. He then goes on to treat in separate chapters the several exponents of the common ideas. In each case just enough biographical material is given to set the person in his right place and time, but we are spared all those trivial personalities that tend rather to confuse than to enlighten. Then we are introduced to the principal writings of the person in question, and these are analyzed with the purpose of bringing out the writer's relation to the whole spiritual movement. There are seventeen individuals thus brought together as types of a widespread tendency. The striking thing is that they seldom stand in the relation of master and pupil. In the great majority of cases they work out, each for himself, the solution of the spiritual problem which most appeals to them. They cannot be described as a "school," still less as a "sect." They range from Jacob Boehme, the Silesian shoemaker prophet, to Sir Harry Vane, the brilliant victim of religious formalism. Boehme receives an especially thorough treatment as the most remarkable expression of purely personal religion worked out of the inner consciousness of an unlearned thinker. In fact, as Dr. Jones states in his preface, we owe the present volume to his interest in Boehme and to his discovery, through his more detailed study, that he was but one illustration of what was going on in widely separated but spiritually related minds all over Western Europe. The names of Hans Denck, Bünderlin, Castellio, Coornhert, and Whichcote will be strange to many readers, and it is a distinct service to have them brought into relation with the better-known Sebastian Franck, Caspar Schwenkfeld, and Jacob Boehme. The value of the book is increased by the admirable index, for which we have to thank the author's wife.

THE DEVELOPMENT OF WRITING.

The Beneventan Script: A History of the South Italian Minuscule. By E. A. Loew. Oxford: Clarendon Press. 21 shillings net.

In this account of the Beneventan script Dr. Loew has accomplished his task in the spirit of the great master who suggested it to him—Ludwig Traube. Starting at Traube's suggestion to write a history of Monte Cassino, Dr. Loew found that a necessary antecedent undertaking was the history of the script in use at Monte Cassino, the Beneventan, or, as it was formerly but nevermore will be called, the Lombardic hand. This history now lies before us, set in clear order on the basis of original research and penetrating analysis of countless details. A forthcoming work, "Scriptura Beneventana," will contain a hundred plates of reproductions in collotype; the present volume has enough facsimiles to illustrate the important points under discussion. In an appendix the author gives a list of over six hundred Beneventan manuscripts, almost all of which he has inspected, either in photograph or in the original. There are seemingly no important sources that have escaped his attention. The subject is connected at every turn with the larger story of which it is a part. Palæography, to be vital, is history, and not merely human history. Free will and the artistic impulse have helped to fashion styles of script, but the development of writing, viewed in the large, seems as natural an affair as the evolution of some zoölogical type.

To the observer who, like the author of this book, has scientific imagination, this is an interesting process to follow.

Of all the European scripts, the Beneventan, which is simply the culmination of the characteristically Italian hand, is the most natural in its growth. The different national hands, Italian, French, Spanish, and—to take issue with Dr. Loew and the current theory—the Irish hand, too, sprang from varieties of the Roman cursive. In all the others the influence of the statelier majuscule scripts operated in the formation of new book-hands. In Italy, starting in the north, but eventually restricted to the south, the Roman cursive grew entirely by its own resources into one of the most elaborately artistic of all the hands. This is a curious career, for Italy was the home of those statelier scripts which were efficient in transforming the cursive in other countries, but which, once created, assisted in no further innovations in the land of their birth. We follow in Dr. Loew's account the beginning of the new Italian hand in the eighth and ninth centuries, its real formation in the tenth century, its acme in the eleventh and the twelfth, its decline in the thirteenth. Like nations, it had its rise and fall and its battles. The clear and finished Caroline hand, most beautiful and potent of all the scripts, the origin of the lettering on this page, invaded Italy in the ninth century and displaced all rivals in the northern and the central districts. In the south, the Beneventan script not only held its own, but grew undisturbed to maturity. It took over the useful system of abbreviations, which, thanks mainly to the Irish scribes, had become a part of the Caroline system; but in other respects it clung to its own ways. When it surrendered after its decline in the thirteenth century, the victor was not the Caroline hand, which had itself temporarily succumbed, but the Gothic.

As treated by Dr. Loew, palæography has kinship not only with history and zoölogy, but with chemistry. For him script is not merely an assemblage of letters; it consists of the elements used by the scribe in forming the letters; letters are made up of shafts and bows and these of strokes and shadings, from which we can learn the shape of the Beneventan pen. To be exact, the entire script can be resolved into short, upright strokes, bows, upright stems, descending stems, horizontal connecting strokes, and approach-strokes. When the system reached its perfection, you can find the chemical formula for every letter. In the ancient cursive, the letters flow from the pen in a stream; in the Beneventan, though it is the lineal descendant of the cursive, the scribe uses his pen rather as a brush, and makes an entity of each stroke.

But all this science is not an end in itself. It leads to history again. The careful observation of hundreds of details in letters, ligatures, and abbreviations gains criteria for dating manuscripts, thus for estimating the literature accessible, say, at Monte Cassino in some period, and thus for writing the history of culture during that period. The patient analysis of what seems hopelessly unessential and the genius for discovering in these minutiæ sure principles which guide to the larger issues are characteristic of this work throughout.

Without going into details, we would specially commend the author's convincing proof that the Beneventan hand owes nothing to the Visigothic, his account of the hitherto neglected scripts of Bari and Dalmatia, his orderly treatment of ligatures and abbreviations, and his quite novel discussion of punctuation, a little subject with large bearings. A matter of some concern to the classical scholar is the part played in the transmission of ancient literature by Monte Cassino. Not many years ago the surprising find was made of two new fragments of Juvenal in an Oxford manuscript of the eleventh century. It seemed incredible that a book so late could supplement a familiar text with genuine bits hitherto unknown, but genuine they are. It was then pointed out that, as the script is Beneventan, the book came from Monte Cassino, which, owing to its well-nigh unbroken connection with the past, might have contained treasures inaccessible elsewhere. Experts took the hint and put a premium on anything written in the hand of Monte Cassino. An Eton manuscript containing among other works Ovid's "Heroides," advanced in value after a noted scholar had called attention to its Cassinese script, and its interpolations were regarded with a more lenient eye; its text was really as bad as before. Just here Dr. Loew performs good service in showing that Monte Cassino, despite its creditable collection of ancient texts, acquired not a few of its books from the north. He further makes clear that not everything Beneventan hailed from Monte Cassino; Monte Cassino was one out of many centres. In fact, as appears from the character of their scripts, both the Juvenal and the Ovid came from elsewhere, the latter, most probably, from Bari.

In a word, Dr. Loew has given us for the first time a real history of the Beneventan script. He has combined known facts with his own discoveries in a technical and authoritative work not lacking in human interest.

A SINGULAR BOOK.

I Myself. By Mrs. T. P. O'Connor. New York: G. P. Putnam's Sons. $2.50 net.

For the American edition of this book, the author provides a preface which is at the same time a key. Bernard Shaw once urged her to write more. "But I don't write well." "That's true, but remember one thing, any man can write well who will lay his soul bare to the public." The recipe is at least as old as Carlyle, who spoke of Rousseau's success in going off in self-conflagration for the edification of the neighbors. Labouchere, too, gave Mrs. O'Connor the advice to "place yourself boldly in the foreground." This she did, though it might appear at times as if she forgot his further injunctions to exercise taste and make "some reservations."

The fact is that the volume is so frank, so unveiled, so marked by the overmastering desire of the writer to sit down beside you and have one grand sentimental time over everything that ever happened to her, that it fairly piques you into reading page after page. The thing seems incredible. Really, you say, it can't go on like that. But it does from cover to cover. From her young days in Texas, her girlhood in Washington, her first marriage, her widowhood, her struggles in New York to get a foothold in the press and a livelihood, down to her going to England and marrying Mr. O'Connor, with all of the variety and interest that thereafter came into her life, she carries the reader on one mighty stream of gush. You are fascinated by it, yet you are ashamed of yourself for being so. But that is only one of the mysteries of the book. Another is the fact that you suddenly wake up at the end to the discovery that the author must have been much more than the artless prattler that you were setting her down—or, rather, that she was writing herself down. She had so many friends, sensible people, distinguished men and women, and they were immensely fond of her. How could she have concealed so carefully in these pages the qualities which they valued in her? Somehow, she didn't lay bare her soul after all. The real self was not this written "I Myself." In that fact lies the puzzle—and the appeal—of this singular book. Its like it would be hard to find.

Notes

G. P. Putnam's Sons announce the publication of "The Law of Faith," by Joseph F. Randolph, and "Round the Wonderful World," by G. E. Mitton.

The Johns Hopkins Press announces the publication of "The Piscatory Eclogues of Jacopo Sannazaro," edited with introduction and notes by W. P. Mustard.

W. B. Clarke Company announces for early publication "Elizabeth Buffum Chase, 1806-1899: Her Life and Its Environment," by Lillie Buffum Chase Wyman and Arthur Crawford Wyman.

"Tales of Old New York," by Albert Ulmann and Grace C. Strachan, is announced for publication by D. Appleton & Co.

E. P. Dutton & Co. are publishing this week Henry Bordeaux's "The Awakening," translated by Ruth Helen Davis.

McBride, Nast & Co. will publish shortly Col. Frobenius's "The German Empire's Hour of Destiny," with an introduction by Sir Valentine Chirol.

"Landmarks," by E. V. Lucas, is announced for publication by the Macmillan Company.

G. P. Putnam's Sons have in press for immediate publication "The Message of Japan to America." The volume is prepared under the editorial supervision of Prof. Naoichi Masaoka, of Tokio, with an introduction by Lindsay Russell, president of the Japanese Society. Other volumes which have been announced for immediate publication are: "France Herself Again," by Ernest Dimnet, and "A Life of Henry Laurens," by D. D. Wallace.

The Letters and Arts Publishing Company announces for publication the latter part of this month "The Vatican, Its History, Its Treasures," by Commendatore Corrado Ricci and other authors.

Mr. Gustav Pollak, whose work on Grillparzer and the Austrian drama was reviewed in the *Nation* of January 2, 1908, has made an interesting book, entitled "International Perspective in Criticism" (Dodd, Mead; $2 net). Mr. Pollak has here brought together, with preliminary essays of his own, a large number of critical utterances on literary subjects by Goethe, Grillparzer, Sainte-Beuve, and Lowell. He has made his selections with the primary intention of exhibiting the wide outlook of all these critics over the literature of foreign nations—English, French, German, Italian, Spanish, Roman, and Greek. He has endeavored also, by allowing them as frequently as possible to speak on common topics, to emphasize their essential community of feeling and their similarity of judgment on the larger questions before the republic of letters. He finds them all rising with a serene and catholic "enthusiasm for what is beautiful and excellent," above the levels of mediocrity, above the transitory fads and infatuations of current literature, and above the "provincialism of nationality." Mr. Pollak's own comment is informed with the spirit of this nobler cosmopolitanism. His presentation of Grillparzer's merits as a literary critic is a service of what Bacon finely called the "merchants of light," whose traffic in these days suffers sadly at the hands of the pirate nations. At a moment when Petrograd has de-Germanized herself, when French savants and German Gelehrten renounce their foreign honorary degrees, when the Kaiser is shorn of his English titles of honors, when every bookseller is compiling lists of works on international hatred, when the Krupp guns are supporting Gen. Friedrich von Bernhardi's contention that "the State is itself the highest conception in the wider community of man," it is restorative of one's mental equilibrium to turn aside and linger in this temple of literary concord erected by Austrian, French, German, and American builders who in the higher brotherhood of men worshipped together.

The colloquial style of Nicholas Vachel Lindsay's "Adventures While Preaching the Gospel of Beauty" (Mitchell Kennerley; $1.00 net), the diary of a summer's foot-journey from Illinois through Missouri, Kansas, Colorado, and New Mexico, suits the easy content. The book has a sociological interest, and if it procures many readers the author will have served his purpose less by his preaching than by the report he gives of social and cultural deficiencies in the rural West. But its main appeal is as a narrative in the Borrovian manner; though Mr. Lindsay is no born observer, though he sees life one day and the next is lost in his own ideas, and though he dwells on trivialities and refuses to touch up his scenes, the matter imparts life to all the pages and sparkle to a few. Before this "special idea on legs," diggers, teamsters, red-necked politicians, harvesters, farmers, railway men, pass to be drawn with Whitmanesque appreciation. Sometimes the community is treated as a whole, as when with grave humor he depicts the Kansas Mennonites, mediæval in their abhorrence of bonnets, neckties, and organs, but riding in proud automobiles. The incidents are those which might be expected to befall a man popularly regarded as a crank, though Mr. Lindsay was able to meet the people on intimate ground. He avoided cities and fellow-tramps, and travelled penniless, now working in the fields, now peddling his literary wares. The chapters on Kansas harvesting, dealing with the twelve-hour daily struggle against burning heat, fatigue, and thirst, have vivid episodes, and in spite of the careless prose express something of the panoramic splendor of the season on the plains. Nothing of the doctrinaire intrudes anywhere, though at the end are appended "proclamations" upon the New Time for Farmers, the New Village and the New Country Community, and the Coming of Religion, Equality, and Beauty.

The naïve, hopeful creed of these proclamations merits some attention, if only as the central impulse behind Mr. Lindsay's very unequal verse; a creed of local self-dependence and idealism, it is all the more fervid for its unsophistication. A new communal self-consciousness is to arise in the West: the politician will become a Pericles and "rebuild the local Acropolis"; the priests will be men like Wesley and Newman; there will be artists like Leonardo or William Morris. The pledge and proof of a course which will shortly outstrip New England's is "the Chautauqua, which is New England's old rural lecture course; the temperance crusade, which is New England's abolitionism come again; the magazine militant, which is the old *Atlantic Monthly* combined with the Free-Soil Newspaper, and educational reform, which is the Yankee school-house made glorious." Some fairly vigorous verse inspired by this vision is scattered throughout the "Adventures."

There is nothing "donnish" about the papers contained in "The Life of a Little College" (Houghton Mifflin; $1.35 net), by Archibald MacMechan; instead an individual charm and grace color the various subjects that caught the fancy of this Canadian scholar. If the writer never intended to defend the case of the small college in the perpetual controversy, yet it must be noted that the point of view animating the various papers collected under its inspiration constitute a pleasant brief. Glimpses of a type of academic democracy that we have somehow come to associate with the Scottish institutions, of famous teachers of that fine, ripe scholarship that flourished under the "humanities," and of the traditions shed about the colonial institution by close association with the official world representing the mother country—all these memories give a definite charm to the book. Certainly, we hope with the author that the new accruing fame and growth will never obliterate, as in our experience this side the border, the splendid traditions of the small and early institution. What must the author have felt regarding this topic during his sojourn at Harvard! There, at any rate, he was privileged to be intimate with Professor Child, and quite the most attractive of his papers is that entitled "Child of the Ballads." Literary enthusiasms are gracefully presented, ranging from Tennyson and Browning, with an informal appreciation of Virgil, to Lewis Carroll's, and what the author rightly calls, "Everybody's Alice." Also, it is good to find an appreciation of "the best sea-story ever written," the little-known "Moby Dick" of Herman Melville, of which a popular reprint was recently issued. Professor MacMechan's modest argosy carries freight of definite quantity and quality, and there is no danger of his "college window" growing impatient of its immediate horizon.

It is not surprising that a second edition of Henry Baerlein's "Mexico, the Land of Unrest" (Lippincott; $2 net) should have been called for. The special correspondent of the *Times* in Mexico is nothing if not an interesting writer. In the long preface to the second edition he has amused himself by commenting on three Mexican books recently written by Englishmen. His strictures on "Modern Mexico," by MacHugh, the correspondent of the *Daily Telegraph*, are most spicy, even if a trifle unfair. Mr. Baerlein seems to feel that Mr. MacHugh "must be a humorist" because he gives the full text of the Mexican Constitution! Another book which comes in for handling without gloves is Percy Martin's "Maximilian and Mexico." Mr. Martin has inflicted so many Latin-American books on a long-suffering public, and his general attitude is so thoroughly superficial as well as anti-American, one cannot restrain a chuckle when Mr. Baerlein commences his critique with the remark that Mr. Martin "has seen fit to continue his so-called literary labors, . . . " and concludes: "I dare say that Mr. Martin, not content with the glory of his F.R.G.S., will write many another book, but I hope they will not be devoted to a country which has had of recent years more than enough misfortune." Mr. Baerlein is no friend of Messrs. Pearson & Son, and has become fully informed on the Mexican machinations of Lord Cowdray. He had a high opinion of Madero, but of Villa he says: "The career of this eminent bandit and general officer is typical of Mexico, where cotton mills and Pullman cars and thousands of industrious foreigners have not by any means expelled Romance. . . . Villa saw that as an active politician he might take an honorable place again among his fellow-countrymen. And in fact he did become a sort of national hero, a hero of the Revolution." There are many unusually interesting photographs and a few highly illuminating cartoons. However much one may differ with the author in his severely caustic criticisms of ex-President Diaz, one must admit that this is a good book for Americans to read. Furthermore, it is provocative of thought and discussion.

Another recent volume on Mexico which merits attention is "The Political Shame of Mexico" (McBride; $2), by Edward I. Bell, formerly editor and publisher of *La Prensa* and the *Daily Mexican*, of Mexico City. Although bearing the earmarks of personal prejudice and lack of perspective, it has the advantage of having been written by a man who saw with his own eyes many of the recent occurrences in Mexican history which he describes. Furthermore, Mr. Bell appears to

have been in an extremely favorable situation for acquiring information concerning the underground diplomacy of Mexico City. It is a decidedly interesting human document. Mr. Bell feels that our recent foreign policy towards Mexico, while almost invariably honest, has been also "almost invariably mistaken." Highly sensational, and as a matter of course thoroughly journalistic, his story will be read with keen interest by those who are endeavoring to unravel the puzzle of the last two or three years. His general point of view may best be summed up in his own words as follows:

With the deepest respect I wish to say that the President's published utterances on the Mexican question do not reveal a full understanding of it. The Mexican people are not fitted for self-government, in the sense in which he seems to use the expression. To stand by willingly while some millions of uneducated Indians, vastly outnumbering the cultivated inhabitants of the country in which they live, try to evolve a working democracy from a state of demoralization only to be relieved by the exercise of the most highly developed judgment, would be as cruel and absurd as to wait for a sick child to grow up and evolve the theory and practice of medicine. What the Mexicans really require is a business government equipped with every device of science, and above all with the method.

There is no doubt as to the duty of the United States; it is the same as that of every organization and every individual in relation to the general welfare, and consists in unremitting effort to extend the gains of scientific research and the use of the scientific method into all the details of human life, governmental, industrial, and personal. That is what the United States ought to do for Mexico, so far as may be practicable.

The difficulty is that each reader will differ as to what is "practicable."

Under the title of "Principles of Economics" (Holt), Prof. Henry R. Seager has just issued a fourth edition of his "Introduction to Economics." The changes in the work are perhaps not as considerable as the altered title might imply. The size and exterior of the book are substantially as they have been; the form and general appearance of the text remain unchanged, and really leave little room for improvement. The common teaching aids—marginal headings, italicized definitions, references for collateral reading—are all retained. And the purpose of the book still is "to introduce college classes to the study of the subject." Nevertheless the changes of this edition are important. Several of the theoretical chapters, for example, those on wages and interest, have been rewritten in parts; the general explanation of value and distribution has been somewhat simplified, though the theory remains essentially the same. In the part of the book dealing with practical problems, the alterations are conspicuous. The arrangement of subjects has been distinctly improved. The chapter of the third edition entitled Taxation and Tax Reform in the United States has been expanded into two chapters on those subjects; and three new chapters are added on Profit-Sharing and Labor Copartnership, Social Insurance, and Socialism. Ever since its first appearance ten years ago, Professor Seager's introduction has been one of the most satisfactory expositions of economics for class-room use. In parts it is more difficult than most of the elementary texts, but this is largely because it courageously faces the problem of developing a complete and consistent theory of value and distribution. In form and arrangement the book lends important aid to effective teaching. The improvements in this fourth edition should make the work even more serviceable and assure an even wider adoption.

The insistent demand by secondary schools for a smattering of legal knowledge has evoked a number of books, one of the latest and most elementary of which is "A Short Course in Commercial Law" (American Book Company; 80 cents), by Nichols and Rogers. Few of these handbooks aim to give the student a professional knowledge of law, and the one before us does not take him beyond the kindergarten limits of the legal domain. Its publishers insist that it "can be easily used by teachers without special legal training." Possibly it can; but we fear that such a situation would present a case of blind leading the blind. In the hands of a teacher who has mastered legal principles and who has had considerable experience in applying them to cases presented by clients, the book can be made both entertaining and useful. The subject is presented in the form of seventy-six topical lessons. It is not quite clear whether the authors intend that these shall be presented in their printed order or whether that order may be varied. For example, the topic of contracts is presented in eighteen lessons, seven of which are devoted to cases which illustrate the principles set forth in the preceding lessons. It would seem that the cases in lesson twelve ought to be discussed immediately upon the conclusion of the second lesson in the text. The discussion of cases in lesson thirteen would then follow the text of lesson three and four; and so on. Perhaps the authors planned to leave the order of discussion to each teacher. Whatever uncertainty may be felt on this point, no one can doubt that the authors have presented a perfectly clear outline of commercial law, without technicality and in a lucid style.

Mr. Cardinal Goodwin's well-written monograph covering four years of Californian history, "The Establishment of State Government in California, 1846-1850" (Macmillan; $2 net), is both a narrative of political events on the Pacific Coast during a critical period and a study in the origin of American institutions. From both points of view it will prove useful. Beginning with the first signs of American influence in this Spanish territory, the author reviews rapidly the events which led to its conquest and to the establishment of military rule. Here the book tells us little that is new. Then comes a study of the constitutional convention of 1849, its organization, personnel, and problems. To this theme the greater portion of the volume is devoted with excellent judgment. The author has managed to clear up some unfounded notions concerning the make-up and work of this famous convention. More particularly has he been able to prove that our time-honored ideas (derived chiefly from Bancroft's great History of California) concerning the domination of this body by pro-slavery politicians are without any real basis in fact (pp. 82-86). Students of political science will be interested in the author's discussion of the sources from which California drew many of the provisions which found their way into the Constitution of 1849. The framers of this document gave no heed to foreign precedents, either English or Spanish, but they did study with great care the organic laws of the various American States, and borrowed freely from several of them, taking the preamble from New York, the bill of rights from Iowa, and other provisions from the existing Constitutions of Michigan, Tennessee, and Texas. Economic events of the preceding decade, as the author shows, were fresh in the minds of these men, and the panic of 1837 showed its influence upon the sections relating to corporations and banking. The volume embodies a modest but highly creditable piece of work, based wholly on official or otherwise dependable sources. It will clarify our ideas on several rather intricate matters connected with the political and economic expansions of the ante-bellum period.

Jean Richepin writes an enthusiastic preface to the latest account of "the favorite for whose sake we forgive all other royal favorites" ("The Life of Louise de la Vallière," by Claude Ferval. Translated by Sidney Dark. Brentano; $4.00). According to M. Richepin, the original French text rests on documents and bristles with notes and references. All this learned apparatus has been shorn off from the English version, and we are left with a merely romantic narrative, which has, after all, been told more amusingly if less veraciously by Dumas.

For the student of Dutch colonization M. A. Cabaton's book, "Java, Sumatra, and the Dutch East Indies" (Scribner), with its background of experience gained in his own French colonies, will commend itself for its precision and breadth of observation. His frank admiration of the Dutch administration seems to be judicious; his enthusiasm even suggests previous experience with the old intransigent attitude of officialdom that has been charged against the British, and his own nation. But it should be mentioned that not always have the Dutch been free from criticism. The name of Gov. Daendals, "a pitiless Jacobin," survives to be execrated by both the Dutch and their subject races, while the basis for the present régime was inherited by the Dutch from the worthy and revered Sir Stamford Raffles, and inaugurated during the English occupation. In both these books the reader is agreeably surprised to find fulsome praise for the Dutch, and M. Cabaton strongly disapproves of the political generalizations of his countrymen, who urge that the future destiny of the archipelago lies under the Japanese. He regards as Utopian any plan to give all the "yellow" races of Asia and the "brown" races of the archipelago to Japan "in the name of vague racial affinities." It is not surprising to find Mr. Brown, a New Zealand journalist, also disapproving of the theory of Japanese occupation, and there is reason to support his indictment of the Chinese traders that infest the archipelago. Ruthlessly, they have exploited the easy-going, improvident native under the still easier Dutch system of paternalism, until the administration is at last devising means for the protection of its charges. A further cause for the demoralization of the native Mr. Brown attributes to "the curse of sago," the palm of which is numerous, one tree, with a half hour's labor, providing food sufficient for a family for six months. This engenders laxness, and leaves room for the vices of opium and hashish, the former fostered by the Chinese, and the latter a probable survival of the old Hindu rule.

Science

AN ENORMOUS UNDERTAKING.

Studies in Water Supply. By A. C. Houston. New York: The Macmillan Co. $1.60 net.

Catskill Water Supply of New York City. By Lazarus White. New York: John Wiley & Sons. $6 net.

These two books exhibit, in the one case, the most advanced sanitary treatment of public water supplies, and in the other case probably the greatest undertaking in the world for the supply of water to a single community, the latter being characterized by the highest excellence known to the engineering profession in the whole range of constructions required in the completed work.

Dr. Houston has set forth in "Studies in Water Supply" the results of his work as the Director of Water Examination for the Metropolitan Water Board of London. He states in his preface that his book is not a broad treatise on the sanitation of water supplies, but rather a monograph based upon what he has actually done in connection with the water supply of the City of London; and his results are all the more valuable because they belong to actual work on so great a scale.

In this day of excessive care as to the source of a public water supply, especially for large cities, it is both interesting and significant to observe that about 60 per cent. of the water supplied to the City of London is taken from the River Thames, and about 20 per cent. from the River Lee, "both of which rivers drain populous areas and are admittedly sewage-polluted." In spite of these apparently dangerous sources of water supply, the general health of the City of London is excellent and the rate of cases of illness due to water-borne infection is exceptionally low. The freedom of London from water-borne diseases is, as is well known, due to the maintenance of ample storage and thorough filtration of its water supply. Dr. Houston shows what investigations in this sanitary field have been made for the Metropolitan Board of London during the eight-year period of his incumbency as Director of Water Examination, particularly those relating to the treatment and purification of polluted rivers, like the Thames and Lee. The more technical parts of the book will chiefly interest experts in the sanitary treatment of potable water, but by far the greater part of what Dr. Houston has written may well interest all intelligent persons who are users of public water supplies. Among other matters he devotes a chapter to the influence of storage, which largely reduces pathogenic bacteria and clarifies the water. The beneficial effect of reducing the number of bacteria in water is indicated by his observation that for all practical purposes thirty days' storage is sufficient for the elimination of nearly all pathogenic bacteria in sources of water supply "comparable to those of London." If, after such a period of storage, the water is passed through a well-designed and maintained sand filter, it may be held to be of excellent quality for city consumption.

Although Dr. Houston is fully abreast of the most competent and experienced experts in his views as to the sanitary treatment of water supplies, he takes occasion to differ from most American sanitarians like Sedgwick, Whipple, Hazen, and others, including Dunbar, of Hamburg, and expresses doubts whether the improved health records of a considerable number of American cities are chiefly due to the adoption of filtration for their public water supplies. He does not express these views in opposition to filtration, which, indeed, he advocates, but he appears to doubt whether what may be termed the American case, that the improvement of city-health records is due to filtration, has been completely made out. American sanitarians, however, recognize "accidental" origins of typhoid outbreaks no less than he, and some of the most discriminating and effective researches ever made in cases where typhoid epidemics have originated from other sources than polluted water have been rewarded by complete success in this country during the last two or three years.

Dr. Houston's work is another effective contribution to professional literature in the field of sanitary engineering, and constitutes a direct argument of much force in favor of the early completion of suitable filters for the Croton water supply of New York city, and eventually even for the water from the Catskills. It may be doubted whether such filters for the Croton supply should be placed within the city limits when good locations far more appropriate may be found further north, on the line of the new Croton aqueduct, but there is no doubt whatever about the fact that the entire Croton supply should be effectively filtered as soon as possible.

The book by Mr. White on the "Catskill Water Supply of New York City" may be regarded as the complement of Dr. Houston's, since the latter prescribes the procedures to be followed in order to secure a public water supply of proper quality, while the former covers the requisite constructions to convey the suitable supply from its source to the community which will consume it.

Mr. White sketches briefly the history of the waterworks of New York city from the old Dutch days, when a public well near Bowling Green in connection with numerous private wells constituted the entire water supply, to the present time; but the real interest of his book attaches to the construction of the reservoirs, aqueducts, and other parts of the works required to deliver the additional water supply from the Ashokan reservoir in the Catskills, a dozen miles beyond Kingston, to the different boroughs of the city, a distance which may be taken as an even hundred miles.

The present population of New York city is about 5,500,000, the Boroughs of Manhattan and Brooklyn containing by far the greater part of that population. The consumption of water in the entire city is over 500,000,000 gallons per day, the Croton watershed being the principal source.

The years of low rainfall prior to 1902 demonstrated by the imminence of water famines that it was imperative for the city to seek an additional supply of water and of such volume as to satisfy rapidly increasing needs for a considerable period of years. During the administration of Mayor Low, in 1902, the sources of feasible additional supply were thoroughly investigated by the so-called Burr-Hering-Freeman Commission on Additional Water Supply. The results of these investigations showed that it was entirely practicable to obtain between 500,000,000 and 600,000,000 gallons of water per day either from the Fishkill and Wappinger Creeks and the Jansen Kill on the easterly side of the Hudson River, or from the Esopus, Schoharie, Rondout, and Catskill Creeks on the westerly side. Immediately thereafter legislation was secured by certain persons in Dutchess County which made the streams on the easterly side of the Hudson River unavailable, leaving those on the westerly side the only practicable sources of additional supply, except from the Hudson River itself; but inasmuch as the latter water would require filtration from the outset of its use as well as the construction of costly storage reservoirs in the Adirondacks, the Catskill Mountain streams were selected for the necessary additional water supply of New York city. The wisdom of this selection is enhanced by the fact that the waters of Esopus, Schoharie, and Rondout Creeks are almost ideal for a public supply in consequence of their softness and purity and their comparative freedom from pollution due to drainage of populous areas.

The present Board of Water Supply was created, therefore, in 1905, during the term of Mayor McClellan, for the purpose of constructing the works to bring the required additional water from its source in the Catskill Mountains to the city. The Board was empowered to acquire the land required for the construction undertaken, but all such acquisitions of land were finally made through commissioners of appraisal, and not by the Board.

The total area drained by the four streams named and available for the additional supply sought is nearly 800 square miles, from which it is estimated that not less than 650,000,000 gallons of water per day may be drawn even in years of extraordinarily low rainfall. On each of these basins there must be at least one reservoir in which its available water may be collected and from which the latter flows either directly or indirectly into the aqueduct leading to the city. The first of these collecting and storing reservoirs, now completed, is the Ashokan reservoir, on Esopus Creek, about twelve miles

from Kingston. This reservoir is formed by a concrete masonry dam at Olive Bridge, 1,000 feet long and 240 feet above its foundations, together with extensive earth embankments, and it has an available capacity of 128,000,000,000 gallons. The maximum depth of water is 190 feet, and the average depth is 50 feet. It is divided into what are called the east and west basins by a dividing wall of masonry. The elevation of the water surface of the west basin is 590 feet above tide and 587 feet in the east basin. The total area of water surface in the two basins is 12.8 square miles.

It is obvious that the great capacity of this reservoir will afford unusual opportunity for the beneficial effect of storage in eliminating pathogenic bacteria, as markedly set forth by Dr. Houston, as well as for sedimentation in order to produce a clear water.

This is the only reservoir so far completed in the Catskill Mountain region, but when other reservoirs are constructed on the Schoharie and Rondout Creeks, they will discharge through aqueducts into the Ashokan Reservoir, inasmuch as the main aqueduct extends from the latter all the way to the Hillview equalizing reservoir at the northerly city line, which is also nearly completed.

This main aqueduct, extending along suitable high ground on the west side of the Hudson from the Ashokan reservoir to the Storm King-Breakneck crossing of the Hudson River, and thence down the east side of the river to the city, and having a length of ninety-two miles from that reservoir to the northerly city line, is the largest construction of its kind ever built. In its main parts its cross-section is shaped much like a horseshoe, the maximum clear height being 17 feet and the maximum clear width 17 feet 6 inches. This part of the aqueduct never runs quite full, and hence is not under pressure. The slope or grade of the aqueduct is consequently just enough to give the water the requisite velocity, averaging about 24 inches to the mile throughout the entire distance between Ashokan and Hillview reservoirs. This is called the cut-and-cover type of aqueduct, inasmuch as it is built in an open excavation along the hillsides or natural surface at the right elevation, instrumentally determined by following the proper contour. The total length of this cut-and-cover aqueduct is fifty-five miles.

Where hills or mountains were found, circular tunnels at the natural elevation or grade of the aqueduct were constructed. There are twenty-four of these grade tunnels with an aggregate length of fourteen miles. In the case of deep valleys which have considerable width and in which there is suitable rock beneath the surface, the water is conveyed in tunnels under pressure corresponding to their depth below the natural elevation of the aqueduct. There were seven such pressure tunnels about fourteen feet in diameter and with an aggregate length of seventeen miles. These deep pressure tunnels are frequently if not usually called siphons.

The largest siphon or deep pressure tunnel was that required for the aqueduct crossing under the Hudson River between Storm King Mountain on the westerly side and Breakneck Mountain on the easterly side, about seven miles north of West Point. In all this construction of the aqueduct it was necessary, before even making plans, to investigate by deep borings by various methods the character of the subsurface material down to the greatest depths contemplated, and this was particularly the case at the Storm King crossing of the Hudson, where the depth of the tunnel is about 1,100 feet below the surface of the water. There is a vertical shaft on either side of the river leading from the surface of the ground down to the horizontal tunnel 1,100 feet below. It was found by making soundings and borings in the river that, although the maximum depth of water is but little over ninety feet, the depth to ledge rock under the river-bed must be at least about 800 feet below the water surface. The usual appliances for making borings under such conditions, however, failed to reach the great depth required, and it became necessary to secure the information desired by making inclined borings from the vertical shafts on either side of the river into the rock for a distance of about 2,000 feet, so that the lines of borings from the two sides would intersect in elevation. It was thus determined that the depth of bed-rock below the surface of the river was probably not less than 900 feet, so that a depth of 1,100 feet for the tunnel, or siphon, would be judicious from an engineering point of view, and it was so built.

It is wise if not imperative to have a large reservoir near the lower end of an aqueduct like the Catskill, where a safe supply for the city for a month or two, at least, may be stored, so that in case of injury to the aqueduct or a cessation of flow from the collecting reservoir for any reason there may be afforded time to make necessary repairs without prejudicing the city's daily supply. The Kensico Reservoir, four miles north of White Plains, serves this important function. It has an available capacity of 29,000,000,000 gallons, and the elevation of its water surface is 355 feet above tide. This storage volume would make available a supply of more than a month and a half, even if as much as 600,000,000 gallons per day were being drawn from it without any discharge into it from the aqueduct.

Below the Kensico Reservoir on the line of the aqueduct, there is ample area of ground conveniently situated for the construction of filter beds whenever they may be required in the future. The long storage in the Ashokan Reservoir, supplemented by that in the Kensico Reservoir, together with the sparse population on the Esopus basin and the sanitary precautions which are being taken permanently along the Esopus Valley, make immediate filtration unnecessary. The Kensico Reservoir is now in active process of construction and will be completed before it is needed.

The remaining reservoir on the line of the aqueduct is that of Hillview, on the northerly line of the city, and it has a capacity of 900,000,000 gallons, the elevation of its water surface being 295 feet above tide. The purpose of this reservoir, situated at what may be termed the entrance into the distribution system of the city, is to afford sufficient volume to equalize the hourly variation of the city's demand in different parts of the day with the discharge of the aqueduct into it, which is essentially uniform. It is admirably placed for this purpose, and will largely add to the pressure in the distributing pipes throughout the city.

The remaining prominent features of the Catskill additional supply are the deep tunnels connecting the aqueduct with the distributing system on Manhattan Island, passing thence under the East River a short distance northerly of the Manhattan Suspension Bridge, and connecting with the Brooklyn system, and thence, finally, under the Narrows to the Borough of Richmond, thus completing the supply of additional water to all the boroughs of the city.

All the details of this unusual work, processes of construction, methods of overcoming difficulties, the handling of contracts, and the description of all features, are fully given in Mr. White's book, which cannot fail to be of interest both to the general reader and to the engineer, who will appreciate its more technical parts.

A review of such a project should not be closed without special notice being taken of one or two features of its administration. Although the magnitude of this work is so great that many of its principal features, at its inception, were necessarily shadowed with more or less uncertainty, as a whole it has thus far been completed on schedule time and within the estimated cost, two extraordinary results in the conduct of great public works.

Although they are not within the scope of Mr. White's book, it is excusable perhaps in this review to notice public statements to the effect that inasmuch as the elevation of the water surface in the Ashokan Reservoir is nearly 600 feet above tide, and as the daily flow through the aqueduct will be large, a correspondingly large amount of water power ought to be available when the aqueduct goes into use; indeed, this statement has at times been made with much insistence. As a matter of fact, there is no such available power whatever. The entire fall from the surface of the Ashokan Reservoir to the city of New York is required to overcome the resistances to the flow of the water through the aqueduct and tunnels or siphons and to give pressure in the distributing system of the city. This statement needs no explanation to engineers, it goes without saying. If the water in the Ashokan Reservoir could drop 600 feet within a short distance, and if it were not required to be used under pressure at the bottom of that fall for other than power purposes, then the flow from the aqueduct would be available for power, but not otherwise.

Drama

LONDON DRAMA IN WAR-TIME—PRODUCTIONS NEW AND OLD—AMERICAN SUCCESSES.

By WILLIAM ARCHER.

LONDON, October 2.

The London theatres in this time of war show little outward disturbance. Some of the successes of last season still go on, and most of the new productions arranged for the autumn have duly taken place. That they are all "doing good business" I should be sorry to assert; but none of them has met with instant disaster. Of the established successes, "Potash and Perlmutter" heads the list—it has passed its two hundredth night. Its cryptic name is familiar on the fields of France: I have seen several photographs of transport wagons at the front with posters showing not only the names but the faces of the delectable partnership. Then there is "The Great Adventure," of which, however, the end draws near; there is "Mr. Wu," there is "Grumpy," and there is "My Lady's Dress." One of the promised new productions, by the way, has been postponed. We were to have had a version of "David Copperfield" at His Majesty's; but Sir Herbert Tree, with his unfailing instinct for gesture, thought of a move worth two of that. His manifesto afforded a little humorous relief in the early days of the war. "Feeling," it began, "that the moment is one in which the theatre may fittingly be a factor in the national life, we propose to put upon the stage of His Majesty's Theatre the play of 'Drake.'" A milder "factor in the national life" than this pageant-romance it would certainly be hard to imagine. I am told that (at reduced prices) it fills the theatre nightly; and as the profits go to various relief funds, all is for the best.

The most interesting original play of the new season is "Outcast," by Mr. Hubert Henry Davies, author of "The Mollusc." It is a sad little study of a sentimental muddle brought about by a fickle woman's worldliness. The play-bill does not condescend upon the characters' surnames; and, as I have forgotten them, I must tell the story in terms of Christian names. Valentine, then, has jilted Geoffrey, and has thereby brought him to the verge of dipsomania and ruin. In the depth of his misery, he encounters Miriam, a "gay" woman, who is rather more miserable than himself. He is kind to her, and gradually conceives an affection for her, which saves his mind and character, but is far from supplanting the feeling for Valentine in his heart. There is much good in Miriam's nature, and she knows that she has no real claim upon Geoffrey; yet when Valentine, wretched in her wealthy marriage, begins to reassert her sway over Geoffrey, Miriam proves that she is a woman by an unreasonable, but none the less natural, paroxysm of jealousy. Geoffrey is on the point of asserting his freedom and taking his own way; but various little incidents lead him to realize that the very kindness he has shown her creates a claim upon him which he has no right to ignore; so he and Valentine sadly make up their minds that to attempt to patch up the original mischief wrought by her faithlessness will only make bad worse. There is in this play a good deal of knowledge of character and subtlety of feeling. Miss Ethel Levy, in the part of Miriam, makes the success which I have prophesied for her ever since I first saw her in a silly revue at the Hippodrome; and Mr. Gerald du Maurier and Miss Grace Lane are very good as Geoffrey and Valentine.

"The Impossible Woman," at the Haymarket, is a version by Mr. Haddon Chambers of Anne Douglas Sedgwick's extraordinarily able novel, "Tante"—not, I think, the same version which you have seen in America. The play is a sufficiently effective one, yet it illustrates the rule, to which there is scarcely an exception, that the better a novel is the harder it is to dramatize adequately. Mr. Chambers gives us the character-scheme of the novel, but all the richness and delicacy of the characterization inevitably go by the board. "The Impossible Woman," Madame Okraska, bursts upon us from the first as an impossible woman, a mass of egoism and affectation, whereas in the book it takes us many chapters to find her out. This is no reproach to Mr. Chambers: it is not his fault that the stage affords no room for leisurely and minute character-development. Miss Lillah McCarthy, within the limits imposed by her material, gives a vivid and daring impersonation of Tante, and Miss Hilda Bayley is very charming as Karen.

Sir George Alexander has produced a play by a new writer, "Michael Orme," who is, in fact, the wife of a well-known dramatic critic, Mr. J. T. Grein. There is a good deal of talent in "Those Who Sit in Judgment," but it has two serious defects, one accidental and one inherent. The first is an act of extreme painfulness, which, under existing circumstances, seemed quite intolerable. People who are living in a chronic state of what may be called spiritual toothache do not want to have it aggravated by the contemplation of black imaginary woes. Of course, when she wrote the play, Mrs. Grein could not foresee the condition under which it would be presented; but I rather wonder that Sir George Alexander did not postpone the production till happier times. The second defect is the strange lack of grit and fibre in the hero's character. He is presented to us as a man of bold and adventurous spirit, in whom the heroine, a *femme incomprise*, married to an intolerable Cockney bounder, finds the ideal of her dreams. Accompanied by this lady's brother, he goes off to make his fortune on a rubber-concession in Africa. There the brother dies of fever, and a complication of other disasters forms the matter of the agonizing act before mentioned. The hero comes back a hopeless failure, having lost practically all the capital of the company he has floated. The shareholders, led by the heroine's husband, overwhelm him with false accusations of gross misconduct, and he makes no fight at all against them. Only when the heroine confesses her love for him does he promise to buck up and confront his slanderers; but this promise, on which the curtain falls, is small consolation to us for the hopeless lack of backbone he has previously manifested. The action, in short, is a sad anticlimax, and it may be doubted whether, at the best of times, the play would have succeeded.

Mr. Wilfred Coleby has produced at the Criterion a bright character-comedy named "Sir Richard's Biography," in which Miss Mary Moore, for so long the leading lady of this theatre under Sir Charles Wyndham's management, takes the principal part. The play reminds one a little of "The Mollusc." The type of character presented is that of an exceedingly charming woman who has contrived to work up a reputation for saintly unselfishness, when in fact she is, in a quite amiable way, incurably self-willed and obstinate. The construction of the comedy is not very good, but it is very brightly written, and, under normal circumstances, would be a safe success.

Mr. Arthur Bourchier, having proved himself, in Shakespeare's "Henry VIII," a sort of reincarnation of that monarch as Holbein limned him, has got Mr. Louis Parker to make him the hero of a sort of peageant-play entitled "Bluff King Hal." It is an innocent, unpretending piece of work, chiefly notable for the very clever and original mounting, devised from first to last by a new artist, Mr. Hugo Rumbold. Another production in which the scenic element is of prime importance is "Mameena," adapted by Mr. Oscar Asche from a novel by Rider Haggard. Here the story is of no interest, and exists simply for the sake of some extraordinarily vivid illustrations of Zulu life. Mr. Asche has got together a large company, if not of Zulus, at any rate of unimpeachable Africans, who give wonderfully spirited representations of the epileptic dances at a Zulu wedding, of the weird ceremonies of witch-hunting, and of other incidents of South African life. The scenery, too, is very striking. The opening tableau, representing a rocky gorge with a sunlit mountain-wall in the distance, is, I think, the best piece of theatrical chiaroscuro I ever saw. Somehow, too, the artist has contrived to attain that effect of unlimited atmospheric space which all our scenic innovators are sedulously aiming at. I beg to call the notice of American students of "Inscenierung" to this production, as well as to "Bluff King Hal."

I must not omit to mention that "Seven Keys to Baldpate" was enthusiastically received at the Apollo Theatre, where it was produced by Mr. Charles Hawtrey, and very well acted. The text appeared to be entirely unaltered, and the very American phraseology did not altogether harmonize with the very English intonation of the actors. These linguistic exchanges, however, are

most desirable, and certainly the American slang did nothing to impair the enjoyment of the audience. If the piece is not a great success, the Kaiser, and not Mr. George M. Cohan, will be to blame.

You will have heard that the outbreak of war put an end to Max Reinhardt's Shakespeare Cycle at the Deutsches Theater, Berlin, but that he has since been encouraged to resume the series, on the ground, no doubt, that Shakespeare is a naturalized German, and as such entitled, in Sir Herbert Tree's phrase, to be a "factor in the national life." We went through a similar little spasm of chauvinism several weeks ago. The management of the promenade concerts, a great institution of the autumn season, proposed to boycott Wagner and Strauss, and did indeed do so for one or two weeks. But they were promptly laughed out of their "War upon Wagner," and now, as in other seasons, each Monday evening is devoted entirely to the works of the Bayreuth master. I am not very keen on Wagner in the concert-room, but I seldom miss the Friday evenings which are devoted to Bach, Mozart, and especially Beethoven. It is good to be reminded that there still exists a world of pure beauty and sublimity, and to see vast English audiences, oblivious of all international disasters, expressing their rapturous gratitude to its creators. Great is the magic which can drown, even for an hour, the thunder of the Battle of the Rivers which for twenty days has been throbbing in our ears.

"DIPLOMACY."

The inferiority of our contemporary actors to those of a generation ago in the matter of adequate artistic equipment—of that all-round competency which marked the graduates of the old stock company system—is never more apparent than in the occasional revivals of more or less famous plays, not necessarily classics, demanding, for their proper interpretation, appropriate style and diction. It receives one more striking illustration in the present performance of "Diplomacy" at the Empire Theatre. This piece, of course, except in the extreme cleverness of its mechanism, is not, in any sense, a master-work. It has no great ideas or emotions, no sincerity of purpose, no particular dramatic significance. Theatrically effective, it deals with incident, not character, and with conventional personages. But it represents a period, has an atmosphere of its own, is romantic rather than realistic, and belongs to the comedy of polite intrigue. In that mood it ought to be played. Any attempt to rejuvenate it, to bring it up to date, by substituting modern naturalism for the more formal manners of an earlier day, and modifying the dialogue and business, must be disastrous, first, because of the obvious discrepancies it creates between the conduct of the performers and their supposed conditions, and, secondly, because of the fierce light it throws upon the artificiality of the plot. Incidentally, it must also result in a considerable injustice to the author.

This is what has been done at the Empire, not so much, perhaps, with the idea of freshening the play, as of suiting it to the capacities of the available actors. It would not be easy at this time to collect a cast equal to a representation of it upon traditional lines. Performers trained in the art of romantic or polite comedy are few and far between. On paper, the present company is an excellent one. It contains three or four popular stars, but none of them has had much experience outside modern plays and melodrama. They have not learned the niceties of precise, cultivated, incisive utterance, the secrets of an easy dignified carriage, the eloquence of controlled and varied gesture, accomplishments absolutely essential in all comedy of manners, if altogether superfluous in the crudities of realism. It may be true that the newest diplomacy is as independent of such superficial elegances as the ordinary undergraduate, but Sardou had older fashions in mind, and was writing fiction for the theatre. No one knew better than he how to use stage convention for the concealment of his artifices. Able, learned, and imaginative man as he was, he never wrote a really great drama—although he came near to doing so with his "Daniel Rochat"—because his chief aim was the making of "situations," not the study of character. Moreover, his situations, from "Dora" to "Théodora," "La Tosca," "Thermidor," and "Robespierre," were generally devised to fit the abilities of some popular favorite. Thus, he won fortune and sacrificed fame.

In "Dora," the original of "Diplomacy," he meant the heroine to be the prominent figure, but, in all the English adaptations, at least, she is entirely overshadowed by the much more picturesque figures of Henry Beauclercq, Zicka, and Stein. She has one big scene, but this requires great emotional power on the part of the actress to make it vital. The conception of Henry Beauclercq is perfectly clear. It is a type that has always won favor in the theatre, that of the polished man of the world, cool, resolute, adroit, perceptive, and prompt. Throughout the play he dominates the action by virtue of his personal prestige, and it is his ready wit that finally solves the dramatic problem. Such actors as John Clayton, Lester Wallack, Squire Bancroft, and John Hare lavished their best skill upon the part, but the finest performance of all was that of Charles Coghlan, who realized most perfectly the ideal of keen, polished, resourceful suavity. All endowed it with the graces of genteel comedy.

Mr. William Gillette, who is the Henry of the Empire cast, has not these graces at command, nor does he attempt to assume them. His diplomat is the ordinary man in the street, natural enough beyond question, but utterly undecorative and unauthoritative, without any marks of social or intellectual distinction. He is awkward, hesitant, stammering, without dignity, tact, or assurance. In the famous three-man scenes he is merely a contributory, instead of the dominant, factor. His studied naturalism robs the artificial scheme of its illusion, its suspense, and its effect. Gustav von Seyffertitz, the well-trained actor who appears as Baron Stein, makes no such mistake. Entrusted with a picturesque theatrical character, he makes the fullest use of its conventional attributes. His embodiment of the urbane, crafty, unscrupulous Russian is masterly, by all odds the best bit of sheer acting in the whole representation. Artificial and unreal it may be, but it fits the play and fulfils the author's design. The Zicka of Blanche Bates would have been more satisfactory if the impersonation of Rose Coghlan had been less fresh in remembrance. It is a clever and forcible performance, with a dash of the right romantic coloring, but somewhat lacking in brilliancy and fascination. It is most effective, perhaps, in its brief surrender to purely womanly emotion in the interview with Stein. Second honors in the representation belong to Giorgio Majeroni, who plays Orloff with fine feeling and intelligence and unaffected elegance of manner. His unconscious denunciation of Dora and his subsequent embarrassment upon discovering the mischief he had unwittingly done, are both admirable. And the Julien of Leslie Faber is a thoroughly good piece of work. The Dora of Miss Doro is fairly competent, but in no way remarkable, while the Marquise of Jeffreys Lewis is a bit of broad burlesque, entirely inadmissible in comedy. Lady Fairfax and Algie are both caricatures.

Thus the performance, as a whole, is in the nature of patchwork, in which old and new materials are intermingled with disconcerting effect. Such success as it may attain must be attributed rather to the inherent interest of its cleverly constructed story than to the consistency and skill of its interpretation.

J. R .T.

"THE HIGHWAY OF LIFE."

Mr. Louis N. Parker, greatly daring, has been generally successful in his adaptation of "David Copperfield," intended originally for Sir Herbert Tree at His Majesty's Theatre, London, but, in consequence of the war, now first produced by the Liebler Company at Wallack's Theatre. There are many obvious faults, as there must be in any stage production of such a work, but the general effect is to our mind more pleasing and has more of the flavor of the original than, for instance, the version of "Vanity Fair," played by Mrs. Fiske, has of Thackeray's novel. Mr. Parker takes considerable liberties with his material, but it is difficult to see how he could avoid doing so. Whole scenes and passages of dialogue are ruthlessly snatched out of their context and sequence and fitted to the exigencies of the production; but the adapter deserves unstinted credit for one thing—he rarely introduces phraseology of his own; the dialogue, almost without exception, is to be found in the text of Dickens, and the characterization as drawn by Dickens is observed with scrupulous fidelity and considerable skill. Dramatically, the piece suffers from a surplusage of characters, and would be more closely knit had a number of minor rôles which in no way assist the development of the plot been elliminated. We must, however, take Mr. Parker's version only for what it pretends to be—not so much a consistent drama as a spectacular production of the novel intended to present to our notice individual characterizations as they were limned by Dickens and illustrated by Phiz.

Thus regarded, the production at Wallack's is wholly acceptable, and no lover of that "favorite child" of the novelist need complain that Mr. Parker's touch has been laeking in reverence. The scenes, twelve in number, are conspicuously good in point of stage production, and the delay caused by the frequent changes, which on the first night somewhat prejudiced the play by keeping the weary audience in their seats till an inordinately late hour, has since been entirely overcome. The action covers the period of David's prosperity, and the plot—what there is

of it—revolves around the seduction of Little Em'ly by Steerforth and the machinations of the unscrupulous Heep. If Mr. Parker has elected to include some characters that only serve to confuse the issue, he has nevertheless been judicious in his omissions. A conspicuous instance of his sagacity in this respect is the elimination, except for allusions which are themselves unnecessary, of Dora, who might have been a temptation to a less skilful adapter and would certainly have been a trial to any actress who might have essayed the rôle.

The cast is well selected and, on the whole, eminently satisfactory, displaying care and intelligence in the interpretation of the various characters. Emmett Corrigan gives a forceful characterization of Dan'l Peggotty, erring occasionally perhaps on the side of over-emphasis, but on the whole interpreting well the rugged, big-hearted nature of the old fisherman. That unfortunate but perennially hopeful gentleman, Mr. Wilkins Micawber, is played with infectious zest and an admirable make-up by Lennox Pawle. O. P. Heggie conveys a good idea of the humility and rascality of Uriah Heep. The Tommy Traddles of Philip Tonge and the Mrs. Gummidge of Miss Louie Emery must be singled out as clever characterizations of minor rôles, and Mrs. Maggie Holloway Fisher's Mrs. Micawber is also a good piece of work. Mr. Prince Miller's conception of Mr. Dick is mildly amusing, but one may doubt whether it agrees with that of Dickens, and Miss Dorothy Parker's performance of the rôle of Little Em'ly—by no means an easy part to play—is too negative to be convincing. David Copperfield himself is well played in the pleasant, gentlemanlike manner which the part requires by J. V. Bryant. S. W.

THE PRINCESS THEATRE.

Though Horror is no longer protagonist, the Princess Theatre, under the management of Holbrook Blinn, affords entertainment which is very different from that to be found at other New York play-houses. Mr. Blinn still welcomes plays which are exotic and mysterious. A part of this relish is probably derived from a desire for the sensational; in part, it seems to rest on a love of psychology of a very special nature. As usual, there is a series of one-act plays.

The programme this week includes four pieces, which range in point of time from the present to 199000 B. C., and in respect to setting from nowhere to London. The first, "The Forest of Happy Dreams," by Edgar Wallace, sketches the delirium of a defaulter, who, having escaped to the African forest, has become a victim of fever, and who, under the influence of morphine, sees the dreams come true which in his waking moments, before he ran away, he had cherished. The girl he loves still trusts him in his financial difficulties; his jockey reports a sweepstakes to his credit, and another friend offers him money in plenty. The play is a pure fantasy, in which everything depends upon the presence and personality of the actor, and Mr. Mestayer's rich voice stood him in good stead.

For the second piece Mr. Blinn revives "The Cat and the Cherub," by C. B. Fernald, which he first produced in 1897. Laid in San Francisco's Chinatown, it catches much of the atmosphere of that strange settlement; and, though involving a murder, it is saved from the purely grewsome by a pretty love element and by Mr. Blinn's representation of Wing-Shee, the philosopher. Ah-Yoi was daintily played by Miss Polini, and to the rôle of the villain Chim-Fang, Mr. Trevor brought a quite unusual equipment, both of looks and ability.

Henry Arthur Jones's "The Goal" is third on the programme. Though it is slight, it furnishes a rich opportunity for quiet characterization. Sir Stephen Famariss, a wealthy Irish engineer living in London, is at the point of death as a result of angina pectoris. But he faces death as he faced life, on his feet and fully dressed. He is an old-fashioned type, also, in showing a mingling of obstinacy and generosity. Tragedy and comedy are nicely blended in the part. There is whimsicality, brought out by reminiscence, and there is the relentless drive of ambition checked by the knowledge that the end must soon come. Unfortunately, the suspense which gives the play its intensity seems hardly justified artistically; for it is just a bit cheap to harrow an audience with the assurance that the final attack of the disease may arrive at any moment, as it does, indeed, just before the curtain. Mr. Blinn gave a good exhibition of acting in this part.

That the audience may leave the theatre in a jovial mood, the concluding play is anything but tragic. "Little Face," by Roland Oliver, is somewhat in the vein of Mark Twain's "Diary of Adam," having all of its extravagances and little of its humor. Cave men and women, scantily dressed in skins, indulge in present-day slang and are concerned mostly about the marriage question. To some persons in the audience, at least, vulgarity seemed to be the play's outstanding characteristic. F.

"EXPERIENCE."

This interesting experiment, by George V. Hobart, which is produced at the Booth Theatre, is ostensibly a morality play. Youth, first in the company of Ambition, who is soon supplanted as guide by Experience, leaves Love and goes forth into the world. A series of episodes follow, which carry him from mere pleasure-loving to gambling, to remorse, to association with abandoned women, to cocaine, and finally back to love. Regarded purely as a morality, the work is not badly constructed, except for the melodramatic device—he is arrested by a hymn as he stands outside a church—through which he is at length dissuaded from following Crime when all other resources fail. The sound of this music directs his thoughts to his dead mother, and he returns to Love.

But the episodes of his temptation furnish the author with an opportunity to introduce several of the sensations which have outworn their usefulness for problem plays. There is an alluring cabaret in which Beauty lives quite up to her name; a scene with a complete gambling outfit; a "joint" frequented by navvies and other outcasts; and there is a scene in which victims of drugs wail in delirium. Mr. Hobart adopted a clever ruse to wring one more "run" out of these haggard features. And it is true that they lose some of their viciousness when they are so frankly labelled and when the moral is made so simple. If Intoxication exists wholly by fiat and is not supposed to have any will power, wine to excess assumes for the moment a harmless virtue. The play in this respect suggests interesting comparison with some of the moralities in the days preceding Shakespeare, when this sort of play had its greatest vogue. Was the attitude of previous audiences much the same as that of an audience of the present day in viewing sensational episodes? Is the fundamental moral of "The Nice Wanton" more assertive in its setting of low tavern life than that felt in the dive scene of "Experience"? It is an interesting psychological question which we suggest without attempting to answer.

Youth, though played with a certain sweetness by William Elliott, lacked the reflectiveness to give the part dignity and seriousness. Of the other personages a good word should be said of Miss Margot Williams, who had the two parts Intoxication and Frailty. F.

"A PERFECT LADY."

Miss Rose Stahl is seen in a characteristic part in "A Perfect Lady," which is given at the Hudson Theatre. A member of a troupe of burlesquers who are stranded at a railway junction in Kansas, she decides with two of her pals to open an ice-cream parlor in the little town and secretly to convert the residents to the new dances. As will be seen, the theme is a year or two old on the stage, and what relish the audience might once have found in the spectacle of puritanical people practicing the strange paces was somewhat blunted. Miss Stahl, as Lucille le Jambon—a name selected in part from a bill of fare as being the only French accessible—filled the rôle of one who is a lady at heart, if unpolished on the surface. Her generous, homely philosophy is, of course, made to stand out against the smug system of the townsfolk, and in the end she not only confutes the most influential bigot, but wins the heart of the minister, a not unattractive personage, as played by Harry Browne. We need not recount the plot. Enough is indicated to show the trend of the part. There are some bright lines in the play, which are enhanced by Miss Stahl's quiet, conversational tone. A remark from the lips of another character is also worth repeating. To the piano player, who thinks he has the talent to compose, though it always turns out that, when the mood is on him, he is simply creating a slight variation of some old standby, this person says: "You ought to be a wonderful composer, you have such a good memory." F.

"THE BATTLE CRY."

As a vehicle for William Farnum and Grace Elliston—and "The Battle Cry" hardly can be viewed in any other light—Mr. Charles Neville Buck's play is a rather unfortunate selection. Frankly melodrama, it contains little merit, and the interludes of moving pictures are not distinctive enough to make them seem essential to the piece. Furthermore, the theme is not unfamiliar, nor is the setting altogether fresh. It was all done a great deal better in "The Great Divide," to which play some of the incidents of "The Battle Cry" seem traceable.

The story is that of an Eastern school-teacher who goes to Kentucky to educate the illiterate children of the mountain regions there. In the process of trimming the lamp she finds herself in some darkness as to the powder-and-shot education peculiar to that part of the country. She is brought sharply in conflict with "Bad Anse" Havey, but seems to find some satisfaction in the fact that, al-

though, as leader of the Haveys, he may have killed any number of men in open fight, he never shot a sworn foe from behind. In the end, of course, all that is strong in "Bad Anse"—and the best of it is developed by the girl herself—appeals to all that is weak in the young schoolma'am, and when he takes her in his arms and declares that he will marry her that night, she begins to realize that in this powerful mountaineer she has found the man of her dreams.

As "Bad Anse," Mr. Farnum acquits himself with distinction, and Miss Elliston gives a decidedly good portrayal of Juanita Holland, the school-teacher. She is least fortunate in a scene where, with a rifle, she defends "Bad Anse" against the feudists, but that may be traced to faulty characterization on the part of the author. Worthy of mention, also, are Donald Gallaher as Jeb McNash, Beatrice Allen as Dawn McNash, and Madeline Chieffo, Edwin Dupont, and Carolyn Duffy, who appear as school-children. "The Battle Cry" is presented by the Shuberts at the Lyric Theatre.

L.

Music

TWO NEW OPERETTAS.

It is not likely that Andreas Dippel's plans for a season of light opera and operetta will be carried out as originally announced, because the war has made it impossible for him to import a complete and satisfactory French company. That he will, nevertheless, provide some interesting novelties seems assured. He made a successful beginning last week at the Forty-fourth Street Theatre with "The Lilac Domino," by Emerich von Gatti and Bela Jenbach, whose dialogue and lyrics were considerably localized by Harry B. Smith and Robert B. Smith. The humorous contributions of Robert O'Connor and John E. Hazzard to the dialogue and the play were obviously, for the most part, their own, and, while not on an elevated plane, they were never offensive. The plot into which they had to dovetail themselves is concerned with a Count, who, at a masked ball in Nice, falls in love at first sight with a girl in a lilac domino, but fails to discover her identity. While trying to find her again, he meets two friends who have lost all their money at roulette and faro. He himself still owns 30,000 francs, and this he shares with his friends, in the hope that one or the other may win a fortune. All lose, however, and at a conference they cast dice to see which of them is to be doomed to marry an heiress, for their common benefit. Upon the Count falls the task of thus sacrificing himself. Georgine, meanwhile, the lilac domino, who happens to be an heiress, too, the daughter of a Viscount, hears accidentally of that dice-throwing, and, though she, too, had fallen in love with the Count, she resents it so much that she agrees to marry her cousin. Of course, she doesn't, but comes in time to save the Count from committing suicide.

The music for this plot was composed by Charles Cuvillier, who, though a Frenchman, was trained in the Viennese school of operetta, which, for the last ten years, has exhibited more vitality than any other. He is said to have composed some serious works, and to be now in the army. Judging by his achievement in "The Lilac Domino," he is equipped for more ambitious tasks. He understands his business thoroughly, writing for the voices idiomatically and handling the orchestra with skill. Mr. Dippel had provided an excellent cast and ensemble, including a well-trained chorus and orchestra, with a competent conductor. Among the singers there is a good tenor, James Harrod, and a soprano and baritone who made a sensation. Eleanor Painter, an American girl who received her training in Berlin, proved to be pretty, vivacious, a capital actress, and the owner of a most agreeable voice, while Wilfrid Douthitt won much admiration for his fine voice and singing.

Victor Herbert, though born in Ireland and trained in Germany, might be called the American Johan Strauss. He shares with that Austrian a delightfully fresh melodic fount, a rare skill in orchestral coloring, and an amazing fertility. In addition to two works written for the grand-opera stage ("Natoma" and "Madeleine"), he has composed in the neighborhood of forty operettas, most of them tuneful and entertaining. The latest of them produced on Monday night at the Thirty-ninth Street Theatre, is one of the best he has composed. It is entitled "The Only Girl," and the programme states that it is adapted by Henry Blossom from Mandel's comedy, "Our Wives." But one can go further back, to Ludwig Fulda's amusing comedy, "Jugendfreunde." Thanks to Mr. Blossom's skill, the comedy has lost nothing through this double transformation. He has cleverly adapted it to musical purposes, introduced funny details in the dialogue, with suitable lyrics, and kept the whole within reasonable limits. There is hardly a dull moment.

The plot is concerned with Kim, a librettist, who wants to write an opera, but has no one to supply the music. From a neighbor's window comes floating a song which so enchants him that he sends for the musician. To his surprise and disgust he discovers that the composer of the song is a woman. He is not over-fond of women, and thinks it would be quite impossible to collaborate with one. But finally he decides to do so, and the inevitable result follows. In the third act he marries her, although many things had happened to his most intimate three friends—each of whom had married "the only girl" and had his experiences.

Those experiences are very amusing, and Joe Weber has provided a really excellent cast, nearly all the members of which not only act well, but sing well, too. It includes Wilda Bennett as the composer, Thurston Hall as Kim, and Ernest Torrence in the very amusing part of a Scotch painter. Mr. Herbert's score includes a song, "When You're Away," which runs through the whole operetta, and which will be sung soon all over the country. There are thirteen other numbers, most of them in the composer's freshest vein.

H. T. F.

An advertisement reads, "Owing to the cancellation of his European dates, Godowsky will be in America this season." On the other hand, it is asserted that Godowsky is held as a prisoner of war in London, because, though a Russian by birth, he was so indiscreet as to become an Austrian citizen at the time when he was at the head of a music school in Vienna.

Ossip Gabrilowitch, despite his Russian name and origin, was allowed to leave Germany to tour the United States this season. Last season he achieved the almost unprecedented feat in Germany of playing nineteen great symphonic works with piano in historical order in several cities.

"It will be good news to piano students and lay keyboard connoisseurs," says the *Musical Courier*, "to hear that Rafael Joseffy is at work on a monumental new edition of Chopin's complete works, which will begin to make its appearance shortly. This is a much-needed piece of musical labor, for the Kullak, Mikuli, and Klindworth editions of Chopin all contain many faults and no longer are in touch with modern keyboard reforms and general twentieth-century musical phases. No one is better equipped both as a pianist and a musician to undertake the revision of the works of the greatest piano composer of all time than Rafael Joseffy."

David Sequeira, of the faculty of the New England Conservatory of Music, Boston, has been invited to conduct the Nicaraguan national band in concerts which it will give at San Francisco next summer. This organization, whose work Mr. Sequeira observed during a visit to his native country last July, is said to be a good one containing a number of able musicians. The problem of the conductor will be largely one of selection of material suitable for general audiences, among which people of the United States will predominate. Mr. Sequeira hopes to be able to strike a balance between the music of Latin America, which is little known in this country, and the usual classical orchestral music.

The most suggestive and valuable musical criticisms ever written are undoubtedly those of Robert Schumann. When they first appeared, week by week, in his periodical, the *Neue Zeitschrift für Musik*, they attracted considerable attention because of their fearless exposure of musical charlatanry, and, on the other hand, their championship of the best music, new and old. He was the first to hail such rising geniuses as Berlioz, Franz, Chopin, and Brahms, and his only failure was his not recognizing the greatness of Wagner, though it must be remembered that he never heard the most mature works of that master. In 1854, when his mind was already clouded, there appeared a volume containing selections from his musical criticisms. Of these criticisms the fifth edition has lately been issued by Breitkopf & Härtel. It differs widely from the first. The editor, Martin Kreisig, is the curator of the Schumann Museum at Zwickau, and he has taken pains to compare each article with the original, as printed in the *Zeitschrift*. He has also restored a number of criticisms that had been omitted in earlier editions and supplied many valuable footnotes. Most of the previously omitted criticisms related to composers or works now forgotten; but Schumann's remarks on them are, nevertheless, worth preserving, being usually illuminating and always of literary charm.

Charles de Beriot, whose death was recently announced in Paris, was a son of Charles Auguste de Beriot, the eminent virtuoso, who has been called "the founder of the modern Franco-Belgian school of violin playing." The latter married the prima donna, Marie Garcia-Malibran, and their son, Charles, was born in Paris on February 12, 1833. He became famous as a pianist, and also as a composer of "Opéras sans paroles" for piano and violin. Together with his father he wrote a "Méthode d'Accompagnement."

Art

ART AND WAR IN LONDON.

LONDON, September 25.

Had the war been started as a deliberate crusade against art, the effect could not have been more immediate and disastrous upon artists in England. For the moment—and it will be a long moment, I fear—art simply does not exist, and it must be the same in every other capital of Europe. I suppose it is inevitable. Luxuries must go first, and art is the first of luxuries. Books have a better chance, because they are comparatively cheap, and yet publishers are reducing their staffs and their autumn lists. For the theatre also the case is less desperate, because it makes a grosser bid upon the emotions and serves with the public as a narcotic to help them forget the horrors in the midst of which they live; and yet managers can draw the crowd only by the attraction of lower prices, patriotic plays, and enormous gifts to patriotic funds. But art is for the few, for the public with finer sensibilities—and a wider purse—and art is the last thing now that London has any use for.

It was extraordinary, during the first days after England's declaration of war, to watch the usual column of art advertisements dwindle and then disappear from the newspapers. One enterprising firm endeavored to escape the general disaster by advertising a supply of artists ready to paint at reasonable prices portraits of officers ordered to the front, but it was no use; officers were busy about other things, and money was going to more immediate needs, and this advertisement, too, went the way of the rest. Nor can the papers spare the space for that other form of art advertisement—art criticism. Nobody reads anything but war news, and the art critic might as well put up his critical shutters and seek another shop, for his occupation is gone. It was, and still is, more extraordinary to walk down Bond Street, Piccadilly, and the other streets where the principal art dealers have their galleries, and to find in the once familiar windows nothing save the big printed "Call to Arms," now stuck up on every taxi and every 'bus and every free hoarding in London; or else the sort of war pictures that were popular when Victoria was Queen, or portraits of Nelson and Kitchener and Wellington hanging side by side, or old color prints of soldiers and battles resurrected from drawers and portfolios where they had probably lain, forgotten and unsalable, for years. I have even seen the place of honor in one window filled with that picture, so famous in its day, of Tommy Atkins, as he used to be, philandering with a nurse-maid in the park—a picture thought a masterpiece when Jan Van Beers painted it, and now as old-fashioned as the guardsman's short red jacket and little round cap so elaborately rendered. It would be a waste to show any other kind of work, for nobody wants paintings and prints, nobody has the money to buy them if they did. The very American, who is usually the stay and support of London dealers through August and September, has this autumn failed, frightened by the threat of financial famine and the high rates of exchange.

The desolation is more apparent behind the windows. Paintings and prints hanging on the walls when war broke out may hang there still, but the effort to change them is rare. Old exhibitions may close, but the new ones to open are the exception. Artists, whose shows have hitherto been the paying and popular event of autumn and early winter, have had to countermand their orders for frames. It is true that academies and municipalities in different parts of the country propose to hold their annual exhibitions, war or no war. In towns like Edinburgh, Glasgow, Liverpool, Brighton, Bristol, I believe the big shows will be open at the accustomed dates. The larger and more important societies of artists—like the International, for one—also will probably make no difference in their arrangements. Whether there will be visitors for these shows is another matter and, anyway up till now, more has been heard of the closing than the opening of exhibitions. The Anglo-American Exposition at Shepherd's Bush will shut its doors this week, and the fine collection of the work of American artists, that in the beginning had to face the opposition or indifference of critics only to meet in mid-season the complete neglect of people plunged into the most desperate war they have had to fight for centuries, will go back to America without ever having received the attention and interest it deserves, while the galleries, with all the buildings, it is said, will be turned into the barracks England is much more in need of. Nor is it astonishing that Shepherd's Bush should make no effort to remain open when already Venice, though comfortably out of the war zone, has decided to close its big international exhibition, usually the most successful and best patronized in Europe.

London, however, has at least the consolation, if consolation it is, to know that in this respect its fate is no more unhappy than that of its allies and enemies alike. The sudden end brought to the Russian, English, and French sections at the wonderful Book Show in Leipzig, brought really to all sections, since nobody out of Germany has been able to travel to Leipzig since the last of July, is nothing less than an international calamity. And Paris, to go no further, has to deplore the loss of its Salon d'Automne, as well as smaller exhibitions, which I know, judging from the preparations for them, would have been of equal importance and interest.

When there is next to nobody to show his work, to advertise it, to write about it, to buy it, the outlook for the artist is not particularly cheerful. Much as he might like to, he cannot live on art alone. During an interval he must reconcile himself somehow to the fact that he is one of the most superfluous members of the community and, worse than this, he must suffer accordingly. He already feels the pinch, whether he is the fashionable portrait painter whose plentiful sitters are now fading fast away, or the unknown struggler who has lost his last hope of the unexpected sale that was to set him upon his feet again. Reports have come to me from every side of commissions cancelled and work unpaid for, the moratorium not proving an unmixed blessing. The illustrator, who of old prospered on war, is not much more fortunate than the painter, for the present censorship is strict and only the photographer seems able to evade it. Altogether, if England is looked upon as the safest refuge for the French artist and the Belgian, if Americans from their colonies in Paris and Etaples begin to establish themselves in London, the English artist knows that at home now there is no place for him, and he, for his part, is hurrying away to New York or Chicago, where the Belgian refugee is not the sole consideration—that is, if he has not turned soldier or Red Cross aid, or private constable, or harvester and farmer.

Possibly, when the period which spells ruin for him can be viewed in the right perspective, the artist will learn that art did not stop so suddenly as he, looking on from too near, imagines. War did not put an end to the career of the Florentines, the Spaniards, the Dutchmen; David and his influence did not perish with the Revolution, nor were the Impressionists lost in the storm of 1870. Indeed, I have heard it prophesied that only good for art will emerge from the present ordeal, that the result will be a healthy weeding-out and a fresh inspiration, that only the fit among the thousands of artists in England will survive the struggle, that the survivors will be helped to rid themselves of the fads and poses which lately have been undermining their sanity and vigor.

Certainly, it is not to be denied that there are far too many artists in England, or, rather, far too many men and women who call themselves artists because they have dawdled through art schools and set up studios; and art will be the healthier if they are left so far behind in the race that they can never catch up again. Nor can it be denied that, of late years, there have been far too many signs of decadence not only in England, but in all the countries of Europe to which even peace, when it comes, will be long in bringing either the inclination or the leisure for art—in Russia, where Pabst and the Russian ballet seemed leading the way headlong to exaggeration; in Germany, which has been given over to Post-Impressionism and its attendant follies with the same zest that made the Germans a few years ago the chief prey of L'Art Nouveau, now happily dead; in France, which apparently had outworn its fine old courage in inaugurating new movements, as though it realized it had done its fair share of this work for the world; in England, which has been reëchoing feebly and clumsily the worst absurdities of Continental Cubists and Futurists, inventing Vorticism, and proclaiming its ineptitude in a journal where the

lowest level in illustration, type, and printing is reached and made a virtue of. It may be that the art schools and the studios will be swept free of the dawdler and the amateur. It may be that the air will be cleared of exaggerations, puerilities, and affectations much as, according to certain scientific authorities, the world will be cleared of hundreds and thousands of its excess population by the useful scourge of war, useful, they say, because it restores a juster balance, less fierce competition, and easier prices.

But these promises for the future are scarcely more consoling to the artists who are being purified than to the excess population that is being killed off. Whatever may be the ultimate reward, there can be no doubt of the present distress, which will last, unfortunately, not merely as long as the war, but during the years Europe will take to recover from the tragedy. The world will be so much the poorer by the good work left undone, the great commissions never given, and the poor artist will have to exist through the interval with what patience and hope he can muster. But one good thing has so far resulted to the lover of art in London. In the face of real war the suffragists' "militancy" seems too sorry a farce for any one to bother about, and the national galleries and museums are once more open to the public. And the horror with which the colossal crimes of Rheims and Louvain have filled the world should put an end to all vandalism, great or small, forever more. N. N.

"The Meaning of Art," by Paul Gaultier, translated by H. and E. Baldwin (Lippincott), is dedicated to Henri Bergson and is introduced by a letter of sixteen pages from the pen of Emile Boutroux. The first chapter, covering more than one-third of the volume, is entitled What is Art? It contains practically all the important matter; the other chapters, devoted to questions relative to The Rôle of Art and The Value of Art, being given largely to the discussion of minor subjects of less significance. After noting the obvious fact that "their utility alone does not entitle the fine arts to be called such" (p. 7), M. Gaultier holds justly that "Art must not be confused with Logic," or, in other words, that the fine arts cannot be held to aim at the true, as so many of the modern realists tacitly claim. This contention, coming from a Frenchman, is especially welcome. He also well shows that fine art does not "aim at the good or perfect" (p. 9); and concludes that it suffices to say of art that it produces beauty. When, however, he asks, "What is beauty?" he gives us a strangely unsatisfactory reply. "Beauty," he tells us (p. 25), "is nothing more than that agreeable emotion which we feel in the presence of beautiful things." But when we seek to discover what is meant by this "agreeable emotion," we find no indication whatever that the pertinency of such a question has occurred to our author. We are thus left in the air, as we should not be if he had really studied with thoroughness the modern literature of the subject.

Although M. Gaultier's book in itself is thus a disappointment, M. Boutroux's Introduction is a gem worth cherishing. With inimitable grace the latter examines two points made by M. Gaultier. First, whether art, properly so called, is the realization of beauty, and secondly, whether beauty is æsthetic emotion made objective. In relation to the first point, M. Boutroux holds that in our complex life the realization of beauty can never possibly be the exclusive aim of art; "for beauty is not an end, it is a means" (p. xi). Turning to the second point, M. Boutroux denies that æsthetic feeling is only an emotion; affirming that this view involves the contention that "the living soul could throw aside all the traditions of the past, and create for itself alone, *ex nihilo*, the form that would express its impressions" (p. xvi); and would thus be an exception to the general laws of objectification. This introductory letter of M. Boutroux's is, in fact, of far greater literary and philosophical value than the work it introduces, and itself makes the book an important addition to the æstheticians' library. The volume is handsomely illustrated with thirty-six photographic plates.

Finance

FORECASTS.

It is now an old story that when the Stock and Cotton Exchanges closed on July 30 we should have to look for the drift of things to the money market, the grain market, and the foreign exchange market. The money market held the centre of the stage as an index to the situation, for about one week. It told of the London situation in the last week of July by the rise in the Bank of England rate to 10 per cent.—a level not reached since the disastrous London panic of 1866, and touched on only one other occasion in the past century. That was a prompt and sure foreshadowing of the events of the next week, in which London, dealing with perhaps the most formidable panic situation in a hundred years, adopted the 1907 plan of Nevada, Oklahoma, and California in declaring extra bank holidays by legislative decree, and in which every great nation in the world, excepting Germany and the United States, declared a moratorium on debts.

This moratorium largely upset the value of the money market as an index; because people in trouble will not bid high rates when their loans have been forcibly extended. But along with the consequent subsiding of sensational activity in the money market, the wheat market came into the limelight. Reflecting first, by a decline at Chicago from 98¼ cents a bushel on August 10 to 87½ on August 17, the momentary prospect of having our whole foreign trade imperilled by two powerful hostile fleets and by consequent inability to send our grain to Europe, that market next, when channels of commerce were reopened, began to measure by its action the prospect of a long or a short war. It promptly gave its prediction for a long and obstinate war. Such a contest would point to a higher price for wheat; and, in line with the drift of financial sentiment on Wall Street, the wheat trade evidently assumed that initial German successes merely meant prolongation of the war. In fact, the rise in wheat, from the August price of 87½, to $1.21, on September 4, occurred in the very period when von Kluck was swinging triumphantly down to the gates of Paris.

As with all speculative markets which serve as a forecast to conditions developing outside, the wheat market overdid its "discounting" process, or else was driven next to an altered view of the probable duration of the war, due to the German army's retreat. From the $1.21 price of September 4, when the battle of the Marne was being fought, the price fell back by September 15, to $1.00⅞. That was the date when the Germans ceased retreating; from that price, wheat advanced again, between then and the middle of October, to a price 10 or 15 cents a bushel higher, around which it is now apparently awaiting some new and sensational turn in the war news. Precisely when the wheat market, two or three weeks ago, ceased to move violently, the foreign exchange market became the centre of things in the field of financial prophecy.

The course of foreign exchange had already foreshadowed developments in two directions—first, in the matter of the absolute breakdown of international credit facilities generally, but, secondly, in the doubt as to what was to be the commercial and industrial position of the United States, under the war conditions, towards the rest of the world. The amazing price of $7 in the pound sterling, touched on August 3, reflected the momentary possibility that all the relations of international finance throughout the world would collapse as a result of war.

The rate fell rapidly when this possibility disappeared; but sterling exchange remained far above what ought to have been the highest possible level in a normal market. Ranging, during September and the first half of October, between $4.92¾ and $5.06, whereas $4.89½ is traditionally the highest attainable figure, the foreign exchange market absolutely pointed to the seeming probability that our market either could not or would not meet its accruing foreign liabilities. It was presently evident that we were willing to meet them. But the question remained of our ability to do so, especially with London reluctant to extend maturing American indebtedness, with our cotton trade with Europe decimated, and with $2,000,000 excess of merchandise imports during the first two months of war, as against an export excess of $97,400,000 in the same months last year.

But from 4.97 at the opening of last week, exchange on London broke with exceptional violence, until it touched last Monday 4.89, the first rate on a normal and familiar basis since the war broke out. In part, this highly sensational movement was a response to the effective work of the "bank pools," formed to provide properly for the maturing foreign indebtedness of New York city and other American borrowers; in part, also, to the increased purchases in this country by the belligerent states; to the sudden and rapid increase in our exports; to England's admis-

sion of our right to send our cotton, even to Germany, and to a consequent doubling and trebling of our weekly shipments of that staple.

But it also pointed unmistakably to belief in the strongest financial quarters, that return to a normal position, both at home and in the field of international finance, is now before us. No doubt, this movement of recuperation will be slow; but the character of the financial phenomena which have accompanied the outbreak of this extraordinary war has made the market for international exchange the index, in an exceptional degree, to the shifting phases of the real situation, both in this country and in Europe.

BOOKS OF THE WEEK

FICTION.

Abbot, P. The Little Gentleman Across the Road. Boston: Badger. $1 net.
Bacon, A. F. Beauty for Ashes. Dodd, Mead. $1.50 net.

Scientific Method in Philosophy

Lowell Lectures for 1914

By HONORABLE BERTRAND RUSSELL, M.A., Cambridge, England. *Pp.* 246. 8*vo; cloth Price,* $2.00.

Our present philosophieal age is one of bewildered groping, and accordiag to Russell the time has now arrived when this uasatisfaetory state of things can be brought to an end. He proposes to take certain philosophies as examples, and to show why their achievements have not been greater. Professor R. M. Wenley of the University of Michigaa says. "Every student of philosophy must reckoa with these Lowell lectures."

Putnam Books

My Path Through Life

By LILLI LEHMANN.

"The Most Important Biography of the Year."

8vo. 500 pages. 50 Illustrations. $3.50.

This autobiography will be eagerly received by the world-wide publie the great prima-donna has eharmed. Nor will interest be confined to the musie lover. Her struggles in Berlin, her experiences at the Viennese Court, her eollaborations with Wagner are among the many entertaining ehapters of this notable work.

Political History of Secession

TO THE BEGINNING OF THE CIVIL WAR

By DANIEL WAIT HOWE.

Author of "The Puritan Republic," "Civil-War Times," ete. 8vo. $3.50.

The author traces the eauses, of which slavery was the chief, but by no means the only, one that led to the Civil War. It is an important eontribution to a momentous period. The faets have been arrayed in such a way as to give them a new interest and to enable the reader to understand the issues and the attempted compromises that antedated the final outbreak.

The Law of Faith

With a Lawyer's Notes on the Written Law.

By JOSEPH F. RANDOLPH.

8vo. About 300 pages. $1.50.

This book discusses what Faith is and *how* it leads men to God. It assumes that the Bible words are their own best interpreter—to be read by millions of plain men and women. hence simpler than any of the systems and theories built around them.

The writer of the book addresses it to readers, learned and unlearned, as a question which concerns them all—

WHAT HAS FAITH TO DO WITH SALVATION?

The design of this paper is to diffuse among the people correct information on all interesting subjects, to inculcate just principles in religion, morals, and politics; and to cultivate a taste for sound literature.—[Prospectus of the *Evening Post*, No. 1, November 16, 1801.

"The editorial page of *The Evening Post* has long had the reputation of being one of the ablest in New York. The subjects presented are always discussed with ability and force. We are never at a loss to tell where the paper stands on any question upon which it expresses an opinion. Its war editorials possess an element of frankness that is refreshing."

From the Editor and Publisher, September 26, 1914.

—and, judging from the many letters we are receiving, the editorial page is widely regarded as an authority. Every day a two-column article entitled "The World War" is printed on this page which carefully analyzes the news dispatches and presents the war situation in perspective. If you want to be intelligent about the war you must read

LONGMANS' RECENT PUBLICATIONS

George III. and Charles Fox

The Concluding Part of "The American Revolution"

By the Right Hon. Sir George Otto Trevelyan, Bart., O.M. 2 Vols. 8vo. **Vol. II.** With Map. $2.25 *net.* (Weight, 32 *oz.*)

"With this volume Trevelyan's admirable six-volume history of the American Revolution, written from the English standpoint, is brought to a close. It stands a proof of the truth of the common thought that history cannot be truthfully written by a contemporary. Sir George Otto Trevelyan's story of the American Revolution will take its place among the great narratives of English history."—*Boston Evening Transcript.*

"It is so pleasantly written, so abounding in information derived from a thousand sources, so good when it follows the high-road, and so attractive when it leads us into picturesque bypaths, that it deserves what is at all events a high panegyric—it was worth while to devote to it the labor which it has cost and the talents which it has employed."—*The Times, London.*

Peep-in-the-World

By F. E. Crichton. With 4 Illustrations by Harry Rountree. *New edition, with new cover design by* Harriet Olcott. 8vo. Pp. vi+258. $1.25 *net.* (Weight, 16 oz.)

"An unusually good story of a little English girl who spends a year at her uncle's castle in Germany. A mysterious dwarf who is the friend of all the forest animals plays a prominent part. . . ." —*American Library Association Booklist.*

An Introduction to General Psychology

By Robert Morris Ogden, Professor of Philosophy and Psychology in the University of Tennessee. Crown 8vo. $1.25.

A general elementary text for beginners written from a modern point of view, based upon recent investigations of the thought processes. It is a departure, the necessity for which has for some time been realized, from the conceptions and methods of the physiological and other schools.

Work and Wages

In continuation of Lord Brassey's "Work and Wages" and "Foreign Work and English Wages"

By Sydney J. Chapman, M.A., M.Com. **Part III Social Betterment.** 8vo. $3.00 *net.* (Weight, 32 oz.) Vol. I, Foreign Competition, at $3.00, and Vol. II, "Work and Wages," at $4.00, are already published.

Railroads: Rates and Regulation

By William Z. Ripley, Ph.D., Nathaniel Ropes Professor of Economics in Harvard University. With 41 diagrams in the text. *New edition.* 677 pp. $3.00 *net.* (Weight, 40 oz.)

"Professor Ripley is presenting the most exhaustive study of the railway problem in the United States that has yet appeared. By his intimate knowledge of the whole field of railway operation and by his attractive literary style, he has produced a book that is likely long to remain a standard authority on the subjects discussed. . . . A treatise of high merit."—*The Nation.*

Vol. II.: Finance and Organization [In the Spring]

The Pan-Angles

A Consideration of the Federation of the Seven English-speaking Nations

By Sinclair Kennedy. 8vo. $1.75 *net.* (Weight, 24 *oz.*)

Studies in History, Economics and Public Law

Edited by the Faculty of Political Science of Columbia University

Constantine the Great and Christianity

Three Phases: The Historical, the Legendary, and the Spurious

HOUGHTON MIFFLIN COMPANY'S
Important New Books

Samuel F. B. Morse

By EDWARD L. MORSE

This life of the inventor of the telegraph, based on his letters and journals, promises to be perhaps the most important biographical work of 1914. After Morse's death, in 1872, a somewhat hasty one-volume life was published. The author, however, did not have access to the very large amount of manuscript material which has now been used by Morse's son for the first time. Morse, who was born in 1791, was one of the most notable painters of his time, and had his career not been turned in middle life to invention, would doubtless now be remembered as one of the greatest of American painters.

Morse was a vivid as well as a many-sided personality. He wrote excellent letters, and of these the book is mainly made up. His son has done his work with skill and intelligence, and the result is a notable addition to American biography. The material for illustration is very rich. In the first volume the illustrations will be mainly Morse's own portraits of himself and family and of his distinguished contemporaries. In the second volume, in addition to various portraits and pictures of his homes, there are to be facsimiles of some interesting memoranda concerning the telegraphic alphabet, his own first designs for his instruments, etc., etc.

$7.50 *net.* Postage extra.

Poems

By CLINTON SCOLLARD. A selection from the harvest of thirty years of song. One of Mr. Scollard's critics says: "One cannot read a volume by this writer and fail to see that it is the work of a literary artist and optimist, with a peculiar richness of masterly imaginative power." $1.25 *net.*

Hans Breitmann's Ballads

By CHARLES GODFREY LELAND. The many readers of the poetry of Hans Breitmann will welcome this Riverside Press Edition of his work. Limited to 300 copies for sale. $7.50 *net. Postpaid.*

Prints

By EMIL H. RICHTER. A clear and suggestive review of the development of the engraving art by a well-known writer and authority actively connected with the Museum of Fine Arts, Boston. *Fully illustrated.* $2.00 *net.*

Dramatic Instinct in Education

By ELNORA WHITMAN CURTIS. An illuminating story of the various forms of dramatic expression, showing how these are now being turned to definite educational account by our schools and by various civic and social institutions. $1.00 *net. Postpaid.*

Byways in Bookland

By WALTER A. MURSELL. In this book Stevenson, Dickens, Borrow, and many others are dealt with in a sympathetic way. $1.25 *net.*

Rutherford Birchard Hayes

By CHARLES R. WILLIAMS. A full and intimate biography of the nineteenth president of the United States, showing him as an uncxpectedly interesting and important figurc in our history. *Illustrated. 2 vols.* $7.50 *net.*

China Under the Empress Dowager

By J. O. P. BLAND and EDMUND BACKHOUSE. A new popular priced edition of the most important contribution yet made to our knowledge of China. It gives the inside history of China and of the life of the great Empress Dowager with inimitable richness and vividness of detail. *Illustrated.* $1.75 *net.*

Meditations on Votes for Women

By SAMUEL McCHORD CROTHERS. "Whichever side we may happen to take on that most rampant of modern questions, we cannot fail to be pleased by the book as it meets the eye from every page, and entertained and enlightened by the most genial of our cultured American humorists. . . . As in all that he has written, Dr. Crothers is here an unconquerable optimist."—*Boston Transcript,* $1.00 *net.*

The Problem of Freedom

By DURANT DRAKE. A vital discussion of live problems confronting each person, that will appeal not only to those who have a special interest in ethics, but to all men—college students, business men, professional men—and to all women who are seeking guidance in the complex and often perplexing social questions in our modern life. $1.75 *net. Postpaid.*

Principles of Taxation

By HASTINGS LYON. In simple, untechnical language, the book presents clearly and logically the principles that should control all forms of taxation. It will be of great value to students of economics, officials in State and local governments, legislators, bankers, and all others interested in public finance. 75 *cents net. Postpaid.*

The Witch

By MARY JOHNSTON. "A well-told and effective story, the most artistic that Miss Johnston has written."—*N. Y. Sun.* *With frontispiece.* $1.40 *net.*

Diane and Her Friends

By ARTHUR SHERBURNE HARDY. Has all the fascination and charm that characterized Mr. Hardy's "Passe Rose." Illustrated by Elizabeth Shippen Green. $1.25 *net.*

Her Wings

By FRANCES JENKINS OLCOTT. "A book which we heartily recommend to those who do not require morbid self analyses nor crave excitement, but can enjoy a simple story about real things."—*Boston Post.* $1.35 *net.*

Shifting Sands

By Mrs. ROMILLY FEDDEN. The story of a doctor's devotion and sacrifice and ultimate reward, and of a mystery. $1.35 *net.*

The Poet

By MEREDITH NICHOLSON. "This delightful story, so filled with blended poetry and common sense, reminds one, as he reaches instinctively for a parallel, of the rarely delicate and beautiful ones told by Thomas Bailey Aldrich."—*Washington Star. Illustrated in color.* $1.30 *net.*

The Nightingale

By ELLENOR STOOTHOFF. "A clever, original, and amusing book . . . the fun is kept up until the very end."—*The Outlook.* $1.25 *net.*

JUST ISSUED

MUNICIPAL CHARTERS

By NATHAN MATTHEWS, LL.D., Mayor of Boston 1891-95, Chairman of the Boston Finance Commission, 1907-09, and Lecturer on Municipal Government in Harvard University.

8vo. Law buckram. 203 pages. $2.00 net.

The author has had close connection with municipal affairs for over thirty years. His aim has been to write, not another theoretical treatise, but a practical handbook of municipal legislation, and especially of those administrative safeguards and business provisions which his experience has shown to be the most vital requirements of an efficient city charter. Specimen drafts of various types are given.

FINE ARTS
MUSIC AND DRAMA

THE THEATRE OF TODAY

By H. K. MODERWELL

With 32 illustrations and numerous line cuts. Cloth. $1.50 *net.*

Takes the modern theatre from all sides—new methods of scene designing, new stage equipment, newer types of architecture, the relation of a theatre to its audience; these are some of the many subjects covered.

NATURE IN MUSIC

And Other Studies in the Tone Poetry of To-day.

By LAWRENCE GILMAN,

Author of "The Music of Tomorrow," "Edward MacDowell," etc. 12*mo. Cl.* $1.25 *net.*

Topics of vital interest to all lovers and students of the tone-art. The leading essay is a delightful study of the influence of the natural world—landscape and the sea—on composers.

AN ILLUSTRATED TREATISE

ETCHING AND OTHER GRAPHIC ARTS

By GEORGE T. PLOWMAN

Fully illustrated. Cl. $1.50 *net.*

The book covers briefly the whole field of the Graphic Arts. The author has endeavored to answer all those technical questions which naturally arise when studying the various methods of artistic expression in black-and-white.

NEW BOOKS OF LASTING VALUE

AMONG THE CANADIAN ALPS

By LAWRENCE J. BURPEE

With four full-page color plates and forty reproductions from photographs. 8*vo. Boxed. Cloth.* $3.00 *net.*

The wonderful plan of the laying out of the Canadian National Parks, the old Indian trails and the new mountain roads, the experiences of many famous travellers in mountain climbing, and the gorgeous scenery of the Rockies, are some of the topics in this vastly entertaining and beautifully illustrated volume.

THE ENCHANTMENT OF ART

By DUNCAN PHILLIPS

Frontispicce in color, and 8 other illustrations. 8*vo. Handsome Coth.* $2.50 *net.*

Here is just the kind of criticism which Anatole France once called "Romance—the Adventures of the Mind Among Masterpieces." The author is capable of rich enjoyments, and his enthusiasm for art is infectious. The book abounds in keen estimates and sensitive appreciations, and underlying the charm of the writing there is a fine life-enhancing philosophy.

CARILLONS OF BELGIUM AND HOLLAND

Tower Music in the Low Countries

By WILLIAM GORHAM RICE

With 32 illustrations, etc. 12*mo. Cloth.* $1.50 *net.*

Antwerp's beautiful cathedral, endangered by Zeppelin bombs, and Mechlin's noble tower that has been a mark for German shells in the present devastating European war, are among the churches and bell-towers mentioned in this unusual and interesting book.

THE POEMS OF FRANCOIS VILLON

Translated by H. DE VERE STACPOOLE

Edition limited. Half Cl., $3.00 *net. Half Morocco,* $5.00 *net.*

"Mr. Stacpoole's book is the fullest English tribute yet paid to one of the greatest, if not the greatest, of French poets."—*Saturday Review* (London).

JOHN LANE COMPANY PUBLISHERS NEW YORK

FICTION
THAT WILL LIVE

THE REVOLT OF THE ANGELS

By ANATOLE FRANCE

Translated by Mrs. Wilfrid S. Jackson. Limited Library Edition. 8*vo. Cloth.* $1.75 *net. Popular Priced Edition.* 12*mo. Cloth.* $1.25 *net.*

This latest novel by the greatest living French stylist presents graphically the irrepressible conflict between science and theology.

BELLAMY

By ELINOR MORDAUNT

Author of "Simpson," etc. Cloth. $1.35 *net.*

"It resembles a glass of sherry and bitters—stimulating, leaving a sharp, enjoyable tang behind. Unlike so many novels, 'Bellamy' is worth a careful and attentive reading."—*New York Times.*

DELICIOUS SATIRE

ARCADIAN ADVENTURES WITH THE IDLE RICH

By STEPHEN LEACOCK

Author of "Behind the Beyond," etc. 12*mo. Cl.* $1.25 *net.*

Stephen Leacock is a humorist who puts big ideas into satire and fun. These delicious adventures take us into the realm of financiers, American clubmen and clubwomen, and the magnificent homes of the wealthy, and literally bubble over with wit and farcical satire.

Pictures for Your Home

MEDICI PRINTS, a series of reproductions in color after the great masters — Corot, Constable, Dürer, van Eyck, Gainsborough, Giorgione, Holbein, Lancret, Lippi, Miereveld, Nattier, Raeburn, Raphael, Rembrandt, Terborch, Titian, Vandyke, Vermeer, da Vinci, Whistler, and many others. A catalog with 250 illustrations sent on receipt of 15 cents in stamps.

Among the many subscribers in the United States are the Library of Congress, Metropolitan Museum, N. Y., and the Boston Museum of Fine Arts.

SOLD SINGLY AT PRICES WITHIN THE REACH OF ALL.
AN EXCELLENT GIFT FOR ANY MEMBER OF YOUR FAMILY.

FOSTER BROS., 4 PARK SQUARE, BOSTON

SCRIBNER PUBLICATIONS

THROUGH THE BRAZILIAN WILDERNESS

By THEODORE ROOSEVELT

Here is Colonel Roosevelt's own vivid narrative of his explorations in South America; his discovery of the famous "River of Doubt," his visits to remote tribes of naked and wholly barbarous Indians, his 500-mile journey on mule-back across the height of land between the river systems of Paraguay and the Amazon, his observations on the most brilliant and varied bird life of the South American tropics; hunting of the jaguar the tapir, the peccary, the giant ant-eater, and other unusual animals of the jungle; all of this varied panorama is depicted in the author's most graphic and picturesque style, full of the joy of new adventures. The book is a permanent addition to the literature of exploration.

With illustrations from photographs by Kermit Roosevelt and other members of the expedition. $3.50 net; postage extra.

Half Hours

By J. M. BARRIE

"Pantaloon," "The Twelve Pound Look," "Rosalind," and "The Will."

From the delightful, romantic fantasy of "Pantaloon" to the present day realism of "The Twelve Pound Look" represents the wide scope of Sir James Barrie's dramatic work. All these plays, though quite diverse in subject, are beautifully characteristic of Barrie at his best. Not only is the dialogue vividly spontaneous, but the stage directions also are full of a subtle humor and imagination.

$1.25 *net; postage extra.*

In Dickens's London

By F. HOPKINSON SMITH

The reader of this volume will, in effect, have the delightful experience not only of visiting those London scenes frequented by Charles Dickens himself, but also those used by him as scenes in his novels and familiar through them in connection with Alfred Jingle, Nancy, Bob Sawyer, Sam Weller, Quilp, The Marchioness, Mr. Pickwick, Mr. and Mrs. Micawber, and so on, in the company of that most sympathetic and eloquent guide, the author-artist.

With 24 full-page illustrations from the author's drawings in charcoal. $3.50 *net; postage extra.*

The Cruise of the "Janet Nichol" Among the South Sea Islands

By MRS. ROBERT LOUIS STEVENSON

Lovers of Stevenson and his work will discover a new inspiration in the diary of his wife written during their voyage in 1890 through the South Seas. The material taken from this diary and used here has never been given to the public before in any way. The diary was written with no thought of publication, but, as Mrs. Stevenson says, "to help her husband's memory where his own diary had fallen in arrears."

Illustrated, $1.75 *net; postage extra.*

Notes on Novelists with Some Other Notes

By HENRY JAMES

All of the essays in this volume, critical and commentative, have naturally the peculiarly high value inhereut in anything by this writer because of his almost isolated position of eminence among men of letters to-day, and his minute powers of vision and expression, which enable him to see and reveal points of importance on art, literature, life invisible or inexpressible for any other writer.

$2.50 *net; postage extra.*

Outlines of International Law

By CHARLES H. STOCKTON

Admiral Stockton's practical experience in dealing with the complex problems and delicate situations in connection with international law renders him especially well qualified to speak with authority at this moment on a subject of such general interest. And a book on international law from his pen is especially timely since a number of works previously published upon the subject have become out of date, especially in the body of the text, by the changes that have occurred, partly as the results of the recent tribunals and conferences of The Hague, and of the London Naval Conference of 1909, at which Admiral Stockton was the first representative of the United States.

$2.50 *net; postage extra.*

The End of the Trail

By E. ALEXANDER POWELL, F.R.G.S.

In this volume Mr. Powell treats of those portions of the West which have not been hackneyed by tourists and railway companies in the same vivid, entertaining, and acute manner in which he treated Africa in "The Last Frontier." The volume is, incidentally, a narrative of the most remarkable journey ever made by automobile on this continent—a narrative upon which are strong descriptions of the climate, customs, characteristics, resources, problems, and prospects of every State and province between Texas and Alaska in such a manner as to form the only comprehensive and recent volume on the Far West. The narrative is brightened by what is probably the most striking collection of pictures of American frontier life that have ever been gathered together.

With 45 full-page illustrations and map.

$3.00 *net; postage extra.*

The Grand Canyon and Other Poems

By HENRY VAN DYKE

This collection of Dr. van Dyke's recent verse takes its title from that impressive description of the Grand Canyon of Arizona at daybreak, which stands among the most beautiful of Dr. van Dyke's poems. The rest of the collection is characterized by those rare qualities that, as *The Outlook* has said, have enabled the author "to win the suffrage of the few as well as the applause of the many."

$1.25 *net; postage extra.*

The Poems of Edgar Allan Poe

With an Introduction by E. C. Stedman and Notes by Professor G. E. Woodberry.

Nearly half a century passed after the death of Poe before the appearance of the Stedman-Woodberry edition of his works, which embodied in its editorial departments critical scholarship of the highest class. In this volume of Poe's "Poems" the introduction and the notes treat not only of the more significant aspects of Poe's genius as a poet, but of his technical methods, and of scores of bibliographical and personal matters suggested by his verses. While the text of this volume is the same as that of the Stedman-Woodberry Edition, the book has been entirely reset in larger type.

With portrait, $2.00 *net.*

Robert Frank

By SIGURD IBSEN

(The only son of Henrik Ibsen)

William Archer says: "It is as eminently a play of to-day, or, rather, perhaps, of to-morrow"; and the accuracy of this is evident from the mere fact that its motive is the attempt of the hero, a young prime minister, to end forever all the struggle between capital and labor, by a dramatically heroic stroke.

$1.25 *net; postage extra.*

One Woman to Another and Other Poems

By CORINNE ROOSEVELT ROBINSON

"Mrs. Robinson has a gift of poetic thought and expression and an ear for the music of poetry which rarely permits a discordant line, but it is this constant impression of deep sincerity which is her most appealing and distinguishing quality."—*Springfield Republican.*

$1.25 *net; postage extra.*

A Great Peace-Maker

The Diary of James Gallatin in Europe

From the American Peace Through the Downfall of Napoleon and the Following Years.

This journal of the son and secretary of Albert Gallatin, who accompanied his father during the negotiation of the Treaty of Ghent and afterward during his ministries to France, 1815-23, and to England, 1826-7, is one of the most entertaining and enlightening commentaries on that period ever written. Its historical importance, as being the work of a young man whose chance to observe and comprehend great historical events was unique, is obviously great. But the casual reader will be charmed rather by the candid, sharp, and fresh observations upon great men and women, and events in France and England at the end of the Napoleonic era, made by this American youth.

Illustrated, $2.50 *net; postage extra.*

The British Empire and the United States

A Review of Their Relations During the Century of Peace Following the Treaty of Ghent.

By William Archibald Dunning. With an introduction by the Right Honorable Viscount Bryce and a preface by Nicholas Murray Butler.

This is the psychological moment for the appearance of a book which explains the century of peace between Great Britain and the United States. When nearly every world power except the United States is at war, the history of our relations with a country, one of whose dominions borders ours for a distance of 3,000 miles, cannot help being intensely interesting and helpful to an understanding of war and peace and their underlying causes. $2.00 *net; postage extra.*

Artist and Public, and Other Essays on Art Subjects

By KENYON COX

There is no one writing of art to-day with the vitality that fills every paragraph of Mr. Cox's work. Its freedom from what has become almost a conventional jargon in much art criticism, and the essential interest of every comment and suggestion, account for an altogether exceptional success that his book on The Classic Spirit has had within the last few years and that will be repeated with this volume.

Illustrated. $1.50 *net; postage extra.*

The Man Behind the Bars

By WINIFRED LOUISE TAYLOR

Miss Taylor has for many years devoted her life to the study of prisons and prisoners, and her book contains studies of intense human interest and deep and intelligent sympathy into the lives of convicts, the effects of prison life, the careers of men who have served their terms, and the prospects and sources of their reform.

$1.50 *net; postage extra.*

Germany and the Germans

By PRICE COLLIER

"We shall have war when the German Kaiser touches a button and gives an order, and the German people will have no more to say in the matter than you and I." In view of the fact that this book first appeared more than a year before the present war, the above sentence from the chapter "Frederick to Bismarck" is of startling significance.

New and cheaper edition at half the former price. 75 *cents net.*

CHARLES SCRIBNER'S SONS FIFTH AVENUE, NEW YORK

The Nation.

NEW YORK, THURSDAY, NOVEMBER 12, 1914.

Summary of the News

The full returns of the elections held on November 3 are not yet available. Returns that have come in since we wrote last week show, however, that the Republican landslide, though formidable enough, was not quite so overpowering as was at first thought, and the indicated Democratic majority in the House is thirty. In the Senate, according to present returns, the Democratic majority will be increased by five or six votes. We comment elsewhere upon the result of the elections.

After an actual siege of about a month—although preparations for the siege were started by Japan soon after the outbreak of the war—the German fortress of Tsing-tau surrendered on the morning of November 6, following the capture by assault of the middle fort of the first line of defence. Japan has announced that she will occupy Tsing-tau on behalf of China until the conclusion of the war.

The entry of Turkey into the war has up to the present been followed by no very startling developments. Any lingering hope that may have been entertained that even at the eleventh hour the Ottoman Government might find a way of escape from the consequences of the rash action of the fleet in the Black Sea was dispelled when, on November 5, the British Government officially announced the existence of a state of war with Turkey. On the same day the island of Cyprus, which has been administered by Great Britain since 1878, but has nominally remained a part of the Turkish Empire, was formally annexed, and on November 8 the British Admiralty announced the occupation of the port of Fao, on the Persian Gulf, which is the terminus of the submarine telegraph line to India. The forts of the Dardanelles have been bombarded by the combined French and British Mediterranean fleets, reports conflicting as to the extent of the damage that has been done. On the Armenian frontier a demonstration undertaken by the Caucasian army of Russia, has, according to reports from Petrograd, met with some success. No general engagement between the fleets in the Black Sea has taken place, and there is nothing further to record concerning the proposed invasion of Egyptian territory.

There are many indications that the Islamic uprising counted upon by Germany and the Ottoman Government to embarrass Great Britain in her relations with her Mohammedan dependencies is unlikely to occur. In Egypt no symptoms of any such movement have so far been observed, and, according to the most competent English opinion, they are not expected to develop. It is pointed out that even the Nationalist movement, which has decreased considerably in importance since Lord Kitchener went to Cairo as British Agent, was never a movement advocating reunion with Turkey, whose former despotism Egyptians have good reason to remember with dislike, but was essentially one for independence, with "Egypt for the Egyptians" as its rallying cry. In India the influence of the Sultan is still less likely to be felt than in Egypt. The announcement of the participation in the war by Turkey was immediately followed by declarations from various parts of India of loyalty to the British Raj and of condemnation of the action of the Sultan, among them being manifestos from the Nizam of Hyderabad, the largest Mohammedan state in India, and from the Aga Khan, the spiritual head of the Mohammedans in India, East Africa, and Central Asia. On the other hand, there is evidence that the action of the war party, headed by Enver Bey, has by no means the unanimous support of public opinion in Turkey. The Ministers of Agriculture, Interior, and Post and Telegraph, who had made every effort to preserve peace, resigned from the Cabinet on November 2, and dispatches from Constantinople speak of numerous arrests and courts-martial of people expressing anti-Governmental views.

The status of Italy and of the neutral states of the Balkans has not so far been affected by the action of Turkey. The Italian Cabinet has been re-formed, Signor Salandra retaining the Premiership; Baron Sonnino becoming Minister of Foreign Affairs; Signor Paolo Carcano, Minister of the Treasury; and Signor Vittorio Orlando, Minister of Grace and Justice. The other portfolios remain in the same hands as in the last Cabinet. It was denied at the Italian Embassy in Washington last Friday that the change of Government indicated any change in Italy's policy of strict neutrality, and it was even stated in the *Giornale d'Italia*, on November 7, that an effort was being made in conjunction with Rumania towards the constitution of a federation of neutral Balkan states under the auspices of Italy. On the other hand, the situation in Tripoli is undeniably delicate. Germany is understood to have guaranteed that Italy's African colonies should not be threatened by Turkey, but trouble appears already to have been caused by marauding bands of Bedouins, who have attacked small detachments of Italian troops, and, according to a dispatch from the Rome correspondent of the New York *Sun* on November 8, reinforcements of garrison troops have been sent to Tripoli. Italian intervention, therefore, may depend on whether the situation in Tripoli shall become sufficiently serious to cause Italy to demand from Turkey an explanation. So long as the trouble is confined to unorganized bands of Bedouins there would appear to be no reason for Italy to make of it an international question.

The situation in Mexico grows more obscure from day to day, and the outlook for the avoidance of a triangular conflict among the partisans of Villa, Carranza, and whatever chiefs there may be who believe in the authority of the Aguas Calientes Conference, is by no means promising. The difficulty of comprehending the situation is not mitigated by the conflicting nature of the dispatches received from Mexico. Briefly, the situation appears to be this: Villa is anxious to oust Carranza and has ambitions of his own; Carranza is disinclined to be ousted and resents the assumption of authority by the Conference at Aguas Calientes, which has appointed Eulalio Gutierrez Provisional President. An ultimatum was presented to Carranza by the Conference giving him until six o'clock on Tuesday to decide whether he would abide by the decision of the Conference, and declaring that armed force would be used against him in the event of his refusal to do so. As we write, the issue is still in doubt.

The announcement was given out by the Federal Reserve Board on November 7 that virtually the whole of the first instalment of the capital stock of the Federal Reserve banks, called for on November 2, had been paid. It is expected that the banks will open their doors for business on Monday next.

The effect of the war on British trade is shown by the figures for the month of October published by the Board of Trade. Imports during the month decreased £20,170,000, and exports £18,020,000. The principal loss in imports was £5,500,000 on raw cotton from America, and £1,500,000 on cotton from Egypt, together with £7,000,000 on manufactured articles. The exports of coal declined £2,000,000, and of manufactured articles £13,500,000.

The moratorium in England ended on November 4 without any disturbance in the money market, money appearing to be abundant. The Stock Exchanges of both London and New York, according to dispatches from Washington last week, reporting the results of conferences between Sir George Paish, representative of the British Treasury, and the United States Federal Reserve Board, are likely to remain closed for some time to come, the New Year being set as a possible date for reopening. That decision, it is stated, is necessary to prevent the dumping of American securities held in France and England in such quantities as might result in debits against the United States which could not be met.

An unfortunate situation, in which the diplomatic intervention of the United States has been virtually requested by both sides, has arisen as a result of the German spy scare in England. Recently the police have been active in arresting and interning German residents in England on suspicion of being spies, and the German Government, through United States Ambassador Gerard, let it be known that if the practice were not abandoned and German residents against whom no reasonable grounds of suspicion existed released by November 5, retaliatory measures would be adopted on British subjects in Germany. These measures were put into force on the morning of November 6, when all Englishmen between the ages of seventeen and fifty-five were required by the police to report at police stations for transportation to the concentration camp at Ruhleben, near Berlin.

The deaths of the week include: Mario, Prince Chigi-Albani, ex-Senator John Kean, F. Augustus Heinze, Duke of Buccleuch, Tom Gallon, November 4; Henry Gannett, Major-Gen. Robert G. Kekewich, November 5; Prof. August Weismann, November 6; Bernard Doran Killian, November 7; William Endicott, November 8; Julius Harburger, Col. Thomas C. Zimmerman, Col. Randolph Dickins, November 9; Prof. Paul Philippe Cret (In France).

The Week

The Guildhall meeting on Monday night in London was inevitably made the occasion of a sort of national stock-taking, as regards the great war. What has been done, and what remains to do, were the themes of Lord Kitchener for the army and Winston Churchill for the navy. More interesting than these military details, or than the appeals to English courage and endurance that were made, was the speech of the Prime Minister. Mr. Asquith not only gave a review of the causes and the course of the war, but made an attempt to define its objects. This is to-day the great thing. Whoever brought on the war, or might have prevented it, now that the terrible struggle is raging and can be stopped by no human power, men wish to know what is aimed at by the combatants. The purposes of the Allies were unfolded last night by the British Prime Minister. He spoke as follows:

> We shall not sheathe the sword, which we have not lightly drawn, until Belgium has recovered more than she has sacrificed; until France is adequately secured against menace; until the rights of the smaller nationalities have been placed upon an unassailable foundation, and until the military domination of Prussia is finally destroyed.

It will be noted at once that in this there is no bluster about absolutely "crushing" Germany. A good deal of impotent and irresponsible talk about wiping Germany off the map, has been heard in England, and echoed elsewhere. But it never had official endorsement, and is at present dropping more and more out of the thoughts and speech of Englishmen. Turning to the more moderate description of the present objects of the war, as defined by Mr. Asquith, he is right in putting the claims of Belgium first. He is right, that is, if the considerate judgment of mankind is to be invoked on the final result. Not only in neutral nations but everywhere, we believe, where the sense of justice is strong and dispassionate, is there an earnest feeling that, whatever other outcome the war may have in the event of Allied success, Belgium must have her sacrifices and sufferings made good to her. Any other result would shock the universal conscience. It is true that recently a kind of lurking suggestion has crept to notice, that perhaps a peace might be made with Belgium left in German hands. But all questions of national advantage or danger put one side, England and France ought to know that the world would consider them eternally disgraced if they did not fight on until at least Belgium got an indemnity sufficient to restore her ruined cities, and to heal as many as possible of the wounds of a war which she faced with valiant heroism, and only for the sake of upholding public right in Europe.

The tragic end of the Emden was precisely what was to have been expected. The only wonder is that she was allowed to be at large so long, and to do so much damage in an ocean which is practically a British possession. Sentimentally, one may wish that officers and men as daring and gallant and skilful as Capt. von Müller's crew have proved themselves to be might all have escaped with their lives. Yet to the German navy this fighting end, with flags flying and guns firing to the last, will perhaps seem the more desirable thing. But though the neutral onlooker might wish that internment or bottling up such as has happened to the Königsberg could have been the Emden's fate, nothing can deprive her of the laurels she steadily won until she met a ship of superior speed and superior armament. Her feats will long rank high in naval annals, and she will always be known as the modern Alabama, for it is not likely that the Karlsruhe will surpass her record. Indeed, now that Tsing-tau has fallen, the number of hounds on the track of the few remaining hares will increase so largely that it should be merely a matter of days or weeks until Admiral von Spee's little fleet and the other ships are accounted for. As it is, Australia is doubtless rejoicing to-day at this proof of the usefulness of her little new fleet.

Sir Edward Grey's telegram to the British Ministers in Norway, Sweden, and Denmark, informing them that the British Government is satisfied with the assurance of the Governments of these countries that contraband goods shipped to them will not be subsequently exported to an enemy country, disposes of a question which some have regarded as threatening serious friction between our own country and England. One after another, these vexing questions of the treatment of goods carried in neutral ships come up inevitably in such a situation as is presented by this war; but there is no reason to suppose that they will not, one after another, be disposed of in a way that will satisfy the just demands of the United States. Our Government can be trusted to look after the interests of our legitimate commerce; and surely no motive for respecting them could be stronger than the desire to preserve our good will which must animate the British Government. It takes two to make a quarrel; and in this instance neither the one nor the other party has the slightest desire to quarrel. With no ill will on either side, it would require an extraordinary lack of good sense to prevent a smooth and satisfactory adjustment of every dispute or difference that may arise on the subject.

When Mr. Hilaire Belloc gets to working with figures, there is no telling what weird conclusions he will turn up. Two or three years ago he distinguished himself by finding something appallingly pathetic in the plight of the poor but honest country folk who were then buying consols at 75, though they had in former years invested in them at 110; in apparently complete forgetfulness of the fact that buying at 75 means getting half as much interest again on the investment as buying at 110. He is now engaged in computing the present strength of the German army, which he finds no difficulty in reducing to a desperate pass. The German losses to date he estimates at 1,750,000; and he is evidently of the opinion that every man jack of this million and three-quarters is permanently out of the game: "Of all the available material for anything approaching a true army, a quarter has already gone." Moreover, he is astonished at his own moderation. He could easily, by "a little manipulation of the figures," have made the total "very much larger"; what he has tried to do is to "fix the lowest conceivable minimum." The British War Office, however, and indeed British observers generally, are able to conceive a much lower minimum; and accordingly there is no indication that they are going to content themselves with turning the German army over to the tender mercies of Mr. Belloc's arithmetic.

If the surrender of Tsing-tau to the Japanese besiegers comes as a surprise, it can only be because the world has not known of the conditions within the fortress. The Germans had made so stout a defence, and were apparently so prepared to sell their lives dearly, that the general expectation was of a prolonged resistance. It could not have been merely a question of yielding to an overwhelmingly superior force, for that was pitted against the Tsing-tau garrison from the first. The inference seems clear that, in addition to the capture of outlying forts, disease among the troops or shortage of supplies or lack of ammunition com-

pelled the surrender. Though this was inevitable from the beginning, its coming now will be a sad reminder to the German people of the losses on the sea and beyond the sea which the war has brought them.

Great Britain's prompt annexation of Cyprus, almost at the moment of declaring war on Turkey, does not, except in name, alter the status of that island. It has been in British hands since 1878, Disraeli having brought it home in his pocket, along with "peace with honor," from the Congress of Berlin. A thin pretence of Turkish suzerainty over Cyprus is all that the British Government has now ended. The step is doubtless intended, however, as a sharp reminder to Turkey that, by going to war, she is endangering every foot of her possessions in Europe. Dispatches from Egypt intimate that fear of British annexation is felt there. Such a move at this time would apparently be a mistake, and is, indeed, unnecessary. The anomalous position of the Egyptian Government is one of the finest illustrations of the English disregard of logic in colonial policy. Lord Cromer gave expression to the whole curious arrangement when he said that the Government of Egypt was, of course, independent, except for its being nominally under Turkish suzerainty, but that it always did whatever the British Agent advised it to do! And Lord Milner, speaking of the possibility of an Egyptian revolt against the British, in consequence of the war with Turkey, points out that the Nationalist movement among the Egyptians has never looked towards Constantinople. The cry has always been, "Egypt for the Egyptians," never Egypt for the Turks. This state of feeling would certainly seem to make it wise policy for the British at present, while defending Egypt, to leave her governmental status severely alone.

To hail ex-President Taft as the successor of Mark Twain, as one newspaper does, is a bit "previous," but he is putting the country in his debt for his good-nature in treating questions of government and politics. This might seem inconsistent with the importance which he attaches to sound notions on public matters. Yet his smile is never far behind his argument. The day after election he spoke to the students of the Harvard Law School on "The Presidency." He expressed his well-known preference for a single term of seven years, alluded to the "recent Progressive party, with their disdain of Constitutional limitations," and, as if to be impartial in his survey, referred to President Wilson's return to the early practice of addressing Congress in person. This action he praised, but added: "I cannot but smile when I think of the chance for oratory that was lost to the followers of Jefferson because Mr. Roosevelt or I did not inaugurate this custom." His characterization of "Uncle Joe Cannon, now redivivus," was that he was "one of the most faithful watchdogs of the Treasury, with a profane bark, that I have ever seen."

If the triumph of Penrose is a blow for his party in the country at large, the defeat of Sullivan in Illinois is a victory for the Democratic party, despite the support he received from the Administration. Sullivan is forward-looking in the sense that he can see which side his bread is buttered on, but the damning event in his career is the part that the "Sullivan Democrats" played in the election of the Republican Sullivan, Lorimer, to say nothing of their reputed willingness to repeat the act. A politician who bosses his own party is bad enough, but one who is able to maintain an alliance with his fellow-boss of the opposing party is peculiarly dangerous in a two-party system of politics, since this arrangement deprives the electorate of the natural way of punishing the party that has fallen a prey to the tyrant. Sullivan's name is associated with all that love of machinery, ward-heeling, and deals that marks the politician in the narrow and uncomplimentary meaning of the word. His opponent, Sherman, within his lights and abilities, represents the more statesmanlike type, the type that thinks in terms of measures rather than methods. He is at all events far from being a disgrace to one of the greatest States in the Union.

Any satisfaction that La Follette may have in the apparent defeat of McGovern as his associate in the Senate must be swallowed up in regret over the poor showing of the independent candidate for Governor, who had La Follette's support, not to mention Roosevelt's, but polled a bare fifth of the vote of the successful Republican candidate for the office. The result confirms the forecast of those who dwelt upon the strange position in which the father of the Wisconsin primary placed himself by his repudiation of the outcome of a primary. His enemies are saying that he is for the primary when it gives him what he wants, but against it when it does not. This attitude recalls the inconsistency of another reformer, no less a man than Tom Johnson, who, in the later stages of the street-car struggle in Cleveland, and after having for twenty years been an ardent advocate of the initiative and referendum, opposed the submission of the issues to popular vote. There were enough signatures to the referendum petitions to compel an election, however, which he lost by a small majority. The moral is, not that one should place consistency above everything else, but that a statesman does well to be careful how he asserts the sacred finality of any political arrangement.

What is the matter with Kansas now? With a perfectly good Progressive running for Governor and another for Senator, she chooses for the former position a man who, after careful consideration, deserted the Progressives for his old party, and for the Senate a pronounced standpatter. In the State of ex-Gov. Stubbs, concerning whom we were bid by the highest authority, "Keep your eye on Stubbs of Kansas!" Stubbs's party is now third. Arthur Capper, the rising hope of the stern, unbending Rooseveltians, who was defeated by Hodges two years ago by only 29 votes in a total of 335,000, threw away his career, in the opinion of William Allen White and other admirers, when he put away the Progressive nomination for Governor a few months ago and accepted the same place on the Republican ticket. These friends warned him that, while he might carry back with him into the party of the pirates a few of the more thoughtless Progressives, these would be greatly overbalanced by the number of standpat Republicans who would scratch his name. Yet, lo, Capper's vote leads all the rest. The only consistent explanation of so curious a political turn is that the Sunflower State is determined to surprise the rest of the country at any cost.

We know nothing about the Governor-elect of Colorado, Mr. Carlson, but he talks like a man of sense. He declares his resolute purpose to bring to an end the industrial warfare which has so long injured and disgraced his State. To effect this by peaceful methods is his earnest wish, but if it is necessary to use force in order to protect property and the right to labor, he will use it. The new Governor is evidently more alive than the present Executive to the shame of having order kept in Colorado, all these months, by Federal troops. This has been tantamount to an abdication of the sovereignty of the State. The whole situation growing out of the Colorado mining war is reviewed impartially in the *Bibliotheca Sacra* by the Rev.

Dr. Berle, of Cambridge, and the one positive conclusion to which he comes is that "the State of Colorado owes it to itself and the country to secure the withdrawal of the United States troops and to secure the administration of its own affairs in a lawful manner." If we may judge by the utterances of her Governor soon to be, Colorado is, in fact, about to resume her own government.

National interest attaches to the election by which Buffalo last week adopted a commission-government charter by a majority of 15,000, in that she is the first city of over 400,000 population to pass under that form; and State interest in that for a city of her class she achieves a unique measure of home rule. Her desperate fight against the Aldermanic gang, and the contractors and public-service corporations it has been alleged to favor, has extended over six years. For five the Legislature refused to respond to the demand of the voters for a charter bill; and when it finally passed, it was vetoed by the Mayor. Repassed and brought before the people, the new charter no doubt profited by the fact that the Republicans advocated and the Democrats opposed it. Discontent with a tax-rate that has risen nearly 30 per cent. in a quarter-century, with the loss of Buffalo's waterfront, with her poor railway terminals and water supply, figured in the result. Five commissioners will govern the city, and 5 per cent. of the voters can call for a referendum on any ordinance. The largest cities heretofore under the commission form are New Orleans, with 340,000; Jersey City, with 270,000; St. Paul, with 214,000, and Denver, with 213,000 people; Buffalo had in 1910 a population of 423,000.

"Given an opportunity to deal with the cotton situation, the Legislature of South Carolina has wrought substantial results." This tribute to the lawmakers of Columbia and Gov. Blease is paid by the Atlanta *Journal*. What are these substantial results which every cotton-growing State has been craving but which no one of them except South Carolina has succeeded in reaching? Simply the passing of a law limiting the cotton acreage for 1915 to one-third of the land cultivated and imposing a fine of from $25 to $100 for each acre so planted beyond the limit named. The very simplicity of this solution might be expected to commend it to other Legislatures, but there seems to have been a suspicion at other Southern capitals that it was a bit too simple. Certainly, whatever case might be made out for concerted action of the sort by the whole cotton-growing section, for one or two States to take it separately is only to injure themselves without relieving the strain. South Carolina may be doing it as an example for less bold commonwealths; if the example is not followed, she may save herself from harm by the simple process of repealing the law. Her action furnishes one of the most striking instances that even this country has seen of attempts to control economic consequences by legal measures. The experience of Brazil, with her huge coffee crop of a few years ago, might be a warning to the South in general not to take South Carolina's lead. Incidentally, can such a law be Constitutional?

For the first time, a "full-crew" railway law was last week submitted to popular vote and was overwhelmingly defeated. This occurred in Missouri, where a bill, having been passed by the Legislature and signed by the Governor, was referred to the voters. They rejected it decisively. The result is significant in more ways than one. It is a pretty good index, in the first place, of the general feeling that the railways have had about as many hard knocks as they can stand, and that it is for the good of the country that they should have a chance to recuperate. Even more striking is the demonstration that the demand for full-crew laws—meaning the employment of more men than are needed to handle the trains—has rested solely upon a narrow labor-union basis. Because the employees were organized and exigent, they have been able to terrorize Legislatures and frighten Governors and befool politicians. The pretence was that there was an immense popular backing for the movement. But at the first real test in Missouri, this was shown to be hollow. Railway managers are warranted in hailing the event as most suggestive. It ought to help on the work for the repeal of full-crew laws in the States where they have been rashly enacted. All such legislative devices to "make work" are repugnant to sound ideas of efficiency and economy.

The session this week of the Governors' Conference in Madison, Wisconsin, sees the activities of that body pretty definitely limited to one-third its original programme; the topics of the relations between State and nation, and the greater efficiency of State government, being subordinated to that of uniform State legislation. That this is so is indicative of the constant and general demand for attention to uniform laws, manifested continually in less important ways. A fortnight ago the conference of Commissioners on Uniform State Laws—men appointed by the Governors—met at Washington, and discussed or recommended uniform laws on marriage and divorce, for the control of business corporations, for the regulation of cold storage and of automobiles. The meeting of the National Association of Railway Commissioners this month has for its chief discussion the need of harmonizing Federal and State laws and rules affecting railways; and wide publicity has been given the protest of various railway presidents against the hauling of their business "forty-nine different ways." The Farm Mortgage Bankers' Association, in its convention at Chicago, has just opened a campaign for uniform laws relative to titles and rural credits. The American Road Congress, which convened in Atlanta on Monday, heard a report from a committee which has worked with the American Bar Association "on the codification of State highway laws, with a view to securing more uniform and effective action among the States."

The closing of the Chicago stock yards adds interest to the opening of a good-sized packing-house, locally owned, at Moultrie, Ga., although the new enterprise has only an accidental relation to that incident. The purpose of the Moultrie Chamber of Commerce, which was chiefly instrumental in launching the concern, was to promote diversified farming in south Georgia, north Florida, and southeastern Alabama by furnishing an easily accessible market for the cattle and hogs raised in those sections. Along with this purpose was the expectation that ultimately the enterprise would have a wider influence, in that packing would be done for distant markets. In this way, some contribution would be made towards solving the problem of meat supply for the country in general. Already the New York Department of Agriculture, anticipating a possible cutting-off of Western supplies, has estimated that there are 2,376,000 cattle in this State, of which half are available for slaughter. In Pennsylvania a similar authority has pointed out that with proper enterprise the State should raise all its own meat on its own hillsides, and dress it in its own towns. The recrudescence of the American live-stock industry has long been felt to depend, in part, on again encouraging the small farmer to raise regularly a few beef cattle for the local butcher. Apart from this aspect, the dislocation of the industry of the greater stock yards is a serious blow to business.

THE CALMER VIEW.

The Republicans won great successes last week, and their mighty rejoicing thereat is justified. But are they justified in asserting that the Democrats are hopelessly beaten, and that nothing can prevent the Republican party from carrying the country in 1916? Let us look calmly at the actual political situation as it is left by the election.

The chief change wrought by it is the elimination of the Progressive party. This is admitted by all. The Republicans have virtually put down the 1912 revolt in their own ranks. But they still have their historic enemy to face. How stands it with the latter? Not even a hostile summary of the position of the Democrats can deny that it is one of great strength. They have a majority of ten or twelve in the United States Senate. That is secure for two years; it probably could not be displaced until after four years. In the House there is a Democratic majority of from twenty to twenty-five. Then look at the once sure Republican States in which the Democrats elected Governors—Massachusetts, Michigan, Minnesota, Wyoming; Maine they had won in September. Nebraska, too, reëlects a Democratic Governor. Ohio they barely lost, while retaining Indiana by a plurality of more than 30,000. Does all this look like a party in a desperate plight? What we would ask confident Republican editors to do is to go back in memory to the late nineties, or even only six and eight years ago, and put to themselves the question what they would have thought then of a Democratic party having not only the Presidency, but both Houses of Congress and Governors in the States we have mentioned. We fancy that they would have thought the outlook pretty blue for their own party.

As the case stands to-day, the Republicans are filled with hope, and have much reason to be. They have recovered a good deal of their fighting morale. The Progressive thorn in their flesh has been removed. Even ex-Senator Davenport, the Progressive nominee for Governor of New York—who polled only about a third as many votes as Sulzer did—admits that the election has shown that the American people are content to fall back upon the two-party system. This is undoubtedly a real ground of good cheer for the Republicans. But they still have a powerful antagonist to encounter. And in reckoning with such boastful certainty upon beating him two years from now, they may be a bit premature. It is just possible that the Republican prophets cannot see so far over the hill as they profess; and that the course of events may not prove so favorable to them as they pretend that it surely will be.

Last week, they profited largely by the chapter of accidents. It was an accident that the country came up to election day with finance deranged and business suffering. No one could have foreseen the great amount of miscellaneous dissatisfaction and discontent which the European war would thrust upon the United States, and which inevitably inured to the benefit of the Republican party in the voting on November 3. But another time it may be the Democrats who will be lucky. Industry and trade are certain to improve before 1916; they may even be flourishing by that year. If so, the Republicans will be, on their own showing, estopped from using the arguments and appeals which they have successfully employed this year. In the recent campaign, they drew largely upon what Burke called "the bank of discontent"; but if that institution presently closes its doors, where will they present their calamity drafts?

Another thing. The Republicans will reckon ill if they leave President Wilson out. They admit that, up till now, he has displayed extraordinary qualities of leadership, yet seem to expect that he will suddenly go sterile. But the provoking man may show in the future, as he has in the past, that his genius for public life and for political management is not lacking in flexibility. Certain it is that, at every point in his political career thus far, he has exhibited remarkable sagacity. Each situation, as it has arisen, he has judged with great accuracy. This was as true in his campaign for Governor of New Jersey as it was in his campaign for the Presidency. Many at the time did not like his tactics, but these proved to be correct. And no one denies that he has acutely divined his opportunities at Washington, and has availed himself of them with wonderful mastery. Now, why should it be supposed that these great political talents of the President should all at once fail him? It is true that the changed conditions in Congress and throughout the country will be a great test of his abilities and his skill. But thus far he has seen every problem before him clearly, and has found the key to it. Why take it for granted that he has not the wit to adjust himself to the new demands upon his leadership, or the force to shape and execute the new policies which the new times will call for? We make no prophecies of Woodrow Wilson's continued success; but such prophecies would be as worth credence as are the glowing predictions of a Republican march to unquestioned victory.

ARE WE POLITICALLY FICKLE?

Col. Roosevelt's choice, on the day after election, of a consoling passage from the Scriptures was doubly odd. He made his own the grieving statement of the Apostle that "they will not endure sound doctrine," but will "heap to themselves teachers having itching ears," and "turn away their ears from the truth." Now, this "they" can be none other than "the people," or the majority of them, whose infallible political decisions the Colonel and his new party have exalted to the skies. Why, he was ready to recall a judgment of the courts, or upset a Constitution, in a twinkling if "the people" showed by a chance vote that they wanted it done. Yet now he mourns over the political delusions to which the people are subject, just as if he were a Federalist or a Tory. Moreover, he is sublimely unconscious that the charge most frequently brought against himself is that of having been a teacher with itching ears—meaning an ear to the ground listening for the immediately popular—who turned the people unto fables. Was not the person who called the Colonel's attention to this Lesson for the Day tempted to point him to another Scripture—"Thou art the man"?

We never could understand the Colonel's humor, or lack of it at times, and have no thought of dealing with it now. What interests us is his underlying complaint that Americans are politically fickle; that they are easily swept away by every wind of doctrine; and that, having begun a good work, they weary of it and do not drive it on to completion. This may be true, but one craves a wider basis for induction than the Colonel suggests. That the people have left off following him is really not a convincing proof that they are mere political weathercocks. That they often appear to change their political views, or at least their party preferences, with surprising rapidity, is true. This was remarked long before Roosevelt was born, and no doubt will be after he is dead. But in all the ups and downs of parties, the coming and passing of political leaders, the catching up and then the dropping of novelties in government, is there nothing but an aimless ebb and flow, the insensate "flux" of Greek philosophy? That is a question much better worth discussing than any grievance,

real or fancied, which Col. Roosevelt may at the moment be cherishing.

A part of the appearance of excessive changeableness in American political life is owing to our readiness to experiment. If any man comes along with a suggested great improvement in our way of conducting public affairs, we are disposed to give him a chance to show what he can do. Good often results from this, but frequently it merely arouses false hopes in the breasts of political inventors. Then when their expectations come to nothing, they are tempted to rail at the fickleness of the people. But it may not be fickleness at all; it may be simply a cool survey of the results of making use of a political novelty, or playing with a political toy, and concluding that it has not lived up to promises and had better be quietly dropped.

An illustration of this lies at hand in the announcement of the programme of the Governors' Conference this week at Madison, Wisconsin. It is a very modest programme. There will be reports and addresses on rural credit, on State control of natural resources, on the submission of Governors' recommendations in the form of bills, and on certain aspects of the uniformity of laws. That is all. The discussions will be useful, no doubt, and it may be that the actual attendance of Governors will be larger than at the last meeting of the kind. But the notable thing is that the high and, as we can now see, exaggerated hopes connected at first with the project of the "House of Governors," have been tacitly abandoned. There were those who saw in it a political discovery, or invention, of enormous importance. It was to give us a new coördinate branch of the Government. All sorts of public problems were to be solved by it with ease; and the sittings of the House of Governors were to be followed with breathless interest by the people in all the States. But the experience of a few years has been sufficient to dissipate all those expectations. Public interest in the novelty has sunk almost to the point of expiring. The institution lingers on, serving minor purposes usefully, but evidently destined never to verify the enthusiastic predictions of its early sponsors. It was again a case such as Emerson spoke of when he said that people are at first inclined to see in a new doctrine or movement a thunderbolt which will pierce to the centre of the earth, but that soon they discover that it has made barely a scratch on its tough old rind.

When that is a fair description of the matter, it is obviously unjust to say that the people are fickle in giving up what they have found out will not work. Political experiment means the rejection of failures as well as the acceptance of successes. When we quote the saying "Prove all things," we usually add merely, "Hold fast to that which is good." But it goes without saying that the duty is just as clear of throwing away that which is bad. In the latter process there may seem too great readiness to change, but change for good reason shown is not a proof of instability of character. And, in sober fact, most of the charges of fickleness, on the part of American voters, deal only with externals. Political machinery may be shifted or remade from time to time; parties and leaders may rise and fall; but the fundamental political forces of the nation do not fly madly from their orbit.

WAKING UP TO OUR DUTY.

The growth of the Belgian Relief Fund in the past few weeks has been encouraging. Last week alone added about $120,000 to the amount, and brought the total to nearly $400,000. In this total, and in the contributions for the week, are included handsome sums sent to the Belgian Relief Committee in New York by local committees in other cities; thus $30,000 was received from the Boston committee on Saturday. And there continues to be that wide range of size in the contributions of individuals—all the way from $1 to $10,000—and that large number of separate participants which ought to obtain in a matter appealing as this does to the deepest instincts of our common humanity.

But let it not be thought that $400,000 is anything more than a beginning—a mere earnest of what this great nation of a hundred million inhabitants, blest with resources almost beyond measure and happy in its exemption not only from the horrors but also from the terrific economic burdens of war, is going to do for the relief of a people crushed beneath the weight of affliction. We are not forgetting the magnificent work of rescue which is being carried on by the Rockefeller Foundation, over and above that furnished by the general contribution. But all that the Foundation will do, together with all that will be done by individuals, is sure to fall far short of what will be needed to supply the Belgian sufferers with the bare necessities of decent existence.

The Foundation took care, in the first announcement of its plans of relief, to make it plain that these could not be regarded as making it in the least less incumbent on the people at large to give as abundantly as possible for the same purpose; and it has been gratifying to note that in point of fact contributions have been coming in more rapidly since that announcement than before. The Foundation is working in coöperation with the Belgian Relief Committee of New York; and the two organizations have now made a joint appeal in which they ask "the good people of the United States to do their utmost in this extreme emergency." A statement that may influence many persons to give liberally is that relating to the arrangements for sending and distributing the relief supplies. All transportation expenses, as well as all expenses of organization and distribution, will be defrayed by the Rockefeller Foundation, and accordingly "any person who gives either in money or in food can be certain that the whole of his contribution will reach some one in Belgium who needs help." Contributions of money should be sent to the Belgian Relief Committee, 10 Bridge Street, New York, and checks should be made payable to its order.

With the plea, sometimes put forward against participation in this work of mercy, that "charity begins at home," we have no sympathy whatever. By this we do not mean in the least to excuse any person who does less than he ought to do for the poor and unemployed at home because he has sent something to the Belgians. On the contrary, we would urge upon everybody the imperative duty of keeping up his full usual quota and more—for the need is greater—of aid to works of charity and humanity in our own country. Charity does indeed begin at home; but there is no reason in the world why it should end at home. And above all, there is no reason why at a time of appalling distress abroad and of more than usual want at home, it should end at the same point as it does in ordinary times. There is hardly a man of the well-to-do classes, still less of the wealthy classes, who could not in this emergency double or treble his usual expenditure for humane objects, and yet suffer no perceptible impairment either of his resources or of his enjoyments, to say nothing of any sacrifice of comfort or well-being. It is preposterous to regard it as a matter of course that what a man gives to the desolated people of Belgium he must take away from the poor of his own country.

How small is the $400,000 thus far collected, in comparison either with the occasion or with our disposable means, it ought to require no argument to show. There are in

this country—and a considerable percentage of them are in New York city—several hundred persons whose income exceeds a quarter of a million dollars, thousands having an income of more than fifty thousand dollars, while the number of those whose income is above five thousand runs up into the hundreds of thousands. If each of these persons were to give what he could give without feeling it at all, the total would be not only millions, but tens of millions of dollars. In the little province of Nova Scotia there was contributed, in response to an appeal from the Premier, $35,000 in cash, besides a great quantity of useful gifts. To match this cash contribution, the United States, in proportion to its population and wealth, would have to give probably at least $20,000,000. And we may be sure that nobody in Nova Scotia has deprived himself of anything he really needs in order to make this handsome gift. Our people are not less generous; as usual in all such matters, what stands most in the way is want of imagination. Let every man of generous temper devote but a few minutes of earnest thought to an attempt to realize what is really going on in Belgium, what our country's duty is in this situation, and what he himself must do if he is to expect that that duty will be performed. Then, if he can go on "getting and spending" just as though all were well with the world, we are sadly mistaken in our estimate of men's capacity for unselfishness.

THE WAR AND AVIATION.

The annual report of Brig.-Gen. George P. Scriven, Chief Signal Officer of the United States army, confirms the view entertained by non-professional students of the war that the use of aircraft "has worked a great revolution in the theory and application of grand tactics." No one can have followed day by day the accounts of the war in the foreign press without being convinced of the value of this new instrument of warfare. But not as a destructive agent. The net result of all the bomb-dropping on both sides has been of the slightest, so far as concerns actual injuries or killings, or the destruction of property of value to the enemy. Gen. Scriven is so impressed with this that he believes that bomb-dropping on land will be stopped by the consent of all civilized peoples. Humanity stands for almost every atrocity in war, but the killing of women and children by aviators, however unintentionally, seems beyond the pale. The fact that the British have now imitated the German tactics, in their flying over Bruges, will accentuate the demand that this form of warfare be placed alongside the poisoning of wells.

It has been but seldom that a discharge from aeroplane or dirigible has done substantial damage. At the outbreak of the war the French, whose achievements in aviation and possession of Clement-Bayard dirigibles had led to the belief that they would be the masters of the air, let loose a whole swarm of aviators. They not only crossed the German frontiers and bombarded some Rhine cities, but one even reached Nürnberg and dropped useless missiles upon that city—a fact which Germans are constantly citing in reply to the criticisms of those who denounce them for similar acts. This French air raid was a total failure. A number of the best-known aviators were killed or captured, and the comparative inefficiency of the corps led, after the German flights over Paris, to the dismissal of its commander and a reorganization. The Clement-Bayards have not even been heard from, and by some gross error no less than fifty aeroplanes were allowed to fall into German hands at Rheims. The Russian aviators, too, have not distinguished themselves so much as have the Germans and English. To the latter belongs the honor of the best single achievement of the war—Lieut. Marix's destruction of the envelope of the Zeppelin in its shed at Düsseldorf. On the whole, the offensive work of the aviators has achieved little; the best from the military point of view that can be said for it is that the Germans indubitably hastened the fall and evacuation of Antwerp, Ostend, and other Belgian towns by terrorizing the civilian population through their bomb-dropping by aeroplanes and dirigibles. An eye-witness of the raid over Antwerp assures us that the detonations were horrifying beyond words, and that the destruction was complete where the bombs fell.

None the less, Gen. Scriven is thoroughly justified in urging the United States Government to go slowly in the matter of dirigibles. After the promised German raid upon England is over it may be necessary for him to revise this judgment. To-day, however, the Zeppelin and Parseval and Schütte-Lanz airships have nothing to their credit which could not have been as well done by aeroplanes. No British warship has even been assailed by them. It was a Schütte-Lanz that gave to the crew of the U-9 the news of the whereabouts of the Hogue, Cressy, and Aboukir; but an aeroplane could easily have had the same luck. So far as the army scouting is concerned, the advantage is thus far all with the aeroplane. The revolution that this has achieved is, indeed, remarkable. A surprise attack or a sudden flank movement is now impossible, not only because of the millions of men on the battle-line, but because the aeroplanes are omnipresent. To conceal even a battery from them is practically impossible. In the early movements against the Germans the Russians tried every means possible to hide their advancing columns from the German aeroplanes. They abandoned the highways, changed their marching hours, went through fields and forests, and finally resorted to night-marching only. But Gen. von Hindenburg was never without the most accurate information while laying his terrible trap near Tannenberg. That his aviators have not prevented his defeat near Warsaw is not to be laid at their doors. They have done as wonderfully as have the officers of the German submarines.

Gen. Scriven is careful to point out that air scouting will never wholly supersede reconnaissance and patrolling work by cavalry and cyclists. It is more in the field of strategy that the aviator's opportunity lies; yet it is a fact, attested by numerous German reports, that aeroplanes have located batteries and concealed intrenchments and signalled the proper ranges during the hottest of the firing. Gen. Scriven admits that the efficiency of both artillery and infantry fire has been enormously increased as a result of this scouting in minor tactical operations. As for defence against aeroplane attack, letters from the front tell of the enormous difficulty of hitting fliers. Volley firing is resorted to in the hope that a chance shot may bring the craft down, and, of course, artillery is less effective than infantry firing. In an article in the *Journal of the Royal Service Institution*, written prior to the war, Col. Louis Jackson, formerly of the Royal Engineers, gives his opinion that a properly designed vertical-fire cannon will make possible a "very good degree of efficiency" against fliers. We have as yet not enough facts from the front to confirm this opinion. Col. Jackson does not believe that any system of aerial patrol at night will prevent the arrival of dirigibles or their beginning an attack. He admits that destruction and panic in the large British cities would be a very serious matter from various points of view, and that the dropping of half a ton of gun-cotton on the War Office or the Admiralty in London might have notable results in "disorganization and discouragement." His sole conclusion is that the only sure defence is by dirigibles and armed aero-

planes. At least, his paper contains valuable hints for the German General Staff and Count Zeppelin.

MISUNDERSTOOD SOUTH AMERICA.

A report has just been published of a tour of a group of university men through the chief capitals of South America this past summer. The journey was undertaken under the auspices of the Carnegie Endowment for International Peace; and the dozen professors and teachers sent out were peculiarly fitted for their task. This was, in general, to seek to develop closer intellectual relations between the United States and the South American republics. All that has to do with education and humane and social activities—in a word, the essentials of South American civilization—was sympathetically studied by these travellers. They were everywhere welcomed, and every facility was afforded them. But what was their strongest net impression? It is pretty clearly set forth in the report, written by Prof. H. E. Bard, of Columbia. These educated and skilled inquirers found something like a great gulf fixed between the intellectual world of South America and our own. It is the old story from a new angle. Just as we in this country do not understand South American government and trade, so we do not understand the leading cultural ideals of the peoples to the south of us. This conclusion appears again and again, directly and by implication, in the pages of the report.

It has appositeness greater than could have been foreseen when the party sailed from New York last May. For we have since had the South American opportunity thrust upon the United States as never before. Nothing has been more talked about in trade and banking circles. The huge dislocation in South American commerce caused by the European war was from the first in all minds as a wonderful invitation and challenge to our enterprise. And the thing seemed so natural, so inevitable. There was no need to speak in terms of commercial conquest. Our merchants were not called upon to oust rivals already in possession of the field. Those rivals were temporarily crippled by the consequences of the war. The South Americans turned of their own accord to us. How instinctive and spontaneous was this looking to American markets may be seen in the recent action of the Argentine Government in laying before the Secretary of Commerce at Washington "a plan for closer commercial relations which contemplates that American manufacturers shall take the place left vacant by European industry."

This, as Secretary Redfield has pointed out, is really a kind of official notice to American exporters. But they have been finding out since August 1 that they have a great deal to learn about the South American market. By them, too, South America has been misunderstood. South America, also, was clutched by the world-wide financial crisis. She had her own moratorium. And the very first requisite for developing trade along new lines was the providing of banking facilities. In addition, large exporting houses found that it would be highly advisable to open branches in one or more South American centres. The emergency and the opportunity were great, but they alone could not create trade. The business had to be gone about in patient fashion, the details being studied and the necessary ways and means worked out with an attention which few Americans had ever given to the subject.

There is really nothing new in this revelation of our ignorance concerning the republics of Latin America. It has been harped upon for years in our Consular Reports. These have told us, to satiety, that there was no possibility of our entering the South American market with success on a large scale, unless we sought trade by methods that approved themselves to our customers. Their tastes must be consulted, as they notoriously had not been by haphazard American exporters, venturing now and then to take a little "flier" to the south; their systems of credit and banking must be studied and conformed to; a higher type of commercial agents must be sent to them; above all, a market for what they had to sell must be provided in this country.

This admitted American neglect of trade opportunities beyond the sea has often been explained, and naturally enough, as due to the absorption of our best business talent in the far greater opportunities at home. But excessive homekeeping, we know, causes "homely wits." Professor Bard cites the delightful instance of an American publisher of whom a gentleman in Buenos Ayres had ordered two books, but who wrote that he could not forward them to "Caseros, Buenos Ayres," and asked if his correspondent could not call for his mail at Rio de Janeiro or Bahía! If a publisher—or, let us hope, his mailing clerk—could do that, of what might not an exporter of boots and shoes be capable? We have no doubt that, in the end, a good part of this misunderstanding of South America will be overcome, but it will take time and attention.

Chronicle of the War

The speech of Lord Kitchener at the Guildhall on the occasion of the Lord Mayor's banquet on Monday evening answers the critics in the London press who have recently been complaining of the backwardness of recruits in coming forward to fill the ranks of the new army, and of the faulty organization which the War Office has provided for their enrolment. Lord Kitchener is not addicted to exaggeration, and so, assuming that he was correctly reported, we must accept his statement that "more than 1,250,000 men are in training in this country [England], excluding the overseas contingent." The enlistment of more than a million and a quarter men in three months hardly seems to bear out the complaints of the press, nor can the War Office fairly be blamed if, with an organization intended to deal with recruiting for an army of 165,000 men, it has found itself somewhat swamped by the recent enlistment. To the numbers of the new army must be added the expeditionary force in France and Belgium, which, with the Indian troops and the Territorial regiments that have reinforced it, must now consist of at least 300,000 men. Apart, then, from any further enlistments, from natural wastage in the process of training, from losses at the front, and from men who have only recently enlisted and will not be adequately prepared for active service, Great Britain should have in the field by the early spring an army of not less than a million men.

The question of officers for these troops is naturally a serious one. Not only have officers for the new army to be found, but the losses at the front must be replaced. These numbered, up to October 27, 1,598, of whom 384 were killed, 876 were wounded, and 338 were missing. Those reported as missing are most of them prisoners, and so are out of action for the duration of the war. Of the wounded a considerable proportion may be expected to return to active service before the war is ended. For the training of the new army there are available in the senior ranks a number of retired officers too old for active service, but fully competent for the work required at home. Their places on active service will doubtless be filled by promotions. For the junior ranks public-school boys and university men, many of whom have served in the Officers' Training Corps, are receiving commissions, and, as the lists of promotions and appointments in the London *Times* reveal, non-commissioned officers are being promoted rather freely to the commissioned ranks on account of meritorious service in action.

By the spring, then, it may be assumed that Great Britain will have in the field an effective army of a million men. By that time, too, the attrition which, according to dispatches from the front, is already beginning to be noticed in the German armies, may be expected to have had its effect. Time, as we pointed out early in the war, is fighting on the side of the Allies and against the Germans and Austrians. France, Germany, and Austria can hardly do more now than make up the wastage of the war. By spring it will be difficult even for them to do that. Russia, on the other hand, has not yet marshalled her full strength, and Great Britain

has hardly made a beginning. The strategy exhibited by Gen. Joffre must be viewed in the light of these considerations. A military critic recently described that strategy as an effort to avoid being beaten, and in the description there is nothing derogatory. A cardinal principle of both the French and the German General Staffs has been to adopt the offensive. The French tried it at the beginning of the war, with disastrous results in Alsace-Lorraine. Since then Gen. Joffre has adjusted himself to circumstances, and, *more Scipionis*, has conducted a defensive campaign, allowing the German leaders to test the theory of their military textbooks that intrenched positions in the field will yield to determined attacks undertaken in force, trusting to the stability of his lines, and relying for ultimate success on the natural attrition caused by the disproportionate losses inflicted on the attacking troops. Gen. Joffre's strategy may be slow, but it has the appearance of being extremely sure. He is waiting for the weakening of the German armies and the reinforcement of his own by the fresh British troops before undertaking any general offensive.

The character of the fighting during the past week in France and Belgium has differed from that of preceding weeks only in having been, if possible, more intense. There has been a change, however, in the German objective. The attack on Calais by way of the coast has been definitely abandoned on account of the flooding of the country between Nieuport and Dixmude, and the main attack has been directed on the line between Ypres and the River Lys. The object of the Germans is presumably to break the line here and reach Boulogne, the occupation of a town on the English Channel having apparently become almost an obsession in the minds of the Kaiser and his General Staff. All things are possible in war, but it is difficult to see how the German commanders can look for success in their present endeavor. The most favorable opportunity they have had of breaking through the Allied line was after the fall of Antwerp, when the army that had been engaged there was released and was thrown against the left of the Allies. If they failed then to achieve their object, it seems hardly probable that they can succeed now. The system of communications from point to point in the rear of the Allies' line has evidently been brought to a high state of efficiency, permitting of the rapid concentration of reinforcements at threatened points. The character of the fighting is almost monotonous in its sameness. A desperate attack is launched by the Germans; the defenders, temporarily overwhelmed, retire to other positions; supports arrive; a counter-attack is made, and the previous position is reoccupied. The changes in the relative positions of the armies in France and Belgium during the past week have been insignificant.

The seriousness of the defeat which caused the retirement of Gen. von Hindenburg's army from the line of the Vistula becomes more apparent every day. Berlin has minimized it as a "strategic retreat," but it is clear that it cannot be explained by such euphemism. On October 14 the battle on the Vistula began. A decisive result was reached ten days later by the outflanking of the German troops near Warsaw, at the junction of the Vistula and the Bug Rivers. By the end of last week they had been pushed back a hundred miles to the line of the River Warthe. As we write now, there is some doubt as to the exact position occupied by the German army. Berlin dispatches, reporting a Russian repulse in East Prussia on November 8, which may have been only a minor engagement, allude to the army of Gen. von Hindenburg as still occupying the line of the Warthe, but seem to admit that Russian patrols have crossed the frontier within the past few days. Petrograd dispatches, on the other hand, declare positively that Russian troops are established at Pleschen, thirteen miles west of the frontier, and unofficial dispatches report that the strong defensive line, Kalisz-Czenstochowo-Cracow, which the Germans had previously prepared for precisely this emergency, has been abandoned. The forward sweep of the Russians has been so formidable that it seems by no means improbable that the Germans have been driven from this corner of Poland, which they have held since the outbreak of the war, into their own territory.

On the wings of the main army, north and south, successes seem also to have been gained. In East Prussia the fighting on the frontier appears to have been exceptionally severe. Berlin reports the Russian defeat to which we have alluded, near Gumbinnen; Petrograd records successes at Goldap and near Soldau, both within the East Prussian border, and some 120 miles apart. In Galicia the Russian army appears to have regained most of the ground which it formerly occupied, and which was evacuated by the retreat to the San River, in preparation for the great battle. Jaroslav was reoccupied last week, and in announcing the victory in telegrams to Gen. Joffre and Lord Kitchener, the Grand Duke Nicholas, who has usually been somewhat conservative in his reports, alluded to it significantly as "incontestably the greatest success gained on our side since the beginning of the war." An attempt was apparently made to get round the left flank of the retreating Austro-German army, and squeeze it against the Carpathians, but this seems to have failed, and the defeated army has retreated on Cracow.

The most serious naval engagement of the war occurred off the coast of Chili on November 1, between a British and a German squadron. The former consisted of the cruisers Good Hope, Monmouth, and Glasgow; the latter of the cruisers Scharnhorst, Gneisenau, Leipzig, and Dresden. The Good Hope and Monmouth engaged the Scharnhorst and Gneisenau; the Glasgow fought the Leipzig and Dresden. The heavier armament of the German ships told, and at the end of an hour the Good Hope foundered. The Monmouth hauled off after dark and it is virtually certain that she has sunk. The Glasgow got away without serious damage. This success, which was highly creditable to the enterprise and fighting qualities of the German navy, was partly offset by the destruction, announced on Tuesday, of the German cruiser Emden by the heavier and speedier Australian cruiser Sydney off Cocos Island, in the Indian Ocean. On the same day it was announced that the German cruiser Königsberg had been bottled up at Mafia Island, on the coast of German East Africa, by the blocking of the harbor.

Foreign Correspondence

CHARLES PEGUY—FRENCH POET AND VICTIM OF WAR.

PARIS, October 15.

In the lato endless fighting, which is said to be the struggle for life of German culture against Latin civilization, Charles Péguy fell, struck by a bullet in the brain. No more pervasive intelligence has gone out in these battles which are levelling the mind of man to brute matter. He was little known abroad, except, perhaps, by some curious perversion of things, in Germany.

In France, for fifteen years, his *Cahiers de la Quinzaine*, or "Fortnightly Books," held a public fit though small. In them he introduced to the world Romain Rolland and his "Jean-Christophe"; the *Cahiers rouges* of the Communist, Maxime Vuillaume; Daniel Halévy's "Apologia for Our Past" (the past of young men), and his own "Mystery of the Charity of Joan of Arc," by which he became best known to the generality. All these and others who were allowed to print their writings in his "copy-books" agreed little among themselves in their mental evolution—except in the act of evolving. Whither youth does not ask; and a whole wing of Young France thought, not the same things, but in time to the fortnightly beat of Charles Péguy. For himself, his brain, however trained and polished as a *normalien*, lived and grew more and more in the traditions of his French ancestors of a thousand years. That is, in patriotism and religion and logic, which is the filiation of thought, but not in literary form. There is no more desperate case of a writer to be introduced to a foreign public. Some compared the influence of his prose to that of Thomas Carlyle, which means that there was not the slightest literary resemblance; but both reached down to the Veracities of at least one generation, that younger than their own. In his prose and in his poetry, he had a way of repeating words intended to catch the reader's attention that may be necessary to minds whose commonest stimulus is in headlines. In primitive generations to which we may be reverting by excess of breathless civilization, such were the literary methods of psalmists and liturgy composers, of Buddhist legends and Johannes Scotus Erigena preaching to the court of Charles the Bald.

Taking our courage in both hands, let us look through "Eve," the real and great and monstrous poem of 1,906 quatrains, which is Charles Péguy's legacy to the world.

No one need be expected to read through such poetry; but, as in unread poets of James the First's reign, perennial inspiration may be sought in it of lofty thoughts and images, and even felicities of expression. The opening lines are, very literally:

> O mother, buried outside the first garden's pale,
> No longer did you know that climate of grace,
> And the pool and the spring and the high terrace,
> And the first sun on the first morning.

Twenty-three like stanzas follow, beginning to tell what Eve, expelled from Eden, "no longer knew," and then of more of what the earth was then:

> The silence of the soul was like still lakes.
> . . . . . .
> And cedars made high barricades,
> And days of bliss were colonnades,
> And all reposed in the evening calm

Next seventeen quatrains, and then twenty variations, meditate how

> —God Himself, at once young and eternal,
> Rested brooding over his creation.

In the language of the Incas, Humboldt noted, God is called *Vinay Huayna*, "the eternally young." Then twenty-four stanzas take up again what Eve no longer knew and what now she knew:

> No longer knew you aught save time in space,
> No longer did you know the youth of the world,
> And that peace of the heart heavier and more deep
> Than immense Ocean under God's regard:
>
> That rest of the heart which nothing wants,
> Which knows itself served by all Eternity,
> Receives its Master, its good possesses
> In solemn tremulous unity.

Eighteen further stanzas bring Eve to her children:

> No longer did you know aught but a hurrying race:
> No longer did you know aught but a world saying—No!
> . . . . . .
> You have borne only a complaining race,
> Now bound to earth and now victorious,
> Now martyr, saint, and sage—or mad.
> O mother! and 'tis my race and the captive race
>
> Forever pressing against its prison walls!

Let not the reader wonder at this unforeseen apostrophe to Mother Eve, for at an initial corner of these poetic "tapestries," it is explained of all—"Jesus speaks."

How Eve the woman must for evermore set things in order, twenty-six stanzas tell:

> O woman ordering palaces and towers,
> And turnings about and iniquities,
> Young distress and antiquities,
> Old tenderness and youthful loves!

But just what the woman should restore to order in all human things, from the flight out of Eden to Christ's Passion and to the final Resurrection of all, 154 stanzas do but suggest:

> Woman, thou hearest me: when the souls of the dead
> Shall come back, looking in old parishes,
> After such battle stress and so many woes,
> For the little that's left of their wretched bodies;
>
> And when there shall rise in fields of carnage
> Soldiers so many dead for mortal states—
>
> When thou seest no more at Christmastide,
> In straw and Space, in the stable and Time,
> The Birth of Israel's last-born—
>
> When no more shall descend from great organ lofts
> Celebration of Life's beautiful days—
>
> When to lofty cathedral courts
> The people freed from vast charnels,
> Paris and Rheims and bishops' towns,
> Shall bring the horror of their burial place—
>
> Grandmother of the leper and the great commander,
> Shalt thou know how in that encumberment,
> Shalt thou be able in that bewilderment
> To light their steps with some poor signal-light?

And we have so far had the patience to analyze only eighty of these four hundred or so divisionless pages. Yes, Charles Péguy, who was an initiator, heeded no more the labor he was exacting from his readers than was done in the beginning of literatures. So Ruskin would not allow his tracts for the people to be given away; but they must be sold for a shilling, lest what cost nothing should be thought worth nothing. Charles Péguy's poetry, like his prose and his life, has been, and will be, something worth—most of all, to a generation forced to learn what was spontaneous in prehistory—the need of possessing Time in Space.

> And by France I mean the Paris land.—
> The snow has unrolled its measureless tapestry.
> History has unrolled its measureless discourse.
> Glory has begun its unmeasured course.

S. D.

The True Sportsman

THE LIGHTER SIDE OF WAR—"TOMMY" IN THE TRENCHES AND HIS FRIEND THE ENEMY.

It was "somewhere in France," as the war correspondents say, that I first came across them. To be more exact—as one may be where the censor is not—it was in a by-lane in the woods near Soissons, and the Great Battle which has been going on there for weeks, and seems as if it might go on for years, was raging noisily in the background. There were many horrible sights in that bit of woodland, for fighting had taken place there not three days before, rolling always northward to where the German army finally went to ground in the quarries, and there had been little time to clean up after it. Nearly everything you saw was of the kind you try unavailingly to forget afterwards, but there was one sight that was by contrast very pleasant indeed. Two British infantrymen were helping a wounded German towards the place where they hoped to find an ambulance.

They were typical "Tommies," and they were very dirty and war-stained, and I could not imagine what they were doing there, for they were at least four miles from the fighting line, nor where they had picked up their wounded enemy. One of them was wearing a German infantryman's cap at that. They had nothing to do with the R. A. M. C., and they certainly ought to have been somewhere in the trenches with their battalion. But all those are side issues; more important is it that they were uncommonly good sportsmen. The German had been badly hit, once, it seemed, in the upper part of the body and again in the thigh. He was very obviously in agony and kept protesting under his breath that he could go no farther. His friendly enemies almost carried him between them, and they were talking to him after this fashion: "Come on naow, ol' pal. You ain't goin' to give up naow. Almos' there, we are. Jus' be'ind them there trees over there. 'Ere, take a drink o' water an' you'll feel better. Come, ol' man, be a sport naow"—and so on, and so forth.

Whoever is responsible for the war and its horrors, I think that even his enemies must admit that "Tommy" is a sportsman, if sportsmanlike it be to bear no malice when the game is over. And if I have seen one I have seen fifty instances of the same spirit. There was a private in the Argyll and Sutherland Highlanders. I talked to him as he was being carried on to the boat at Boulogne on his way to a home-hospital. He had been wounded during the retreat after Mons and, as he himself put it, had very bad luck, for after all the tiresome preliminaries he got only three days' fighting before he was put out of action for ever. Both his feet were shot away by fragments of the same shell. The men were lying, he told me, in the trenches, quite comfortable and out of danger, as the enemy had not found the range and were sending their shells a couple of hundred yards too far. Then suddenly, out from behind a wood, came a German aeroplane. It was flying very low, said the Highlander, and bullets rained at it by the thousand, but it came on, quartering the ground like a dog after game, until it was above the trenches. Then it shot up into the air and flew back to the German lines. Five minutes later the big German shell was dropping into the trenches and the line had to retreat.

Now, the thing that above all interested the man from Argyllshire was the pluck of the German aviator. That he quite certainly owed his crippled future to that one man did not seem to strike him. Time after time he came back to his theme. "A vurra brave mon, he was," he would say reflectively. "I was glad when he got awa' safe, vurra glad I was. We all had a shot at him, but he just came on. A vurra brave mon, I'm telling ye."

Everybody knew the British soldier was a "first-class fighting man," but few even of those of us who have known him well in peace-time have realized to the full his depth of patience, of good humor, and especially his sense of humor. We have all heard how he has elevated "Tipperary" to the level of a national anthem, or, as a French officer put it to me: "He laughs, says 'Tippy-tippy,' and fights like a devil." Incidentally, since then the French *piou-piou* has also learned the charms of "Tip-tippy" and may be heard singing it to words of his own, while on at least one occasion, when the opposing trenches were very close together, the Germans also caught up the tune and were heard singing it no less lustily, whether out of derision or good-fellowship, I cannot say. But Mr. Atkins is by no means a man of one idea, and knows well the joys of the appropriate. He advanced on at least one occasion to a particularly fierce bayonet charge shouting at the top of his voice a song whereof the chorus begins: "Hold your hand out, naughty boy." And he will turn his hand to anything, as when I myself saw four infantrymen, not to speak of a couple of Turcos, anxiously consulting over the best way to repair the broken-off fore wheel of a peasant woman's perambulator.

Bravery is the monopoly of no nation, and certainly the bravest thing that came under my personal knowledge was the exploit of fifteen Bavarians, of which I was told by a British Intelligence officer. For some reason—to set up a range-mark, I think—it was necessary for them to reach the top of a rocky hill up which only one man could go at a time, and which was open to the fire from the British below. Fifteen men went up, one by one, and every one was in turn killed. If the last half-dozen, say, had been ancient Greeks, their fame would have been world wide. As it is, I do not suppose a dozen people outside their own half-company could tell their names.

And, if both sides are brave, both also acknowledge the courage of the enemy. Indeed, one of the most curious features of the war is the contrast between the comments of the soldier and the "civil." While the civilian

sits at home, "killing Kruger with his mouth" and furiously denouncing the atrocities and barbarities committed by the enemy, the man who is really doing the work has scarcely a word to say about them, nine times out of ten flatly denying their existence. I interviewed one German prisoner, at Villers-Cotteret, who told me that he had expected to be shot at once, because it was understood that the French and English took no prisoners; but he frankly admitted that he had never heard any proof of anything of the kind, and had been very well treated. This, by the way, applies particularly to the French. Although they have a much more immediate reason for hating the invaders, in the burned houses that to-day dot northern France, their attitude when the long columns of German prisoners are marched before their eyes is admirable. There are neither taunts nor abuse; they watch silently until the column has passed and as silently disperse. Once, indeed, I heard the whole roadway hiss with fury and loud-voiced abuse, but it was not at the prisoners; it was reserved for three French soldiers chained together who marched behind the column, having been caught in the act of pillaging.

Where, I think, Mr. Thomas Atkins shows himself unique is in his extraordinary *insouciance*. The last thing he worries about when he is in the trenches is the neighborhood of the enemy. He plays cards, he shaves—he has a positive passion for shaving, and some one has presented him with an enormous supply of cheap safety razors. Unfortunately, really good shaving soap is rare—one of the major ills of his life, if you may judge from his comments. Naturally, he quarrels sometimes—about the football results or the respective beauties, feminine or topographical, of Kent and Cardiganshire—and sets manfully to work with his fists, surrounded by an appreciative group of comrades, what time the big German shells blunder past unheeded. On one occasion he even had a stand-up fight with one of the enemy. It was at Vic; the opposing lines were very close together, and having nothing better to do, they began to chaff each other. One of the Prussians, who had been a waiter in London and spoke perfect Cockney, felt himself aggrieved by the remarks of, I think, the Warwickshires, and challenged their best man to come out and stand up to him, which was done accordingly, to the rapture of both armies.

How far it is true that clothes do sometimes make the man is shown by the amazing popularity of the kilt during the present war. Wherever the British army is represented in France, or for that matter in Germany, on picture post-cards or in caricature, it is always typified by a kilted Highlander, and this not because he has fought more gallantly than the rest, but rather because his kilt stands out so distinctively from the breeched monotony of his comrades. One of my pleasantest memories of the war is of an extremely bashful young private in the Gordons fleeing desperately from the attentions of perhaps a dozen young women who performed around him a kind of war-dance of admiration to a monotonous chanting of "O, les jupes, les jupes, les jupes." And a French lady asked me in all seriousness if it were not a fact that in some earlier war the Scotsmen were so eager to attack the enemy that they rushed straight from their beds without waiting to put on their trousers, and, as reward for their gallantry, have ever since been allowed to fight without them.

If it does nothing else, the present war should cause us to revise our ideas of the physical degeneracy of the town-dweller compared with his country cousin. For it is a fact that some of the best fighting, the best marching, and, above all, the most unfailing cheerfulness and endurance have been contributed to the Allies' armies by the small, almost weazened contingents from the great cities. Wherever you may hear, on the march or in the trench, the loudest laughter, the most strenuous singing, or the straightest shooting, there you may be sure you will find the Cockney, the Glaswegian, or the gavroche from Paris. And, although I can only speak from hearsay—for your prisoner is never the best of company—so it is also in the German lines. What your town-dweller lacks in size and weight he makes up by what is, after all, very much more important—his excellent morale.

O. M. Hueffer.

Book Notes and Byways

EARLY AMERICAN REALISM.

In the "Advertisement" to "Wieland," Charles Brockden Brown hinted at a source: "If history furnishes one parallel fact, it is a sufficient vindication of the writer; but most readers will probably recollect an authentic case, remarkably similar to that of Wieland." Contemporary readers doubtless understood the allusion, and at least one of them, writing for the *American Review and Literary Journal*, July-September, 1801, Vol. I, p. 335, pointed directly at an authority. His citation, however, of an article in the *New York Weekly Magazine*, Vol. II, pp. 20-28, seems not to have served students of Brown, though some have accepted the reference without going nearer to the original source than the *American Review*. (See, for instance, Miss Annie Russell Marble's "Heralds of American Literature," 1907, p. 296.) The article in question appeared not in Vol. II, pp. 20-28, but in Vol. II, p. 20 (July 20, 1796) *and* Vol. II, p. 28 (July 27, 1796) of the *New York Weekly Magazine*. Its full title, a glance at which would have prevented Miss Marble's error as to the date of the actual tragedy, is "An Account of a Murder Committed by Mr. J—— Y——, upon his Family, in December, A. D. 1781."

This prototype of Wieland, it seems, was a farmer living near Tomhannock, N. Y., who belonged "to one of the most respectable families in this State," and who, "though he was not in the most affluent circumstances . . . maintained his family (which consisted of a wife and four children,) very comfortably." He is said to have been gentle, industrious, sober, and upright. One Sunday afternoon, as "there was no church near," several of the neighbors, including his sister, Mrs. J——n and her husband, came to his house for an informal religious service, and after the others had gone, Mr. and Mrs. J——n remained till nearly nine o'clock. During the evening, as his sister later remembered, Y——'s "conversation was grave as usual, but interesting and affectionate: to his wife, of whom he was very fond, he made use of more than commonly endearing expressions, and carressed [*sic*] his little ones alternately:—he spoke much of his domestic felicity."

What follows is largely his own confession. After the J——ns had gone, he was sitting happily with his family, reading the Bible, his wife and the baby girl, Diana, on his lap. "Instantly a new light shone into the room, and looking up I beheld two Spirits . . . he at my left bade me destroy all my *idols*, and begin by casting the Bible into the fire." The other spirit dissuaded him, but he obeyed the first, and forced his wife to let the Bible burn. He then, "filled with the determination to persevere," rushed out of the house, broke up a sleigh with an axe, and killed one of his horses. "My spirits were high, and I hasted [*sic*] to the house to inform my wife." She, frightened, begged him to be calm, but "the good angel whom I had obeyed stood by me and bade me go on, 'You have more idols (said he) look at your wife and children.'" Without further hesitation Y—— dashed out the brains of his two sleeping boys and pursued his wife and daughters, who had fled out into the night. Catching up with his wife, he first killed the baby she carried in her arms. She escaped again, but he pursued her once more. "I now came up with her . . . my heart bled to see her distress, and all my *natural feelings* began to revive; I forgot my duty, so powerfully did her moanings and pleadings affect me." But when he thus weakened, a voice behind him called out, "This is also an idol!" At that he caught up a "stake from the garden fence" and killed her. "I repeated the blows, till I could not distinguish one feature of her face." He then sought and found his eldest child, Rebecca, who begged pitifully for mercy. "She was my darling child, and her fearful cries pierced me to the soul—the tears of *natural piety* fell as plentifully down my cheeks, as those of terror did down her's [*sic*], and methought that to destroy *all* my idols, was a hard task." He wavered again and decided to retain her, first making her dance and sing beside her mother's body, but his sense of duty reasserted itself and he put her to death, too.

This done, he realized he would be called a murderer and punished for doing the will of his "father," and at first he thought of putting all the dead into the house, setting fire to it, and laying the blame to the Indians. But he decided he could not tell a "*horrible lie.*"

At this point the story of the sister, "who was the principal evidence against him," begins. Her husband having been called away by his mother's illness, she was alone about four o'clock in the morning when her brother came and told her what he had done. She let him in, but when he attempted to seize a "case knife" (apparently with the notion of destroying another of his idols), she succeeded in disarming and binding him. The neighbors were called, the facts ascertained, and Y—— was taken to Tomhannock. There he refused to repent, and would not join in prayer with those who besought him, "but when they arose he would prostrate himself and address his 'father,' frequently saying 'my father, thou knowest that it was in obedience to thy commands, and for thy glory that I have done this deed' . . . his speech was connected,

and he told his tale without variation; he expressed much sorrow for the loss of his dear family, but consoled himself with the idea of having performed his duty." Taken to Albany, and "there confined as a lunatic in the gaol," he managed to escape twice, but was both times returned to his chains and dungeon, where, when last heard of, he still remained.

Brown's own acknowledgment, the citation in the *American Review*, and the details of the story make it almost impossible to doubt that this "Account" is the original of "Wieland." In the novel, indeed, the action is much refined. Theodore Wieland is a cultured and wealthy gentleman living near Philadelphia. The hocus-pocus of the two spirits and the burnt Bible disappears, and in its place comes an insupportable "effulgence," an "element of heaven," out of which Wieland is commanded to sacrifice first his wife and then his children. The slaughter of the children, originally so grewsome, is left untold in "Wieland." Y——'s ghoulish act of making Rebecca dance by the body of her mother and his plan to burn the house, Brown does not touch. On the other hand, the progress of Wieland's frenzy is given with detail and sympathy. This, indeed, is, for Brown, the chief interest of the whole theme. He does create a Godwinian "principal person" who hurts all who come near him with ugly, and often unintended, mischief. But though Carwin "the Biloquist" is the reigning spirit of evil in the book, and actually sets going the train of thought which terminates in Wieland's crime, he does no more than arouse from unsuspected depths a fanaticism already latent in Wieland. The birth and growth of this fanaticism are Brown's own creation; they merely prepare for events of which Brown had heard, and which he wanted to explain in a more scientific way than by ascribing Y——'s acts, as the pious reporter of the "Account" had done, to the devil.

Not only the central action, but many details are common to the two narratives. Wieland's confession is potent in solving the mystery. Mrs. J——n has a counterpart in Clara, the heroine of the novel, whom Wieland tries to kill, but who lives to tell her brother's story. Each man has four children, two boys and two girls, the baby, in each case, a girl. Wieland mangles Louisa Conway, his foster-daughter, as Y—— does his wife, so that "not a *lineament remained*" ("Wieland," 1889, p. 176). Both men are exalted in spirit, both deny they have acted on the instigation of demons, both resent the infamy which follows their deeds, both console themselves with the thought that they have faithfully obeyed their "father." Wieland is put in "a dungeon loaded with chains" (p. 180), whence he escapes twice, but is each time retaken. In the "Account," which comes to no conclusion, the story stops shortly after the second recapture, but Brown rounds out the career of Wieland with a third escape, on which the murderer meets Carwin, learns he has been deceived, and kills himself.

Brown may well have learned of J—— Y—— from other sources than the *New York Weekly Magazine*, and those sources may yet come to light, though a fairly extended search in contemporary newspapers has so far failed to discover them, but as matters stand, the "Account" seems to furnish the "authentic case, remarkably similar to that of Wieland."

WILLIAM ARCHER'S REPLY TO "VERNON LEE."

To the Editor of The Nation:

Sir: It is more years than I care to count since I read with warm admiration the delightful essays in "Vernon Lee's" "Belcaro"; and since then I have followed with sympathetic interest the career of that accomplished lady. What, then, was my amazement and sorrow to read in your columns her letter of August 26, in which she comes forward as an uncompromising champion of Germany! There is one extenuating circumstance—she wrote before the sack of Louvain. That makes her position more excusable, but scarcely more comprehensible.

The letter is primarily inspired by indignation at Mr. H. G. Wells's appeal to America not to protract the contest by "victualling our enemy." Whether that appeal was judicious or not we need not decide; personally, I am of the opposite opinion. But when "Vernon Lee" tells us that "there are thousands of English men and women who feel only shame and disgust at the proposal," one can only rub one's eyes with astonishment. Since when has it been considered an enormity above the other enormities of war to bring an enemy to terms by the method of siege? If Germany could gain command of the sea, does "Vernon Lee" imagine for a moment that she would hesitate to starve out England? Is actual carnage so much more humane than the pinch of hunger? It may be said that women and children suffer in a siege; but are women and children exempt from suffering in the open field? Let Belgium reply. "Vernon Lee" speaks with horror of the "scurvy-stricken and anæmia-undermined creatures" whom she saw in Paris in the summer of 1871. Who, I wonder, had reduced them to that condition if not the fathers of the generation to whom "Vernon Lee's" compassionate heart goes out the moment there is any talk of their being subjected to a similar regimen? I fear there is little chance of bringing Germany to reason by methods of siege; but, if it could be done, would it not be by far the humanest way out of the hideous embroilment?

The fact is, however, that "Vernon Lee" does not want to see Germany "brought to reason." From her point of view, it is the Allies, and not Germany, who have strayed from reason, and require to be brought back to it. For any hope of the liberalization and humanization of Russia, she has nothing but scorn. Russia, in her eyes, is absolutely past redemption. She apparently looks forward to its remaining to all eternity a disgrace to civilization, unless and until it is conquered by German "culture." She does not say so in so many words; but as she seems to see no other hope for Russia, it is fair to conclude that she would regard this as the best thing that could happen. The case of France, decadent, reactionary, self-aggrandizing France, is, if possible, worse. She refers to the Caillaux affair as a symptom of incurable disease; she does not tell us whether she thinks the Zabern affair a symptom of a very desirable kind of health. As for England, she quotes and makes her own Professor Harnack's words as to the "inconceivable betrayal of Western civilization" by a Government carrying out what she calls "an anti-Liberal, Tory-inherited policy." She does not quite explicitly say that she would have had us stand by and see Belgium martyred and France irretrievably crushed without lifting a finger; but it is hard to see what other course she would have had us pursue. What would America have thought of us had we taken this course?

Germany is, to "Vernon Lee," absolutely the injured innocent of the official German apologetics. Prussian militarism is a "mythological monster." She "knows enough of Germany, of liberal, Socialistic, anti-Prussian South Germany, to know that the militarist and absolute predominance of the kingdom of Prussia would have diminished automatically . . . had there existed a condition of security from without." It would appear, then, that this militarist predominance is not entirely a myth; but if Germany had been "secure from without," "Vernon Lee" thinks it would have grown small by degrees and beautifully less. That may appear a reasonable conjecture; it is hard to imagine that even Kaiserism would have loaded the Empire with armaments if there had been nobody to fight. Yet even this reasonable conjecture is negatived by the German writers whom "Vernon Lee," like the other German apologists, clerical and lay, does not seem to have heard of. These writers—men of unimpeached authority in Germany—are never tired of assuring us that war is necessary to the health of the world, and that, if you have not an enemy ready to hand, it is your duty to go out and find or make one. "Thus spake Zarathustra: 'Ye say a good cause will hallow even war? I say unto you: a good war halloweth every cause.'" I suppose even "Vernon Lee" will scarcely pretend that Nietzsche is without influence in Germany; and his principles are either echoed or independently arrived at and promulgated by a whole group of other writers. In the face of this literature, it seems very idle to pretend that mere internal security would have exorcised the demon of militarism. Security must, of course, be the first care of any country; but Germany is not content with security—she demands expansion. If "Vernon Lee" does not know that it is her loudly trumpeted aim to dominate the world and impose her "culture" on mankind, then "Vernon Lee" is amazingly deaf to the Teutonic trumpet, or rather to the shrilling of a whole historico-philosophico-political brass band. I do not say that the desire for expansion is unnatural or unreasonable; but I do say that it has been carried to a pitch and emphasized by measures of preparation which have only too clearly proved to be an intolerable menace to the rest of the world.

Russia is, for "Vernon Lee," the villain of the piece. It was she who "instigated French hostility against Germany"—as though the rankling sore of Alsace-Lorraine had nothing to do with the case. Can any one imagine that if Germany had been content with security within her own borders, Russia would have dreamt of threatening it? Is not the plain fact that Germany could not endure Russia's very natural pretensions to hegemony in the Balkans, because it meant a break in the continuity of her "permeation" towards, and up to, the Persian Gulf? And are not Russia's interests in the Balkans at least as obvious and comprehensible as Germany's in Mesopotamia?

But no! If it had not been for Russia's wickedness, we should have had "an Anglo-Franco-German rapprochement, which would

have automatically undermined Prussian militarism by rendering it unnecessary for Germany's self-defence." Again one can only say that "Vernon Lee" does not seem to have acquainted herself with the documents of the case. We can all understand and sympathize with the difficulties created for Germany by her geographical position. Had she faced these difficulties reasonably, courteously, and with tolerable moderation of spirit, her neighbors would in all probability have met her in a like temper, and there would have been no difficulty about her "place in the sun." She chose instead to put forth an inordinate and almost insane claim to world-leadership, material and spiritual, to build herself up into the most formidable engine of destruction the world has ever seen, and then to go about professing a love of peace, which was sincere only in so far as she believed she could get all she wanted by rattling her sabre without actually drawing it. She has played that game once too often, with results which we all deplore. But who can believe, with "Vernon Lee," that Prussian militarism could have been "automatically" cured by any concessions short of helpless surrender to its overweening claims? It was a case for surgery, if ever there was one.

WILLIAM ARCHER.

London, October 25.

GERMANS MADE RESPONSIBLE FOR THE WAR.

To the Editor of The Nation:

Sir: Are we not moving a little too rapidly in increasing the number of those persons in Germany who are responsible for the war? We started out by bravely throwing upon the Kaiser the sole responsibility, unmasking his constant talk of peace during the past fifteen years, and his rôle as a peacemaker as a clever disguise to throw the other nations off their guard, and, meanwhile, to prepare for the present contest. Afterwards, when doubt arose as to the accuracy of this picture of a modern combination of Machiavelli and Napoleon, we discovered Bernhardi, and found that his influence, or that of the whole party which he represents, was behind it all. Bernhardi frequently quoted a man by the name of Treitschke, and, although very few in this country had ever heard of him and scarcely anybody had read him (for his works had not been translated into English), we were willing to take him on faith, and were quite satisfied that his teachings involved the conquest of all of western Europe and of England for the purpose of spreading German "culture"; and to this programme we added, of our own accord, the subsequent conquest of the United States.

Then came Nietzsche, whose "superman" was, of course, merely a thin disguise for Germany. This was rather hard on Nietzsche, who hated Germany and tried his best to make out that he himself was not a German, but a Pole. The late Professor Cramb, in his interesting although depressing work on "England and Germany," practically told us this, for he points out that Treitschke stamped Nietzsche as a very poor German; but that made no difference, and so Nietzsche was added to the list of those whose teachings brought on the war. And now comes your correspondent, Mr. Heywood, who, in last week's *Nation*, not only adds Virchow and Mommsen, of the past generation, to form a triumvirate with Treitschke, but gives us a long list of "damned professors" of contemporary Germany, who are all accused of devoting their splendid talents towards the spread of teachings which brought on the war.

Mr. Heywood's list is taken (though he does not say so) from a book of Frederick William Wile, "Men Around the Kaiser," p. 116, which contains exceedingly interesting and clever sketches of prominent Germans in all walks of life. In connection with a sketch of Professor Delbrück (the successor of Treitschke at the University of Berlin), Mr. Wile says: "It is from Harnack, Delitzsch, and Pfleiderer, the theologians; from Wagner, Schmoller, and Bernhard, the political economists; from Schiemann, Meyer, and Delbrück, the historians; from Haeckel and Ostwald, the philosophers; from Zorn, Kohler, and von Liszt, the jurists, that modern, mighty, material Germany derives its chief intellectual inspiration." There is nothing in the original to suggest that the author holds these men responsible for pan-Germanistic teachings, but Mr. Heywood, who quotes this passage, apparently looks at them in that light.

If we go on in this way we shall soon find that all of Germany is peopled by Bernhardis and Treitschkes. Let us look at some of the names in this list. The Delitzsch meant is Prof. Friedrich Delitzsch, who holds the chair of Assyriology at the University of Berlin, and who has devoted his entire life to Assyriology and Biblical research. His pupils, of whom there are some in this country, and his friends will be amazed to find him among pan-Germanic agitators. During the past year Professor Delitzsch published a Sumerian grammar and a Sumerian lexicon, and I can assure your readers that these volumes do not contain any doctrines calculated to upset the world's peace. Professor Pfleiderer (who is no longer living) was a very distinguished theologian, who, so far as I am aware, never wrote about anything outside his own domain, which was the history and development of Christianity and its relation to other faiths. The distinguished theologian, Professor Harnack, is a man who, apart from his astonishing scientific activity, stands in public life, but until this war broke out I do not find among his collected writings any discussion of Germany's political aims and ambitions. His interest in present-day problems lies in totally different directions. He is concerned chiefly with religious and philosophical thought. Then, among the historians included in the above passage is Meyer, meaning Prof. Eduard Meyer, of the University of Berlin, the greatest living authority on the ancient history of the Orient, who, as Harvard exchange professor a number of years ago, came into contact with hundreds of scholars and large public audiences in this country. Those who know the wide scope of Professor Meyer's work in ancient history will agree that a man who has accomplished what he has can have very little time or energy left to devote to public agitation. The only modern theme on which he has ever written (so far as I know) is a monograph on the Mormons of this country, in whom he is very much interested. Ostwald is a chemist, who has developed on the basis of modern science a system of philosophy which is entirely international, and has absolutely nothing to do with German politics. Prof. Joseph Kohler, another name in the above list, is an authority on the history of law. His last work is a study of the history of the legal development in the ancient Orient, and he also would probably be amazed or amused to find himself placed in a group with military and political agitators encouraging young Germany by his teachings to step forth and challenge the world.

Where is this kind of thing going to end? The ignorance about Germany, especially about German history, politics, and literature, is surely large enough among us; why add to it by catchwords, by ill-digested phrases, and by giving to the public, unable to test statements for themselves, totally distorted notions of modern German science and of the character of the men from whom thousands of Americans have drawn inspiration for their scientific careers?

MORRIS JASTROW, JR.

University of Pennsylvania, November 2.

THE PEOPLE AND THE KAISER.

To the Editor of The Nation:

Sir: The writer is another of the thousands of Americans who are glad to acknowledge a deep debt of gratitude to the noble German people. It was his privilege to spend a year and a half in study and travel among them, and many were the kindnesses received while there; and to this day he loves to speak in terms of sincere admiration of the fine character of these people as he learned to know it. Their naturalness and simple-hearted kindness cannot be forgotten. And now, in these frightful days, when "misery like a flood" is inundating that great nation, nothing but sympathy, deep and compassionate, goes out towards them. Perhaps the profoundest depth of sympathy is reached when one reflects that such a people hold their fortunes and their lives subject to the word of a single "war lord," who was once reported as saying to his troops: "If I command you to shoot your father, it is your duty to obey." And when we further reflect that Germany is not only in possession of the mightiest army the world ever saw, but that she is also the greatest nation of scholars in the whole world, to such an extent that in the great majority of subjects the foremost authority is likely to be a German, our sympathy deepens at the thought that one man can send them forth to slaughter. I think it was in the *Nation* that I read the statement years ago about the great Helmholz, that almost every distinct thought of his had advanced the boundaries of human knowledge; and yet, if Germany has another brain developing into greatness approaching that, it may be spattered on the ground, smashed by a bullet!

"He that furnished the seed is responsible for what grew from it," said Demosthenes, holding his political opponent accountable for the loss of "men, places, cities." Who is mainly responsible for this volcanic eruption of war? Did not the Kaiser say years ago that no great question could any longer be decided in Europe without consulting Germany and its Kaiser? Do our German friends disagree with us if we say that their great Emperor was and is the most potent political personality in Europe? And if he was, could not his heavy hand have stayed Austria in her savage demands on little Servia? *He* knew all about it, and the one man who more than any other could have prevented war and did not is naturally held to account.

But the thing that has swung American sympathy so strongly against the German cause is the deliberate and flagrant viola-

tion of the promise to Belgium. That promise may have been merely "a scrap of paper"; but behind it ought to have been that fear of God which the Germans so proudly boast as the only fear they have. The time may come when even among the Germans some Cicero may say, with a change of only two words: "Doletis tris exercitus populi Romani interfectos; interfecit Antonius. Desideratis clarissimos civis; eos quoque nobis eripuit Antonius."

ADDISON HOGUE.

"THE COLORADO PROBLEM."

TO THE EDITOR OF THE NATION:

SIR: Permit me to express my appreciation of the exceedingly fair tone of the editorial in your issue of October 1 under the heading, "The Colorado Problem." Your views are particularly gratifying, as they indicate a knowledge of our conditions which it has been most difficult for us to disseminate through the East. In thus expressing myself, may I also comment on your reference to certain objections offered by the operators to the President's truce proposal?

I feel that no commission, no matter how impartial it might be, would be as competent as the natural managing officers of a company to say when and how the property of the company should be operated. I question if even a commission composed of officers of our company not intimately connected with the mining operations would be competent to pass on questions which, under the proposal, were to be left to "the commission." In my experience I have many times found it necessary on very short notice to direct the closing down for a period of weeks, or even months, of some one or more properties. It would obviously be a great handicap to our business to be compelled to submit such a question to the commission, unacquainted with the requirements of our trade and the almost numberless conditions surrounding the operation of mines, for its deliberate and possibly prolonged consideration.

As to the assessment of penalties prescribed in the proposed truce, it is a well-known fact that it would be next to impossible to penalize successfully the workmen for violation of a commission's orders. Colorado is bounded on each of its four sides by coal-producing States, and the nearest coal field in New Mexico on the south is but a few miles from the most important district in Colorado. Workmen who, for some reason, might be dissatisfied here could quickly move to an adjoining State. I think it is not out of place in this connection to say that the men at work when the President's proposal was received were almost sufficient in number to produce the amount of coal required. Within the past thirty days more than 1,000 additional men have been employed, and the output of coal is now even greater than the requirements. These men have expressed strong opposition to being required to work alongside of the strikers, so many of whom have threatened and abused them. We have no work for a greater number of men than are now employed, and little or no prospect of requiring an additional number, even during the coming winter. It would be manifestly unfair to our workmen to ask any of them to give up their places in order that work might be furnished to strikers, and it would seem quite as unfair to the operators that they should be required to make concessions to those who have incited and directed the lawlessness, for the purpose of inducing them to make a promise of keeping the peace.

There is no obstacle to the removal of the Federal troops except the presence of the lawless element. Within the past week an unquestioned authority has reported that an officer of the United Mine Workers of America, who is one of the strike leaders, said in effect that as soon as the Federal troops are withdrawn, the "strikers" will attack the State militia and property of the mining companies; that in preparation for such an event union men in the neighboring States to the number of 3,000 have been organized, drilled, and armed, and are in readiness to take the move when called upon. I am sure you would not expect us to deal with such an element, even indirectly, in a matter affecting the welfare of our workmen and the operation of our properties, yet that is the element which dominates the United Mine Workers of America in Colorado, and the policy expressed in the threat quoted illustrates the policy and the practice of the leaders of the strike now over a year old.

J. F. WELBORN.

Denver, Col., October 23.

A NATIONAL ASSOCIATION OF UNIVERSITY PROFESSORS.

TO THE EDITOR OF THE NATION:

SIR: In the current number of the *Atlantic Monthly* there appears, on one of the pages devoted to biographical sketches of the contributors, a statement concerning the committee on the organization of a national Association of University Professors, to which reference is made in Prof. H. C. Warren's valuable article on "Academic Freedom" in the same issue. The statement conveys an erroneous conception of the functions of the committee and the purposes of those interested in the organization of the new society; and it is published without the committee's authorization, and, as Professor Warren permits me to say, without that of the author of the article. The committee is in no sense a body for the investigation of grievances or for the examination of the internal conditions in American universities. Its only duty is to prepare plans for the formation of a representative professional organization of university teachers. The reasons why many members of the profession think such an organization likely to be serviceable to the interests of the American universities have been excellently presented in an editorial in the *Nation* of March 26, this year. The committee itself has adopted the following formulation of its understanding of the purposes of the Association:

". . . to bring about more effective cooperation among the members of the profession in the discharge of their special responsibilities as custodians of the interests of higher education and research in America; to promote a more general and methodical discussion of problems relating to education in higher institutions of learning; to create means for the authoritative expression of the public opinion of the body of college and university teachers; to make collective action possible, and in general to maintain and advance the ideals and standards of the profession."

It may, perhaps, be well to take this occasion to report to those interested that the committee expects to call a meeting for the formal organization of the Association during the last week of December. The day and place cannot yet be announced. The committee, after much discussion, determined last spring that members of the profession should, at least for the present, be asked to adhere to the organization as individuals, and not as representatives of their local faculties. The committee is, therefore, about to send out invitations to a large number of university and college professors who are known to the committee, or to those who have been called upon for advice in the matter, as well qualified representatives of their respective sciences. Doubtless, through the limitations of the knowledge of the committee and its advisers, many to whom invitations should be sent will be overlooked. It is not contemplated, however, that the eventual membership of the Association will be limited to those who are asked to attend this meeting. The committee merely sought, by the means indicated, to bring together a body much larger and more representative than itself, which may constitute a nucleus for the Association, and to whose judgment the committee may submit its recommendations.

The committee is not empowered to define authoritatively either the purposes and scope of the Association, or the conditions for membership in it. It is, however, to be expected that the Association's policy with regard to these matters will be determined at the meeting to be held next month.

ARTHUR O. LOVEJOY,
Secretary.

Johns Hopkins University, November 2.

CATHOLIC COLLEGES.

TO THE EDITOR OF THE NATION:

SIR: As a subscriber and reader of the *Nation*, I beg to submit the following remarks about the article "The Church and Higher Education," which appeared in your issue of October 22.

While this editorial gives an interesting survey of the decline of the religious character of many denominational colleges, it appears strange that the Catholic colleges and universities should be passed over in silence. They are hardly a negligible quantity. Further historical facts would hardly bear out the statement: "After a time intelligent men, seeing the denominations entirely incapable of uniting, began to turn to institutions secularly endowed, or towards the State as the only hope for great and well-equipped seats of learning." There are thousands of parents here in America who want their sons and daughters educated under religious influence.

As to Mr. Pritchett, it is known that he a few years ago most assiduously, though inconsistently, maintained that the State universities had the highest kind of religion. The so-called broad social service, without some religious conviction, is like an electric wire without a current.

F. HEIERMANN, S.J.

St. Xavier College, Cincinnati, O., November 1.

Literature

AN OPPONENT OF BURKE.

The Life of Charles, Third Earl of Stanhope. Commenced by Ghita Stanhope, revised and completed by G. P. Gooch. New York: Longmans, Green & Co. $3.50 net.

"Disraeli once spoke of Shelburne," Mr. Gooch remarks, "as one of the suppressed characters of English history. Shelburne's friend, Charles, third Earl of Stanhope, is another." The well-known "Political History of England," edited by Hunt and Poole in twelve volumes, grudgingly gives him five lines; the "History of England," seven volumes, edited by Oman, merely mentions his name, while Lecky ignores him altogether. Although there is the tendency common to works of this nature to give its subject a prominence which the facts scarcely justify, the reviewer lays aside the Life with the conviction that its publication is a real service to history. With just enough description to enable the general reader to understand the leading problems which the Earl attempted to solve, Lord Stanhope and his contemporaries are allowed to tell the story through copious extracts from letters, speeches, newspaper articles, and pamphlets. This method of treatment, which renders the perusal somewhat dry, enhances the value of the work for the student of history. The biography is based upon the family papers at Chevening, unpublished material in the Record Office and in the British Museum, and the printed sources. It deserves the careful attention of all persons interested in early democratic reform and early scientific investigation.

Charles, third Earl of Stanhope, 1753 to 1816, was educated at Geneva, where he was imbued with Puritanic views of life and strong democratic ideals. He resolutely refused to wear powdered curls and kept "a bottle of sirrup and water to drink healths." After the outbreak of the French Revolution he styled himself Citizen Stanhope and tore down the coronets from the iron gate at Chevening. It is reported that when he restored the family coach at the insistence of his wife and daughters, he remarked, "Well, well, we will see; but damn it! no armorial bearings." In his will he expressed his desire that his funeral "may be conducted without the least ostentation, as if he were to die a very poor man." Although he was possessed of much property from which he gave liberally to charity and education and spent thousands of pounds upon scientific investigation, he lived a life of extreme frugality.

At the age of twenty-one he entered politics as the protégé of John Wilkes. As a member of the House of Commons he exerted all his energies to oppose the war with America, to secure adequate reform of Parliament, home rule for Ireland, and the repeal of the oppressive laws against Catholics and Dissenters. Henry Grattan, before the Irish House of Commons, referred to him as "an Englishman who understood good sense and Constitution." A strong attachment existed between him and the younger Pitt, his brother-in-law, until the latter's alarmist and reactionary policy, occasioned by fear of the French Revolution, resulted in an irretrievable personal and political estrangement. He remained through life the ardent advocate of the reforms of Wilberforce, Clarkson, Wyvill, Cartwright, and was much admired by Price and Hardy. He exercised a powerful influence upon the masses, and while vehemently denouncing their oppression, always opposed violent methods. He was chairman of the Revolution Society when it voted the famous resolutions, in 1789, congratulating the National Assembly upon its accomplishments. The next year he wrote a thirty-page pamphlet in answer to Burke's denunciations in Parliament. In this pamphlet, which rapidly passed through three English editions and numerous French translations, he declared: "The Revolution in France is one of the most memorable pages in history, and no political event was, perhaps, ever more pregnant with good consequences to future ages. That great and glorious Revolution will, in time, disseminate throughout Europe liberality of sentiment, and a just regard for political, civil, and religious liberty." These views he continued to hold, when nearly every other English statesman lost his senses and helped plunge England into a period of arbitrary rule paralleled only by the worst days of the Stuarts. Napoleon he hated as the destroyer of liberties. But while praising Wellington for his part in Napoleon's overthrow, he hotly resented England's share in replacing the Bourbons on the throne of France.

Burke he regarded as "the high priest of reaction," and went so far as to show that Burke had fallen foul of the law of high treason in asserting that the crown of England was not elective. He was the close friend of Condorcet and Rochefoucauld; his letters and speeches were printed in the *Moniteur*, and his name was well known throughout France. His defence of the principles of the French Revolution and his opposition to the war with France brought down upon him a storm of invective. Horace Walpole spoke of the "ravings of a lunatic, imagining he could set the world on fire with Phosphorus," and the *Rolliad* dubbed him "the Quixote of the Nation." His house was burned over his head by a mob, set on, he believed, by some one high in authority.

After five years of absence from the Upper House, where his denunciations of the French war had been received with scorn, he returned in 1800 to oppose the Act of Union with Ireland, and later the War of 1812 with the United States. In his later years he worked upon a codification of the statutes, abolition of imprisonment for debt, and a simplification of legal procedure. Aside from Fox's Libel Act and the abolition of the slave trade, which he was in no small measure responsible for forcing through the House of Lords, nearly every reform which he advocated failed of adoption during his lifetime, because it was regarded as visionary, if not indeed destructive of social order. Since his death nearly every one of these measures has been placed upon the statute book. Wraxall said of him: "His ardent, zealous, and impetuous mind, tinged with deep shades of republicanism and eccentricity . . . was equally marked by a bold originality of character, very enlightened views of the public welfare, inflexible pertinacity, and a steady uprightness of intention . . . a man who at every period of his life, whether as a commoner or a peer, displayed the same ardent, fearless, indefatigable, and independent character."

In the field of applied science the Earl's reputation was great. At the age of seventeen he was awarded a prize by the Swedish Academy for his French treatise on the construction of pendulums. He made experiments in electricity with Franklin and Priestley, and his "Elements of Electricity," which appeared in 1779 and passed through several foreign translations, won for him membership in the Philosophical Society of Philadelphia. He invented an adding machine, a lens which still bears his name, and a system of stereotype printing, acquired and long used by the Clarendon Press. He took out a patent for a steamboat in 1790 and made several successful trials. But he met with strange opposition from the Admiralty Board, and it is more than suggested that the Board was in some manner responsible for the otherwise unaccountable leaks which impaired the utility of his boats. He was in close relations with Robert Fulton in steamboat, canal, and torpedo-boat construction. Mr. Gooch justly remarks: "Few of his contemporaries touched the life of their age at so many points."

CURRENT FICTION.

The Wife of Sir Isaac Harman. By H. G. Wells. New York: The Macmillan Co.

Mr. Wells can tell an excellent story when he will, but is seldom content to be a story-teller. As he says on one of the five hundred-odd pages of this book: "To invent stories to save middle-aged prosperous middle-class people from the distresses of thinking is surely no work for a self-respecting man." As a judgment upon pure fiction, this reminds one of Carlyle's dismissal of Scott as a "restaurateur." Granting that a novelist is primarily an entertainer, the fact remains that at his best he is more than that. He does not consciously cater to customers of some particular class or age, nor does he consciously challenge such a body of customers.

Mr. Wells is never able to get the middle-aged, middle-class, respectable Briton out of his head. He not only does not wish to divert him from thinking, he wishes to force him to think; and the way to do that—it is the way of Shaw and Chesterton, and the whole clever crew—is alternately to shock and to lecture him. Not that the operator must seem to take himself seriously; Mr. Wells somewhere in this book intelligibly

"places" himself as a story-teller who is above all things determined to be "British and Gothic and unclassical." And somewhere else he more than hints that everybody's business is the novelist's business.

At the risk of revealing himself hopelessly middle-aged and middle-class, the present reviewer must admit that he does not share Mr. Wells's contempt for his Sir Isaac's contempt for "littry idees," as applied to concrete matters. "I dessay I'm all wrong," cries poor Sir Isaac, with his millions and his belated "Victorian" views of commercial and domestic life. "I dessay I don't know anything about anything and all those chaps you read, Bernud Shaw, and Gosworthy, and all the rest of them are wonderfully clever, but you tell me, Elly, what they say we've got to do. You tell me that. You go and ask some of those chaps just what they want a man like me to do. . . . they grumble and they grumble; I don't say there's not a lot to grumble at, but give me something they'll back themselves for all they are worth as good to get done. That's where I don't agree with all these idees. They're Wind, Elly. Weak Wind at that."

Mr. Wells has always been full of Idees, rather at the cost of his integrity as a "littry" artist. Sir Isaac and Lady Harman and the amiable Mr. Brumble are well worth attending to for their own sakes, but having given them life, Mr. Wells cannot let them alone. Mr. Brumble must become a mouthpiece for some of his creator's social and industrial theories, and Lady Harman must exert herself to put them in practice. In this book, therefore, as in almost all of his fiction except the inimitable "Mr. Polly," his vein of sound humor, his faculty of characterization, are overlaid with "idees." And there are so many persons in the world who have nothing better to do than write tracts and invent nostrums!

Fine Clay. By Isabel C. Clarke. New York: Benziger Brothers.

This is a story of a purpose which actuated three generations, growing stronger in each and triumphing wonderfully in the third. The story chiefly concerns Yolande, daughter of Major Maxim Pascoe, a British soldier, who, while in service in India, met Veronica Chesson and her father, globe-trotters. He married Veronica, who lived only long enough after the birth of Yolande to see her christened by the same priest who had officiated at the marriage. Major Pascoe is not over-particular in the personal affairs of life, except to adhere rigidly to the promise made to Veronica that Yolande should be reared under Catholic instruction. While she is still too young to recognize sophistry, she visits London and there meets Gifford Lumleigh, heir of a prominent family, whose property is subject to a provision in an ancestral will that no part of it should ever pass into Catholic hands. Gifford, nevertheless, determines to marry Yolande, and her love for him enables her to undergo many hardships due to his poor management of their affairs. Their son, Ambrose Maxim Gifford Lumleigh, whose existence becomes known to Gifford's parents only after his death, is sought for the world over. Shortly after his mother's death he is found in Italy, taken from the faithful nurse, and established in England for proper training. But the teachings of his mother remain with him, and enable him, after many years, to triumph in a most dramatic manner.

Diane and Her Friends. By Arthur Sherburne Hardy. Boston: Houghton Mifflin Co.

It is hard to believe that a full generation has passed since, with "But Yet a Woman," Mr. Hardy made himself known to a large audience. That striking novel appeared in 1883. Best-sellers had not yet been so christened, and it may be they did not exist in that golden sense which now attaches to the term. Mr. Hardy's genesis as an author was in a sense old-fashioned. He did not emerge, with a punch, out of the street, or even out of the reporter's room. He had already been for ten years a professor at Dartmouth College when "But Yet a Woman" appeared, and such he remained for another ten, publishing another novel or two, but by no means making up to his public in the business-like way now expected of successful authors. At forty-six he accomplished the rare and difficult feat of ceasing to be a professor; and after a short experience as editor of a popular magazine, again denied his public by becoming a diplomat. The decade of his service produced a single novel, and this is but the second volume of fiction to come from his hand since his retirement in 1905. In forty years he has produced, all told, five or six volumes of fiction. A method so costive, or, to use the current phrase, an "output" so limited, might be the result of either caution or indolence. We do not believe it is the latter in this instance. Mr. Hardy's fiction is not great, but it is distinguished, and distinction is not achieved without pain.

Its style betrays it as the work of that old-fashioned person, a literary artist:

> You know how marvellously the dead leaves of the dead year disappear, how little by little the naked branches take on those faint colors which herald the spring, and then, after days of alternate sun and cold, and delays without number, how, in spite of all of these warnings, we are suddenly astonished to find every leaf and bud in its place, and to hear the strife of chattering birds seeking nests.

There is, to be sure, nothing striking in such English as this; one fancies some school of advertising or of journalism setting an exercise: "Take following passage and give real Punch!" Its merit is that which conceals itself; its simplicity has a haunting grace or graciousness.

The book is not a novel, but a series of episodes in the lives of a loosely bound group of Frenchmen and Frenchwomen, ranging from the aristocratic Diane and the cynical boulevardier De Sade to Inspector Joly, efficient servant of the Prefecture and man of sentiment. These persons are sketched with a hand light, graceful, but unerring, and their racial atmosphere is conveyed with equal subtlety. That pseudo-Gallic patter which is so deadly familiar in Anglo-American stories of Paris is as far from these pages as from reality.

Bambi. By Marjorie Benton Cooke. New York: Doubleday, Page & Co.

"In a bubble over Bambi." That is where even the most satiated reader will quickly be. He cannot resist farther than page 152 at most. In the beginning, it is hard to decide whether "Bambi" is a novelized drama or a dramatized novel. In the end, one does not care, since he has had the enjoyment of reading it. "Bambi" is an American "Bunty," and the way she pulls the strings that manage everybody from the queer Herr Professor, her father, and her queerer husband Jarvis, whom she married out of hand like a progressive cave-woman, to the redoubtable Mr. Charles Frohman himself, is delicious. It does not matter that one knows that Bambi and the Professor and Jarvis are too good to be real—one enjoys them where they are. Miss Cooke makes her characters reveal themselves by their own words, and even manages to bring them physically before the mind's eye. The simplicity of style and clarity of expression are not the least of the book's charms.

THE STATE IN THE MAKING.

The State. By Franz Oppenheimer. Translated by John M. Gitterman. Indianapolis: Bobbs-Merrill Co. $1.25 net.

The Collectivist State in the Making. By Emil Davies. New York: The Macmillan Co. $1.60.

Problems in Political Evolution. By Raymond Gettell. Boston: Ginn & Co. $2.

These three recent books approach the general problems of statecraft from somewhat different angles. Dr. Franz Oppenheimer's volume, which appeared six years ago, but is now for the first time translated into English, gives an epitome of the author's entire political philosophy. The writer, as most students of political science are already aware, is a docent in the University of Berlin and a leading exponent of the socio-psychological theory of the state. He seeks to explain all steps in political evolution from sociological standpoints. The genesis, essence, purpose, and future of the modern state are all viewed from this "royal highway of scientific inquiry," as the author terms it. Oppenheimer's writings have given rise to much discussion in his own land, and although he has been treated with disdain by the orthodox teachers of *Staatswissenschaft*, he has nevertheless gained a considerable popular following. It is well that the American reader should now have a chance to judge for himself as to the merits of this scholastic controversy. The classical interpretations of social evolution from Plato to Benjamin Kidd have not succeeded in satisfying everybody. Each

new political diagnostician is accordingly sure to get some circle of interested listeners.

Of a much more practical nature is Emil Davies's book on "The Collectivist State in the Making," which deals with the increasing economic activity of public authority in State and municipality. There is some discussion of the forces which have promoted collectivist policy and of the limits which may be set to collectivism; but in the main the book is devoted to an enumeration of things now done in various parts of the world by the community for its own people. The relation of collectivism to the labor problem is touched upon briefly in the closing pages of the volume.

The only assertion that the author makes on behalf of his book is that it is not academic. If by this he means that he has not gathered or sifted his material impartially, his contention is entirely well founded. While professing to make his volume a record of both successes and failures in collectivism, the author has, as a matter of fact, paid very little attention to the failures, although he might have found some conspicuous examples, such as London's ill-starred experiences with municipal steamboats, without going very far from his own doorway. The full calendar of collectivist successes, as Mr. Davies sets them before us, embraces almost every conceivable field of business enterprise: mining and manufacture, the retailing of merchandise, banking and pawnbroking, the ownership and operation of hotels, warehouses, grain elevators and abattoirs, the management of insurance agencies and undertaking establishments, not to mention the host of ordinary public utilities which have so generally passed under community control. Collectivism as a policy is steadily gaining ground. On that point the evidence given in the book is adequate. Whether it is, as the author contends, "the only remedy visible for many of the evils from which modern society suffers and the only possible solution of the ever-more-threatening labor difficulty" (p. 207), is quite another question.

Professor Gettell's "Problems in Political Evolution" differs from both the foregoing volumes in its wholly non-controversial tone. It is an historical study of the origin and nature of the state, together with an analysis of the influences which have moulded its growth, and of the problems which public authority has been and is still called upon to solve. The author has not attempted to settle any controverted questions. His intention has been to state problems, not to solve them. More particularly, he has tried to show that every political problem is the product of many forces, economic, social, or religious, and cannot be profitably studied in isolation. Many problems of present-day interest are thus brought forward for consideration as to the various factors involved—for example, the proper relation of the state to the church, to industrial organizations, and to political parties.

Within the limits laid down the author has done his work with carefulness and good sense. He has made good use of available materials, although not always with perfect discrimination as to their relative values. The book is well planned and clearly written. Its discussions are well within the comprehension of elementary students. The ever-present danger of gaining conciseness at the expense of accuracy has been on the whole successfully avoided. Without attempting to present new theories or novel points of view, Professor Gettell has furnished the student of political science with a useful conspectus of the forces which have welded the state into unity.

THE AMERICAN PEOPLE.

American Public Opinion. By James Davenport Whelpley. New York: E. P. Dutton & Co. $2.50 net.

This volume contains fourteen chapters, seven of which first appeared in the *Fortnightly Review* of London, five in the *Century Magazine*, the other two being here presented for the first time. They furnish a consistent view of American affairs, with special reference to our relations with foreign nations. Mr. Whelpley is amiable when most critical, and does not let our weaknesses overcloud our sterling qualities in the reader's mind. He possesses a fair share of that optimism which he attributes to us as a race, and in his case it is not an unthinking optimism, but the result of a careful balancing of contemporary events. The world at large should think none the worse of us for what he has written; indeed, it will not be his fault if it does not have an enhanced opinion of us, for underlying much in American life which to the casual observer may seem to betoken ignorance, indifference, and lack of dignity, he detects a spirit indicative of sound and stimulating national character.

The keynote of the life of America is optimism, he tells us; yet a vast majority of the American people are intelligent, unusually well educated considering their resources, and possessed of a practical vision which quickly penetrates fraud or charlatanism. In other words, the nation as a whole is possessed of a goodly supply of shrewd common-sense. It is not a slow and calculating quality in this case, and many mistakes are made, but are righted with equal swiftness when the sham is exposed. American characteristics are energy, directness, shrewdness, lack of subtlety, a more or less strong provincialism. The American is quickly aroused and quickly pacified, and he will, as a rule, meet his opponent more than half way to patch up a quarrel, whether it originated with the other man or himself. He is sensitive to criticism or ridicule, though quick to criticize or ridicule others, but likes a man who is ready at repartee, even though it be of rather obvious nature. His provincialism in most of its phases is one of the greatest strengths of the nation of which he is a unit.

This hits us off rather well, and on the whole is a characterization which should please us; though it stamps us as lacking sophistication, it indicates that we possess plentifully the primitive instincts by which nations rise to greatness. The diplomacy of America, declares Mr. Whelpley in his chapter on American Foreign Relations, may indeed be termed that of the daylight. The subtleties of Old World diplomacy are not for Washington, but perhaps, he adds, this may be no real loss to the cause of international peace and understanding, towards which America, in the peculiar simplicity of her foreign affairs and policies, has contributed in no small degree. The troubles of Americans are more superficial than those of any other great nation, for America is sound at heart, spiritually, industrially, and financially. That these troubles, superficial though they may be when the state of the nation as a whole is considered, are serious, is undeniable. The effort of the politicians to become great heroes of reform is not only doing away with acknowledged evils, but incidentally destroying much that has taken years of intelligent labor to construct. The situation resembles the state of a householder who, having sent for the fire department to extinguish a small blaze, finds the contents of the entire house apparently ruined by floods of water and the axes of the willing firemen. The damage is not as great as appearances indicate, but it is serious enough to cause dismay on the part of the owner and the onlooker. Yet all that is of the surface. The American people, in the judgment of this intelligent and amiable critic, are working out the greatest experiment in a government by a people for a people that the world has ever seen. The very throes through which the nation is passing are but the casting out of devils, some of whom are most fetching in their borrowed robes of white and halos of reform.

We have been careful to indicate the writer's fundamental optimism regarding us before calling attention to those things in our national life which he visits with genuine censure. Of such there is no lack. In Washington at the present time, for example, the nation is conducting at enormous cost a practical school of politics and statecraft. To this school have been sent a lot of ambitious, well-intentioned men, ignorant of the practical workings of the machinery of government, without consciousness of foreign affairs, "and with all the pedagogical instinct of the teacher rather than the willingness of the public to learn." Even more explicit is this:

> The legal department of the Government at Washington, in its efforts to keep up a fight against "Big Business," resembles the militant suffragist pursuing a window-breaking campaign after the purpose that might have been intended originally has been thwarted by lack of novelty and the boredom of the public. There were undoubtedly evils in connection with the conduct of the affairs of all the great American industrial combinations, sins against public policy, but they were sins committed in self-de-

fence or self-aggrandizement, and condoned by the public and the law for so many years that they became an acknowledged part of the system. It was unquestionably possible to correct these errors without the sudden, merciless, and unintelligent attacks upon industry as a whole which have marked this era of alleged reform. In the end violence reacts upon itself, and the public suffers rather than benefits, as is already apparent.

Whatever his predispositions, the reader will not be able to call these essays uninteresting. A great many subjects are discussed, all of them highly debatable: "big business," the tariff, Mexico, free tolls, immigration, American diplomats, American foreign relations in the Far East and in Europe. The discussion is always spirited, but is carried on with a detachment calculated to make the dissentient reader wonder if, after all, there is not more in what the writer says than he cares to admit.

Notes

The Outing Publishing Company announces the publication of "The Pawns of Liberty," by Corinne S. and Radoslaw A. Tsanoff.

G. P. Putnam's Sons announce that they have in press for immediate publication a biographical and critical study of the Life and Work of Prof. Heinrich von Treitschke, by Adolph Hausrath.

Harper & Brothers announce the publication of: "California. An Intimate History," by Gertrude Atherton; "With Sabre and Scalpel," by John Allan Wyeth; "Life in America One Hundred Years Ago," by Gaillard Hunt; "May Iverson's Career," by Elizabeth Jordan; "The Last Rose of Summer," by Rupert Hughes; "Before the Baby Comes," by Marianna Wheeler.

The following books are announced by Houghton Mifflin Company: "S. F. B. Morse: Letters and Journals," by Edward L. Morse; "Prints: A brief Review of Their Technique and History," by Emil H. Richter; "The Eskimo Twins," by Lucy Fitch Perkins; "Shifting Sands," by Mrs. Romilly Fedden; "The Old Diller Place," by Winifred Kirkland; a new edition of "China Under the Empress Dowager," by J. O. P. Bland and Edmund Backhouse, and a new Collection of Poems by Clinton Scollard.

The "Modern Reader's Chaucer," the prose rendering by John S. P. Tatlock and Percy MacKaye, with illustrations by Warwick Goble, which appeared two years ago, is reprinted (Macmillan; $2 net). The Prologue seems as much of a travesty, upon being reread, as it seemed at first, but other portions of the volume deserve praise for the way in which they have been adapted to the requirements of the persons for whom the version is intended.

The long roll of Dr. A. S. Way's verse translations from the classics is lengthening more rapidly than ever; one begins to wonder whether he, too, is not an association of rhapsodists! His latest publications are "Theocritus, Bion, and Moschus" and "The Song of Roland" (Cambridge University Press; Putnam). In both versions he employs the long, free, six-stress ballad line, rhyming in couplets:

> Shattered in glittering fragments is the blade of many a sword,
> Rolled red surges of battle over many a valiant lord.

This measure serves admirably for the "Roland," but to the "Idylls" it gives an outlandish look and sound. Indeed, the versions from the Greek, though respectable in scholarship and by no means lacking in excellent passages, are as a whole disappointing. The very spirit of the *chanson de geste,* on the other hand, pervades Dr. Way's translation of the "Roland." Reading, one shares in it all with eager heart, from the fateful anxiety of the council to the loyal comradeship, the superb patriotism, the heroic faith of Roncesvaux. The changing episodes are set forth in vivid simplicity; and the verse, if less restrained than the French in rhythm and metaphor, is none the less vigorous and dignified. Deeply impressive as the Roland is at any time, it is doubly impressive in these days, when the valor of "sweet France" is marshalled against another invading horde. The panoply of war was different then:

> But ever the foe draw nearer by hidden gorge and vale;
> Clad are they all in hauberks, in links of the knitted mail,
> With helmets laced and with broadswords girt ride cavaliers,
> Their shields from their necks are swinging: there be ranks of targeteers,
> There be glittering points of javelins, and ordered lines of spears.

But its bitterness is the same:

> Whoso had heard the war-glaives on the helmets ring death's knell,
> Whoso had seen the heroes as from saddle fast they fell,
> Had heard the moans of the dying, on the hard earth as they lay,
> Ah, long should he have remembrance of the woe of a fearful day.

And the hearts of men are the same:

> "Thine hand, O friend and companion!" each unto other saith:
> "It may hap that I die before thee, but I fail thee not unto death!"

Random comment upon America and American ways as he saw them, first in New York, and then in the course of a walking trip from the metropolis to Chicago, is the characteristic of Stephen Graham's "With Poor Immigrants to America" (Macmillan; $2 net), much of which is here reprinted from *Harper's Magazine.* The result is the inadequate view of us that one would expect from so cavalier a mode of investigation, made a bit irritating by the evident fact that the writer is intelligent enough to draw a more lifelike picture if he only were not in so great a hurry to finish his articles and get back to Russia, which, whatever its deficiencies, is "home once more."

If the general opinion of Stevenson's genius as a writer has recently undergone some abatement, there are few signs of slackening interest in him as a man. Mrs. Stevenson's "Cruise of the Janet Nichol" (Scribner; $1.75 net) will be valued as a side-light upon one of those South Sea adventures in which the doomed but indomitable Scot so delighted. The present record is modestly accounted for as "orlginally only intended to be a collection of hints to help my husband's memory where his own diary had fallen in arrears." Much of the material was rewritten by Stevenson, and the notes so developed have been here omitted, as well as numerous entries of a personal nature. A chief reason for printing what remains lay in the need of correcting various recent fabrications in connection with Stevenson's voyages. "No one, outside of our immediate family," says Mrs. Stevenson, "sailed with us on any of our cruises. All the books 'With Stevenson' here, and 'With Stevenson' there, are manufactured out of 'such stuff as dreams are made on,' and false in almost every particular. Contrary to the general opinion, my husband was a man of few intimate friends, and even with these he was reticent to a degree." The Janet Nichol was a six-hundred-ton cargo steamer, with schooner rig. She set out upon an ordinary trading cruise from Sydney in April, 1890, returning in July. Her course ran to New Zealand, Samoa, and the Gilbert and Marshall Islands, with several side trips to islands well off the common trade routes. She carried a crew of fifty—mainly blacks—three officers, one of the owners, a trader returning to his island station, the Stevensons, and Lloyd Osbourne. The liveliest member of the company was the trader, named Buckland and known as "Tin Jack." He was the original of Tommy Hadden in "The Wrecker," and was very proud of the fact. The details of the cruise are interesting, though they add nothing of moment to our impression of Stevenson. They show him delighting in the island dwellers, and adored by them. He was, as always, a sick man, and had one serious hemorrhage in the course of the voyage, from which he rallied with his usual courage and with that strange tenacity which had so often pulled him through, and was to keep him alive for some four years still. The pictures show him habited in that ruffianly manner which clearly pleased him as "dressing up" pleases a child.

Volume XLVII of the Proceedings of the Massachusetts Historical Society is more than ordinarily rich. Of the numerous documents, perhaps the most important are the series of letters, from the John Wilkes papers in the British Museum, comprising addresses and other communications sent to Wilkes from Boston in 1768-70. A paper by Cotton Mather on witchcraft, with keen and pungent notes by Robert Calef, is contributed by Worthington C. Ford, who, as usual, furnishes informing notes. A selection from the letters of Elbridge Gerry, written between 1797 and 1814, affords interesting glimpses of Washington society, particularly during the administration of Madison; while the contemporary literature of the Civil War is enriched by two letters of Joseph Lyman, 1861-62, and the correspondence between the Duke and Duchess of Argyle and Charles Sumner. Of the papers by members of the Society, the most notable are Charles Francis Adams's "A Crisis in Downing Street," dealing with the activities of Sildell in England following the Trent affair, and Prof. Edward Channing's "Washington and Parties," in which the seriousness of the political problems confronting Washington, and the connection between his longing for advice and the institution of the Cabinet, are concisely stated. Appreciative mention should also be made of Edward Stanwood's historical review of trade reciprocity with Canada, although the subject itself hardly seems to fall within the Society's sphere.

For the subject of the Storrs Lectures, delivered before the Yale Law School, Judge Lucilius A. Emery chose to talk "Concerning Justice," and these lectures are now published by the Yale University Press. The book, like its companions in the series, is small in compass, but it is well freighted with thought. The earlier chapters deal historically with the philosophical conception of justice and right and natural law in themselves, and contain a good deal of learning in little space. In one point Judge Emery is at fault. He quotes the ironic dismay of Socrates in the "Republic," after the debate with Thrasymachus: "The result of the whole discussion has been that I know nothing at all; I know not what justice is, and therefore am not likely to know whether or not it is a virtue"; and he implies that no definition of justice was arrived at by Plato in the course of the dialogue. That is an odd lapse or bit of ignorance; but in general Judge Emery's scholarship is sufficient, and leads up nicely to his own more legal and practical definition. "Justice," he says, "is the equilibrium between the full freedom of the individual and the restrictions thereon necessary for the safety of society. . . . In other words, it is equal freedom, equal restraint. It is order and harmony. Plato and Aristotle were right in teaching that order is an essential element of justice." The question follows: Who is to determine the limits of this equilibrium, and what power is to enforce them when determined? The rest of the little book is given up to answering this question from the point of view of a wise and legally trained conservative. The conclusion may best be summed up in the author's own words:

> Justice is more firmly secured by government with a division of powers, with a written Constitution excluding from governmental interference such personal rights as long experience has shown to be necessary both for the happiness and efficiency of the individual subject and for the welfare and efficiency of all; and, finally, with an independent judiciary to defend those rights when assailed, as they often have been, and will be, by impatient and changeable majorities.

We are not informed whether "The King of the Dark Chamber," copyrighted by the Drama League of America and published by the Macmillan Company, is an early work of Rabindranath Tagore's now resuscitated or a new production; but we have a distinct feeling that each fresh volume from that fertile pen is a step downwards—with the exception of the deep drop middle volume, "Sādhanā," which was a wearisome display of what the virile old Hindu Vedānta can become when wish-washed over with the Maeterlinckian twilight. The earliest published volume, called "Gitanjali," contained some really exquisite prose poems, in a vein of wistful mysticism, though the furor it created in certain circles was out of all proportion to its value. But the present play, which turns on the invisibility of a royal and spiritually symbolic despot, seems to us to carry the *théâtre de l'âme* to a point where it ceases to have any but the faintest interest for any but the faintest souls. We trust we are not unfair to the distinguished author, and admit that it is very easy for a sober judgment to revolt overmuch from a writer who comes heralded as "one of the few great world-figures in poetry and philosophy," and from writings which are announced as "the perfect union of beauty and truth in poesy." Such sentiments are heard in drawing-rooms, as well as in the publishers' advertisements, and are merely silly nonsense, as we hope Mr. Tagore would himself admit. Dramas like "The King of the Dark Chamber" will probably do a good service by putting an end to that sort of talk; and we shall be allowed to enjoy the really charming lyrics of our Hindu poet as they deserve to be enjoyed.

"Republican Rome" is the second of the series of Great Nations (Stokes & Co.; $2.50 net), in which "an attempt is made to tell the stories of the great nations from the modern historical standpoint." The manuscript was completed by its author, H. L. Havell, just before his fatal accident, and the necessary illustrations, maps, etc., were left to other hands, whose work in this department deserves all praise. As regards the book itself, we consider the publishers' announcement rather misleading, if we understand the expression "modern historical standpoint" aright. It is, in fact, an eminently readable and scholarly history of the Roman republic, well worth the perusal of the layman who would fain renew his touch with ancient Rome. Written by one who was saturated with Latin literature, but less versed, it would seem, in the philosophy of history as understood at the present day, its method is largely conventional. As in the legendary period heroic figures necessarily loom large, so, when we stand on firmer ground, we are too much confronted by great men posing as types of their epochs. If we have a fault to find with the volume, judged from the standpoint we have laid down, it is that it lacks balance. The endless wars of the early Republic are treated in detail more suited to a textbook than to a work of wider outlook; the social and political matter, while well stated, is often inadequate. As an example, take the author's treatment of the position of women. This is confined, in the main, to two brief passages, one, of the conventional type, under the caption The Marriage Law; the other, no less conventional, but ending with a lively description of the invasion of the Forum by Roman ladies "prepared to do battle for their earrings and necklaces." The book is extremely well made, and the illustrations are far above the ordinary standard.

In the first volume of his "Studies in Ancient Hindu Polity" (Longmans), Narendra Nath Law has brought together in popular form the data obtainable from the recently published text of the Arthaçāstra, of Kautilya, the Minister of Candra Gupta, who lived in the fourth century B. C. As the whole subject of administrative machinery is reserved for a second volume, the present work is confined to the discussion of legal procedure, laws of contract, irrigation, care of live stock, game, means of communication between different parts of the kingdom, etc. All the subjects are handled not only in the Arthaçāstra, but also in the law-books. The latter, however, are more or less theoretical; the Arthaçāstra is a practical manual, and is thus of great historical importance, if it is really a work of Candra Gupta's minister. An introduction on the age and authenticity of the Arthaçāstra by Prof. Radhakumud Mookerji, discusses the moot question whether this work should be ascribed to Kautilya. It may be a manual of later date attributed to him. Neither Mr. Law nor Professor Mookerji refers to one argument of some weight, namely, that the Arthaçāstra agrees with later rather than with earlier law-books in several particulars. Moreover, the Arthaçāstra recognizes the zenana, which is not an early institution, the fifth Rock Edict, cited (p. xliii) in support of the contrary, furnishing no evidence in this regard. An occasional freedom in translation is also to be noticed. Thus "royal passports" (p. 30) should be "the seal of the king." On p. 40, the reference to horses of Vanāyu is found in the Mahabhārata as well as the Rāmāyana; but Vanāyu (or Banāyu) is not certainly Arabia. Written agreements used in contracts are mentioned in Kautilya's work as they are in later law-books, but not in the earliest. On this and other grounds it still remains questionable whether the Arthaçāstra is what it pretends to be or what many scholars regard it as being. For this reason, despite its great historical value, since in any case it is a venerable document, it may not be cited as a work indubitably of the fourth century B. C., although its detailed provisions in the matter of public polity will always be of interest. It may be said in general that these provisions confirm in many respects the account of Megasthenes, as they corroborate the dicta of the Dharmaçāstra, and this fact alone speaks for the genuine character of the work as a reflex of ancient conditions, the only questions being whether it is quite as old as the fourth century and whether it may all be attributed to its reputed author.

The same publishers have just issued a little volume entitled "The Fundamental Unity of India," which professes to show from Hindu sources that the Hindus recognized a fatherland or motherland as long ago as the Vedic period and that they have always treasured the feeling of patriotism for India as a whole, probably the most improbable thesis ever maintained in a land notorious for historical fallacies. The author is Prof. Radhakumud Mookerji, who wrote the introduction to the "Studies in Ancient Hindu Polity" (above), and the English labor leader, J. Ramsay Macdonald, writes an introduction in turn for Professor Mookerji. Both the writer and his introducer urge that the "sense of nationhood" must inspire Hindus; but the Englishman merely urges the present necessity, while Mr. Mookerji patriotically, but, as we think, vainly, ascribes this sense to the ancient Hindus. As an example of the argumentation may be cited the use made of a Vedic hymn to mother earth, here utilized to show that Vedic Indians were "patriotic." Any one familiar with this hymn must smile at its employment for such a purpose. Another hymn invokes various rivers, whence is drawn the conclusion that the poet's mind "traverses the entire area of his native land and grasps an image of the whole as a visible unit and form." The colonization of Southern India is represented as accomplished by the seventh century B. C., to which date are referred both Pānini and the two epics! The Vedic ceremony of consecration of a "king over kings" reveals also (it is argued) a sense of nationhood. Hence the general conclusion that, from very early times, the political consciousness of the people had "grasped the whole of India as a unit," and that religion and political experience had led to "the perception of the fundamental unity of India." Finally, "India's gift to the world has been the fair fabric of an Empire, a Nationality, founded on the basis of Universal Peace" *(ahinsā)*. Ahinsā in fact merely implies that a man must not

wantonly injure living creatures! Universal peace was the ideal of one Buddhist Emperor, who also, like all Buddhists, inculcated the doctrine of "non-injury" *(ahinsā)*. Even in his day there was no patriotism in the modern sense; nor has India ever felt itself one homogeneous country. It has expressed no love of country in its poetry, because it has had no sense of country. Why not state boldly that India has never been bound by the narrow notion of patriotism? Its own poets say, "Where a man earns his livelihood, there is his country"; and again: "Only fools reckon this man or that as their own or foreign; the wise know that the whole earth is their home."

Students of Jewish magic will find much curious matter in "Sepher Maphteah Shelomo" ("The Key of Solomon"), edited by Prof. Hermann Gollancz (London: Oxford University Press; 42 shillings net). A facsimile of the manuscript (the only complete one known) is here given, with explanatory remarks and a few translations. The work is very old, Jewish in tone, with material taken from non-Jewish sources. The magical formulas are such as are found in all such works—they guard against all dangers and summon demons to do one's will. A complete English translation of the treatise would be welcome.

Science

PROFESSOR MÜNSTERBERG'S PSYCHOLOGY.

Psychology, General and Applied. By Hugo Münsterberg. New York: D. Appleton & Co. $1.75 net.

"It can hardly be claimed," says the author in his preface, "that a new textbook of Psychology is needed because there is a lack of new ones. . . . Yet the plan and aim of the present book are very different from all of them." The difference, he tells us, lies in the fact that his treatment covers applied as well as general psychology; includes "social psychology" as well as the "individual psychology" to which the ordinary textbook is limited; and adds to the usual "causal psychology" its complement in what he would call "purposive psychology." The author thus emphasizes again the importance he attributes to the "applied psychology" he has himself attempted to develop in a number of separate volumes, and at the same time tries to show that his mode of approach enables him to cover the field of social psychology lately brought into prominence by MacDougall and others, to whom he strangely makes no acknowledgments. But he steps beyond this in endeavoring to show that certain fields which others have found difficult to explore must be approached from a direction quite diverse from that which yields the results most familiar to the psychological student.

This last mentioned thesis, already suggested in previous works, he evidently considers the distinguishing mark of his treatment of the subject. He tells us (p. 11) "that we can try to explain mental life, and that we can try to understand mental life"; and that these two modes of consideration yield two diverse branches of psychology, viz., "causal" and "purposive." "These two accounts do not exclude each other; they supplement each other, they support each other, they demand each other" (p. 17). "The aim of the causal psychology is the explanation of the mental processes" (p. 21), while purposive psychology aims to understand their meaning (p. 287). Our author is thus including more than will be admitted to be properly included by those who would look upon psychology as the science of mind; a field that is well covered by what he calls "causal psychology." Indeed, those who would oppose his broader inclusion will doubtless contend that he is treating of metaphysical concepts in a field from which such treatment should be rigidly excluded. That this point may well be made is indicated by the subjects embraced in his survey of this "purposive" field as given by the captions of his chapters: Immediate Reality, The Soul, Meaning, Creation, Practical Relations, Ideal Relations. He tells us, indeed (p. 313), and perhaps in an effort to forestall such a criticism, "that the careful research, with all the aid of experimental and comparative methods, may just as well be devoted to the purposive aspect of mental life" as to the casual. So positive a statement from one who has all the facilities of the well-equipped Harvard laboratories at his command naturally leads the reader to look for a record in his pages of some examples of such application of these methods; and when one looks in vain one cannot but be led to conclude that the author has made an unjustified assertion, and one is thus likely to be confirmed in the conviction that this "purposive psychology" is a bit of metaphysics quite irrelevant to the subject matter the writer undertakes to treat.

Turning to the discussion of "causal psychology" to which the bulk of the volume is devoted, and bearing in mind the author's early predilection for physiological psychology, it is interesting to note that, although he holds this "causal psychology" to be necessarily based upon neural functioning, he is nevertheless willing to omit all detailed account of this functioning, and of the anatomy and physiology of the nerve system upon which it depends. This is surely a most hopeful sign; for our modern psychological textbooks have too often so emphasized this study of the nerve system that the student has come to mistake a certain branch of physiology for psychology; an error against which our author gives warning (p. 213) in calling attention to the fact that the modern "behaviorist" is not in any true sense a psychologist at all. His emphasis of the fact that the brain state corresponding with any given mental experience is determined as much by the nature of the motor outflow, if we may so speak, as by the nature of the incoming stimuli from the sense organs, is significant; but his whole treatment of this subject is colored by assumptions in relation to the nerve activities that correspond with consciousness, which were generally granted two decades ago, but which many neurologists nowadays hesitate to accept. Thus he holds the extreme view (p. 42) that "most of the brain processes are not accompanied by psychical states at all"; and rejects summarily the hypothesis of the existence of psychic states beyond the field of awareness which are generally described by the unfortunate term "sub-conscious." He would lead the reader (p. 32) to believe that "the hypothesis that there are sub-conscious ideas" has been introduced "exclusively for the purpose of furnishing a causal explanation for the mental interplay." But this is far from the truth. This hypothesis has not been devised by the theoretical psychologist for this, or any like, reason; it has been forced upon him, so far as he has accepted it, by the observations of the neurologist and the pathologist. Indeed, he has so often dogmatically blinded himself to the import of these observations that the pathologist has found himself impelled to write a new psychology which may take account of the facts thus observed; and if the latter has made a sorry mess of it, the psychologist has himself to blame.

One might mention other instances where the author is led by the theoretical positions he maintains to uphold views not warranted by the evidence. He does not hesitate, for instance, to reiterate with positiveness the very questionable hypothesis that disagreeableness corresponds with a contraction of the flexor muscles, and agreeableness with activity of the extensor muscles; restating it (pp. 199-201) in these terms: "The excitement becomes pleasant or unpleasant if it is starting a movement of approach or withdrawal."

A writer who displays such characteristics must not complain if his work fails to carry conviction, in some directions, even to one who acknowledges its brilliancy and suggestiveness. We may, therefore, be pardoned if we hesitate to accept, for example, his dicta in regard to the racial differences between the Greco-Latins (inclusive, of course, of the French) and the Teutons (p. 234), which he sums up in the statement: "The southern peoples are children of the moment; the Teutonic live in the things which lie beyond the world, in the infinite and the ineffable."

"American Natural History," by William T. Hornaday (Scribner) is a reprinted and enlarged four-volume edition of the same work published ten years ago, and reviewed at that time in the pages of the *Nation*. As such it requires little additional comment, its many excellent qualities, together with the few shortcomings, being equally magnified in this expansion. One of the most important accretions is the considerable addition of data in regard to the relative value to man, and the need for protection, of mammals and birds. This phase is brought down to date and alone forms an excellent *raison d'être* for the work. The illustrations have suffered, appearing much less crisp than in the first printing, and it is unfortunate that a work of this kind, which is of first-rate value to the layman in moderate circumstances, should be put beyond the reach of many by a *de luxe* edition.

Drama

AN APOSTLE OF THE SPECTACLE.

The Theatre of Max Reinhardt. By Huntly Carter. New York: Mitchell Kennerley.

Mr. Huntly Carter has written a book which specialists should read and others doubtless will, since it contains first-hand information on a subject on which curiosity is active and knowledge scant. Furthermore, Mr. Carter is never uninteresting, and in one section of his theme, the section comprising visual appeals in art, he makes his judgment trusted. Beyond this he does not go. For permanent valuations, for posterity in short, he manifests an unconcern which it is safe to assume that posterity will reciprocate.

The construction of the work is rather loose; it includes many pages on the history of staging, inadequately related to Reinhardt, and contributing more to the size of the book than to the elucidation of the subject. The grasp of principles is feeble. Mr. Carter does not fail, it is true, to supply the abstract catchwords, impulse, intimacy, rhythmical unity, which are the tags of intellectualism, and he is quite capable of an offhand paragraph of easy-going and lighthearted analysis, but the serious seeker for intellectual clearness must look elsewhere for his nutriment.

Mr. Carter is both art critic and dramatic critic, and, in his eyes, the second office is a branch of the first. A point of view so special and so closely analogous to Reinhardt's makes him an admirable judge of the success of the director in attaining his ends, but disqualifies him, *pari passu*, for pronouncing weighty verdicts on the ends themselves. The critique of the Reinhardt plays as spectacles impresses one as clear-sighted and even impartial, though the author's friendliness to the director makes him quick to suggest excuses for the shortcomings he is not unwilling to point out. But on the question of the rating of spectacle in the aggregate or abstract the critic vanishes in the partisan. The man who speaks with contempt of "the literary and moral theatre" (poor literature, through its addiction to bad companions, having at last incurred the opprobrium which long since overtook morality) has renounced the standards which make dramatic criticism interesting for a large section, at least of the cultivated classes. Mr. Carter has small respect for Ibsen; and a rather petulant vivacity, which sometimes rises into wit and sometimes sinks into puerility, becomes acrid on any mention of the works of Mr. Shaw.

What Reinhardt seeks and Mr. Carter approves is apparently a confederacy of many arts wherein the headship is to belong (though this is not expressly formulated), not to literature as in traditional drama, not to music as in traditional opera, but to spectacle or picture. The management of lights is to supply color; "intimacy" is to be reconciled with the amphitheatre by pushing forward the stage into the midst of the spectators; seven experts are to combine the independence of seven minds with the concentration of one in a half-mystical co-directorship known as the Will of the Theatre; and a suggestive, even an "austere," simplicity is to be obtained at a great expense of ingenuity and cash in mechanical contrivance.

The doubts that overhang the absolute value and ultimate fortune of the Reinhardt productions will not be dispelled by Mr. Carter's book. Two points of relative clearness may be noted: First, the book cannot be said to give a *death-blow* to the hypothesis that Reinhardt is nothing more than a very enterprising, resourceful, and ingenious entertainer. Secondly, it seems highly probable that, if this supposition be wrong, if Reinhardt be an original and creative artist, the art in which he works is not drama in the sense which has made that term familiar and attractive to the imagination of mankind. The emphasis on spectacle and the reversion in the newer and more characteristic productions to sensation and crudity in plot create a half-presumption that the exodus of the art of Sophocles and Shakespeare from its modern house of bondage must be effected under other leadership. Mr. Carter's book, in spite of its author's perfect readiness to re-define drama in terms of Reinhardt, leaves that presumption virtually intact.

"MARY GOES FIRST."

In the *Nation* of October 29, reviewing the edition of this play by Henry Arthur Jones published under the auspices of the Drama League of America, we drew attention to the excellence of its literary and theatrical workmanship, and the opinion we expressed as to the merits of the piece is only confirmed by seeing the presentation of it on the stage of the Comedy Theatre by Miss Marie Tempest and her company. It acts even better than it reads, and is one of the rather rare instances of a play written for a star which makes no sacrifice of art to the demands of the stellar rôle. The lightest of light comedies, its plot is of the slightest. Its conspicuous merit lies in the ingenious manner in which the situation is developed naturally from a chance remark in the first act, in the brightness of its lines, and in its clever satire on contemporary manners and politics in England. The niceties of this satire naturally can hardly be as well appreciated here as in London, but the brilliant technique of the play, the sparkle of its dialogue, and the delightful acting of Miss Tempest in a rôle exceptionally suited to her piquant personality should insure its success.

In the reign of James I baronetcies were purchasable for, if we remember aright, the relatively modest sum of £600. The price is considerably higher in our day, and the transaction less open and aboveboard. In "Mary Goes First" Mr. Jones gently satirizes the methods by which titles are obtained—the lesser titles of those who, as the late Sir Wilfrid Lawson, himself a member of the order, once said, have ceased to be gentlemen and have not become noblemen—and displays the heartburnings which may be expected to ensue in a provincial community when his Majesty has delighted to honor one of its prominent members. Mary Whichello has been the acknowledged leader of society in the fashionable suburb of an English provincial town until honest Tom Bodsworth, having presented a hospital to the community, becomes Sir Thomas, Knight Bachelor, and Mrs. Bodsworth, whom her neighbors have known as Fanny, blossoms like the rose as her Ladyship. Then, of course, she goes into dinner before Mary and, good vulgar soul that she is, is not above rubbing it in. In three acts and an epilogue Mr. Jones lets us see how the sprightly and nimble-witted Mary, outmatching her more sluggish rival in every exchange of repartee, urging on her easy-going husband to unheard-of and undesired ambitions, twisting a local lawyer and a precocious young politician round her little finger, finally regains her supremacy as social leader and becomes entitled, as the wife of a baronet, to precede Lady Bodsworth into the dining-room—a triumph, however, which in the end she good-naturedly foregoes.

Miss Tempest, as Mary Whichello, gives full value to the crisp dialogue which the author has written for her, playing the part in the true vein of light comedy. Franklin Dyall, as Richard Whichello—a rôle which ingeniously receives a new development in the second act, when Whichello's somewhat torpid ambitions are aroused by the clever prodding of his wife—and Graham Browne, as Felix Galpin, also keep well within the legitimate bounds of comedy. The same cannot altogether be said of the parts of Sir Thomas and Lady Bodsworth, which, as played by Kenyon Musgrave and Miss Kate Serjeantson, are sufficiently amusing, but are interpreted throughout in too farcical a vein, and the symmetry of the play is thus somewhat impaired. The same fault is noticeable in the Mr. Tadman of John Alexander. Other characters are interpreted adequately, if without any great distinction. Even, however, with a cast far less competent than the one which presents the piece at the Comedy Theatre, the outstanding merits of the play itself, which might almost serve as a model for the construction of light comedy, and the really delightful performance of Miss Tempest would make "Mary Goes First" one of the most enjoyable productions of the present season.

S. W.

"THAT SORT."

Mr. Basil MacDonald Hastings, who is said to have written "That Sort" with Nazimova in mind for the principal part, greatly overestimated her powers if he fancied that she could make the play seem vital. This is not to blame Nazimova, whose acting showed the possibilities of great fascination and was freer from mannerisms than her recent work had led one to believe was possible. Her enunciation, too, except for troublesome "s's" and "th's," was excellent. Yet, for all her exceptional abilities, the play dragged and appeared wrong-headed from the start; only a miracle could have raised it to the plane of solid drama.

Mr. Hastings has taken one of those rare cases against which Aristotle, a wiser man, strongly protested, as being incapable of dramatic credibility. The plot, in brief, involves the tragedy of a woman of thirty-four who, having married at seventeen and borne a child, was shortly divorced by her husband for infidelity, and, of course, deprived of the child. In the meantime, she has sunk to the depths, including the use of drugs, and just before the play opens has attempted to take her life. Why? Because it has suddenly come

over her how much she misses her child. Her mother-instinct has been thwarted, her bosom aches, and her arms are empty. It is not to be supposed that a woman, even after having led for seventeen years a life like hers, may not in rare cases feel what she does. But so remote an instance fails to catch the warm sympathy of the audience. And all that is later said with the object of bringing her into the company of her child has the ring of special pleading, instead, as it should do, of hammering on two or three conceptions which the audience can feel to be fundamentally true.

We need not recount the plot in full. After Dr. Maxwell has revived this woman from the attempted suicide, he learns her story, and is so moved that he resolves to further her wishes. It transpires that the former husband is his dear friend, Sir John Heppell, who is now remarried and is looking for a governess for the small offspring of the second union. The doctor sends Diana (such is the notorious beauty's name) to the country, and after six months, when, as he says, she is no longer Diana Laska, but now a pure, true woman, confronts Sir John with her. There is a scene, but she remains, and is much with her daughter, who, of course, does not know her identity. The big entanglement comes in the final act, when the daughter admits her engagement to Philip Goodier, of whom Diana had once been the mistress. The concluding tragedy is seen in Diana's resolution, which is precipitated by a threat from Philip, to retire from the household and to leave her daughter still in ignorance.

To our mind, the most interesting act of this silly play is the first—a fact which in itself condemns the piece—in which Diana, coming back to consciousness, reviews the sordidness of her career. Here Nazimova showed solid talent and was in all respects a fascinating, if appalling, figure. Other parts in the play, which is produced at the Harris Theatre, were taken by Messrs. Charles Bryant. Vincent Serrano, David Glassford, Wilfred Seagram, and Miss Charlotte Granville and Miss Beatrice Prentice. F.

"PAPA'S DARLING."

The musical comedy bearing this alluring title, which is presented by Messrs. Klaw & Erlanger at the New Amsterdam Theatre, though originally made in France under the title "Le Fils Surnaturel," has doubtless been considerably adapted to the supposed requirements of the American stage. It is, we should say, an almost ideal example of what that mysterious entity known as a Broadway audience is told—and presumably believes—that it wishes to see. When one has comfortably abandoned the attempt to follow the ramifications of an extremely complicated plot, wherein the paternity of a son who doesn't exist is foisted upon a succession of parents, one can view the animated spectacle with the detached unintelligence of the weary to which productions of this class are supposed to minister. The chorus is really admirable, being, in rowing parlance, well together, and presenting a standard of personal attractiveness both in natural charms and in the external adornment of costume that is considerably above the average. Of the principals, only one comedian, Frank Lalor, is at all interesting; there is nothing startling about the book, and the music, though pleasing enough, is frankly of the reminiscent order. In view of these facts, and particularly in view of the disproportionate excellence of the staging and chorus, the idea suggests itself that the logical development of this type of musical entertainment would be to dispense altogether with principal and book and to present, possibly under the leadership of a χορηγός, a succession of ensemble movements by the chorus, harmonious in color and action, and chanting ditties that are calculated now to soothe and anon to stimulate the jaded nerves of a Broadway audience. S. W.

"SUZI."

Possessed of a spacious setting of summer gardens at Budapest and of a large mixed chorus, "Suzi" gave promise, at the rise of the curtain, of developing into an ambitious musical comedy. But it soon settled into the humdrum affair which this sort of spectacle so often is. The plot, what there is of it, is well enough. A young man who has hitherto been indifferent to love is desired by his father to marry a wealthy countess. When he refuses, the father undertakes to turn his thoughts in that direction by arranging a flirtation for him with some mythical beauty. But the son has just become aware of the charms of Suzi, a prima donna, and resents any interference, not suspecting that Suzi is the person whom the father is using as a tool. Of course, it turns out that the Countess marries the father, a widower, and that the son and Suzi are left to undisturbed bliss.

Jose Collins, as Suzi, gave an adequate performance, though her voice would have been more pleasing if she had not resorted so frequently to a falsetto note. The play is presented by Lew Fields at the Casino. F.

"LIFE."

There is little to commend itself in "Life," the melodrama-spectacle recently presented by William A. Brady at the Manhattan Opera House. It is neither impressive nor is it thrilling, and its great length—for it plays nearly four hours—makes it tiresome. If you like schemes, stratagems, and spoils, virtue horribly wronged, villany enjoying for a time the fruits of its sin, and meeting inevitable retribution, or heroic innocence languishing in durance vile, you will find some elements in "Life" to hold your interest. But you will find it exaggerated, ludicrous, and out of drawing.

As a four-reel drama for the "movies" the production would be infinitely more satisfying than in its present form. For instance, the automobile pursuit in Act III would be made something more than an illusion, and the wreck of the pursuing car something more than a pretence. Motion pictures are employed, in fact, but these, though intended to move the action, serve merely to cover intervals between changing scenes. A certain crudity in stage management also robs the piece of any impressiveness it might otherwise have. The scenery is flimsy. Doors that should be rigid wave annoyingly and back drops shake. Moreover, there is something wrong in the selection of the cast when not one out of a great mass of characters is worthy of mention. A grave error on the part of Mr. Thompson Buchanan, who wrote the piece, is that he has apparently worked it out with the thought that mere sensationalism is spectacular.

The reception accorded to the production indicates that it may meet with approval.

L.

Art

THE NEW PAINTING AND THE MUSICAL FALLACY.

By FRANK JEWETT MATHER, Jr.

It is an odd reversal of usual conditions that the French writers on the new painting, MM. Apollinaire, Gleizes, and Metzinger, should be hopelessly unintelligible, whereas the most distinguished German practitioner and critic of Post-Impressionism, Wassily Kadinsky,* is entirely lucid. Some power there must be in a movement that makes a French critic obscure, a German transparent. We have Kadinsky's "The Art of Spiritual Harmony" in Mr. Sadler's excellent English, well printed and adorned with a number of incoherent scrawls by the author, which presumably express the harmony of his spirit. Again we touch paradox. Why should anything so emphatic and plain as French Post-Impressionism and Cubism inspire the blindest of writing, whereas Kadinsky's systematic organon of painting eventuates in an art wholly cryptic? We may waive such inquiries in favor of an immediate consideration of Kadinsky's doctrines. Since they are clearly formulated, they invite inspection on their own merits, and quite regardless, for the moment, of the art they purport to justify.

Creation grows out of the artist's "Inner Need." This is the fundamental axiom, and, naturally, it presupposes an untrammelled individualism in which the Inner Need shall not merely arise, but also fully wreak itself. At first blush, this is merely the familiar Romantic theory of the artist as self-sufficing titan. But both in theory and practice the Romantic artist never was quite unconditionally titanic or self-sufficing. His volcanic and imperative emotions he drew, after all, from his reactions to the immense variety of nature, to the extreme joys and horrors of the world of man. Here the Post-Impressionist parts company with the mere Romantic. The Inner Need may grow out of the artist's wider experience, but preferably should not. It is an isolated specialized stress which finds within itself both the motive and the materials for creation. This is what the French modernist critics mean when in their single intelligible phrase they demand *la peinture pure*. It should be complete, that is, within the original creative impulse, should be free from contamination of any sort with the artist's usual associational life. Kadinsky merely varies the notion when he claims for painting the freedom of the art of music.

In the analogy of painting and music consists the most interesting part of his essay, but before going on to this, the primary axiom of the Inner Need should be closely examined. In bluntest words, the notion of a specialized emotion, creative or otherwise, wholly shut off from the residual feeling and thinking is merely bad psychology. You

**The Art of Spiritual Harmony.* By Wassily Kadinsky. Translated with an Introduction by M. T. H. Sadler. Illustrated. Houghton Mifflin Co. $1.75 net.

cannot thus parcel out an individual. All experience is knit together; it is in vain that one minimizes or denies the bond. The Inner Need draws from the whole life, and is part of it. Relatively, the Inner Need can be isolated, by a manner of starvation. That is, the artist may keep out of his creative stress all the normal associations, paint, as it were, with a chosen fraction of himself. This seems to be what the modern artists are doing. Indeed, the command to obey the Inner Need, and only it, could in practice simply mean that the artist is to avoid his commoner range of associations and work from exceptional and precious associations. Taken sensibly, such counsel is merely that of selection. Artists at all times have been supposed to practice that. Taken fanatically, the counsel is merely to prefer the most recondite and exotic part of the self. The eccentricity of the modern painting shows clearly the sense in which the maxim is actually taken. Here there doubtless is some element of self-deception. After a long course of thinking out oddities with pains, the artist may be able to convince himself that the oddities came spontaneously. Doubtless, a skilful and short-minded performer might persuade himself that he was born a tight-rope walker. Genetic science would, however, hardly believe him.

Though the maxim that the artist emits art from an isolated emotional apparatus, quite as the firefly emits phosphorescent light from his tail, must be rejected, it is plain enough that the artist can do very odd and apparently unprecedented things. These are, however, unprecedented only because our knowledge of the artist's consciousness is incomplete. A thorough analysis would show that he merely is distorting and recombining his obscurer and, to him, more precious experiences. If these have any universality in them, the work will have value, but probably not highest value. The highest art is central. As a matter of fact, most of the new painting, though it has its happy audacities, remains trivial, the product of a sophistical dualism which attempts to isolate the artist from the whole man. Yet the command to be odd, avoid natural appearance, eschew commonplace of all sorts, may have most pragmatic significance. Young talent is rallying in force to this standard. But the fact holds that it is better to live in the whole than in a part, and we shall never have any really important art from the new movement until the Inner Need consents to keep company with life as a whole.

It is probably some inkling of the irresponsibility and ultimate sterility of the Inner Need that has led some of the strongest young painters to have recourse to external and quite arbitrary disciplines. Cubism, Pablo Picasso's ingenious adaptation of fourth-dimensional geometry, is a characteristic case. Kadinsky seeks his discipline in a kind of grammar of form and color which usurps the terms not of geometry, but of music. An arrangement of simple forms is "Melodic," and arrangement of complex forms and colors "Symphonic." The colors have definite spiritual values, affinities, and oppositions. Blue and yellow are antipodal, symbolizing respectively the most mysterious and the most obvious sentiments. The compromise, green, is the mundane average, good to live with, but refractory as material for art. Throughout, the colors and their relations may be equated with the musical notes and their harmonies, or more accurately the colors resemble the several instruments in the orchestra. Music is the best teacher, for, above all other arts, it has eschewed imitation and has devoted itself "to the expression of the artist's soul in musical sound." Accordingly, the painter who renounces mere representation, and longs to express his inner life, "cannot but envy the ease with which music, the most non-material of the arts to-day, achieves this end. He naturally seeks to apply the methods of music to his own art. And from this results the modern desire for rhythm in painting, for mathematical, abstract construction, for repeated notes of color, for setting color in motion."

So, too briefly, we must epitomize what Kadinsky explains at length with eloquence and evident conviction. We may add that he distinguishes three grades of art: the Impression, which is any representation of outer reality, and is regarded as a permissible but inferior stage; the Improvisation, which is a quick and summary expression of the Inner Need—it is the name which he modestly gives to most of his own pictures—and the Composition, which is a matured and pondered expression of the Inner Need. These definitions, as against the impulsivist dogmas of French Post-Impressionism, have the merit, first, of leaving for representation a place, if an humble one, and, next, of vindicating against the current dogma of emotional immediacy the sway of the intellect in art.

Indeed, there should be small quarrel with Kadinsky's definitions, as descriptive of a certain type of art. As a general æsthetic, however, the doctrine has manifest defects. It entertains the illusion of an artistic, creative faculty apart from the personality as a whole, and it denies the principle of relativity which affects all the arts, that of music included. Music itself does not play with fixed abstract terms, such as Kadinsky wishes the colors to be. An oboe, for instance, is neither a sad nor a glad instrument; it all depends on circumstances. The 'cello, and even the double bass, are highly serious or most playful instruments, according to context. The minor intervals may be the basis either of the most plaintive ballad or of the topical song. Syncopation is the mark of the impassioned czardas and of the comico-sentimental "coon" song. So when we speak of a canon of the instruments or harmonies or rhythms, we mean only typical or frequent effects, admitting all manner of exceptions. It is only in an incomplete sense that we can agree with Schopenhauer that music is "an immediate symbol of the will itself"—*unmittelbar Abbild des Willens selbst*. For an art that must express itself through the most complicated and severe conventions cannot be truly an "immediate" symbol of anything. Music is merely the most detached of the arts, a landmark art, the bearings of which may readily be found. Much of the modern confusion of counsel comes from taking spontaneity and effectiveness, which have always been desired, for immediacy, which is psychologically impossible.

If this be true of the relatively uncondi tioned and mathematical art of music, how much more is it so of the highly conditioned art of painting. In a sense, the musical notes are an abstraction without reference to the sounds of external nature—which will only rarely coincide with the notes of the scale—but every conceivable color and form has manifold reference to similar hue and shape in visible nature. There are what we may call unapplied notes and harmonies, there are no such unapplied forms and colors. At best, we can have only odd or novel rearrangements of the forms and colors already in nature. In short, the detachment from everyday reality which the musical composer gets of right and by the very nature of his material, the painter only achieves by a wilful act of forgetfulness, by refusal to link his raw material with its source. More definitely, what shall we say of the dictum that blue is a remote mysterious color? Sir Joshua Reynolds, holding this view, forbade the color in foregrounds. In retort, Gainsborough painted the admirable Blue Boy. He might as well have cited any one of a thousand madonnas with azure mantles. Blue is a remote and mysterious color in the Alpine background of the Mona Lisa; in her robe, it is a proximate and explicit color. With justice the negro speaks of "plain red and yellow," but consider these colors in a Japanese print or in one of Turner's skies. In short, any color may take on the most varied emotional values, just as the bow may draw from a single note of the violin the most various shades of feeling. Of necessity this is the case, for colors and notes alike are inexpressive until charged with human emotion, an emotion which surges up, not from a fractional part of the personality, but from the whole man.

The whole issue is whether the impression of art is weakened or strengthened by alliance with the associational life. Is our task as artists and amateurs resolutely to shut off all associations that gather about the enjoyment of art? to accept such associations without criticism? or finally to regulate and command the associations that are relevant to the particular æsthetic experience? The modern artists generally are following the first course and are impoverishing their product by depriving it of reinforcing associations; the average man has always followed the second course, losing the specific æsthetic experience in a maze of his own sentimentality; the artist and the man of taste at all times have tried to follow the third course, discriminating between the associations that are or are not relevant to the particular impression of art.

This course, being one of compromise and technical adjustment, is repugnant to absolutists of all sorts. It has too much humanity and common-sense in it to be generally acceptable to-day. It requires of the layman that he take the pains of thought and taste, of the artist that he accept the complication of being also a man. Thus both the naïve and the doctrinal impulsivist are offended. The man who "knows what he likes" finds himself in logical if uncongenial fellowship with the life-renouncing artist. In fact, the quest of "pure painting" has much the look of an evasion. In a normally realistic or traditionally imaginative art there are so many ways of going wrong, so many chances of error and stupidity, so small a percentage of originality and conspicuous success. Such are the hard conditions with which the artist has coped cheerfully for some thousands of years, and with considerable success. But modern times have bred a new type of artist, no longer an accepter of the conditioned world of humanity, but a yearner for free and unconditioned and creative existence. "Since the actual world is hard and intractable," he seems to say, "I will emigrate to a world within myself where I shall create both the conditions and the work of art. I will be master in a world all my own." Such a programme is merely a belated phase of the old counsel of romantic isolation. Your titan, unlike all other living organisms, thrives only in a vacuum.

To say that the modern artistic revolt is wholly wrong in theory, being in the main simply a refurbishing and accentuation of romantic dogmas already disproved, is by no means to condemn it utterly. In matters of art, despite Leonardo da Vinci, plenty of strong work has based itself on weak theory. By nature the artist is little of a doctrinaire, and his choice of doctrines is often casual and only lip-deep. But, so far, the modern movement has, in my opinion, produced no considerable works. There are improvisations of a novel and exciting sort, there is a febrile and ill-regulated vitality, not without its attractiveness. As yet, except for the calculated pedantry of the Cubists, modern painting has not passed from what Kadinsky calls the Improvisation to the Composition. Matisse and Kadinsky are doing a good deal what Tintoretto and similar impetuous temperaments did in their more casual moods and in hasty sketches which later were to be refined and developed. The defect of the modern artist, in his extreme phase, is lack of masterful adjustment to the modern world. His disposition is an anti-social one. Until he comes to an understanding with life, his art at best is doomed to eccentricity, at worst to sterility. The vacuum is not really habitable, even by the titan.

This is not to say that the seeker for pure painting may not be an appealing and even a significant figure, as he signals to himself in the void. He is at least the eternal voice of protest against the commonplace, in some incomplete fashion an apostle of the ideal. When he learns that the commonplace and the normal are by no means identical, and that within the normal the ideal has ever been comprehended, he may produce works of lasting value. Meanwhile, his very aberrations may serve as tonic and irritant to an official art, itself unduly detached from society and tradition, and confessedly gone rather stale.

Nor need we wholly deplore the prevalence of the musical fallacy. In a cyclic order of events it was due. For centuries painting has been closely bound to literature, generally for its good, but in later time, as literature itself lost religious and public significance, very much for its hurt. As painting sought to liberate itself from literature, the art nearest to life, it was natural that it should turn to music, the art farthest from life. On the whole, the new association has not been a fruitful one. In the nature of its materials, painting is more affine to literature than to music. Forms, colors, and words are common coin of sensory experience, while notes and harmonies are not. The search for the abstract in painting is based on a false analogy with music, which is daily discrediting itself in practice. Painting, when it returns to literature, should find the former tyrant become a faithful and serviceable ally. In the analogy of painting and music there is no standing ground, yet the fallacy may have served its turn, just as a lurch into reckless individualism may be a wholesome temporary experience for a man overtrammelled in the social nexus. Art advances not by reasonable approximations, but by these rather violent reactions. The Tenebrists, who reacted against Raphael, produced little work of enduring worth, yet they opened the way for Velasquez. So there may well be some pioneer quality in the eccentries of to-day. But when the new and finer art comes, we may be sure that it will be free from eccentricity, free from dependence on the only remotely kindred art of music, free also from undervaluation of the inexhaustible variety and suggestiveness of external nature.

Finance

THE FIVE PER CENT. CASE REHEARING

Previous to the passage of the Hepburn Act in 1906 there was no provision in the Interstate Commerce Act for a "rehearing" of rate cases. By the Hepburn Act it was provided that after any decision has been made by the Commission any party may make application for a rehearing of the case, and the Commission may grant such rehearing if sufficient reason appear to exist. It was also provided that after such rehearing and a consideration of all facts, including those arising since the former hearing, the Commission may reverse, change, or modify its original decision or order.

Acting under these provisions, the railways in official classification territory asked on September 15 for a rehearing of the "5 per cent. advanced rate" case which the Commission had decided on July 29, and asked a modification of the order made on that date so as to permit the tariffs as filed by the companies with the 5 per cent. advance to go into effect. The "new facts and circumstances" alleged by the carriers in their petition were three, viz.: (1) the complete financial returns of the thirty-five systems for the fiscal year 1914, (2) the European war, and (3) the apparent insufficiency of the remedies suggested by the Commission other than the horizontal increase in freight-rates proposed by the railways. The Commission granted the rehearing, setting the date therefor as close as the law would permit, and hearings began on October 19, terminating on October 30.

The carriers presented complete financial exhibits for the fiscal year 1914, the chief feature of which was the heavy falling off in "return on property investment," i. e., in the ratio of net operating income to cost of road and equipment. This ratio in 1914 fell below that shown in any of the preceding fifteen years, so far as the combined thirty-five systems were concerned, and it was contended by the carriers that it demonstrated a most critical condition of their affairs. They also put in evidence the operating returns for the months of July and August, which showed continuance of declining business and forced economies in operation.

They further presented expert testimony on the effects of the European war, Mr. Charles A. Conant being the only witness directly called by the carriers. Mr. Conant made an elaborate statement to show the probable effects of the war upon the cost of new capital in the future and the greatly increased competition that would exist for such capital as was available. Broadly speaking, the carriers asserted that this increase in capital cost was one of the factors in making increased costs of transportation, and, therefore, was an additional reason for advanced rates. At this point an interesting development was intervention by the Investment Bankers' Association, which sent several of its officers and counsel to the hearing, with a demand that they be heard. Mr. Frederick Strauss, Mr. Lawrence Chamberlain, and Mr. Oldham were the principal witnesses presented by the Association, and the burden of their testimony was to the effect that railway credit was at the heart of the entire investment structure in America, that investors were losing confidence in railway securities, that the emergency brought about by the war had greatly aggravated the condition of the carriers, and that it was the plain duty of the Commission to do all that was in its power to remedy the situation.

The companies concluded the case with evidence concerning the probable increase of revenues to be obtained from adoption of the various suggestions made by the Commission other than a direct horizontal increase in freight-rates, the general purport of this testimony being to show that only a small amount of money could be immediately realized in this way.

Mr. Louis D. Brandeis, special counsel for

the Commission again appeared as substantially opposed to the railways' plea, and by cross-examination of the various witnesses, as well as by his concluding argument, made it plain that he had not greatly altered his views since the original hearing. Mr. Clifford Thorne also cross-questioned witnesses and argued on his familiar lines, professing to represent several Western States. Various shipping interests, notably the Pittsburgh Coal Company, were directly represented as protesting against the proposed tariffs so far as their own particular commodities were concerned. Arguments by both sides closed the hearing on October 30.

The general impression is that decision will very soon be made on the petition of the railways. While, of course, nothing has transpired as to the opinions of members of the Commission, the reversal by that body of its position in what has been known as the "industrial lines allowances" case, announced last week, has led a good many observers to conclude that in all probability some further relief will be granted to the companies. Cancellation of allowances to what are known as "industrial lines" was one of the methods relied upon by the Commission for increasing the revenues of the railways, and an order was made last spring directing such cancellation. It was estimated at that time that something like $15,000,000 would accrue annually to the railways therefrom. Opposition of State commissions and the decision by the Supreme Court in what is known as the "tapline" case have compelled the Interstate Commission to revoke the decision made in the spring, and the relief expected from that decision will not now be available.

Commissioner Harlan, who wrote the report in the original 5 per cent. case, did not sit with his colleagues in the rehearing, and it is not known whether he will or will not take part in deciding the present case. Commissioner Clements acted as chairman, in the rehearing, and took an active part in the questioning of witnesses. In the original case Messrs. Harlan, Clements, Meyer, Clark, and Hall constituted the majority returning the decision. Messrs. McChord and Daniels dissented, the latter in radical fashion, from the majority opinion.

Ready This Week

CHARLES STEWART PARNELL: (A Memoir of My Brother) **By John Howard Parnell**

An intimate, authoritative, sympathetic biography. $3.00 *net.*

MOTHERS AND CHILDREN **By Dorothy Canfield Fisher**

By the author of *"A Montessori Mother," etc.* $1.25 *net.*

THE CURVES OF LIFE **By Theodore A. Cook**

With 15 plates and 415 other illustrations. $5.00 *net.*

Mr. Cook uses the spiral formation (and especially the Phi Spiral, or ratio of Pheidias) as a kind of key, not merely to natural phenomena, but to artistic and architectural phenomena as well. The work is largely based on the speculations contained in the manuscripts of Leonardo da Vinci. The book contains a valuable letter from Mr. Alfred Russell Wallace and a warm recommendation from Sir E. Ray Lankester.

Fiction

PELLE THE CONQUEROR: APPRENTICESHIP

By Martin A. Nexö. Translated from the Danish. Uniform with *"Pelle the Conqueror: Boyhood."* $1.40 *net.*

This is the second volume in the series of four that are to picture the life and career of a great modern Labor leader, as "Jean-Christophe" pictures the musical genius. Each volume is a complete novel in itself.

"Possesses the literary qualities that burst the bonds of national boundaries."—*Springfield Republican.*

THE LEGEND OF THE SACRED IMAGE

Selma Lagerlöf

A story of inspiring faith, in the manner of the author's other *"Christ Legends."* Translated by Velma S. Howard. 50 *cents net*

HENRY HOLT & COMPANY, 34 West 33d St. New York

To be Published Immediately

Treitschke

12mo. Cloth. $1.50

Treitschke's own writings (translated from the German), in which his Pan-Germanic doctrine is amply evidenced. This volume shows how the premier German historian marshalled his forces to perpetuate his all-German ideas, and how the present teutonic "kultur" has its roots deep in the past.

Partial contents: The Army—International Law—German Colonization—The Two Emperors—In Memory of the Great War—Germany and Neutral States—Austria and Germany—German View of Russia—On Liberty. Life of Treitschke by his intimate friend Hausrath.

Lord Acton pronounced Treitschke to be "the one writer of history who is more brilliant and powerful than Droysen." "He writes," he continues, "with the force and fire of Mommsen. He accounts for the motives that stir a nation, as well as for the councils that govern it."

New York 2 W.45th St. G. P. Putnam's Sons London 24 Bedford St.

PROBLEMS OF SCIENCE

By FEDERIGO ENRIQUES. Authorized translation by Katherine Royce. Pp. 300, 8vo; cloth. Price, $2.50.

The author is professor of projective geometry in the University of Bologna and is one of the most conspicuous of contemporary Italian scientists. Dr. Royce says "this book is by far the most thorough and synthetic treatment of the problems of scientific methodology which belongs to recent years."

"The work before us is perhaps the most considerable contribution to the discussion since Mill."—*The Nation.*

Professor W. B. Smith, Tulane University, says: "I propose to use Enriques's 'Problems of Science' as the basis of a course in scientific philosophy."

OPEN COURT PUBLISHING CO.
CHICAGO.

An English Grammar

FOR USE IN HIGH AND NORMAL SCHOOLS AND IN COLLEGES.

By ALMA BLOUNT, Assistant Professor in the Michigan State Normal College, and CLARK S. NORTHUP, Assistant Professor in Cornell University. (*Progressive Studies in English, IV.*)

xii+375 pp. 12mo. 80 cents.

The present volume carries on the method of *Progressive Studies in English*, with application to the needs of more advanced students, and assumes such knowledge of the subject as would be obtained from the study of an elementary text-book.

Discussions of idioms are from the historical point of view, and follow recent explanations in scholarly books and journals.

"A Chapter for Teachers" gives the book special value for normal school classes.

The Religion of the Hebrews

By JOHN PUNNETT PETERS

Rector of St. Michael's Church, New York City.

This recent book in the series of "Handbooks on the History of Religions" is the first work in English to treat with any degree of completeness the history of the religion of Israel. The author has devoted some twenty years to its preparation. First a student of the Semitic languages here and abroad, then a professor of Hebrew and of Old Testament interpretation, he afterwards became an explorer and excavator in Bible lands. He has thus been able to combine the study of the text with a knowledge of the land, the monuments, the habits, and the folklore of the people whose religion he here traces.

502 pp., with chronology, bibliography and indexes, $2.75

REPRESENTATIVE BOOKS
FROM THE
HARVARD UNIVERSITY PRESS

MUNICIPAL CHARTERS

By Nathan Matthews, LL.D., Mayor of Boston, 1891-95. Chairman of the Boston Finance Commission, 1907-09, and Lecturer on Municipal Government in Harvard University.

8vo. Law buckram. 203 pages. $2.00 net.

From the standpoint of thirty years' experience in municipal politics, the author has prepared a practical handbook of charter-making. A large percentage of political wrongs, he thinks, might well have been avoided, had adequate methods of administration been compelled by law. To this end he treats the city first of all as a business corporation, and drafts specimen charters, of both the Commission and the Responsible Executive Type, which he has made, with slight adaptations, available under the laws of any State. It is a hopeful and constructive review of the phases of city government native to this country, and in harmony with the principles of representative democracy.

"It is by no means an academic treatment that Mr. Matthews gives, but a very practical one. As working plans his theories are progressive, though he is conservative on some points."—*Boston Evening Transcript.*

THE GOVERNMENTS OF FRANCE, ITALY AND GERMANY

By Abbott Lawrence Lowell, LL.D., Ph.D., President of Harvard University.

8vo. Cloth. 230 pages. $1.25 net.

An abridgment and revision of the author's well-known "Governments and Parties in Continental Europe." Although prepared in order that certain portions of it, particularly those which deal with the framework of government in France, Italy, and Germany, may be more easily used in college classes, it is in no sense a text-book, and provides a notable survey, concise and authoritative, of governmental machinery in the chief states of the Continent.

"Lowell and Bryce are, in short, for the whole English-speaking world, the leading constitutionalists of the day."
—A. V. Dicey, in *The Nation.*

SCIENTIFIC MANAGEMENT

Edited by C. Bertrand Thompson, LL.B., A.M., Lecturer on Manufacturing in Harvard University.

8vo. Cloth. 878 pages with diagrams. $4.00 net.

There has been a widespread demand for more detailed information regarding the practical phases of Scientific Management than has ever been given. There has been need, too, of a treatment which shall take up all sides—those of president, manager, employee and expert—and make possible something like a complete view of the subject. This it has been the aim of the present compilation to present—a selection of the most significant articles that have ever appeared on Scientific Management, including many that are not easily accessible elsewhere.

VITRUVIUS: THE TEN BOOKS ON ARCHITECTURE

Translated by the late Morris H. Morgan, Ph.D., LL.D., Professor of Classical Philology in Harvard University. Edited by A. A. Howard, Pope Professor of Latin, and H. L. Warren, Robinson Professor of Architecture in Harvard University.

4to. Buckram. 331 pages, with illustrations. $3.50 net.

No other treatise has ever exercised such an influence upon the classical tradition in architecture. From the early Renaissance, from Bramante, Michelangelo, Palladio, and Vignola, until the last century, the architecture of almost all European countries has owed much to this work.

FORTHCOMING PUBLICATIONS

A BIBLIOGRAPHY OF MUNICIPAL GOVERNMENT. By William Bennett Munro, Ph.D., LL.D., Professor of Municipal Government in Harvard University.

THE TRUST PROBLEM. By E. Dana Durand, Professor of Statistics in the University of Minnesota.

SOME ASPECTS OF THE TARIFF QUESTION. By Frank William Taussig, Ph.D., LL.B., Henry Lee Professor of Economics in Harvard University.

EUGIPPIUS: THE LIFE OF SAINT SEVERINUS. Translated by George W. Robinson, A.B., Secretary of the Graduate School of Arts and Sciences in Harvard University.

HARVARD UNIVERSITY PRESS

CAMBRIDGE MASSACHUSETTS

STUDIES IN MILTON AND AN ESSAY ON POETRY

By Alden Sampson, A.M. (Harvard University)

The right of publication in England has been purchased by Mr. John Murray, London.

Illustrated with a wood-cut by Timothy Cole, N.A., from the bust in clay of Milton, at Christ's College, Cambridge, England. 8vo. 320 pp., uncut—$2.00 net.

COMMENTS OF THE PRESS

"The appearance of this book seems to us of happy augury. . . . Mr. Sampson knows his Milton thoroughly, but he loves him even more thoroughly. He writes with the public in view, yet he never descends, either in style or in substance, to a presentation of his great theme that suggests thinness or smartness. On the contrary, fulness of reading and depths of loving meditation are evident on almost every page."—**The Nation, New York.**

"Discursive studies written by a careful Milton scholar in a spirit of enthusiastic appreciation for the pure quality of poetry, as far as possible removed from ordinary dry-as-dust criticism."—**American Library Association Booklist, Chicago.**

"If there should ever be a Miltonic revival, the Recording Angel will doubtless make a large credit entry under the name of Mr. Alden Sampson. His 'Studies in Milton and An Essay on Poetry' is easily the best thing of its kind that has yet been written of the Cromwellian poet. It is so good because Mr. Sampson's heart is evidently in his work. He is not merely a Milton student, but a Milton lover, and therefore he writes not only with knowledge but with reverence."—**The Argonant, San Francisco.**

"We take it as promising that such a volume as Mr. Alden Sampson has given us is sure and stimulating evidence of rapidly approaching grace and strength in letters. . . . Mr. Sampson, besides realizing the happier truths about Milton and the art and craft of the poets, brings some new lights to bear. . . . (His) estimate of this poet and of all makers of poetry is brilliantly suggestive. . . . Mr. Sampson with this timely book—admirably written, stimulating, and necessary—reminds us of the source of inspiration and spiritual refreshment which is ever in our hands."—**The Saturday Review, London.**

"There will always be room for a book like this inspiring essay, which studies Milton from the point of view of the most refined American culture of these days, a culture which, inheriting its philosophical traditions from the Concord School, and always valuing the finest monuments of English poetry with a reverence akin to that felt by modern men of learning for the masterpieces of the ancient world, has not a little in common with the specific genius of the greatest poet of Puritanism."—**The Scotsman, Edinburgh.**

"Mr. Alden Sampson's 'Studies in Milton' is one of those rare volumes of literary criticism the reading of which leaves us enriched not merely by the possession of the critics' ideas on their subject, but also by new and fresh knowledge of the subject directly. . . . It is a genuine study of the growth and development of Milton's genius and personality as manifested by the chronological order of his works, and the events of his life are only treated by Mr. Sampson in so far as they, directly or indirectly, actually influence his work. . . . The search through Milton's later works for a 'confession of faith' is an alluring task for critic and theologian alike, and Mr. Sampson is peculiarly fitted for the task and does it well. He proves every point by full and apposite quotation, and, to our mind, he has proved his case. . . . The unerring certainty and perspicuous clearness of Mr. Sampson's reasoned judgments upon the most sublime singer of English poetry."—**The Irish Times, Dublin.**

MOFFAT, YARD & CO., 116-120 W. 32d St., New York

INTERNATIONAL PERSPECTIVE IN CRITICISM:

Goethe, Grillparzer, Sainte-Beuve, Lowell

By GUSTAV POLLAK

"It is restorative of one's mental equilibrium to turn aside and linger in this temple of literary concord erected by Austrian, French, German, and American builders who in the higher brotherhood of men worshipped together."—*The Nation.*

NOW READY

OUTLINES OF EUROPEAN HISTORY

PART I.

By JAMES HARVEY ROBINSON, Columbia University, and JAMES HENRY BREASTED, the University of Chicago.

730 pages, illustrated, $1.50

This volume covers Oriental, classical, and medieval history to the beginning of the eighteenth century, setting forth vividly those fundamental principles most essential to an understanding of subsequent history. In style, in illustration, in organization, this book sets a new standard of achievement. The abundant illustrations with their detailed legends give the volume a unique value either for study or for reference.

THE HISTORICAL CHRIST:

or, An Investigation of the Views of Mr. J. A ROBERTSON, Dr. A. DREWS and Prof. W. B. SMITH.

By FRED CONYBEARE, M.A., F.B.A. Pp. 235, 8vo; cloth. Price, $1.50 net.

Whenever a book appears that aims to be a middle ground in scientific criticism of that much discussed question, The Historicity of Jesus, you may be sure it will be instantly attacked by both sides to the controversy. In this present instance the orthodox writers are very much pleased to find that Conybeare deals the Christ Myth idea a smashing blow. As a perennial challenge, Jesus is perhaps the most attractive figure for modern apologists.

JUST PUBLISHED

HARRIS'S GERMAN GRAMMAR

By **Charles Harris**, Ph.D., Professor of German, Western Reserve University.

$1.00

A grammar for high school and college students who already have some acquaintance with German. It takes up first the inflection of the language, then its syntax, and lastly the formation and derivation of words. The standard of usage considered is good present-day prose. Important deviations in colloquial speech are mentioned. Illustrative examples from many sources are freely used. This new book will prove equally adapted for class study, for review work, and for reference.

AMERICAN BOOK COMPANY
NEW YORK CINCINNATI CHICAGO

THE WAR IN EUROPE

By ALBERT BUSHNELL HART

A clear, comprehensive unprejudiced book on the war, its causes and probable results.

$1.00 net.

D. APPLETON & COMPANY, Publishers, New York

The Curious Lore of Precious Stones

BY GEORGE FREDERICK KUNZ.

With numerous plates in color and double tone. 8vo. Cloth, Boxed, $5.00 net. Carriage extra.

Being a Description of Their Sentiments and Folk-Lore, Superstitions, Symbolism, Mysticism, Use in Medicine, Protection, Prevention, Religion and Divination. On Crystal Gazing, Birth Stones and Royal Jewels.

J. B. Lippincott Co., Philadelphia, Pa.

UNIVERSITY OF CALIFORNIA

Lists of publications in sciences, philosophy, philology, history, economics, will be sent upon request.

NOW READY. Revised and Enlarged Edition, with additional new matter and Colored Map, of

Mr. D. C. WORCESTER'S Important Book

THE PHILIPPINES: PAST AND PRESENT

By the Hon. DEAN C. WORCESTER

Secretary of the Interior, Philippine Insular Government, 1901-13; Author of "The Philippine Islands and Their People," etc.

A new chapter of nearly fifty pages reviews the first year of the "New Era" in the Islands. "The author is the one man on earth who knows most about the subject . . . an authoritative work. . . . an invaluable addition to the world's knowledge."—*Lieut.-Col. Charles E. Woodruff in The New York Times.* "An entertaining record of good work in all departments—civil and military. The effect on the reader must be to make him proud of American humanity."—*Cleveland Leader.* "No person interested in the Philippines and the problems that confront our government there can afford not to read this book of real value."—*Boston Globe.*

Two volumes. Richly illustrated. $6.00

A WANDERER IN VENICE

By E. V. LUCAS. The "Wanderer" books in Florence, London, Paris and Holland of Mr. E. V. Lucas have made many friends. His new book, "In Venice," with its vivid and appreciative text, illustrated with color and monochrome plates is perhaps the most fascinating of all.

Illustrated. Decorated covers, $1.75; leather, $2.50

PANAMA: THE CANAL, THE COUNTRY AND THE PEOPLE

By ARTHUR BULLARD (Albert Edwards). New Revised Edition with additional chapters and new illustrations. "The most authoritative and up-to-date of any book yet published on Panama."—*The Outlook.*

Illustrated. Decorated covers, boxed, $2.00

JAPAN TODAY AND TOMORROW

By HAMILTON W. MABIE, author of "American Ideals, Character and Life." "The spirit, temper and genius of the Japanese attractively described, and their varied interests and future aims clearly defined."

Illustrated. Decorated covers, boxed, $2.00

HOW THE WORLD WAR BEGAN

By ELBERT FRANCIS BALDWIN. A work which sets forth without bias the real causes of the Great European War, from the viewpoints of the different countries involved.

Ready shortly

WHY IS THE DOLLAR SHRINKING?

By IRVING FISHER. "Professor Fisher has done his work admirably; this book should be in every library and in every home in the land, for it discusses a subject of vital importance to all."—*New Haven Times-Leader.* ***$1.25***

ECONOMICS OF EFFICIENCY

By NORRIS A. BRISCO, author of "Economics of Business." The essentials of the science of efficiency analyzed and explained, and the methods of applying its principles to obtain increased efficiency clearly pointed out. ***$1.50***

THROUGH THE GRAND CANYON FROM WYOMING TO MEXICO

By ELLSWORTH L. KOLB. Introduction by Owen Wister. "The most interesting narrative of travel and adventure ever written of this great scenic wonder. Describes the first trip made successfully through the Canyon with a camera."

Richly illustrated. $2.00

CALIFORNIA

By MARY AUSTIN. With illustrations in color by Sutton Palmer. "A book in whose making two persons of genius have contributed of their best. Taken together, the work of artist and writer makes this a book in which all Americans will delight."

Illustrated. Decorated covers, boxed, $4.00

PROGRESSIVE DEMOCRACY

By HERBERT CROLY, author of "The Promise of American Life." "An illuminating analysis of the modern progressive democratic movement, with a reconstruction of its historical background and a forecast of its possibilities." ***$2.00***

WAR AND INSURANCE

By JOSIAH ROYCE. "A valued contribution to social uplift and human progress by the well-known professor of the history of philosophy in Harvard University, advocating a system of international insurance. ***$1.00***

INTERNATIONAL TRADE AND FOREIGN EXCHANGE

By HENRY GUNNISON BROWN, Ph.D. A work covering two related fields of increasing commercial importance, and especially adapted for quick reference to American needs.

$2.00

BUSINESS ORGANIZATION AND COMBINATION

By LEWIS H. HANEY. A new, revised and enlarged edition of this standard work, the value of which has been increased by the addition of new matter on corporation development and organization. ***$2.00***

ARTIFICIAL WATERWAYS OF THE WORLD

By A. BARTON HEPBURN, LL.D., D.C.L. A new, revised and enlarged edition of Dr. Hepburn's standard work of information on "Artificial Waterways and Commercial Development." New chapters describe the Panama and Cape Cod Canals, and the whole work, rewritten throughout, now furnishes the best guide to the canalized highways of trade of the world, their commercial development and importance. ***Illustrated. $1.25***

The Nation.

NEW YORK, THURSDAY, NOVEMBER 19, 1914.

Summary of the News

The past week may almost be said to have been a peaceful one in that there have been few rumors of imminent participation in the war by those countries of Europe not already engaged. Italy holds tenaciously to her neutrality, and is occupied with the trouble in her Tripolitan possessions to which we alluded last week. On November 14 it was announced that the Council of Ministers had appropriated $80,000,000 for new military expenses. The measure authorizing this appropriation will shortly be submitted to the Italian Parliament for ratification.

From none of the Balkan states not already engaged has there come evidence of any immediate intention of entering the struggle, even Greece, which it was confidently expected would embrace the opportunity of again attacking Turkey, having so far remained quiescent. The intention of Bulgaria to preserve neutrality was, according to dispatches to the London *Morning Post*, again emphasized last week by Premier Radoslavoff, when he received the leaders of the opposition in private audience and explained to them that Bulgaria enjoyed the sympathies of all the great Powers and did not intend to take part in the war on either side.

So far Turkey's participation in the war appears to have been productive of few results of material importance. The wildest rumors arrive via Berlin and the wireless station at Sayville, as, for instance, the intelligence that the Khedive of Egypt, who is at present in Constantinople, and, *nolens volens*, is likely to remain there, is himself about to lead the army of invasion into Egypt, and that the Ameer of Afghanistan has declared war on Russia and Great Britain. On the other hand, by way of Petrograd and London have come reports of dissension in the Turkish capital and of a revolt of the garrisons there and in Adrianople. The Sultan has issued a proclamation to the army and navy in which he accuses Great Britain, France, and Russia of having instigated the war upon Turkey and declares that "not only the fate of our own country but the fate of 300,000,000 Moslems depends on your victory."

Difficulties arising over the export of copper from the United States to European countries appear to have received a satisfactory settlement. Early last week the State Department gave out a paraphrase of the British note on the subject, which read: "A supply of copper sufficient for normal consumption in neutral countries will not be interfered with, provided that adequate guarantees are given that the copper will not be transshipped to enemy countries." Norway and Sweden have prohibited shipment of copper through their territories, and on Sunday an order was promulgated by the Italian Government forbidding the transshipment of any goods on the transportation of which from Italy a veto has been placed since the beginning of the war. Invoices made out to "bearer" and failing to specify any fixed destination will be interpreted as applying only to Italy, and goods so invoiced will not be allowed to be transshipped.

Pope Benedict XVI's first encyclical, urging peace among the warring peoples of Europe, was made public on Monday.

News of the revolt in South Africa led by Gen. Christian de Wet has been somewhat sparse. Unofficial reports on Tuesday stated that De Wet himself had been wounded and that his followers were much dejected, lacking arms and ammunition.

The twelve Federal Reserve banks of the country were formally opened for business on Monday. Elsewhere we comment upon the remarkable piece of legislation which is thus put into operation.

The Industrial Relations Commission will begin an investigation of the situation in the matter of the Colorado coal strike at Denver on December 1.

Tho question of race segregation in Governmental departments in Washington, of which we take note elsewhere, was brought up on Thursday of last week, when the President received a delegation representing the National Independence Equal Rights League.

The reopening of the Cotton Exchange in New York on Monday was unmarked by any announcement of failures or any "panicky" condition. Trading was quiet, and the fluctuations in the market were of a normal character. The Exchange was open for the first time since July 31 last.

The British Parliament was opened on November 11 by King George. The speech from the Throne dealt entirely with the war, and indicated that the business of the session would be confined to such legislation as might be necessary "to make due financial provision for the effective conduct of the war." On Monday, in moving for an additional vote of credit, Mr. Asquith stated that up to Saturday the war had cost between $4,500,000 and $5,000,000 a day over normal expenditures. The vote of credit, which was passed unanimously, was for £225,000,000, the greatest single sum ever voted by the House of Commons. This, with the addition of the £100,000,000 voted last August, represents a sum equal to an increase of more than 50 per cent. in the national debt. The present measure, Mr. Asquith stated, carried the provision for the war up to March 31. The measure providing for an additional army of 1,000,000 men was also adopted unanimously.

The measures taken against "alien enemies" residing in England have apparently not been quite so sweeping and drastic as had been supposed from the vast amount of agitation that attended the arrest of Austrian and German citizens by the police. Home Secretary McKenna announced in the House of Commons on Monday that 14,500 alien enemies of great Britain were at present interned in concentration camps in the British Isles, exclusive of prisoners of war and men removed from merchant ships of the enemy. Mr. McKenna added that there were about 29,000 alien enemies still at large in the country.

After a stormy week in Mexico the latest news, as we write, bears a somewhat more hopeful character, although in accepting this at its face value it is well to bear in mind that inspired dispatches from Washington have displayed in the past a tendency to hope for the best in the face of circumstances that may mildly be described as discouraging. In conformity with the ultimatum delivered to Gen. Carranza by the Conference at Aguascalientes, the First Chief was officially proclaimed a rebel on November 12, on which day Gen. Eulalio Gutierrez took the oath as Provisional President. On the following day it was reported that Gen. Villa had ordered an attack on Tampico and that the forces of Carranza and of the Convention were preparing for hostile operations all along the line.

All parties, however, appear to have thought better of their militant preparations, and on Saturday of last week it was announced that an agreement had been reached to suspend hostilities until November 20, when the Convention would meet again and either ratify or nullify the election of Gen. Gutierrez. Gen. Carranza's ambitions now appear to have limited themselves to the elimination of Villa, for, according to dispatches from Mexico City dated November 15, he made an offer to Gen. Gutierrez to turn over his military forces to Gen. Gonzalez and leave for Havana, arriving there not later than November 25, if Gen. Villa would turn over his command to Gen. Gutierrez and be at Havana on the same date. What was to happen when the two redoubtable champions met at Havana is not recorded, but on Monday, according to dispatches from Washington, Secretary of State Bryan felt sufficient confidence in the outcome of the situation to announce that Carranza had agreed to surrender control of Mexican affairs to Gutierrez and that peace had been re-established.

That the Administration intends to wait, and watch the situation from a distance, was made clear by the announcement of the Secretary of State on November 13 that the American troops now occupying Vera Cruz would be withdrawn on November 23. Mr. Bryan declared that the assurances asked for by the United States had been furnished both by Gen. Carranza and by the Aguascalientes Convention. It was stated, however, in Washington on Tuesday that the United States would hold the several million dollars in customs collected at Vera Cruz until a stable government should be established in Mexico, President Wilson declaring that the money would be delivered to neither faction in Mexico under present conditions.

The deaths of the week include: Cecil Raleigh, Peter Moran, Lieut.-Col. Frederick T. Leigh, Brig.-Gen. William A. Jones, November 10; Sir Walter Gilbey, November 12; Gen. Geronimo Trevino, November 13; Field-Marshal Earl Roberts, November 14; Henry C. Clarke, Dr. Ewald Flügel, November 15; Mrs. Lloyd C. Griscom, November 16; Brig.-Gen. Charles FitzClarence (in France).

The Week

The prompt voting of another million men for the British army ought to be accepted in Germany as a further pledge of English determination to see the war through to the bitter end. That it will be difficult to recruit this new army speedily, and that trained officers are wholly wanting, will be the German reply. But Germany herself is having to draw upon little-trained levies, and the mortality among her regular officers is enormous. Thus far, as even the Germans must admit, the response to the call of the Government has been remarkable, considering that Great Britain is not a military nation. According to the latest statements, she now has 1,400,000 men under arms, exclusive of Territorials and Indian troops, of whom, by the way, 23,000 more have just reached France. The newly authorized million of men, if raised, will thus give Kitchener 2,400,000 troops, plus the 600,000 Territorials who are doing useful service in Egypt, at Malta, and elsewhere, and some at the front. Latterly, recruiting in England seems to have been going on steadily, not so rapidly as the War Office has wished, but still rapidly as viewed from this distance. Indeed, there seems to be no further need for the recruiting speeches made at the beginning by the British Cabinet members.

Lord Roberts's sudden death, while visiting the firing line in France, is, in view of his great age, not a severe military loss to England. The sixth high British general to die from causes not incident to the war since its outbreak, his value in this national emergency was chiefly sentimental, as is evidenced by his mission in France, which was both to consult with Sir John French and to hearten the Indian troops he had so often led. He, like Lord Wolseley, his old comrade, was the typical Victorian soldier. Admirably celebrated in verse by Kipling, Lord Roberts was more popular than any of his distinguished brothers in arms, because of his readiness to expose himself, no matter how often wounded, and his interest in the enlisted men, with whom his popularity was never equalled. He was in many respects the ideal leader in warfare of the South African, or Indian, type, skilful, determined, with an obstinate refusal to believe that anything else than complete success could crown his arms. In the Boer War his experience and sound strategy, coupled with Kitchener's bulldog determination and aggressiveness, enabled him to turn the tide when England's prospects were black. Indeed, a history of Lord Roberts's life, together with that of Lord Wolseley, would be a complete military account of England from the Indian Mutiny down. A great soldier passed away when he laid down the sword forever.

The statement made by Mr. Jarvis E. Bell, a member of the American Commission for Relief in Belgium, who has just returned from that country, that the German authorities are doing their utmost to assist the Commission in its work, will be likely to quiet any apprehensions aroused by the recent report that the German military Governor had given notice that relief supplies would be stopped unless the population returned to work. What basis, if any, there was for that report, we cannot say; but presumably some kind of order or notice had been issued which had for its object the resumption of labor by as many as possible of the idle population. As reported, the order required an impossibility on the part of the Belgians, and argued on the part of the Germans a kind of cruelty which there was no reason to ascribe to them. One trouble, in all such cases, is that there are always to be found persons who are "more royalist than the king"—who rush to the defence of acts that may never have been committed, but which, if committed, are utterly indefensible and atrocious. A sample of this sort of thing is furnished by a letter that appeared in the New York *Sun*, in which an American who has "worked in Belgium quite a good deal" gave the Germans *carte blanche* for anything they might have done in this matter, on the ground that he "knows that if a Belgian workman can live without working he will not work."

The "Christmas ship," which sailed from New York on Saturday, laden with millions of gifts for children in the European war zone, will benefit others than the little people for whose happiness it is especially intended. It will do this, not simply because it carries such substantial presents as clothing, in addition to the toys that any real child would value far above merely useful things, but because no cheer reaches so wide a circumference as the cheer that is given to children. To do something to bring a smile to the faces of the boys and girls in the region where their elders are submerged under the horrors of war is to lift the war cloud for a moment from the minds of everybody. If there are any persons who feel like asking why this money should not have been more "prudently" spent, the answer will be given in the brightened countenances and the lighter voices of the millions who stand in need of nothing so much as the consciousness that good will among men has not wholly disappeared from the earth.

One reason why Bulgaria betrays an unwillingness to pull chestnuts out of the fire for Russia or Germany, or even to approach the fire in her own interest, is put in concrete form by M. Tsankoff, professor of political economy at the University of Sofia. According to his calculations in the *Minerva* of Rome, the recent Balkan struggles have cost Bulgaria:

War credits	$70,000,000
Requisitions	30,000,000
Budget deficit	10,000,000
Materials of war and of transportation	30,000,000
Various debts, as to the railways	36,000,000
Pension charges	80,000,000
Total	$256,000,000

To this must, of course, be added the immense damage wrought in the economic structure of the nation, which lost a large part of its laboring population—58,000 men between twenty and forty-five years of age, or 6.7 per cent. of the male workers. Eighty per cent. of these were heads of families; while in addition there are about 11,000 cripples incapable of labor, who, with their families, must be supported by the state. Professor Tsankoff believes that a loan of $100,000,000 is immediately required to put the nation on its feet. Such figures, by all accounts conservative enough, show the immense burden to be shouldered by four and a half million people, and are in some degree an index of what warring Western Europe may look forward to.

The statistics of exports and imports for October are not yet complete, but they have been estimated at $200,000,000 and $140,000,000 respectively, thus showing an export balance of $60,000,000; while in September exports exceeded imports by only $16,000,000, and in August there was a $20,000,000 excess of imports. In this aspect, the October showing points, of course, towards a more advantageous position as regards international obligations. As for the quantity of the exports, taken in itself, an increase in that is of significance as relating to the demand for American products. It cannot be said that, thus far, this increase has been very marked. Our August exports for this year, as compared with the average for the month in the four preceding years,

fell short by about $48,000,000; in September and October (accepting the above-stated figure for the latter month) this shortage fell to $39,000,000 and $35,000,000 respectively. But it is quite certain that in particular directions the war has stimulated, and will for some time stimulate more and more, foreign demand for our products; and, however great may be the injury that we shall suffer, first and last, through the world-wide destruction wrought by the conflict, there are some important American interests that will gain immediate advantage; and their prosperity will do much to improve business conditions all round.

Bad manners are bound to hurt even a good cause, and the last place where disrespect is to be tolerated is the White House. If William Monroe Trotter was, as appears, insolent to Mr. Wilson last week, he has impaired his advocacy of the rights of the colored people and hurt them all as well. But Mr. Wilson, we feel, should make allowances, not perhaps for the hasty temper of a man whose passionate desire for justice for his race often leads him astray, but because of the genuine wrongs of which Mr. Trotter complains. It is a sad blot upon the Wilson Administration that it has tolerated, nay, drawn the color line, without real cause, save, as Mr. Trotter truthfully put it, the racial antipathies of Messrs. Burleson, John Skelton Williams, and McAdoo. For an Administration which talks about a New Freedom and boasts of having bestowed a new liberty upon business men, not only to be blind to the wrongs of full ten millions of American citizens, but to add to them is truly discouraging. Mr. Wilson can feel keenly for the governmental wrongs of the "submerged 85 per cent." of the people of Mexico, of whom so many are Indians and of a mixed parentage, but he has yet to say a really sympathetic word about the wrongs of the millions in the South who are without voice in their own government.

The difficulty lies, of course, in putting yourself in the other fellow's place, in having some appreciation of what it means to be the victim of prejudice and injustice, to be wronged without the power to remedy the wrong. That Mr. Wilson is unable to visualize this is, we repeat, the more disappointing because there are so many injured persons with whom he does sympathize so understandingly. His unusual vision and imagination leave him, however, when it comes to permitting his subordinates to inflict indignities upon American citizens in the immediate vicinity of the White House. If he could only have been one of the submerged 10 per cent. of our people in Washington for forty-eight hours he could never have palliated the wrong done, as he is reported to have done, by saying that segregation was enforced for the comfort and best interests of both races, in order to overcome friction. He would know then that it makes neither for the comfort nor for the best interests of the races, but invariably leads to added friction and creates deep and lasting unhappiness among the segregated. This problem has vexed him and caused him heartache more than once in his Administration, and it will not cease to plague him until he lays down the law that sets up equality of treatment of all employees in the Government service.

The Administration's purpose to withdraw the troops of the United States from Vera Cruz is now officially announced by Secretary Bryan. Assuming that that purpose will be carried out, the act will mark the close of a chapter in the story of President Wilson's dealings with a situation which presented, from the beginning, scant prospect of satisfactory handling, in whatsoever way it might be treated. That the actual treatment of it has not thus far led to an outcome which can be viewed with any approach to complacency is true enough. But there is abundant reason to believe that, however much more may at one time have been hoped for, the President has in point of fact come as near as possible to making the best of a bad job. Those who insist that the final victor in the Mexican struggle—whoever he may prove to be—will owe his ascendency to force, and will therefore be no more entitled to recognition than was Huerta, overlook a cardinal difference between the two cases. Huerta's power was attained through the sudden overthrow, by violence in which assassination played a leading part, of a government which had been in full possession of the country and in the enjoyment of international recognition; the case of a country in the throes of revolution and civil war, out of which order must emerge as best it can, is wholly different. Mr. Wilson appears determined to adhere to the policy of permitting the Mexicans to fight their own way out of their own troubles, if they cannot settle them by peaceful means; and in this determination we feel sure that he has the solid backing of public sentiment in this country.

The highly original views of Charles J. Bonaparte have at last furnished the Progressives a statement of their true lament —"If only Wilson had not been so unpopular!" That the Democratic strength should decline while adding no whit to that of the new party is a problem that admits of but one solution. "The voters were really eager to rap the President, so eager that they were willing to vote for Boies Penrose, and 'Uncle Joe' Cannon, and the nominees of Boss Barnes, in the belief that only thus could the 'rap' be practically inflicted." On this basis, the one hope of the Progressives for 1916 must be that our disgraceful Administration improves a bit. If it continues its course, the maddened voters will take vengeance upon it by deserting the Progressive standard to the last man. Just why it is that they turn to Republicanism and not Progressivism, and why they felt that their rebuke could be more "practically inflicted" by joining the party that polled eight electoral votes in 1912 rather than that which polled eighty-eight, Mr. Bonaparte does not fully explain. His one hint, as given in the *Maryland Progressive*, is that Col. Roosevelt was not on the ticket. There is every reason to suppose that his strength is undiminished; "it is plain, however, that this strength is largely personal to him, and cannot be transferred, in anything like its entirety, to any other candidate." This is not in complete accord with those who are protesting that the Progressive is not a "one-man" party.

President Wilson and Secretary Garrison continue to carry out their excellent policy of promoting army officers of merit. On Saturday there were announced the selections of Brig.-Gens. Frederick Funston, Hugh L. Scott, and Tasker H. Bliss for the one existing and the two coming vacancies among the major-generals; of Gen. Scott, as Chief of Staff, in succession to Gen. Wotherspoon, retired, and of Cols. Henry A. Greene, William A. Mann, of the infantry, and Col. Frederick S. Strong, of the Coast Artillery, to be brigadier-generals. These are all worthy officers whose fitness can hardly be questioned. Gen. Funston has not, of course, the standing of a regularly trained officer, but his service at Vera Cruz, with the fact that he has served thirteen years acceptably as brigadier-general, and has for years been the senior in rank in that grade, makes his advancement altogether justifiable. The army will, we believe, agree with us in asserting that it has had under no other President so square

a deal in the matter of the distribution of high honors. Mr. Wilson's custom has been to promote those colonels who are recommended by a majority of the existing generals, and it would be hard to devise a fairer method. For one thing, it wholly eliminates political pressure. If Gen. Scott's rise to the position of Chief of Staff has been rapid, it is merited, for he has served long with troops and in the field, and has in addition acquired certain lore, about our Indians, for instance, which is unequalled by any other officer. Best of all is the fact that President Wilson absolutely refuses to countenance the promotion of any officers as generals who have not served acceptably as colonels.

The unfavorable report of the American Federation of Labor's travelling commission on municipal ownership in Europe coincides with the expression by the first Conference of American Mayors of a general spirit of caution in regard to the public management of utilities. The findings of the commission, that service, fares, and wages are alike unsatisfactory on European municipal lines, may be somewhat discounted on the ground of prepossessions. But more significance attaches to certain utterances at the Mayors' Conference, as being based on a feeling that many cities are not ready for such municipal responsibilities. Even Mayor Harrison, the leading advocate of municipal ownership, declared that a rigid civil service was a first requisite, and that "without it public ownership would be a public disaster." There were also men quick to point out the danger of the argument that with municipal operation "self-interest will induce each citizen to take a more active part in local government." This consensus of opinion that municipal ownership is still on trial is but another manifestation of the spirit of fairness which the conference between mayors and utility-men expressed. The hostility towards privately owned utilities, which would once have rushed to extremes, is gone; it is now recognized that the problem is one of fair regulation and the establishment of utilities investments on a stable basis.

Various explanations of improving business conditions have been offered, more or less sensible or plausible, but there has to be, of course, a political explanation. One is gravely advanced by several Republican newspapers. Republican successes in the election are what has made the change for the better. As soon as the people perceived that the Republican party was certain to come into power two years from now, they were determined to have prosperity right away. To be sure, the Republican party is to come back to power through the demonstration that prosperity is impossible under a Democratic tariff; but that tariff, having now been repudiated at the polls, is as if it did not exist, and so there is no reason why there should not be prosperity under it. After thus gracefully vaulting over an initial difficulty, the Republican logicians have to face another. There must be bad times and resulting discontent in 1916, or else the Republicans will not carry the Presidential election. But Republican victory in 1914 is already banishing dissatisfaction. So what will the party have to go upon? Ah, here comes in the nice distinction between real and apparent prosperity. If it occurs under a Republican tariff, we know that it is not only a case of direct cause and effect, but that the prosperity is the solid article. But if there are seemingly good times when a Democratic tariff ought in sound logic to be ruining all business, protectionists have only to turn back to Horace Greeley to learn that the thing to do is to call it "a factitious but seductive semblance of prosperity."

The reported alarm in Japan over the reëlection of Gov. Johnson and the return of a Progressive Legislature, on account of the anti-Japanese sentiment supposed to be behind them, can best be quieted by leading Japanese residents of California, who seem not to have any such fear. Thus, the Vice-Consul-General at San Francisco states his belief that there is nothing in the present legislative situation in California to cause the supposition that any attempt is to be made at the coming session of the Legislature to increase the stringency of the alien laws. This is in accord with the natural probabilities. California has only recently gone through a threshing out of the question, in which the attention of the whole country was directed towards Sacramento, and the President exerted himself on behalf of just dealing. She can hardly be longing for another crisis of the kind. Perhaps, as is suggested at Washington, the comment in the Japanese newspapers is rather due to a jingo spirit than to any new facts in the situation. The election of labor candidates to the California Legislature, pledged to oppose the alien ownership of land, is taken by the editor of a Japanese newspaper in San Francisco to mean nothing more than opposition to relaxing the existing laws on the subject. In a narrow sense, now is the psychological moment for the breaking out of international animosities; in reality, no time could more strongly urge the supreme duty of civilized nations to be considerate of one another.

The recurrent plaint of the far West against Federal conservation was expressed by Gov. Spry of Utah at the Governors' Conference with less than usual plausibility. Its ground is slightly shifted. Earlier, the contention was that the exaggerated caution of the Government retarded the proper and speedy development of Western resources; now it is that the sheer bulk of the Government reservations is a present grave impairment of the tax revenue of the State. "Utah," Gov. Spry states, "with an area of 54,000,000 acres, has but from ten to twelve millions in vested ownership, . . . and much of that is grazing land that yields but slight income. If our sources for revenue for local self-government were adequate to the increasing demands, or if our revenue were in excess of our needs, I grant that this national curtailment would not be so serious." And he follows this with a comparison with the older States, whose individual owners of land pay heavy taxes, while the Western Government reservations are unproductive. But as a matter of fact, the older States have virtually no sources of income which are denied the West by Washington. Western Government land may be made into private property through the various homestead and mineral land acts, and is being so made as fast as is salutary for the region. The permanent reservations from private ownership are the national forests and the water-power sites. Congress has enacted a "conservation programme" providing for the healthful development of the public domain in a manner approved by all students of the question; while the dangers of hasty exploitation and private monopoly are now generally recognized.

The review by the National Child Labor Committee of the ten years of its existence is a record of important progress. When the Committee was organized in 1904, thirteen States had a straight fourteen-year age limit, while in 1914 there are thirty-six such States. Factory inspection was likewise provided for in but thirteen States in 1904, and in thirty-four in 1914. In 1913 alone thirty-one States out of forty-two holding legislative sessions enacted laws on the subject. That the present generation will see child labor abolished by all the States is a conservative prediction, for its last strongholds in the South are fast giving way.

INTERNATIONAL RIGHT.

English terminology, in matters affecting the law of nations, is at a certain disadvantage as compared with French or German. Our usage is to put forward the idea of "law." The others emphasize the conception of "right." Mr. Gladstone, it is true, used to speak of "the public right" of Europe, but the usual phraseology of English writers and publicists has the effect of giving prominence to the legal more than to the moral aspects of international law. There is a different kind of implication in the French "droit" and the German "Recht"; and it is an implication which the events of the European war have made to seem especially pertinent.

By chance, a recent German and a contemporary French discussion of the subject reach us at the same moment. Voices have been heard in Germany declaring that the old notions of international law have perished. As the *Frankfurter Zeitung* quotes them, they cry out *Es gab ja kein Völkerrecht!* But the Frankfort newspaper, true in this to its Liberal ideals, stoutly contests any such position. The law of nations may have been infringed by both sides in the war, it says, and may truly be affirmed to be passing through a crisis, but to deny its existence is "stark Nihilism." The *Frankfurter Zeitung* points out certain prescriptions of international law which have now passed into the consciousness of all civilized peoples, and which are to-day instinctively held to be inviolable even in the stress of national emergency or the shock of battle. And against the rash militarists and others in Germany who are declaiming about the need of recasting our entire conception of the law of nations, and to exalt national policy above international law, the *Frankfurter* strongly protests that "the idea of *Völkerrecht* is indestructible."

At the annual public meeting of the five Academies in Paris on October 26, a paper was read by M. Louis Renault, of the Institute, on "War and the Law of Nations." It was a very calm presentation. The lecturer made no heated references to the Germans. His aim was, rather, in a quiet and lucid way to recall to mind what had all along been the great animating purpose of those who had striven to improve and to codify the *Droit des Gens*. What they had mainly sought to do was to remove some of the ancient barbarities of war, and to restrict its scope and its area. Thus we have the rule that unfortified towns shall not be bombarded, that explosive bullets shall not be used, and so on. All the disputes still going on about the use of Dum-Dum bullets by the troops of one army or another show how real a thing the international law on that subject has become. But M. Renault was strongest and most impressive when he summed up the long efforts to protect neutral rights, and to set apart neutralized states as exempt from military operations. The motive was primarily humane. It was political only in the sense that the immunizing of certain areas, as outside the lawful theatre of war, might diminish the temptation of other countries to begin hostilities. M. Renault's allusions to the violation of Belgian neutrality are made without violence. He restates the treaty rights, and recalls the guarantees affirmed by the Hague Congress. One interesting passage he cites from the proceedings at The Hague, before the committee on the regulations affecting small states. An address was made by the eminent Belgian statesman, M. Beernaert, who said: "As regards Belgium, you know that her case is peculiar. Her neutrality is guaranteed by the great Powers, notably by our strong neighbors. *Thus we cannot be invaded.*" M. Renault's sole but sufficient comment is: "Our distinguished colleague still believed in the validity of treaties."

Their validity is certain to be restored. International right will be reasserted. No settlement of the war is thinkable which does not include a reaffirmation and a fresh and effective guaranteeing of the "droit" and the "Recht" which must control nations in the manner in which individuals are controlled by the laws. We are at present, no doubt, passing through a period of something like madness in all this affair. International law-breakers answer back to each other in various countries. Col. Roosevelt rails at treaties in the tone and almost in the language of a defiant German militarist. Take the letter which Gen. von Disfurth wrote to the Berlin *Tag*, as quoted by the *Journal des Débats*. "It is beneath our dignity," declared the doughty General, "to defend our troops against charges made either at home or abroad. We owe an explanation to no one. . . . We need pay no attention to the opinion of neutral countries. Whatever our soldiers do to injure the enemy, to win victory, is justified in advance. And if all the monuments, all the masterpieces of architecture, that stand between our guns and those of the enemy go to the devil, that does not matter to us in the least." We will not pursue the quotation. Such outcries may be heard now amid the clash of arms, but they will surely be stilled when the conflict is over, and when the nations find that all that they have done in war will be "assessed," in President Wilson's phrase, before international tribunals. We may be confident that they will in the future make an ever clearer response to the demands of the international conscience.

PRIVATE PROPERTY AT SEA.

The Emden's brilliant career as a commerce-destroyer is universally hailed as recalling the romance of sea-rover days, when men put to sea in ships and preyed for a year or two on whomsoever they met before returning to port. But dashing as the Emden's exploits were, they should not blind us to the fact that destruction of private property at sea is an anachronism. She accounted for some twenty-five ships, whose value is roughly estimated at $10,000,000, or about what the war costs England every two or three days. All told, the German cruisers cannot have destroyed more than sixty ships. That they have disarranged British commerce is true; they have in some cases, as, for instance, along the coast of Chili, compelled English merchantmen to stay in port, and have temporarily sent up the insurance rates. Yet when all is said and done, the cruisers have not in the slightest degree affected the final outcome of the war. They have merely injured private individuals—often the inhabitants of neutral states; as when the Karlsruhe sank the Van Dyck, the finest steamer in the trade between New York and South America, with invaluable exhibits for the San Francisco Exposition in her hold, which can never be replaced. In view of all the waste and destruction of the war, and the enormous losses sustained by the British by the mere fact of its existence, the destruction of merchant vessels seems merely an added cruelty.

Unquestionably, the Germans will contend that the injury they have done to the British pocket-nerve has been worth while, as well as the enhancement of their own naval prestige. On their side they are suffering frightful losses, it is true. Their flag is no longer on the seas. But this is far less due to the imperilling of their private property at sea than to the blockading of their harbors and the control of the North Sea. The supposed object of their great fleet was the protection of their commerce and their outlying ports. They have accomplished nothing in this respect. True, they have several navies massed against them; but even with England alone, or with Russia and France to contend with, it is doubtful if they could have done much if anything for their overseas com-

merce. Yet the Germans are earnestly contending that, so far at least, the injury inflicted on their merchant fleet is far from deadly to the nation. They have lost, possibly, 200 ships. The rest are safe in their own or in neutral harbors, and will be ready to compete for the world's trade again the moment peace is declared, when the question will once more be whether, by superior efficiency or economics of management, they can meet and overcome British competition. Neutral ships can enter German ports if they carry non-contraband of war, providing those ports are not officially blockaded by English cruisers.

Now, it must not be forgotten that Germany has been one of the nations which persistently upheld the American contention, urged by the United States for the past seventy years, that private property at sea should be treated on the same basis as private property on land. We do not see why her experience in this war should alter her historic position. Even in England, there have been many notable men to favor the change; the sentiment in its favor was steadily growing up to the outbreak of the war. One of these Englishmen was the lawyer, Mr. R. T. Reid, who based his opposition to the English position on the ground that a change in existing conditions would chiefly benefit England. He foresaw, however, a protracted and indecisive naval campaign compelling English merchants to use neutral vessels and pay enormously high rates for their use. The actual event has not quite borne him out, it must frankly be admitted; but the principle remains sound. For instance, it is still true, as he contended, that if private property at sea were inviolable, "half or more than half" of the inducement to European nations to maintain costly navies of their own would disappear. "Coolly weighed," Mr. Reid wrote, "the interests of Great Britain will gain much from a change long and eagerly desired by the great majority of other Powers."

It is interesting to note that both Mr. Asquith and Sir Edward Grey favored the ratification of the Declaration of London three years ago in the face of considerable popular outcry that this meant a blow at England's safety in war-time. That Declaration, a highly important addendum to the Declaration of Paris of 1856, brought the law of sea-warfare up to date, but did not, of course, fully accept the American contention as to the proper status of private property. What the London Conference did was, first, to make out a list of articles which should in no event ever be classified as contraband, these being chiefly raw materials, such as cotton, wool, flax, rubber, hides, etc. To these were added a number of manufactured articles, and then came the list of conditional contraband articles, that is, articles whose status depends upon their actual destination and use. It is owing to this list that the English have been declaring as contraband copper, petroleum, etc., which they had reason to believe were finding, or would eventually find, their way into the hands of the Germans for military use. Undoubtedly, the extreme British militarist party which opposed the confirmation of the Declaration of London will find some things in the present war situation with which to bolster up their contentions. The fact remains that steady progress has been made towards the position of the United States for the last century and a half, and that eventually it will become the law of nations, if maritime war is still to continue. From our point of view the careers of the Emden and Karlsruhe and Königsberg show the futility of efforts to destroy private property at sea. Certainly, they prove how little effect on the final outcome of a titanic struggle such raiding can have.

WHAT "KULTUR" REALLY MEANS.

An old story tells of an American naval officer who stumbled upon an uncharted island in the South Pacific. Ordered to send a brief account of the customs and manners of the inhabitants, he replied: "Manners none, customs beastly." Now, these people were deficient in *Kultur*. They were what the Germans call a *Naturvolk*, instead of a *Kulturvolk*, living in a state of nature instead of starting up the rungs of the ladder which we call social evolution. By this time the American public is pretty well aware that when the German people speak of *Kultur* they do not mean what we describe by "culture"; but what *Kultur* really means is still a subject of speculation. An approach to an exact definition was attempted the other day by Mr. F. J. Mather, jr., in a letter to the New York *Times*. *Kultur*, according to him, "means the organized efficiency of a nation in the broadest sense—its successful achievements in civil and military administration, industry, commerce, finance, and, in a quite secondary way, in scholarship, letters, and art."

This definition is but partially adequate, though it does get away from the abstract notion of "culture" and seeks the concrete things which enter into the conception of *Kultur*. But Mr. Mather is still concerned with such generalizations as efficiency, administration, commerce, finance. Nor is he able to rid himself of the ideas of administration, discipline, "regimentation," drill, which he puts to the forefront in the scheme of German *Kultur*. But the ordinary German citizen, and, for that matter, the extraordinary German professor, when he speaks of *Kultur*, refers to a complex of homely things, which we can approximate with fair truth in our own phrase, "the standard of living." Take, for instance, the following definition of *Kulturgeschichte:* that form of history which is concerned with "the social life of a people, racial characteristics, habits, food, shelter, hygiene, clothes, furniture, domestic utensils, morals and customs, legal conceptions, religious creeds, superstitions." Note the order of topics: material conditions first, political and spiritual conditions second. In *Kultur* the idea of the state is on the whole of less importance than the idea of soap.

We really have a number of very satisfactory translations for *Kultur*. "Civilization" is good; so is "progress." So is the phrase "social evolution." We are concerned less with *Kultur* in the abstract than with individual *Kulturs*. The Germans do not assert that they have *Kultur* and the Russians have none. They simply maintain that their *Kultur* is higher than the Russian, that the progress they have made to a fuller, cleaner life, to a completer mastery of tools and the forces of nature, to a solution of social and spiritual problems, is much more rapid than that of the Slav.

For a study of the idea of *Kultur*, the social conditions in the region where German and Slav dwell side by side are instructive. In East Prussia or Russian Poland, in any Hapsburg land where the German lives side by side with the Slav, the most prominent men in the professions, the most skilful artisans, the best gardeners and farmers, are German. The cleanest homes are the German; the best schools are the German schools. German efficiency in the development of the arts of orderly life is recognized by the very Slavs who deny the superiority of the Teuton race as a whole. In the Russian writers, in Tolstoy, in Dostoievsky, there is constant satire against the methodical, disciplined, effective German; qualities which the Slav acknowledges, while denying their ultimate value in the scheme of life.

It is in this sense that the Germans speak of their superior *Kultur* as against the Slav. They do not imply that the Teutonic race

has produced greater novelists than Tolstoy or Turgenieff, but that it has, as a whole, attained the higher level of civilized, orderly existence. An example of *Kultur* is contained in the dispatch from across the Pacific which mentions the forests planted by the Germans on the bare hills around Tsing-tau as having served for a model to the Chinese. This talent for reducing nature to the uses of man by the application of labor and thought and discipline is *Kultur*. The development of discipline, both self-control and state control, to a higher pitch than elsewhere, has been accepted as synonymous with German *Kultur*, whereas it is only one of the elements in it. It may be that the German race has carried discipline of the state to an excess; from the Anglo-Saxon point of view, from the Slav point of view, it seems so. It may very well be that the material conquests made possible by discipline will not atone for more valuable spiritual qualities that do not flourish under a system of drill. But there can be no question that discipline counts, and the material progress of mankind enters very largely into the *Kultur* idea.

Where the defenders of German *Kultur* err is in implying that the possession of the highest *Kultur* is the predestined portion of the Teutonic race. They overlook the very argument which they advance in defence of their aspirations towards world-power, namely, that empires have risen and must fall, that there is no law of nature by which the British Empire must go on forever, or why it should not pass to make way for the Germanic world-empire. Then neither is there a reason why the Slav peoples should be condemned to a rural, clownish, unhygienic, and alcoholic existence. Their turn will come. If the Germans in the Slav lands are in control of the professions, of the arts and crafts, it is partly because they are the dominant race by conquest, partly because the German people had several hundred years the start of the Slavs in the development of a sturdy, industrious, disciplined, and cleanly *Bürgertum*.

Rightly understood, German *Kultur* is very much like the good old Anglo-Saxon virtues—industry, order, filial obedience—and a love of soap and water. The German *Hausfrau* is one of the great standard-bearers of German civilization. It would probably hurt Mr. Kipling to be told that he is a fervent believer in German *Kultur*. But the fact is that his attitude towards the subject races, his doctrine of East and West, his portrayal of the Englishman in India, is only an exaggeration of the German attitude towards the Slav. Mr. Kipling will not deny to the Hindu his ancient civilization, rich philosophy, literature, and art; but, in the last resort, the Englishman bathes and fights and subdues nature to the uses of man, whereas the native's customs tend to be "beastly" and lazy. In a milder form this is the Teuton's views of his own *Kultur* as against that of the Slav.

THE NEW BANKING ERA.

Americans have a not altogether happy way of ignoring a great event, when it comes, if it has been sufficiently "discounted" in advance. Something of this is observable in connection with the new system of Federal Reserve banks, effective on Monday last. When the project was under way in Congress, it was echoed round the country; but as soon as it was certain that it would become operative, public interest in it seemed to flag. And now that it begins, without wrench or jar, to function, people are too much inclined to say impatiently, "Oh, don't talk about that. There's nothing new in it. We knew all about it long ago." While this is perhaps natural, it is not commendable. It is a good thing for a democracy to use a few moments now and then to "consider our marcies," to trace the steps of the long struggle leading to the completion of a great work of peace, and out of it to take courage for the future.

The chief wonder about the new banking system of the United States is that it came as soon as it did, and that we were able to get one so good as we have. That some change of the kind was necessary in this country, the judicious had long urged. It is probable that no competent man has, during the past ten years, written or spoken on the subject of our national banking system without admitting that it suffered from perilous defects. The disease was confessed. But about the remedy the doctors differed. This was one of the great difficulties in the way of banking reform. There was no strong consensus of opinion as to what ought to be done, or what could be done. The single central bank was the ideal of banking experts, but it was declared, and it probably was, incapable of surmounting the political obstacles in the way. We know what a poor reception, on the whole, the recommendations of the Monetary Commission got from the general public, and that all its labors seemed in vain. They were not so, though at the moment it appeared futile to hope that they could be fruitful until after years had passed. Everything looked at loose ends. But that was exactly the time for a sagacious and resolute leader to come forward, ready to enter into the labor of others, quick to perceive that the seemingly hopeless confusion could be cleared up by rational adjustments, and bold to seize the occasion which good fortune placed before him.

That President Wilson did all this is now commonplace. No one really questions that but for his acuteness in divining the opportunity, and his drive and tenacity in taking advantage of it, we should still be handicapped by our outworn and clumsy National Bank Act. He has had ample recognition for his initiative and skill in the whole affair; and it is not necessary to pour on the praise. More to the point, just now, is the recalling of the very successful way in which, by discussion in the press, by the conferences of bankers with committees of Congress, and by the wisdom and tact with which the President led to the final decisions, most of the original defects of the Federal Reserve plan were removed, and a law passed which was both sane and workable. Perhaps the greatest achievement of all was that of procuring so many of the advantages of a central bank without the name. For various reasons, some of them sound in banking as well as in politics, the idea of a central bank had become a thing of dread in the United States. And it was no small feat to have obtained for our new banking system the larger part of the benefits of what in Europe is known as a central bank, while giving it here another and an unprovocative name. Political cleverness could hardly go further.

It is needless to dwell in detail upon what is to be hoped from the Federal Reserve banks. At a stroke they enable us to get rid of the unscientific and cumbrous and financially dangerous features of our national bank system—features which really made it at once an anachronism and a reproach to a shrewd commercial people. They render both credit and currency more flexible, more readily responsive to the actual needs of trade. By centralizing the banking reserve, the total percentage can safely be cut down, and large amounts of capital released for active employment. And there can be no doubt that the new system is vastly better fitted than the old to carry on the ordinary operations, as well as, by its provisions for emergency issues and for mobilizing reserves, to meet the impact of panic. It is true that we had not the Federal Reserve banks in August and September, when an acute financial crisis was thrust upon the

country. This was met by the bankers of New York and other cities with a skill and courage deserving of the highest praise. They made their decisions and took their risks under the old system; but we are confident that they were upheld throughout by knowledge that the new and better system would soon be at their disposal. At all events, there can be no question that the Federal Reserve system will in the future save the country from any such disgraceful breakdown of our credit and currency system as that which afflicted us in 1907.

It is a great piece of constructive legislation of which we are this week marking the practical inauguration. This is an aspect of the matter which may well hearten us all as we look forward. If the establishment of the new banking system was not hopeless—though many voices cried out that it was hopeless—then the solution of no urgent national problem is hopeless. We can work our way to it by the same means that at last brought us to achieved banking reform. We can lay bare the facts. We can single out the evils. We can discuss and agitate and appeal and return to the charge again and again. Above all, we can retain undimmed our faith in the good sense and honesty and moral soundness of the American democracy, and be sure that when Americans are convinced of the rightfulness of some great reform, and the ripeness of the times for it, they will order its enactment with a fiat more compelling and majestic than that of the most powerful autocrat on earth.

SOCIAL ILLS AND MENTAL BALANCE.

To those who are working in the various special fields of social betterment, a word of sage counsel is addressed by the Rev. Charles F. Dole—himself a life-long promoter of philanthropic effort—in an article in the *Survey*, under the title of "Our Need of Perspective." That social workers need to be forever on their guard against taking a distorted view of the condition of society is the burden of his story. "We are given," he says, "the hospital side of life; we go to perpetual clinics; we hear the cries of pain from sufferers; we listen to all the varieties of complaint and fault-finding. We owe to our sympathies and our humanity the prompt willingness to see all this seamy side; we owe it to our sense of justice to listen to every complaint. But we ought to know that the atmosphere of complaints, of strikes, of vice commissions, of sweat-shop investigations, and so forth, cannot be borne too continuously, except by the hardiest constitutions." And he proceeds to point out, with a friendly sympathy that must disarm criticism, the many dangers of false perspective that beset the man or woman who constantly breathes this atmosphere, and whose life is dedicated to the work of bringing about the abolition, of one or another of the evils of human society. Brief as the paper is, it is packed with good sense and right feeling, and can hardly fail to be of real benefit to those to whom it is addressed.

The phenomenon with which Dr. Dole's remarks are concerned is not peculiar to workers in the field of philanthropic endeavor or social reform. It is accentuated in their case by the circumstance that the heart is so deeply involved, as well as the mind; but essentially the danger of error that besets the social worker is that which besets the specialist in any field. The sanitarian fixes his mind so constantly on the possible sources of preventable disease and death that he can hardly see in their true relation the benefits to be attained and the evils that may result from such regulation of human life as would be fatal to the idea of individual freedom and social variety. The efficiency engineer has so vivid a perception of the economies that might be effected by his system that he loses sight of limitations to its desirability which are obvious enough to the rest of the world. He whose thoughts constantly centre upon one object almost inevitably falls into the habit of ascribing to it a far larger place in the universe than that which it in reality occupies. Add to this natural propensity of every specialist the moral ardor and reformatory enthusiasm of the social worker, and the dangers of a distorted vision to which Dr. Dole calls attention are easily explained.

Is it to be desired, then, that the men and women who are spending their lives in alleviating the misery of the world, in working for social improvement and social reform, shall be less completely devoted to their work? Or is it to be wished that their moral ardor were less, that they went about their task in cold blood, with no indignation over wrong, no impatience with evil? Surely nothing of the kind would be advocated by any man of good sense, not to speak of right feeling. All that can be asked is that they endeavor, to the best of their ability, to bear in mind two things—that the part of life with which they are dealing is not the whole, and that zeal for the reform they have at heart is no excuse for carelessness or extravagance in the presentation of facts. It is difficult, indeed, to satisfy these requirements; and accordingly it is the exception, rather than the rule, that they *are* satisfied. And yet we feel convinced that the best, the most effective, work for social improvement is done by precisely those men and women who combine this quality of mental balance with the ardor and devotion that are indispensable to success. Many a cause has been discredited by the extravagant lengths to which its champions have gone in their advocacy of it, and by the obvious exaggeration of the statements made in its behalf. Apart from any other consideration, it ought to be remembered that to represent things as hopelessly bad is often far from being the best way of encouraging one to work for their betterment; to acknowledge the advances that have already been made is one of the most likely means of persuading people that it is worth while to work for further improvement.

There is one aspect, moreover, of this want of perspective which is of the gravest concern to society in its most fundamental interests. The effect of a one-sided view, of an exaggerated representation of evil, is not limited to its bearing on the particular matter at issue. Whether the effect of the interest aroused in some by the exaggeration is or is not balanced by the distrust excited in others may, in any given instance, be doubtful. But what is not doubtful is the influence exerted upon thousands of impressionable minds by constant feeding upon a diet of this kind. Give them the impression that the world is saturated through and through with evil and injustice; cause them to forget that whatever of good there is in it has been attained by slow and painful effort; lead them to imagine that nothing but the perversity and the selfishness and the wickedness of the prosperous stands in the way of the happiness of the poor; represent, in one instance after another, the shortcomings of society, and not the defects of the individual, as the cause of failure, and misery, and crime—do this day after day, and week after week, and the natural consequence is, in thousands of cases, not a determination to look to patient endeavor for the betterment of a state of things so desperately evil, but to welcome any change that promises to bring it to an end. If by a faithful presentation of the present condition and past history of the world one is led to this conclusion, well and good; but he who helps, however innocently, to mislead into it the young and the untrained, by impressing upon them a picture of the world that is false in color and untrue in proportions, makes himself responsible for most serious and far-reaching mischief.

Chronicle of the War

The battle line in the West—from Nieuport to Dixmude, and thence to Ypres and southwards into France, through a point west of La Bassée to Noyon, where it turns eastwards along the Aisne to Verdun—has undergone no important modification. The capture of Dixmude by the Germans was admitted in French official dispatches on November 12, and the town has not, as we write, been retaken. The loss of Dixmude, however, under the conditions in which the campaign in Flanders is fought, is not of great importance, as is shown by the fact that the German troops have failed to turn their possession of the position to any substantial advantage.

This failure emphasizes the siege-like nature of the operations in Flanders and in France. The battleground is a network of tunnels and trenches. Important strategic positions, except where lines of communications are concerned, may almost be said to have ceased to exist. Had this battle been one of manœuvring in the open, the possession of Dixmude by the Germans would have called attention to the fact that a wedge had been driven into the Allied line and that the Belgian troops on the Yser were threatened with envelopment. As things are, the taking of a position which in open fighting would be of strategic importance merely means that the troops which have been driven out retire to other galleries in the labyrinth of trenches and rifle-pits, and that the attacking force is faced with another position of equal strength to the one that has just been taken. The advantage consists simply in the amount of ground gained, and that is measured, not in miles, but in yards and feet. To offset the German success at Dixmude, the Allies have regained the left bank of the Yser, on which the Germans had been able temporarily to establish themselves.

The confidence, then, which becomes increasingly noticeable both in the official dispatches from Paris and in the comments of French military critics, appears to be justified, and we can understand why the setback at Dixmude failed to disturb it. To say that the German line has been at a standstill since it dug itself in on the Aisne and extended northwards into Flanders, occupying Ostend, would be a slight exaggeration. It has advanced on the whole, but its advance has been so slow as to be almost imperceptible. We need not trace the advance in detail, but a comparison of the names that have appeared in the official French dispatches reveals the fact that in the last two months the German line facing west has crept forward, on an average, about six miles, while on the Aisne it has advanced possibly a mile. At this rate of progress, at the end of another six months the Kaiser might expect to be within sight of Dunkirk and Calais. With the prospect of heavy reinforcements from England in the early spring, and having in mind the conditions of success laid down by German experts themselves, of which the first was a lightning-like campaign, the French military experts can afford to view the situation with complacency.

Meanwhile the coming of winter and the heavy rains of the past few weeks have increased tenfold the difficulty of military operations. In the discomfort and misery incurred in water-logged trenches both armies will share alike, and disease will undoubtedly take a heavy toll of life on both sides, but the unfavorable weather conditions will hamper most seriously offensive operations. The heavy roads will impede motor transport, and the snail-like progress of the German line is likely, therefore, to become even slower as the winter advances. Gen. Joffre's strategy, as we have pointed out, is one of waiting; he assumes the offensive only for defensive purposes. Moreover, he has the advantage of a shorter line of communications. He can afford to wait for reinforcements and milder weather in the spring before assuming a general offensive. Only at one point is his line likely to be seriously threatened. As the weather hardens, the flooded area between Nieuport and Dixmude will become frozen over and passable. For this contingency we may presume that Gen. Joffre will provide by strong reinforcements.

Dispatches from Petrograd and Berlin serve to give us a fairly accurate idea of the extent to which the Russian advance has progressed. The reports, which we recorded last week, of the retirement of the German forces from the line Kalisz-Chenstochowo-Cracow have proved to be unfounded. The principal fighting during the past few days has taken place in Poland, centring in the neighborhood of Plock, on the Vistula. When we wrote last week outposts of Cossacks had actually crossed the border into Silesia at one or two points; in East Prussia Russian forces had established themselves at Goldap and Soldau. There the situation remains virtually unchanged. The Russian armies have occupied a strip of from ten to fifteen miles in width of the enemy's country. The Germans have dug themselves in, as they did on the Aisne, and for the past week the battle in this quarter has been at a deadlock.

Meanwhile the Russian advance threatened Silesia and the fortress of Thorn. To resist this advance troops were apparently detached from the German forces in East Prussia and rushed to Poland, where the Germans have again undertaken a vigorous offensive between the Vistula and the Warthe Rivers, and along the line Wlozlawsk-Rypin. According to official dispatches from Berlin on Tuesday the result of this plan has been completely successful, the Russians having been driven back in the direction of Plock with a loss of 23,000 prisoners and 20 machine guns. Petrograd, on the other hand, has nothing to say even of any "strategic retreat," but declares calmly that the battle is still proceeding. Certainly the capture of 23,000 prisoners would indicate a defeat on a fairly large scale, and the relatively small number of machine guns said to have been taken is totally disproportionate to the number of prisoners. Probably, then, we may divide the number of prisoners by ten, attribute the error to faulty transmission, and consider the battle still undecided. In Galicia the Russian offensive towards Cracow has continued. Tarnow, the furthest point of the previous Russian advance, has again been occupied, and the Austrian troops are reported as defending the eastern side of the Dunajec River.

The demonstration undertaken by Russia in Armenia is apparently having the desired effect of keeping employed a large portion of the effective army of Turkey. Petrograd on Sunday admitted a strategical retirement of the advance guard near Koprukeui, east of Erzerum, in Transcaucasia, and Constantinople proclaimed a victory of some importance and spoke of the Turks as "advancing on Batum." The connection between this success and an advance on Batum, which is on the Black Sea, 150 miles distant and on the other side of the Caucasian Mountains, is not at once apparent. The statement of the case as given out at Petrograd is probably the correct one. This was an engagement in which only the Russian advance guard took part, and finding itself outnumbered it retired on the main army. As we suggested two weeks ago would be the case, the Russian operations in Armenia are to be regarded not as a serious invasion, but as a demonstration to keep the Turkish forces busy. It is apparent that only Russia's Caucasian troops, which have not been reported as forming part of the main army in Poland and Galicia, are engaged. These consist of three army corps, with some divisions of cavalry and of Cossacks. One hundred and fifty thousand, then, would be a liberal estimate of the number of troops engaged in Armenia.

One of the most curious and baffling incidents of the war has been the report of the sinking by a mine of the British Dreadnought Audacious. The report reached this country by mail on Saturday of last week and seems to have received confirmation from eye-witnesses of the event. This mishap, according to these accounts, occurred on the morning of October 27, off the north coast of Ireland, and the news has been suppressed by the British censorship until revealed in letters sent by mail. The Audacious is said to have been struck by a mine, and, in response to wireless signals, the White Star steamship Olympic went to her assistance. The Olympic successfully rescued the officers and crew of the Dreadnought, only two lives being lost in the process, and after attempts to take her in tow had proved unsuccessful, the disabled vessel was sunk by orders of the British Admiralty. The Olympic put into Lough Swilly, where she was detained, incommunicada, for a week, and finally docked at Belfast, when her passengers were requested to preserve silence on what they had seen.

The truth of the story in its essential facts is apparently confirmed up to the hilt, and is neither denied nor affirmed by the British Press Bureau. Only the memory of the circumstantial accounts of the presence of Russian troops in England and at Antwerp inclines one to reserve judgment on the whole truth of this story. The concealment of the facts by the censorship is difficult to explain even by making the fullest allowance for official muddleheadedness, nor is it easy to conceive how the story has escaped being joyously recorded from Berlin. If Berlin failed to receive the news, then the German system of espionage must be far less efficient than anxious Britishers suppose. One explanation occurs, which would cover most of the facts as reported and at the same time would explain the taciturnity of the British censorship on other grounds than sheer pigheadedness. It is just possible that the disaster occurred pretty much as recorded, but that the Audacious was beached or sunk in shallow water, and that during the past three weeks salvage operations have been proceeding. The desire to keep these operations from the knowledge of the enemy would explain the strict censorship.

Foreign Correspondence

WINSTON CHURCHILL AT THE ADMIRALTY — DARKENED LONDON — A NEW VOLUME OF THE LIFE OF DISRAELI.

By SIR HENRY LUCY.

WESTMINSTER, November 7.

Mr. Winston Churchill has long been familiar with the varying moods of the public that make either for popularity or the reverse. He had a great reception in the House of Commons when thirteen years ago he made his maiden speech. Mr. Balfour, the junior member of the Fourth Party his father led, was one of the most applausive listeners. When, later, Winston began to show hereditary disposition towards independence of thought and action, Mr. Balfour, at the time Prime Minister, habitually turned upon him the cold shoulder. This attitude, applauded by the rank and file of a party the impetuous young Member took no pains to propitiate, led to a memorable scene. Winston rising to take part in an important debate, the Ministerialists with one accord rose and noisily left the House.

Winston never forgot the concerted insult. It cost the party a big price. Within a year the young member for Oldham had crossed the floor of the House and joined the Liberal party. Since the removal from the scene of the commanding figure of Joseph Chamberlain, the front bench of the Unionist party in the Commons has not been so fully endowed with strength and capacity that it could afford to drive out of the camp so promising a recruit as Winston Churchill. To its subsequent exceeding sorrow it succeeded in doing so.

Up to a recent date the First Lord of the Admiralty has, since the war began, become one of the most popular members of the Ministry. The cleverly designed, admirably executed strategy whereby, under cover of a visit from the King, he had the fleet mobilized to be found cruising in the North Sea when war with Germany was declared, captured popular imagination. Since then his sleepless, vigorous administration has supplied every need of the fleet, anticipated every emergency. His dispatch of a naval force to succor the Belgians besieged at Antwerp was a well-conceived, far-sighted movement that might have saved the city. Though it had important effect upon the German camp at a critical moment, it failed in its full purpose. Whereupon arm-chair critics, ignoring the fact that the step was taken in conjunction with Lord Kitchener and with the approval of the Cabinet, turn and rend the First Lord of the Admiralty. It is true, the conspiracy was led by a Unionist morning paper still smarting under memory of the fact that Churchill, disgusted with Unionist tactics and policy, had gone over to the camp of the enemy. Such procedure was not contrary to usage. What lent the demonstration importance was the fact that an influential Liberal paper joined in the attack, plainly suggesting that the First Lord should be dismissed and Lord Fisher installed in his place.

This mischievous suggestion was made in ignorance of the circumstance, stated in this correspondence two months ago, that immediately on the outbreak of the war Lord Fisher gave up all his private engagements and repaired to London, where, as a member of the Imperial Defence Committee, upon whose deliberations he is in constant attendance, he gives the Board of the Admiralty the advantage of his unparalleled experience and genius for naval administration. His relations with the First Lord are based upon the foundation of genuine admiration of his capacity. Writing to me early in August announcing his arrival in London and the consequent postponement of a country visit in which I was concerned, the famous First Sea Lord of the Admiralty, to whom the nation is largely indebted for the supremacy of the navy at the present crisis, spoke in enthusiastic terms of Mr. Churchill's work at Whitehall. "I am in close touch with Winston," he wrote. "He has been splendid for three things: (1) the appointment to command of the fleet of Jellicoe, a comparatively young admiral; (2) mobilizing before war; (3) buying the two Turkish Dreadnoughts."

More stringent enforcement of the order regulating the lights o' London has plunged the metropolis into profounder gloom. Erstwhile brilliantly lighted thoroughfares east and west of Charing Cross are plunged in semi-darkness. Walking along Fleet Street or Piccadilly is like groping one's way through a catacomb, with here and there a tallow candle flickering on the walls. Not only are the lamps in motor omnibuses, which used to flash through the streets like streaks of lightning, turned down to lowest pitch, but when crossing the bridges they are extinguished. In normal times to drive across London Bridge in the evening, when the population of the City is making its way homewards, was a task requiring infinite skill and care on the part of the multitudinous drivers. To accomplish it in the dark, with two streams of miscellaneous vehicles, one going one way and the other in an opposite direction, is a feat that requires a cool head and a steady hand. Meanwhile, in West End thoroughfares the taxis, with their lamps lowered almost to extinguishing point, stand like hearses waiting for a fare.

Ten o'clock is now the closing hour all round, and there is the threat of prohibiting the reopening of public houses before ten o'clock in the morning. In the interests of temperance, and as contributing to the happiness of many homes, this is unquestionably an admirable arrangement which will, at least in measure, be maintained even after the war is over. At the beginning, it imposes some inconvenience on the public, and inflicts grievous loss upon publicans and brewers, who were just beginning to recover from the depression that has long hung low over the trade, owing less to legislation than the ruinous policy of "tied houses."

Mr. Murray informs me that a third volume of the Life of Disraeli is in the press. He proposes to publish it probably in the second week of November; failing that, it will certainly appear during the third. This is not an auspicious season for publishers, but the deathless interest attached to the personality and career of Disraeli is sure to command attention amid the clangor of war. This will be the first volume in which Mr. Buckle, long-time editor of the *Times*, carries on the work interrupted by the premature death of Mr. Monypenny, who wrote the first two volumes and prepared much material for those to follow. The period dealt with carries the story onward from 1846 to 1855, a comparatively brief period as almanacs reckon time, but critical in the history of Disraeli.

Espiomania

A PASSING INSANITY—THE PERIL OF A GERMAN PATRONYMIC.

The genesis of the present spy-mania is especially interesting because it is a unique example of the power of the cheap press in England. That there were and are many German and Austrian spies in London at and since the outbreak of war, is undeniable. But London got on very well for at least six weeks without worrying about them. It believed, correctly, that the Government and what is popularly called the "Secret Service" had the situation well in hand, and it was perfectly content, in the great-hearted tolerance of the race, to live at peace with the Germans and Austrians in its midst, alien enemies though they were, so long as they behaved decently. Then a strange thing happened.

There is in London a great newspaper which, by something of a miracle, is owned by a person of English name, and of which at least the majority of the staff are of British descent. Many of its rivals, including its deadliest rival, have owners, editors, or contributors less happily named in patriotic times like these. The great paper started—or, to be more exact, adopted—a little "spy-scare" already in existence, though still insignificant. With amazing headlines and a boiling eloquence it painted the dangers of the "enemy in our midst." Naturally enough, the rest, including the hated rival, followed suit, for such is the way of journalism in London. One and all protested, openly or by implication, that they were owned, directed, and staffed entirely by families which had been English since before the Conquest, and at once the hunt was up and woe upon the unhappy quarry!

There have been many recent estimates of the number of unnaturalized Germans and Austrians in England to-day, the average being, I suppose, 200,000. A very large proportion of these originally settled in the country to escape military service in their own, many of them half a century or so ago. They have remained unnaturalized, either from lack of means or lack of thought. Most of them have become as English as their children, more English than their neighbors. They were doomed to be the first victims of the spy-mania.

Had a Conservative Government been in power to-day there would probably have been no spy-scare at all. But as the Unionist press professes to have the monopoly not only of patriotism, but also of efficiency, its Liberal rivals were bound to emulate its new enthusiasm lest they be themselves accused of Teutonizing. And accordingly both sides took up the cry with a singular unanimity, hitherto unheard of. Not only were whole pages given up to the "alien danger," but great placards appeared upon the hoardings calling upon all good citizens to denounce to the police any person they suspected of espionage. Any one with a foreign name,

these notices pointed out, was suspect; he *might*, of course, be an Englishman, but in any case he was dangerous, and to accuse him was the first duty of a good citizen.

In common with all great democratic communities, London—or its unthinking majority—is most easily swayed through its love of sentiment and of drama. The average man leads a life so inherently dull that anything out of the common rut appeals to him imperiously. And the spy-hunt appeal is essentially of the theatre. The average German baker is not at all a romantic figure. But invest him with the attributes of an emissary of the Kaiser, and he at once assumes romance. London thrilled deliciously at its great discovery—it had read of foreign spies in cheap books and cheaper serial stories, watched them on the stage in melodrama and in the picture theatres; here, it seemed, was the real thing brought, if not home, at least next door to it. London rose unanimously to the occasion—the upper middle classes as usual in the lead.

For a month past you have not been able to go out to dinner without meeting at least three fellow-guests who have an intimate knowledge of some German spy, living either next door or over the way. Almost invariably they have wireless installations on the roof and complete signalling apparatus in the garrets. Often they have been seen carrying parcels of bombs in broad daylight. The women-guests are, of course, the most enthusiastic, and serious quarrels take place over the relative infamy of their protégés. Incidentally, they spend much of their time at the local police station, handing in lists of suspects, much to the fatigue of the force. It is as much as your life is worth to hint that not every one with a German name is necessarily a public enemy. The *Daily Mail*, or the *Daily Express*, or the *Times*, or the *Globe* has said it, and it must be so.

From Kensington the outcry spread rapidly to Peckham and to Whitechapel. Not a German, not a Jew, not any breed of foreigner could hope to escape the suspicion of his neighbors. At first the public reprobation was good-natured. Unhappy Frenchmen and Italians were jeered at in the streets and told to go home and eat sausages, but no harm was done to them until the semi-criminal class which infests every big city saw its opportunity. A foreigner or two was mobbed, a window or two was broken; to Deptford in southeast London belongs the credit of having first looted a baker's shop. Remained others, even more attractive. The saloons offered obvious advantages to thirsty patriots; half a dozen, whose owners and managers had perfectly English names and no more connection with the Kaiser than has Lord Kitchener, were looted openly, and the harassed police were forced to interfere.

Meanwhile the wealthier classes had begun to see that there was something mildly ridiculous in being afraid of little German barbers in the back-blocks of Whitechapel, and, led by a faithful press, looked round for higher game. The headlines changed: for "Alien Enemy," you now read "Spies in High Places." And the game became trebly exciting, for none were too high to escape. The King, coming of a German family himself, was not altogether immune. Although I have never heard any one accuse him of betraying himself to the Kaiser, his cousins did not escape so easily. Prince Louis of Battenberg, First Lord of the Admiralty, and one of the best sailors England can boast of, was not only suspected; it was openly said that he had been shot in the Tower—and that at a time when every morning he was directing the councils of the Admiralty. Much the same was said of Lord Lowther, one of the most popular sporting peers in England, but known as a personal friend of the Kaiser. The brother of a popular duchess was another victim. Not only was he executed in the Tower—your story lost half its joy if a less romantic spot were selected—but it was to be given out within ten days that he was dead of sudden pneumonia. When the announcement tarried, it was because the Government wished to escape scandal. Cabinet Ministers, ordinary members of Parliament, members of the Royal Society, not a prominent man but was accused by rumor; if he had a name in any wise suggesting Teutonic sympathies he was at once consigned to the Tower and executed—or if not, it was only because the Home Secretary was a traitor or weakling, according to taste.

I may instance one of the best-known Irish members of Parliament as a victim of this sort of thing. He gave an audience lasting ten minutes to a young foreigner, professing to be an Italian—as he very probably was—who came with a letter of introduction, seeking employment. Next morning a plain-clothes policeman called on the Member to inform him that he was accused of consorting with German spies, and implying that he had better mend his manners or it would be the worse for him. The M.P. in question is one of the leaders of the Parliamentary recruiting campaign.

The police, much against their will, were brought in as auxiliaries. A well-known journalist whose flat was raided for incriminating evidence during his absence, called at Scotland Yard to protest. Scotland Yard was apologetic, but shrugged its shoulders. He had been denounced, anonymously, a dozen times over. It was necessary to look into the matter. It should not occur again; but at such times, it was better to grin and bear it. It would all be over and forgotten in a month. "We don't want to do it," said Scotland Yard, in effect. "But——" and it shrugged its shoulders again. In the meantime a telephone call would always bring police protection, if and when required.

The quaintest part of the whole outcry is that every one knows it is at once artificial and unnecessary. Your London public—the kindliest in the world—has not the slightest wish to damage harmless foreigners, were it not—as the boy found who flung stones into the frog-pond—so fascinating a sport. As to the really dangerous spies—of whom there are many—the authorities have shown themselves perfectly capable of dealing with them, as, for instance, in the case of the spy Lody.

In a month or so—especially when the public begins to realize that the war can have but one ending—the unhappy Londoners with German names may look forward to unharried lives again. It is safe to say, though, that the newly expressed prejudice has come to stay, and that those gentlemen—mostly of the Jewish community—who have taken the precaution of changing their Teuton-sounding names to Smith, Brown, or Robinson for business reasons, will earn the reward of their prescience in years to come. That is, after all, the worst aspect of such a war as the present—the crushing load of prejudice it must leave behind it. For it is not in England alone that "spy-mania" is rampant; England, indeed, is, despite everything, still the most lenient of the battling nations to the stranger within its gates. We had reached, or thought we had reached, a stage of progress where "foreigner" did not necessarily imply "suspect." That is all past and gone for many a generation.

JOHN WARDLE.

Book Notes and Byways

THE HUMORISTS OF THE PROVINCIAL PRESS.

News of the grave illness of Robert J. Burdette at Pasadena, Cal., will recall to the minds of the older generation of newspaper readers the little group of writers to which he belonged, whose fugitive work was at one period more widely quoted than the classics. The long line of American humorists, from Franklin's time to Mr. Dooley's, have had an important share in shaping our popular philosophy. Their activities have taken various forms. In the old times when nearly everybody who read at all read books, they chose that medium for reaching their fellow-countrymen, Artemus Ward and John Phœnix being among the last of this dynasty. The Civil War developed a new line of communication by the rise of the newspaper to a popularity it had never enjoyed before; and the metropolitan press blossomed with special articles, satirizing certain phases of government and politics, by Doesticks, Nasby, Orpheus C. Kerr, Josh Billings, and others of their school. Then came a small and select company of writers, of the quality of Bret Harte, John Hay, and Mark Twain, who, though starting in journalism, infused a charming strain of humor into real literature; and these were followed by the group in whose front rank stood Burdette—men whose humorous work gave to the provincial newspapers with which they were connected a stamp of distinct individuality. Among the lesser lights in this galaxy, but truly typical, was James M. Bailey, who edited the *News* at Danbury, Conn. His special gift was the quaint description of every-day experiences—the perversity of the stovepipe which the impatient householder is trying to put together; the eccentricities of the domestic hen, the pet dog, or the family carryall. He soon leaped into national and even international fame as the "Danbury News Man," and his little weekly drew subscriptions from Chicago, Denver, San Francisco, and London.

and was sold on the street-stands of several large cities. A member of the same group was Charles B. Lewis, of the Detroit *Free Press*, whose imaginary police-court reports, pivoted on the sayings and doings of a functionary named "Bijah," made a market for his journal in quarters where till then it had been little known. Messrs. Knox and Sweet, each a humorist in his own right, united forces for the establishment of the *Texas Siftings*, which, after furnishing for some years a fertile resource for exchange-editors all over the United States, presently took its place on the news-stands and in the regular stock of the train-boys; and almost simultaneously grew up the vogue of Opie Read's *Arkansaw Traveler* and "Bill" Nye's Laramie *Boomerang*.

Robert J. Burdette, after having served an apprenticeship in worldly experience as a private in the Union army—where he "put down the Rebellion with a musket longer than himself"—and then as a postal clerk, drifted into journalism through the disappointment of his ambition to become a great historical painter. He always declared that he never set out to be "funny," but that, however solemn his thoughts, he could not resist the appeal of the comical side of almost everything that surrounded him, and the sportive pranks of his pen seemed to be independent of any intent on his part. His humor lay almost wholly in his forms of expression and in an unexpected collocation of ideas, the effect of which upon the reader was cumulative. In spite of this never-absent tendency, he was also capable of writing forcefully on serious topics, and for a long period, in conjunction with the late Frank Hatton, he made the Burlington *Hawkeye* a power in Iowa politics, and incidentally in those of the nation. Throughout his editorial career he bore in mind a maxim impressed upon him by his first preceptor in journalism: "It isn't knowing what to put into a paper that makes an editor; it's knowing what to keep out." He also escaped a tempting pitfall by sticking strictly to his editorial functions, and leaving the business management in charge of the counting-room—this bit of discretion being the fruit of one unhappy episode of his comparative youth, when he tried his hand at founding a local paper which, as he said, "the gods loved, though the advertisers didn't," and which carried down with its wreck the savings of several toilsome years.

He became so thoroughly identified with his work in Burlington that, in the minds of the outside public, his proper personality was merged into that of "the Hawkeye man." Meanwhile, there had swept over the country a wave of enthusiasm for the lyceum as a means of combined instruction and amusement, and Mrs. Burdette saw here a possible new opening for his talents. As he has told us, he "wrote a lecture about two hours long —'The Rise and Fall of the Moustache'—and went out and said it without hesitation, manuscript, or remorse." This experimental effort was so well received that his wife urged him to enter the lecture field regularly. He demurred somewhat, because of his diminutive stature—he was only five feet three inches in height and of slender build—and his lack of training as a speaker. He had, he reminded her, no voice, no presence, no gesture, his pronunciation was faulty and his grammar uncertain; but he yielded to her judgment, gulped down his impulse to stage-fright, and plunged in, with the result that for ten years a single lecture earned him a larger income than all his other work. It is characteristic of the man that he always apologized, and apparently felt a sincere regret, for having once turned his freaksome humor loose upon the life and character of so good a man as William Penn. He consoled himself, however, with the reflection that all through his life he had been sorry one day for something he had done the day before. "So constantly," said he, "am I doing penance, that I live in a state of chronic remorse and habitual hair-shirt."

It was after he had achieved a notable success on the platform that he was attracted to the East by an offer from the Brooklyn *Eagle*. About the same time he entered the ministry of the Baptist Church. Impaired health led him later to seek the climate of southern California, where, as pastor of the Temple congregation, he preached for six years to assemblages which, Sunday after Sunday, crowded the great auditorium of Los Angeles. In 1909 he retired from active charge of this parish, but remained its pastor emeritus.

FRANCIS E. LEUPP.

Poetry

KAISER AND COUNSELLOR.

ON FIRST LOOKING INTO BERNHARDI'S "OUR NEXT WAR."

I.

Through what dark pass to what place in the sun
Dost thou, misguided Moses, lead this folk?
What rest remains when wayfaring is done?
What clearer skies beyond the cannon-smoke?
Say not he triumphs, though his trampling host,
That knows above his nation's lust no law,
From inland village to the fearful coast
Still treads the peaceful peoples red and raw.
Nay, pity him the banded friends abhor,
Who sees—the tragic fool and slave of state—
Behind him stretch the sterile wastes of war,
Before, a widening wilderness of hate,
While all the world lifts up one wrathful cry
To give this Prussian Machiavel the lie.

II.

White mouths that clamor for the unreaped wheat,
Frail hands that clasp the unresponsive dead,
Brave Belgian hearts, unconquered in defeat,
Dispeopled, exiled King: be comforted.
Though we close not the assaulted gates of sense
To shrieking towns, the gurgle of great ships
In drowning agonies, the fields immense
Horrid with shuddering limbs and writhen lips,
Yet since your woe has wrought this lift and swell
Of world-wide pity, love, and chivalry,
We say the awful sacrifice is well.
The old law holds; on this new Calvary
Humanity, uplifted, crucified,
Still draws all hearts unto its wounded side.

STUART P. SHERMAN.

Correspondence

GERMANY AND THE MONROE DOCTRINE.

TO THE EDITOR OF THE NATION:

SIR: Recent Associated Press dispatches inform us that Germany pledges herself, in the event of victory, to respect the Monroe Doctrine. How droll and naïve! Will some of the apologists for Germany kindly inform us what guarantee Germany can give that she will keep her pledge? What confidence can be placed in a nation which openly avows the doctrine that her solemn pledges are a mere "scrap of paper" when she finds it inconvenient to stand by their provisions? When German professors and scientists like Haeckel and Eucken assert that German greatness has been built on faith and honor, for the sake of the argument we are willing to admit it as regards the past, but when they apply it to the present and the contingencies of the future they stultify themselves and insult the general intelligence of mankind. Might, power, terrorism, is the spirit which pervades the ruling class in Germany to-day; it is unblushingly proclaimed by her philosophers and historians, it has become the propaganda of university professors, and with patriotic fervor is accepted by the masses without question or murmur. Witness the following from the *Frankfurter Zeitung* discussing the probability of Portugal's taking an active part with the Allies: "The fate of Belgium, whose King and Government have had to flee their country, is a sample of what the nations which have allowed themselves to be deluded by England have to expect." An act which has done more to cause anti-German feeling in this country than any other she exults in. Is it any surprise that Germans fail to understand the sentiment in America?

We must at least give Germany credit for the frankness to which she proudly lays claim, but can hardly accept it as a full atonement for all the sins in the calendar. She calls the English hypocrites. Let us examine these respective virtues and vices, candor and hypocrisy. The latter has been described as the homage which vice pays to virtue. I would not be considered as a defender of this sort of homage, but after all, what constitutes the basis of hypocrisy? Is it not a sense of shame, some regard for the good opinion of one's neighbors? It at least implies a knowledge of good and evil and an acknowledgment of the superiority of the good. But what shall we say of the frankness which scorns all the moralities of modern civilization, commits the greatest crimes without shame and without remorse, upholds and defends them as the highest culture and finest product of the race and richly worth the price Europe is now paying for them? It is unquestionably a struggle between two antipodal ideals, and one of stupendous consequences to the future of the human race.

Let us consider for a moment the possible result of victory for the Allies on the one hand and Germany on the other. Who can doubt that the English sense of shame, their "decent respect to the opinions of mankind," their national characteristic of self-restraint, their hypocrisy, if you will, would temper their terms by some show of fairness and justice? For somehow the English have

gained the reputation of being a just people. Stolid and stupid they may be, but they are able to appreciate the point of view of the other fellow. This accounts for their marvellous success in governing alien peoples, and no more striking proof of this was ever exhibited in the world than the present loyalty of Britain's colonies and dependencies. This demonstration of the solidarity of the Empire must seem to an Englishman as a partial compensation for the cost of the war. On the other hand, what could we expect from a victorious Germany dictating the terms of peace? Brazen-faced candor, no doubt, an unshakable disregard for the opinions of the rest of mankind, the fate of Belgium for all who oppose her, the most solemn pledges of faith and honor reduced to a "scrap of paper," the triumph of the doctrine of might and the divine right of kings, a veritable Saturnalia of "woe to the conquered" and all who stand in the way of her superior culture and new morality.

We cannot think this picture overdrawn; all the intellectual forces of Germany are defending these principles with the zeal of religious enthusiasts and would doubtless demand that they be carried out with the usual German thoroughness and ruthlessness. If Germany should succeed to the empire of England, something would probably happen like that which occurred after the Peloponnesian war. This was a triumph of militarism. Freedom and peace were proclaimed to all Greece by victorious Sparta amid the destruction of the walls of Athens to the music of flute-girls. But within ten years the Spartan empire had completely fallen away, Athenian slavery was found ten times more endurable than Spartan freedom resting on militarism. A similar fate would await a German world's empire, for I do not believe that one nation by brute force can impose its ideals for long on the rest of mankind without their consent. The task of destroying human reason and the moralities generally accepted since the dawn of history would prove too great even for Germany.

GLANVILLE TERRELL.

Lexington, Ky., October 27.

CARLYLE AND GERMANY OF THE PRESENT DAY.

TO THE EDITOR OF THE NATION:

SIR: In discussion inspired by the present European war, there has been frequent mention of Carlyle, and persons of German sympathies—like Mr. Maximus A. Lesser in your issue of October 15—seem to think they can cite him as an admirer of Prussian militarism; while others have declared his writings to be the source of Nietzsche's philosophy. Of course, there is an apparent basis of truth for these contentions, but it takes a very slight knowledge of Carlyle to show that the qualities he detected in Frederick the Great are not those guiding the policy of Germany to-day, and that nothing could be more opposed to his teaching that right is might than the Nietzschean theory that lust is power.

Carlyle is, perhaps, the most misunderstood of nineteenth-century writers. His mannerisms make him repellent to the conventional, his hyperboles bewilder the matter of fact, and the sustained character of his thought makes him laborious reading for a generation habituated to ideas only in homœopathic doses; but what more than anything else makes him misunderstood is lack of sympathy, for the standard he sets is so high that, as Emerson says, it accuses our way of living, and so we dislike and think ill of the man who shows us our shortcomings.

Carlyle's position on Frederick is, however, perfectly clear. He admired him because he had a sense of objective reality and was guided by it instead of by his prejudices or his vanity. To perceive facts and to be guided by them was Carlyle's conception of virtue; to see the world through a distorting lens of ignorance, prejudice, or vanity was his idea of vice. Frederick, cynic and materialist though he was, was not deluded by his egotism into overestimating himself or underestimating the forces against which he had to contend, but he saw his position clearly and faced it without illusions or false hopes.

Now, nobody can maintain that German militarism is without illusions or unwarranted hopes. If ever there was anything based on vanity and self-delusion, that thing is German militarism, and the way in which its prejudices have destroyed all vestige of objective thinking in what seems to be practically the entire German race, is one of the greatest wonders of the war. The German people may be exhibiting now the respect for authority and the patient thoroughness that Carlyle so much admired, but the possession of these minor virtues would not save it from his wrath for committing the major crime of being deluded by subjective hopes in defiance of fact and reason.

For Nietzsche's philosophy Carlyle's wrath would be still greater, although it is undoubtedly true that his own ideas may have been a stimulus to Nietzsche, who has transposed and materialized some of them. With Nietzsche, however, the ego is everything, and to pamper it is man's only success; with Carlyle our only hope lies in chastening and disciplining ourselves so that we shall not be deluded or destroyed by the insatiable demands of the ego in us. It would be strange, then, even to-day when anything odd or striking is likely to be maintained, to contend that Carlyle's hero, whose power is due to his recognition of the limitations of necessity on the personal will, is identical with Nietzsche's superman, whose strength is derived from the intensity of his appetite and the completeness with which he refuses to set any restraints upon it.

SIDNEY GUNN.

Cambridge, Mass, November 10.

ADVERTISING GERMANY.

TO THE EDITOR OF THE NATION:

SIR: Mr. Preserved Smith in your issue of November 5 states "that English firms are advertising everywhere that they will send 'Germany's infamous proposals' and other partisan literature to any address at nominal cost." I have not myself happened to see any such advertisements, but, curiously enough, in the very same mail with the *Nation* I received a package of reprints of newspaper articles each one of which was devoted to defending Germany and defaming the Allies. They were not sent by any one of my acquaintance, and from their appearance it was evident that they were specimens of large issues intended for widespread circulation. Probably Mr. Smith has not yet received one of these packages, but he may be interested to note that, although Germany's "campaign" in this country may be as "unobtrusive" as the system by which in time of peace she laid her gun foundations in the heart of a nation whose neutrality she had solemnly guaranteed, it is none the less a very vital fact. KATHARINE DUNCAN MORSE.

Amherst, Mass., November 9.

COMMITTEE TO OPPOSE THE JUDICIAL RECALL.

TO THE EDITOR OF THE NATION:

SIR: Your issue of October 22 contained a letter from me, dated October 10, wherein was criticised a certain passage in the distributed report of the "Committee to Oppose the Judicial Recall" of the American Bar Association, reflecting (as I ventured to indicate) unwisely and unkindly upon Chief Justice Walter Clark of North Carolina. I have now been informed by a member of the committee in question that the objectionable passage was modified before the report was formally submitted. Consequently and happily the language quoted in my former letter will not appear in the final "Report" of the thirty-seventh annual meeting of the Association. I trust the incident will teach some of my fellow members that "rights of the minority" ought to be respected in the American Bar Association, as well as in the nation at large.

TYRRELL WILLIAMS.

Washington University Law School, St. Louis, October 30.

PRESIDENTS AND CONGRESS.

TO THE EDITOR OF THE NATION:

SIR: In looking over a table of the party divisions in Congress since the Civil War, I have noticed several things of interest in the light of the recent election.

It was recalled, no doubt, by many at the beginning of President Wilson's Administration that only twice previously since the war had the Democratic party obtained a clear majority in the Senate—once during the latter half of Hayes's Administration, and again during the first half of Cleveland's second Administration. It is to be noted now that President Wilson is the first Democratic President within the same period to have the support of both houses during his entire Administration.

It is true, as has been asserted, that the party in power has always (since 1869) had its majority in the House reduced in the off-year election. Only on three such occasions, however, has the slump been comparable to that suffered by the Democrats in the recent election: once in the latter half of Harrison's term, when a Republican majority of 7 was changed into a Democratic majority of 148; again in the latter half of Cleveland's second Administration, when the Democratic majority or 94 was turned into a Republican majority of 102; and a third time, when in the latter half of Taft's term the Republican majority of 47 was perforce exchanged for a Democratic majority of 66.

In each of these three cases the following Presidential election completed the victory of the opposition by presenting to it the Presidency and both houses of Congress.

Yet the present Administration may draw comfort from the fact that in the above three cases the waning party, before its débâcle, had in each instance lost its control of the House at the off election. Only on three occasions out of twenty-three elections since the

Civil War has a party failed at a Presidential election after holding its control over Congress in the off year.

Of course, the most striking thing in all the figures is the fact that so many of us change our minds at election time in the off year. "Omnia mutantur nos et mutamur in illis." There seems to be a type of habitual floating voter, an arch-mugwump, who is always eager to take another chance in the odd year. "Then here goes another," says he, "to make sure—for there's luck in odd numbers, says Rory O'More." R. W. K.

Haverford, Pa., November 8.

THE BID FOR SOUTH AMERICAN TRADE.

To the Editor of The Nation:

Sir: In the enthusiasm over our opportunity to get South American patronage relinquished by war-ridden Europe, it is perhaps not strange, after our half-century of high protection, that nothing is said of an inexorable factor.

This factor appears when it is noticed that our ability to deliver the goods needed by South America, and the absence now of anybody to compete with us, are really secondary to the other condition, namely: that however good and cheap may be our manufactures and the means of shipping them, and whatever may be the desire of South Americans to use them, these people nevertheless must first get the wherewithal to buy them by selling equal value in products of their own.

Has the sudden cessation of Europe's selling of the bulk of South American imports any more to do with the case than the sudden cessation of Europe's buying of the bulk of South American exports? It being unlikely that South Americans desire or would be permitted to run into debt, or that they will drain off their gold or pawn their watches in order to buy of us, can we hope to step in unopposed and add scores of millions to our sales, unless we take from them approximately equal value in our purchases?

As the Central West's immense market for New England manufactures could not exist without the wealth and enterprise of the many Western manufacturing cities with which New England must compete, no more could South America approach its recent value as a great trade field for us if the bulk of its buying and selling market disappeared in a blotting out of Europe. Under civilized trade, in order to live one's self, one must be willing to let live, and this with competitors scarcely less than with customers. The former may be as essential as the latter in that industrial growth which alone makes markets. Besides, in the war's waste of capital and injury to industry, can our sales to South America be increased in total half so much as our sales to Europe must soon be diminished?

It is well, though there is slight hint at a reason, that Government carriage of exports is discussed as temporary. Whatever the objections to our paying foreigners from one to two hundred millions a year for ocean carrying, we must buy of them either such service or something else, if they are to continue buying of us our two and a half billions of exports. It can hardly be desirable to increase for long our yearly half-billion "favorable" export balance, of whose stupendous aggregate for the last twelve years the amount collected in excess of gold brought in has been just two per cent. George L. Bolen.

Literature

FRANCE'S LITERARY LEADERS.

Les Maîtres de l'Heure (Second Series). By Victor Giraud. Paris: Hachette.

Those who do not despair of contemporary France, those who wish to believe that she is going through a movement of redintegration, should find support for their faith in the critical work of M. Giraud.

Quite consciously a writer of that "younger generation" which made its appearance about 1890, M. Giraud has revealed his intellectual bias and the range of his scholarship in a long series of substantial studies, including Horace, St. Augustine, Pascal, Bossuet, Chateaubriand, Taine, Sainte-Beuve, and Brunetière. He has brought his ideas to bear upon current literature in "Maîtres d'autrefois et d'aujourd'hui" and in the first series of "Maîtres de l'heure," in which he deals with Pierre Loti, Brunetière, Faguet, Vogüé, and Bourget. The volume before us treats of Jules Lemaître, Edouard Rod, and Anatole France; and concludes with a balance sheet for the literary generation of 1870.

M. Giraud represents that virile and wholehearted criticism which the stricter Hedonic sect assures us is not "literary." Primarily a critic of ideas, his judgment steadily cuts through the book into the life beneath the book. In his court, the æsthetic is only one of many vital questions. His procedure, which is sufficiently systematic, is somewhat as follows: he exposes, first, the origins of a talent in native temperament and external influences; he proceeds then, with careful attention to chronology and frequent recourse to fugitive and uncollected material, to follow the unfolding of that talent and to measure its power in the various *genres;* finally, he brings the results of his analysis together to form a fixed and distinct physiognomy, in which the religious, philosophical, political, moral, and æsthetic lineaments are strongly illuminated by the light of the critic's own convictions. From the individual authors he rises, in the last chapter of "Les Maîtres de l'heure," to a consideration of the total personality and character of the epoch; analyzes in similar fashion its origin and evolution; gives it sharp definition; compares it with other epochs, and judges it.

He is a great admirer of Brunetière, but he is also a great admirer of M. Lemaître; and, so far as his critical method is concerned, he is not distinctively the disciple of any one of his predecessors. He is intimately acquainted with them all, and has manifestly striven to absorb and unite the characteristic virtues of each. He follows Sainte-Beuve in his effort to seize the peculiar personal qualities of his subject. He imitates Bourget in presenting the individual author as a representative of the "psychology" of the epoch. Like Jules Lemaître and Anatole France, he gives free play to his emotion before a just thought finely turned or a page of exquisite prose; though he is not the slave of his sensibilities, he reveals his delight too frequently to allow any doubt that he has a literary palate. He seeks constantly to crystallize his impressions, as did Joubert, in a single suggestive and memorable sentence or phrase. He resembles Faguet and Brunetière in his recognition of the moral accountability of men of letters, and in the force with which he delivers the reasons for his tastes and opinions. It is by no means the purpose of these comparisons to convey the idea that M. Giraud is the perfect paragon of critics; they are intended only to suggest that he, unlike our chorus of indolent reviewers, has taken his profession with sufficient seriousness to become an accomplished master of its technique.

M. Giraud's leading ideas are brought into play in his survey of the *maîtres de l'heure.* In fact, they are all involved in his elevation of Jules Lemaître at the expense, so to speak, of Anatole France, to whom he assigns a position of isolation in contemporary France for substantially the reasons urged in M. G. Michaut's recent vigorous attack. M. France's style has its merits, but it lacks inevitability—the elegant *pastiche* of a man of talent; M. Lemaître has the freshness, the spontaneity, the winged grace of genius. M. France is in his sympathies hopelessly "eighteenth century"—a son of Voltaire, anointed by Renan; M. Lemaître can enter into the spirit of the great age of Louis XIV—a godson of Montaigne, refined by Racine. M. France is the derisive enemy of all religion; M. Lemaître has recognized the strength and splendor of Catholicism. M. France is a corrosive critic of all government, though latterly the demagogic mouthpiece of Socialism; M. Lemaître, though a political pessimist, has not been a jeering outsider or a dupe. M. France is at heart an inveterate voluptuary and a moral anarchist; M. Lemaître has shown himself steadily friendly to respectable Christian morals. "Here," will cry the æsthetic critic, "here are all sorts of extraneous matters *mixed up* with literature!" To which M. Giraud would reply: "Yes: the *ideas* of which literature is both the expression and the inspiration." As for the comparison of M. France with Jules Lemaître, there is in it doubtless something of over-emphasis, which at the present time may be entirely salutary. Certainly, the author of "Penguin Island" has long been courting and provoking a violent reaction against his *Weltanschauung* and his celebrity.

M. Giraud is a significant sign of that reaction. His own position is that of a well-informed and open-minded conservative in all things. In religion his sympathies are Catholic—shall we say, because Pascal, Bossuet, Joubert, Chateaubriand, and Brunetière were Catholics? or shall we say, because he is convinced that social reorganization must have a firm religious centre? In relation to science and philosophy he is discreetly positivistic, alert to the latest speculations of Boutroux and Bergson, and con-

vinced of the existence of things which to science will be forever unknowable. In moral matters he speaks with the accent and temper of a Christian humanist: that is to say, with a severe and critical charity, informed with an adequate insight into human nature. Thus he singles out for praise Lemaître's detection of the intimate contradiction which lies at the bottom of the Socialist dream: "This enticing dream is at heart quite natural and quite earthly. It is a question of enjoying the earth, and of enjoying it to the utmost, by a minimum of effort and labor for each. But it is a question also of all enjoying it together equally, without aggression by the strong upon the weak. That assumes virtues of charity, temperance, and self-restraint, which have never had, hitherto, better support than religious beliefs. *In short, the fulfilment of this pagan dream would exact Christian virtues, virtues of which the essence is precisely to repudiate it.*" In politics, M. Giraud is a patriotic republican, lending to Socialism an attent ear but no voice. In literature he is a classicist, firmly grounded on the ancients and the Grand Siècle, but responsive to the legitimate charms of the Romanticists and intensely interested in the work of his contemporaries.

M. Giraud has himself the air of a man who has profitably gathered himself together and girt up his loins; and, if he interprets phenomena correctly, he is in harmony with the "new spirit" of France. After a period of general spiritual lassitude and loose expansion, she has now entered on a movement of concentration and purposeful energy, which will give the special character to the literature of the next epoch. The literary generation which came to the front in 1870 underwent two great formative influences: the Franco-Prussian War and the works of Renan and Taine. The scientific positivism of the period had latent in it both the epicureanism of Renan and the stoicism of Taine; but the new movement, the necessity of the hour, has been favorable to the sturdier sect, and has left M. France to dawdle in solitary splendor over the "feast of life." The progress of the scientific spirit, moreover, led logically to the destruction of the "religion of science," and made place for the restoration of the higher human values, for expectant skepticism, and for returning faith: "We no longer believe in science as did the Renans, the Berthelots, and the Taines. We do not make of it a 'religion'; we no longer admit that it responds to all our aspirations, and, as Pascal would have said, that it 'fulfils all our needs'; we no longer think that it is the sole generatrix of certitude; and we can no longer conceive it the unique type of knowledge and the unique rule of action. Please observe: we do not deny science; we do not declare it 'bankrupt'; we do not dispute its progress. . . . But we do think that there is a multitude of things, and of essential things, which elude its grasp: religion, morals, politics, even philosophy, and art in all its forms. All these things appear to us, to speak again in the manner of Pascal, decidedly of 'another order'; and on the threshold of each of them we should inscribe, reversing it, the motto of Plato: 'Let no one enter here who is only a geometrician.'" The political recuperation of France, beginning at the same point, has kept pace with, or even outstripped, her spiritual recovery. From the profound humiliation of the defeat in 1871 there have emerged and developed through the years a firm loyalty to the republic, a desire for solidarity within and dignity without her borders, an inspiring regret for her lost provinces, and a fresh love for the national past.

It should perhaps be added that M. Giraud's book was completed some months before the outbreak of the present war. In the light of recent events one reads with curiously augmented interest his explanation of the relationship between the Franco-Prussian War and the decline of the "religion of science." "The war," he says, "had come to prove by facts that science effects no great change in our poor human nature; and we could ask ourselves wherein this Germany—so proud of her science, so inadvisedly admired by us—would have treated us more harshly if she had been less learned."

CURRENT FICTION.

Father Ralph. By Gerald O'Donovan. New York: Mitchell Kennerley.

On the paper wrapper of this novel the American publishers inform the reader that when it appeared in England a year or two ago it enjoyed an immense success there. What the reader would really have liked to hear about is the kind of reception it got in Ireland. The Irish priesthood and the general subject of the Roman Church in Ireland have had a good deal of attention from novelists in recent years, ranging from the gentle but acute treatment of the late Canon Sheehan to the lighter sympathetic handling of the Protestant Irish canon who writes as "G. A. Birmingham." Violent anti-clerical tracts in the form of fiction have not been lacking. The present writer offers neither an amiable commentary nor a hostile attack. This is an interesting story, and a serious study, by a deeply religious Irish Catholic, of the present condition of the Church in Ireland. It is not a cheerful study. Mr. O'Donovan takes as his central figure an Irish youth of the upper class, naturally religious, and impelled towards the priesthood from infancy by a fanatical mother. He enters a local seminary, goes thence to Maynooth, and takes orders in due course. This not without struggle, for he is disappointing his father—breaking his heart, as it turns out—and he is already half-disillusioned as to the character of the priestly class of which he is to become a member. The pictures of life at seminary and college are drawn with unsparing hand, and one hopes that there may be a touch of caricature about them. Squeers and Dotheboys Hall are hardly more grotesque than Father Tom and his Bunnahone. Nor is the famous college at Maynooth represented as anything better than a breeding-place of bigotry and insincere pedantry. But at Bunnabone and Maynooth one finds a figure or two, hopelessly discredited or in the minority, in whom the pure fire of the Catholic faith still burns.

So it is when Father Ralph takes up his curacy in the parish of Bunnahone. The community is crushed under the exactions of the priests and the grinding of the publicans and money-lenders with whom the priests are in league. The two priests in the neighborhood who are good men are powerless. These men represent two types of virtue. Father Duff is the ignorant but whole-souled and faithful minister of his people: "I never gave ten minutes to thinking about my soul in my whole life," he admits cheerfully. "And if the catechism didn't tell me I had one I wouldn't know it. But since it does tell me, I know it's there, and that's enough. I never knew any good come of worrying about it." Father Sheldon is his opposite, the sensitive, intellectual, spiritual type, Father Ralph's type, who has clung to the Church and must cling to it, in spite of his knowledge of its physical corruption and inefficiency. Father Ralph is not able to do this; all his attempts to infuse his priestly office with reality, and to make himself useful as a citizen, are frustrated by his superiors. We leave him defeated and unfrocked, but not destroyed; no longer a priest of the visible church, but exultantly free for wider experience and service. He has not lost his faith, but maintained and broadened it. Whatever degree of accuracy may belong to it as a picture of conditions, this is a book of extraordinary sincerity and force.

The Patrol of the Sun Dance Trail. By Ralph Connor. New York: George H. Doran Co.

Long beloved of Canadian romancers, the Northwest Mounted Police here furnish hero and plot, and their post in upper Saskatchewan the setting. The story is the purest stuff of adventure and sentiment, with its Indian encounters, its reflection of the hardships of Scottish newcomers, its depiction of the free and wholesome emotions of pioneers and fighters. Riel's second rebellion, at the head of the half-breeds and Indians of the Northwest, furnishes an action well adapted to the spirit of the novel and to the exhibition of Mr. Gordon's special knowledge of the savage and the opposed soldiers and settlers. It at times approaches the tensity of an exaggerated school of Western fiction, as when Campbell, the young mounted policeman, who is its central figure, single-handed, wounded, and unarmed, vanquishes the chief Copperhead; there is at other times a tendency to make overmuch of the peculiar virtues of the men from Glen Garry and other glens. The ethical and religious teaching, overt or implied, with which the author was once wont to weight his fiction, is, how-

ever, banished by open-air quality and variety of incident.

May Iverson's Career. By Elizabeth Jordan. New York: Harper & Brothers.

Those who have wondered what the experiences of a woman on a morning newspaper in New York must be will here find them set forth in idealized fashion. The story is at first a succession of reportorial episodes; but the young Catholic girl who is the heroine has the knack of insinuating her personality into the sympathies of all whom she meets—city editors, society women, alleged criminals, authors, and dramatists—until she figures in a mesh of interrelated incident. Realism, in the best sense of that word, is not the story's strong point; the newspaper life of the city suffering less, however, than the unhappy ranchmen of Dakota, to whom we are introduced when May Iverson takes a flying journey West to report a famous lecturer. The word "career" is none too strong to find application, for the heroine conquers a preliminary determination to become a nun, writes a successful play, and marries a rich fellow-worker.

On the Staircase. By Frank Swinnerton. New York: George H. Doran Co.

The characters of Mr. Swinnerton's small circle are inclined to introspection, and he follows their minds and emotions through a realistic set of personal reactions. The central figure has obviously stepped out of George Gissing's gallery, and his tragic career has just that admixture of poetry and sordidness which marks Gissing's work. Adrian Velancourt, a London clerk, makes the fundamental mistake of marrying a girl far beneath himself, unable to sympathize with his tastes and aspirations—the identical sub-theme of "The Unclassed." He struggles vainly against harsh worldly circumstances and the agony of growing domestic estrangement and dies by his own hand with a scrap of Shelley on his lips. In Gissing's own taste for contrast is the parallel picture of another ménage—a household in which an intellectual youth and his sister grow up together, and each rejoices in a successful love affair. The cramped and the free, the harmonious and the discordant, alternate from chapter to chapter, and if the book has no deeper lesson than the avoidance of sentimental haste and self-indulgence, its narrative comes to close grips with life.

The Greatest of These. By Archibald Marshall. New York: Dodd, Mead & Co.

The previous books of Mr. Marshall have been novels of family life in the country, the hunting family of the Clintons in South Meadshire bulking prominently in all. Their quiet, Trollopean leisureliness, their interest in character or the incidents that reveal character, have won the writer many friends in spite of a want of really distinguishing qualities. He now turns to a study of clerical life in a small village. The aristocratic rector, the non-conformist minister, and the gossiping and unusual inhabitants give frequent touches of comedy to the story of county balls, clashes between industrial and landed interests, ecclesiastical affairs, and love. The author's delightful children are for once missing.

TOLSTOY AT HOME.

Reminiscences of Tolstoy. By his Son, Count Ilya Tolstoy. Translated by George Calderon. New York: The Century Co. $2.50 net.

In this volume of scattered memories, ranging from trivial accounts of servants in the Tolstoy household to intimate revelations of confidential talk and correspondence between father and son, Count Ilya Tolstoy shows somewhat of his father's skill in the presentation of familiar, every-day life. His tone is admirable; with a filial piety carefully restrained in expression he blends reverence for his father's genius and a recognition of his faults and foibles. Tolstoy, for example, in his youth and middle life showed an aristocratic pride of birth sharply contrasting with the doctrine of humility that he later developed:

> When our neighbor . . . Bíbikof and his son Nikólenka were asked to our Christmas tree, we used to take note of everything that Nikólenka did that wasn't "the thing," and afterwards used "Nikólenka Bíbikof" as a term of abuse among ourselves, considering that there was nobody in the world so stupid and contemptible as he was. And we regarded Nikólenka in this light because we could see that papa regarded his father in the same way. (P. 308.)

From the rambling narrative one derives the impression of a personality lovable as well as commanding. Tolstoy's sense of humor was more prominent in his daily life than in his writings. With his children he was a genial playfellow. At a Christmas party he acted the part of the bear, and he invented an excellent new game of "Numidian cavalry":

> We would all be sitting . . . rather flat and quiet after the departure of some dull visitors. Up would jump my father from his chair, lifting one hand in the air, and run at full speed round the table at a hopping gallop. We all flew after him, hopping and waving our hands like [*sic*] he did. We would run round the room several times and sit down again panting in our chairs in quite a different frame of mind, gay and lively. The Numidian Cavalry had an excellent effect many and many a time. After that exercise all sorts of quarrels and wrongs were forgotten, and tears dried with marvellous rapidity. (P. 98.)

After this it is somewhat surprising to learn of his austere bearing even in his own family:

> All exhibitions of tenderness were entirely foreign to him. I say "tenderness" in contradistinction to "feeling." Feeling he had, and in a very high degree. . . . During all his lifetime I never received any mark of tenderness from him whatever. . . . Nearness and dearness with him was never accompanied by any outward manifestations. It would never have come into my head, for instance, to walk up to my father and kiss him or to stroke his hand. I was partly prevented also by the fact that I always looked up to him with such awe, and his spiritual power, his greatness, prevented me from seeing in him the mere man, the man who was so pitiable and weary at times, the feeble old man who so much needed warmth and rest. (Pp. 377-378.)

Such habitual reserve makes more touching Tolstoy's grief at the death of his favorite daughter, Masha:

> He went about, silent and woe-begone, summoning all his strength to battle with his own sorrow; but I never heard him utter a murmur or a complaint, nothing but words of tender emotion. (P. 376.)

The novelist's penetration and the moralist's fervor were shown in his relations with his elder sons. "My father's great power as an educator," Count Ilya Tolstoy tells us, "lay in this: that it was as impossible to conceal anything from him as from one's own conscience. He knew everything, and to deceive him was just like deceiving oneself: it was nearly impossible and quite useless" (p. 314). A few words, spoken at the right time, became an inspiring force in the son's life.

As to the later discord in the Tolstoy household, and the quarrels between Tolstoy's kinsfolk and his disciples, Count Ilya Tolstoy is wisely reticent. Only a few hints allude to the whole story, and these hints are generally softened by the omission of names. One passage is characteristic:

> My father had good reason for saying that the "Tolstoyites" were to him the most incomprehensible sect and the furthest removed from his way of thinking that he had ever come across. "I shall soon be dead," he sadly predicted, "and people will say that Tolstoy taught men to plow and reap and make boots; while the chief thing that I have been trying so hard to say all my life, the thing I believe in, the most important of all, they will forget." (P. 302.)

The volume is finely printed and is illustrated with excellent photogravures. One wonders how the repeated error, *Syntáyef* (for Syutáyef, as on p. 269), escaped the attention of the translator in reading proof.

THE ART OF HERALDRY.

Heraldry in Scotland, including a Recension of "The Law and Practice of Heraldry in Scotland," by the late George Seton, Advocate. By J. H. Stevenson, Advocate, Unicorn Pursuivant. Two vols. Glasgow: J. MacLehose; New York: The Macmillan Co. $25 net.

The late John Woodward, LL.D., in the introduction to his "Treatise on Ecclesiastical Heraldry" somewhat bitterly exclaims: "Manuals of, and introductions to, heraldry have been sufficiently abundant. For the most part, compilations from their predecessors, and showing very little original investigation or research, the *crambe repetita* has been dished up *ad nauseam:* but more ad-

vanced treatises . . . dealing more fully with particular branches of the subject have been few and far between." Indeed, so few and far between have they been that not since Woodward's own last work in 1896 have we had, in English, a treatise at all comparable in scholarly importance to the recently published "Heraldry in Scotland," by Mr. J. H. Stevenson, Advocate and Unicorn Pursuivant.

The field of Scottish heraldry is a peculiarly interesting one, and one very little known to foreigners, who, with the seventeenth and eighteenth-century folios of Mackenzie and Nisbet rarely available, assume, thanks to the prevalence of haphazard English manuals, that the practice in Scotland must perforce be the same as in the sister kingdom. As a matter of fact, Scottish heraldry in general has, since its inception, been regulated more punctiliously and, perhaps, more intelligently than has that of any other country in Europe. Conserving even to-day the finely practical spirit of the earliest shields, it seems in its designs rarely to have forgotten the great underlying principle of mediæval heraldry—*arma sunt distinguendi causa;* and holding fast to the early methods of differencing the arms of cadets, it has escaped most of the indistinguishable trivialities which Menestrier would group among his *sottises anglaises.* If less beautiful than the heraldry of the French, it has, because of stricter oversight, been freer from spurious interpolations; if less spirited than that of the Germans, it is also less tastelessly flamboyant. Furthermore, during the period of degradation in the eighteenth and nineteenth centuries, it escaped most of the horrors of "landscape heraldry"—to the influence of which period we in America owe most of our ridiculous State seals. Dugdale, writing in 1681, complains of certain English practices: "Another matter . . . also to be reformed, is the manner of *differings,* which are by the younger Brothers and their posterities laid upon their marks, being *cressants, mollets,* etc., and that such little ones, as that a man cannot discern them a very small distance from him." The English theory of differencing, which still persists, is both so absurd and so impractical that it has been, in shields of minor importance, well-nigh ignored; until now the average English coat, instead of being distinctive of an individual, is something more in the nature of a clan totem. With the Scottish system of differencing the arms of cadets by a change of tincture, by the insertion of an ordinary or a common charge, by the variation of partition lines, etc., the shields (although in course of time they lose the fine simplicity of the original and often sacrifice that homogeneity of design so characteristic of the best mediæval heraldry) are far more interesting to the herald and far clearer to the genealogist than are those of any other current use.

The only completely illogical development (and it has escaped many) peculiar to Scottish heraldry is the invention and prescription, in the case of arms with supporters, of the "compartment." With the military abandonment of figured shields, the passing of the tournament and of heraldic costume, the transition from what one may call "field heraldry" to "closet heraldry" was rapid. Eventually, a shield with its ornaments and accessories came to be regarded, apart from heraldry as architectural ornament, as primarily an affair of painted or engraved design on a small scale. The heraldic officials, dealing now almost exclusively with small drawings, developed a passion for regulating minor details of draughtsmanship which either would not have appeared in field heraldry or would have been serenely ignored by a mediæval herald as unimportant. It is natural for an artist in drawing an achievement with supporters to place the animals—mythological, zoölogical, or human—on some more or less decorative base, even if on the form of "gas bracket" to which Woodward so violently objects. But it remained for a Scot to seize upon this base, hitherto a mere rhetorical detail of ornament wholly unrelated to anything essentially heraldic, as a matter for strict regulation. But with the increasingly rapid return of modern heraldry to the sounder principles of the early field heraldry, it is not too much to expect that even the Lyon Court will ere long abandon its pet peculiarity.

The late Mr. Seton's work, "The Law and Practice of Heraldry in Scotland" (1863), marked, as Mr. Stevenson says, an era in the literature of the subject. Coming twelve years after Planché's radical little book, "The Pursuivant of Arms," it marked for Scotland, as did the latter for England, the final abandonment, early heralded by Dalloway, of what Planché calls the "astrology of heraldry," and the application of modern methods of critical research, based upon "original sources" of archæological value, rather than upon the inner consciousness of inspired coach-painters and stationers' hacks. In heraldry by far the most important "original sources" are early heraldic seals; and the rapid development of the study of sigillography during the last half century and the publication of hundreds of photographic facsimiles and thousands of descriptions of crusading and later armorial seals have finally put at the disposal of the student a wealth of data practically inaccessible to the early heraldists. Mr. Seton was among the first to avail himself of this new material. Mr. Stevenson follows him with, however, the tremendous advantage of the intervening publication of Mr. W. de Gray Birch's great work on the British Museum Catalogue of Seals, the completion of Henry Laing's "Descriptive Catalogue of Scottish Seals," and, in 1904, Mr. W. B. Macdonald's invaluable "Scottish Armorial Seals." This is but a small part of the new sources from which Mr. Stevenson has drawn with complete tact and soundness of judgment. His own temper is agreeably judicial: he is unwilling to go all the way with Planché in the latter's complete reaction from the symbolical absurdities of the writers of the seventeenth century; and, unlike Dr. Woodward, his compatriot, he is not restlessly indignant over modern official blunders in both taste and scholarship. He is equable, open-minded, painstaking, and tolerant, an admirable equipment for an heraldic official. As an official, too, he has had the freest access to the records of the Lyon Court, and his work may, therefore, confidently be regarded as "authoritative" and, in its own field, well-nigh definitive.

The field, of course, is a very special and comparatively small one, and the title of Mr. Stevenson's book in this respect is so general as to be misleading. It is unfortunate that, through fear of confusing the two works, Mr. Seton's title was not retained, for it far more accurately describes the restricted aim of each volume alike. But the student of heraldry soon learns to discount mere titles. Mr. Stevenson himself occasionally does this in his citations, to the complete confusion of the unwary. For example, he refers (p. 204) to Woodward's "Heraldry, British and Foreign," (p. 251) to "British and Foreign Heraldry," and (p. 308) to "Heraldry." A reader unfamiliar with the literature of the subject might well fancy that different works were cited.

Many other titles are quoted with the same freedom and variety. And Mr. Stevenson loves, for no valuable reason, to revise the spelling and the punctuation of the authors from whom he quotes in a way that would drive a bibliographer distracted. In the first three lines (p. 309) of what purports to be a quotation from Dugdale there are six variations in proof-reading from the original text. In another passage (p. 339) Dugdale suffers, either through Mr. Stevenson or Banks's edition of 1812, at least thirty-four typographical emendations. Edmondson and others also undergo similar treatment. It is fair to state that in no case is the meaning or essential tenor of the text changed: but even so, as the variations are based upon no consistent principle and are apparently fortuitous, they give an effect of slovenliness at variance with Mr. Stevenson's fundamentally sound scholarship. As a lawyer he should realize the value of complete textual accuracy, even if he cannot, as a bibliographer, feel its charm. An errata-slip, if published, would note that on p. 31 the last footnote is wrongly numbered; that on the covering slip to plate vii the last two descriptions should be transposed; that on p. 235, note 7, the reference to the B. M. Catalogue of Seals should be 16,175 instead of as given; that on p. 300, while the text refers to a double tressure, the illustrations unfortunately give a single, etc. And while we are on minor matters, any one familiar with French book-plates of the seventeenth and eighteenth centuries will dispute the statement on p. 150 concerning "shields accolee" that "Very few instances of this arrangement are to be met with either in French or Scottish heraldry."

The book as a whole every student of heraldry will gratefully welcome. The illustrations are, in general, of high value, and the two volumes are beautifully printed.

Notes

Houghton Mifflin Company announces the publication of "The French Revolution in San Domingo," by T. Lothrop Stoddard.

"Little Sir Galahad," by Phœbe Gray, will be published on November 28 by Small, Maynard & Co.

Frederick A. Stokes Company announces the following volumes for publication in December: "Lectures on Politics," by Heinrich von Treitschke; "Treitschke and the Great War," by Joseph McCabe; "Woman and War," by Olive Schreiner; "What Women Want," by Beatrice Forbes-Robertson Hale.

"Foster's Complete Hoyle" (Stokes) is a revision of the book of five years ago, brought down to date. The chief addition is the dissertation on auction bridge, which was just coming into vogue at the time of the previous edition; and Mr. Foster's comments upon the game and the play are sound. The book treats of all known card games and gives the rules, while billiards, pool, bowling, chess, and checkers are also included.

In "Hungary: A Land of Shepherd Kings," the opening article of the *National Geographic Magazine* for October, Mr. C. Townley-Fullam gives a sketch of the history of the country and the distinctive characteristics of the Magyars. They are a musical, passionate, chivalric, and lovable people, mostly agriculturist, with a mine of rich folk-lore. The ninety-two illustrations give a vivid impression of the people and their surroundings, especially of their extraordinary costumes. Prof. Roland G. Usher, in his "Oldest Nation of Europe," sets forth distinctly and impressively the geographic and economic forces which have built up England, forces very different, as he shows, from those which have produced the other European nations.

The visit of Canon Hannay (G. A. Birmingham) to America in connection with the production of "General John Regan" has borne its natural fruit in a book of "impressions," entitled "From Dublin to Chicago: Some Notes on a Tour in America" (Doran; $1.50 net). American visitors in England also have impressions, but somehow they do not set about recording them quite so much as a matter of course. England is a *terra cognita*, while we of "the States" are still being discovered, with indulgent grins. The jest of our being always at the visiting Briton to tell us what he thinks of us, is at least matched by the jest of his readiness to tell us. Canon Hannay, being an Irishman, has not an indulgent grin for us, but a friendly, if sly, smile. The book is written in that spirit of amiable trifling which has ruled the English letters of the past two decades. It makes a point of being casual and chatty and merely amusing. It so fears suspicion of the attempt to say the last word about American manners or railways or women, that it hardly trics to say the first. The result is a pleasant, wandering, often witty, and sometimes merely garrulous, series of jottings and reflections apropos of some weeks in America. This, no doubt, is all that a record based upon such slight experience ought to be. America, Canon Hannay finds, is a country of boundless hospitality and a country pervaded by agreeable newspaper men. American sleeping-cars are barbarous. "I do object to undressing in the corridor of a Pullman sleeping-car, and I cannot, not being a professional acrobat, undress in my berth." (It was an alleged fellow-countryman, Mr. Dooley, who questioned the practicability of taking off one's clothes while sitting on them.) The taking of tips in America is a paradox, since to take a tip is to be paid for servility. The American woman is singularly charming, capable, and well dressed. American sheets are short, American colleges democratic—such is the commonplace material of which this book is made; but it is by the author of "Spanish Gold" and "The Search Party," and is made delightful, for the moment, by his characteristic humor.

"The Secret of Louis-Philippe," by Maria Stella, Lady Newborough (McBride, Nast; $2.75), is an autobiography, and imparts to the confiding reader that the bourgeois King was the son of an Italian jail-keeper and his wife, changed at birth for the girl baby of Philippe Egalité, who needed male issue to inherit the vast estates of his family, let alone the throne of France. Lady Newborough's story can hardly fail to remind the reader of Stevenson's immortal "Tale of the Fair Cuban." When her putative father presented to her the elderly English nobleman who was to become her husband, "I violently thrust back my insupportable perseeutor, looking at him with blazing eyes; I abused him, passionately declaring that I would rather endure any plague than the union he offered me; that death itself," etc., etc. But she married him in the next chapter, and after his death she married Baron de Sternberg, and neither gentleman had a quiet life. And in spite of the transparent truth of her story, which lacked only a link here and there, Louis Philippe continued to rule the French, though all men could see that he was the living image of the jailer of Modigliana.

"Other People's Money," by Louis D. Brandeis (Stokes; $1 net), is a collection of essays dealing with the topics discussed by the Pujo committee at the time when the investigation of the Money Trust absorbed the front pages of the newspapers. There will be a good deal that is familiar to readers of newspapers and magazines, who have been made to realize the evils of interlocking directorates, the curse of big business, and the so-called "financial oligarchy." Under the title, "What Publicity Can Do," Mr. Brandeis makes a forceful plea for publicity in aid of fair dealing. Any excessive fee paid to a banker for marketing securities the author calls "water," which he contends can be prevented only by requiring a "full disclosure to the investor of the amount of profits and commissions paid." If this should be done, Mr. Brandeis declares the form of unjustly acquired wealth known as "excessive commissions" would cease. Some of Mr. Brandeis's characterizations seem sweeping and would probably be difficult of proof. But the recital is interesting, as most of the author's productions are. The essays are written in a breezy, popular style, and will be certain to attract readers not only of the class who are interested in anything which hits Wall Street, but also the more thoughtful students of finance, who realize the significance of the changes that are taking place in methods of corporate management, and the efforts of Federal and State authorities to safeguard the investment of "other people's money."

From the Wisconsin History Commission comes "An Artilleryman's Diary," being the record of Civil War service in the Sixth Wisconsin Battery of that forceful and interesting personality, the Rev. Jenkin Lloyd Jones, of Chicago. As the author states, this work presents "a small cross-section of the army that freed the slave and saved the Union," but as such it has genuine value, particularly in view of the author's subsequent career. Such individual narratives must furnish the background for that great historical interpretation of the war for which we are still waiting, and in the years to come they will convey to future generations better than anything else the real spirit of the men who carried their righteous cause to triumph in 1865. Mr. Jones was one of many who sacrificed a university course to serve his country just when, "in the dim haze of the farmer-boy's horoscope, the university outline was shaping itself." "In choosing his country's cause he was relinquishing forever the hope of the education of which he dreamed. But, forty-seven years after the campus was 'dimmed by his tears,' the University of Wisconsin invested this private of the Sixth Wisconsin Battery with the degree of LL.D." Much of the diary tells, of course, of uneventful daily routine; but there are many striking passages, as, for instance, the story of life in the trenches during the siege of Vicksburg, particularly interesting reading just at this time when hundreds of thousands are living in trenches in Europe. Fortunately for the Sixth Battery, it did not participate in many battles, but had plenty of experience in campaigning," none the less. An interesting illustration is one comprising three pictures of Mr. Jones during his service as a soldier, taken in 1862, 1863, and 1864, which vividly bring out the transformation of the boy into the man.

Nearly fifteen years ago Joseph Bédier, the successor of Gaston Paris at the Collège de France, turned into graceful French prose the twelfth century romance of Tristan and Iseult. His version was woven of many strands. Instead of following closely the more nearly complete and courtly form of the story that comes to us from Gottfried von Strassburg, he chose to base his rendering on the apparently more primitive account contained in the fragments of Béroul, completing it, so far as possible, in the manner of Béroul himself, with episodes taken from Thomas and his imitator Gottfried, and from other sources. This charming *tour de force* has now been worthily rendered into English by Hilaire Belloc (Dodd, Mead; $1 net). The translation, by leaving out bits of conversation here and there and a chapter or two near the close, has gained in swiftness, and, though it follows the simplicity of diction and sentence structure which characterizes the original, it is not spoiled by the factitious ornament of archaism. Those who care to read this earliest and most enduring of modern love stories can get it from no better source than this. As for the translation of proper names into English, it can hardly be said that the happiest equivalents are found in Ivan for Ivain and Toot-hold (*sic*), the name of Tristan's favorite hound.

Only exceptional qualifications on the part of the translator could justify a new version of "Beowulf." We already have, among others, Gummere, Clarke Hall, Child, and Tinker; all sound, and each, in ways of its own, excellent. A better rendering than any of these is

no doubt possible, but little in this kind could be looked for except from one who added to a poetic faculty in nice adjustment with Old English idiom the willingness and the ability to utilize the results of modern scholarship. Mr. Ernest J. B. Kirtlan, to judge from his "Story of Beowulf" (Crowell; $1.50 net), had no clear call to this high task. Seldom looking beyond the pages of Wyatt's edition, itself greatly in need of revision, he has, with diligent plying of the glossary, worked out a translation all by himself which would scarcely be creditable as a classroom recitation. Page after page contains flagrant mistranslations, such as "to the naked deck" for "on bearm nacan"; the syntax of a clear and striking passage is completely destroyed by transforming it into "nevertheless the heath-stepper, the strong-horned hart, when pressed by the hounds, seeketh that woodland, when put to flight from afar, ere on the hillside, hiding his head, he gives up his life"; and even when the rendering is verbally correct, there is not a gleam of the literary quality of the original. It is to be hoped that not many will get their first impressions from this thoroughly incompetent translation.

By composing "In Dickens's London" (Scribner's; $2.50), Mr. Hopkinson Smith has gracefully discharged a literary debt. Modestly, yet accurately, he describes it as "not another book about Mr. Dickens, with illustrations by the author, but a book of illustrations, with some explanatory extracts from the Master's text, padded with some experiences of my own." This formula accounts for the chief elements of the book. The title is not quite enough of a blanket to cover chapter v, which digresses to Rochester and Gad's Hill, and which includes three charcoal drawings, two reproductions of dispensable Dickensiana, and one error in the text (a reference to Dartfor*th*, Kent). The real feature of the work is the collection of twenty-two original drawings by the author. These include a half-dozen interiors of the kinds of Inn that the Wellers were best acquainted with, and two of the Inns of Court frequented by Messrs. Perker, Spenlow, Jorkins, and the rest of the legal fraternity. There are four drawings of buildings in which Dickens actually lived or worked, one of the grave in Westminster, several which are distinctly miscellaneous, and four—London Bridge, St. Martin's-in-the-Fields, Covent Garden Market, and the Thames—which most of all have the atmosphere of London in them. To come across these plates, admirably executed—especially the Bridge, with St. Mary Overies across the river, and St. Martin's-in-the-Fields with the Nelson Monument looming beyond it—is to come almost uncannily close to the tragic lives of such Dickens folk as Nancy and Little Em'ly. The text, as a whole, is an amiable interweaving of passages from Dickens which the pictures illustrate, and of Mr. Smith's experiences while making them.

Breathlessly we tour with the author of "A Winter in India" (Dodd, Mead; $1.75 net), and continually we are grateful that he chose the only season possible for such a whirlwind visit, though little that he saw seems to have evaded careful record. Mr. Archibald B. Spens came to his India well prepared, as few British writers do, with a knowledge of its later history, particularly the great Mutiny period. Whether or not this influenced his itinerary, it should be noted that it is not so inclusive as the title of his choice infers. Almost exclusively Mr. Spens devoted his attention to northwestern India, and as far east as the mutiny interest led him. Upon American readers not versed in the story of 1857 the patriotic enthusiasm of Mr. Spens is likely to pall, and a little tedious become the author's ambitious efforts at a vivid re-creation of these stirring historic events. We recommend Mr. Spens to return to India and apply his gift to the writing of a capital novel, particularly of the officialdom under whose tutelage he seems to have travelled; something rewarding should be the result now that Kipling has left the subject fallow for so long. Moreover, a diarial record of travel is more than often in great need of revision. What the author calls his "light impressions," since they cover only half of India, would have been more welcome in a condensed form. Prospective tourists, however, will glean many valuable hints for comfortable travel, and an itinerary of northwest India that is well chosen for a flying visit.

To retell a familiar story with the gusto that goes naturally with a new one is not the gift of every historian, but this quality marks J. M. Robertson's "Elizabethan Literature," one of the recent additions to the Home University Library (Holt; 50 cents net). Some readers will think that he does Spenser scant justice, but his estimates win respect even when one dissents from them. His style pulsates with feeling; occasionally it becomes unduly rhetorical, but it is delightfully readable. The same thing may be said of Edith Sichel's "The Renaissance," which presents that awakening with something of its own freshness, until it turns from the warmth of Italy to the bleaker climes of Germany and England. Even the chapter on the French Renaissance tends to become catalogue-like. But the chapters on Italy are as valuable for their pictures of personalities as for their accounts of movements. The Canon of Westminster mars his well-informed little volume of "Religious Development Between the Old and the New Testaments" by setting forth his opinions upon current religious questions, particularly by his surprising advocacy of a reunion of church and state. He traces carefully and clearly the development of such ideas as the kingdom of God and immortality in Palestine in the two centuries just before the birth of Christ. More genuine romance than many an ostensibly romantic novel can boast is to be found in the pages of Arnold Lunn's "The Exploration of the Alps." Mr. Lunn carries us back to Hannibal, and then unfolds his panorama of daring as it has been exhibited on those heights from that day to this, rounding out the comprehensiveness of his volume with a chapter on The Alps in Literature. More technical, but by no means forbiddingly so, is Dr. Raphael Meldola's "Chemistry," which by explanation and illustration makes clear the main facts of the science as they are now held.

The first ten volumes of a new series, called "The Pocket Books" (Doran; 50 cents each), have appeared. They are handy little publications, for the most part reprints of some of the publisher's better-known issues, and are to be added to monthly. Timeliness is imparted to this initial instalment by three new books suggested by the war: "How the War Began," by J. M. Kennedy; "The Fleets at War," by Archibald Hurd, and "The Campaign of Sedan," by George Hooper. Mr. Kennedy's volume purports to relate the momentous events from the assassination of Archduke Francis Ferdinand, on June 28, to England's declaration of war against Austria on August 13. He precedes this account with a sketch of pertinent diplomatic history from 1903 to 1914. The book is a useful one, but since it gives so much of the important correspondence among the capitals in the weeks just prior to the outbreak of hostilities, the omission of all reference to some of the most significant documents is puzzling. An index would add greatly to its value. The non-military volumes of the group are: Arnold Bennett's "Leonora" and "The Truth About an Author"; G. A. Birmingham's "The Search Party"; Baroness Orczy's "The Noble Rogue"; J. J. Bell's "Courtin' Christina"; Horace Annesley Vachell's "Blinds Down," and J. E. Buckrose's "Because of Jane."

Dr. Ewald Flügel, head of the department of English philology at Leland Stanford, who died on November 15, was born in Leipzig, Germany, on August 4, 1863, and was a student at the Universities of Freiburg and Leipzig, 1882-8. In 1885 he received the degree of Ph.D. from Leipzig. Dr. Flügel had been professor of English philology at Leland Stanford Jr. University since 1892. He was an honorary member of the Akadem. Neuphilologische Verein, Leipzig; the Verein für Neuere Philologie, Dresden, and a member of the American Philological Association, of the Early English Text Society, the Chaucer Society, and the Goethe Gesellschaft, Weimar. Among his publications were "Carlyle's religiöse und sittliche Entwickelung," 1887; "Sidney's Astrophel and Defense of Poesy," 1889, and "Die nordamerikanische Litteratur," 1907. Professor Flügel's death ended his compilation of what was known among philologists as the "great Chaucer lexicon," the plan having been originated by the late Dr. Furnivall. The work, which Professor Flügel had elaborated to include Old and Middle English words generally, had progressed only as far as the letter "H."

NOTES FROM ABROAD.

A quite novel exile is that of the Universities of Louvain and Liège, which have accepted offers of hospitality from Cambridge. Belgian students will be welcomed at the ordinary Cambridge lectures, but the main purpose of the *entente* will be the preservation of the identity of the Belgian universities themselves. They will be provided not only with temporary accommodation for professors and students, but with class-rooms for their lectures. The first foundation to place sets of rooms at the disposal of the Roman Catholic University of Louvain was John Harvard's college, the traditionally Puritan Emanuel. A separate Cambridge committee has been organized to provide facilities for each of the four faculties of theology, science, philosophy, and law.

William Watson was aggrieved when the London *Times* suggested the other day Henry Newbolt, a Westcountryman, as a suitable person to celebrate in verse the heroic deeds of the Yorkshire Regiment. In his letter of protest, he admitted that Mr. Newbolt has written magnificently in honor of British naval heroes, but "I have yet to learn," he added, "that he has ever chosen to enhance with the lustre of his pen the fame of the British soldier." The lacking information

was supplied the next morning, when "A Roving Briton" gave a list of such poems, and supplemented it with a wholesome little bit of literary criticism. "I have never yet read 'The Grenadier's Good-bye' without tears of pride, and I dare not read 'John Nicholson' late at night—it stirs me so that I lie awake for hours. With all his magical use of words, Mr. Watson never brings the lump in your throat. The other man does, I suppose because he is simpler and more unconsciously sincere."

All the artists on the staff of *Punch* have undertaken to contribute signed and framed examples of their work in aid of the artists' contribution to the National Relief Fund. The suggestion was quickly and generously taken up. Among the contributors to the exhibition, open for a few days in Duke Street, St. James's, are twenty-six members of the Royal Academy; eight of the Royal Scottish Academy; thirty-two of the Royal Institute of Painters in Water-Colours; forty-five of the Royal Institute of Oil Painters; thirty-two of the Royal Water-Colour Society; forty-six of the Royal Society of British Artists; fifty-six of the Royal Society of Painter Etchers; thirteen of the International Society, and thirteen of the New English Art Club. The pictures are 600 in number, and an ingenious method has been devised for raising money upon them. The first 400 subscribers of 5 guineas will each receive a painting in oil or water-color, or a piece of sculpture; and the first 200 subscribers of 2 guineas will each obtain a drawing or a print. In this latter class are signed proofs of etchings, mezzotints, and lithographs, by well-known artists. Only 600 subscription tickets will be issued. The works will be drawn by lot, and there will be no blanks. Should the scheme fully succeed, and it promises well, £2,520 will be handed over to the Prince of Wales Fund as the offering of British artists.

Auguste Laugel, who has died in Paris at the age of eighty-four, was an early contributor to the *Nation* and remained so forty years. Older readers cannot have forgotten his letters on books of history as they appeared in France. He was born in Strassburg and was of Alsatian family. He prepared for a scientific career by studies at the Ecole Polytechnique and School of Mines in Paris; but he soon drifted into journalism of a high character. Over the signature "A. Vernier" he was charged with the scientific chronicle of the Paris *Temps*, and he wrote under his own name in the *Revue des Deux Mondes*. He was personally devoted to the Orléans princes, and accompanied to the United States those who took service under Gen. McClellan. It was then he formed a close friendship with Wendell P. Garrison, one of the founders and long editor of the *Nation*. On his return to France, he published his book, "Les Etats-Unis pendant la guerre de Sécession." For many years he was secretary of the Duc d'Aumale at Chantilly and there he wrote his works on English political history. He lived to see his children take honored positions in the world. He retained to his death his place as administrator of the great Paris, Lyons and Mediterranean Railway Company. His last writing was in memory of his wife, the companion of his long life, who died a few years ago. He lived to conceive strong hopes that his native Alsace might be restored to France, the country of his choice like that of his compatriots.

Science

SHOCK IN SURGERY.

Anoci-Association. By George W. Crile and William E. Lower. Philadelphia: W. B. Saunders Co. Illustrated. $3 net.

This book presents the subject of surgical shock and the means of preventing it, as viewed in the light of Crile's "Kinetic Theory of Shock" and the principle of "Anoci-Association." Dr. Crile's argument is briefly as follows: Every adequate stimulus awakens an ontogenetic or phylogenetic memory, or *association*, and the nerve mechanism evolved by countless similar experiences in the life of the individual or his race makes the appropriate response. To use the authors' example, when a barefoot boy steps on a sharp stone there is an immediate discharge of nervous energy in his effort to escape from injury. This is not a voluntary act, but the result of the experience of his progenitors during the vast periods of time required for the evolution of his species. The stone supplied the phylogenetic association, and the appropriate discharge of nervous energy automatically followed. These *associations*, as in the case of the stone, may be injurious to the individual—*noci-associations;* or they may be, as the sight of appetizing food, of benefit to the individual—*bene-associations.* All of life, therefore, is made up of *bene-* and *noci-associations*, and the efforts of the individual and the race to increase the former and decrease the latter represent an attempt to reach a state of *anoci-association.* Thus the nocuous effects of cold, rain, and storm are met by shelter, clothing, and fire; against other coarser environmental influences there have been evolved in man adaptive mechanisms excited to activity by *noci-receptors* richly implanted in the skin, while against other unseen nocuous elements, as the disease-producing bacteria, the body has developed chemical defences—antitoxins, febrile reaction, phagocytosis. Thus an umbrella in a rain storm, a man "swatting" a fly, and antitoxin in diphtheria are all attempts to produce *anoci* conditions.

It is difficult to follow the mixture of hypothesis, theory, and fact which the authors employ in an attempt to bring their kinetic theory of shock into relation with their theory of *noci-association.* Again the argument goes back to prehistoric man. In the beginning, man, like the animals, had two principal means of defence against the dangers (*noci*) which surrounded him—he fought or he ran away. It is, therefore, in moments of danger, the motor mechanism, through its phylogenetic association with injury to the individual, that is responsible for discharges of energy. These discharges, when intense or protracted, produce the extreme conditions called "exhaustion" and "shock." In other words, shock is the result of the "excessive conversion of potential into kinetic energy in response to adequate stimuli." If the response to stimuli takes the form of obvious work performed, as running or fighting, the phenomena expressing the depletion of the vital force represent *physical exhaustion;* if no obvious work is performed, especially if the stimuli are strong and the expenditure of energy rapid, the condition is designated as "shock."

Exhaustion or shock, as the case may be, may be produced by fear and worry, physical injury, infection, hemorrhage, excessive muscular exertion, starvation, insomnia, and as both exhaustion and shock are accompanied, as the writers assert, by changes in the cells of the brain, the adrenal glands, and the liver, it is these cells which they consider as the seats of the essential lesion of shock—lesion due to the conversion of potential energy into kinetic energy at the expense of certain chemical compounds stored in these cells.

In support of the various hypotheses which the authors have loosely grouped together to form their theory, numerous experimental investigations are cited, but these, although of great value as a contribution to the pathology of shock, offer no convincing proof of the adequacy of the kinetic theory as scientific explanation of shock. However, from the purely practical point of view, Dr. Crile has done a great service for surgery by focusing the attention of surgeons on the fact that "the exclusion of both traumatic and emotional stimuli will wholly prevent the shock of surgical operations." This had previously been generally recognized by surgeons, but the crystallization of the idea through the word "anoci-association" has given to the methods of preventing shock a significance in surgery which is quite analogous to the meaning conveyed by the words "anæsthesia" and "asepsis." It is to these practical methods of preventing shock—so technical as to be of interest only to the surgeon—that the greater part (three-fifths) of the book is devoted. It matters little whether the theory of *anoci-association* stands or falls; it has served its purpose by attracting attention to the need of reducing to a minimum the strain of surgical procedures.

Owing to the war in Europe the usual interchange of astronomical announcements between the Harvard Observatory and the Astronomische Centralstelle at Kiel, Germany, is necessarily suspended. Therefore, all cable messages relating to astronomical discoveries are sent direct to Prof. E. C. Pickering, addressed "Observatory, Boston." Announcements received in this way are distributed at once throughout the United States and to foreign countries, so far as practicable. The system and code described in a pamphlet published by the Harvard Observatory in 1906, entitled "Telegraphic Cipher Code," has been in use several years for all dispatches in the United States and between Kiel and Cambridge; and all messages are to be sent in this code.

An entomological book intended altogether for popular reading is "Insect Biographies with Pen and Camera" (Stokes; $2 net), by John J. Ward, F.E.S. Printed in large type, filled with excellent and interesting illustrations, it is written in a style below rather than above the level of the layman.

Drama

"THE OUTCAST."

The prettiness and genuine talent of Miss Elsie Ferguson are sufficient to convert Mr. H. H. Davies's play "The Outcast" from the slight affair it essentially is into a piece of considerable interest. The tragedy of a mistress's life has not the buoyant tradition on the American stage which it enjoys in France. And even a well-constructed play of this sort is bound to seem exotic here. There must be an actress of no little charm in order to make her part appear at all vital. And even then the sympathy of the audience attaches rather to her *per se* than to the rôle which she fills. Viewed in this light, the performance given by Miss Ferguson at the Lyceum Theatre is one which touches and charms.

Of plot there is little. In a fortuitous way Miriam comes into the life of Geoffrey on the wedding-day of his former fiancée, who has rejected him for a nobleman. Her own despair is nicely mated to his, and from this union of sympathy arises a companionship which means much to both. But it means more to Miriam, who not only loves Geoffrey, but cannot down the secret hope that he may yet marry her. Unfortunately, Geoffrey clings to his first love, a sentiment which is aggravated by his knowledge that Lady Morgan is unhappily married. His disquietude, together with Miriam's growing importunity, at length leads to a break between the two. In this scene Miss Ferguson gave a fine exhibition of quiet but intense despair. In the final act, when it is becoming certain that Geoffrey and Lady Morgan mean to elope, Miriam enters and so affects the noble lady by her stricken condition that the latter at once visualizes the plight of her well-meaning husband, and departs chastened and resolved. Whereupon Geoffrey, who is starting the next day for Buenos Ayres, invites Miriam to go with him and insists that he will marry her. Thus is morality saved a shock, even if in the process the play is brought to a theatric conclusion. Mr. Charles Cherry was well picked for the part of Geoffrey; especially well did he simulate the rôle of the haggard lover. F.

"THE MARRIAGE OF COLUMBINE."

A new dramatic venture, which deserves cordial welcome and which we hope may achieve success, is the Punch and Judy Theatre, on Forty-ninth Street, near Broadway. It is another of the "little" theatres, which may not bring to modern drama the full measure of salvation that their more ardent sponsors hope from them. They are, nevertheless, an encouraging sign of intelligent effort towards a higher level of drama than is habitually provided by the purely commercial manager and represent an appeal to a small but eclectic public. Not all of these little theatres are, in our judgment, a healthful influence—there is inherent in them an obvious peril of exoticism—but they represent a movement in the right direction, and out of the sum of the experiments may be expected to develop some results that are worthy of serious attention.

Certainly the plan and architecture of the Punch and Judy Theatre should prove an inspiration to playwrights and actors. Rectangular in shape and built in the Old English style, it recalls the courtyard theatre of the Elizabethan and pre-Elizabethan drama. The dark timbered ceiling is a concession to modern standards of comfort and to the climate of New York, and the straight-backed but exceedingly comfortable stalls take account of the preference of to-day for witnessing our dramatic entertainments in a sitting posture. The feature of the house is the gallery, partitioned into rows of tiny boxes and reminiscent, in general effect, of the courtyards of old inns and, in detail, of the stage on which those fascinating entertainments of our youth, from which the theatre takes its name, used to be played.

The piece chosen for the opening of this new house is a light comedy by Harold Chapin, called appropriately "The Marriage of Columbine." This first play reveals no particular "purpose" to which the new theatre is to be dedicated, save that of wholesome and intelligent entertainment, and if that is, indeed, all that its promoters aspire to do they have sufficient excuse for their enterprise. It is a trifle of a good deal of charm and not a little constructive skill, and is capably acted by a company headed by Mr. Charles Hopkins, the director of the theatre, and his wife. The story is of the love, unconsecrated by ecclesiastical or civil ceremony, of Scaramouche, a clown of repute, and Columbine. In the first act we find the vagabond family, Scaramouche, Columbine, and their three children, staying in the George Hotel at Dunchester, "an old and respectable town," as the programme informs us, whither they have come for the circus. All is domestic and blissful: Columbine the fondest of mothers, the most devoted of wives; Scaramouche the most affectionate of husbands. Enter then the villain of the piece—an ingenious characterization exceptionally well portrayed by Herbert Yost—in the person of Alfred Scott, a local printer who conducts a small newspaper and has come for an interview with the famous clown. Scaramouche has to go to the circus, and leaves Columbine to be interviewed by Scott in his stead. With journalistic eye for "copy" he concentrates his attention on the domestic life of the family and questions Columbine about her first meeting with Scaramouche. In the course of cross-examination he elicits the fact that "the Scaramouches" have never been properly married—Columbine being innocently unaware even of the desirability of the possession of a marriage certificate. Thereupon Scott, a mean little soul, of the straitest sect of the Pharisees, undertakes to rescue Columbine from her life of sin, and, as a preliminary, introduces to her notice the discomforts of hell fire.

We need not pursue the plot in detail. Columbine, thoroughly frightened, comes to regard herself as a curse to her entire family, and, as a way of escape from sin and its resulting inconveniences, yields to the importunities of Scott, who is amiably prepared to sacrifice himself to provide her with a marriage certificate and so restore her to respectability. In the last act the ceremony has just been performed, and Scott and Columbine have come to some furnished rooms. Columbine is supremely unhappy, but tries to imagine herself consoled by the possession of a marriage certificate and the assurance of Scott that she is now a respectable woman, no longer living a life of sin. Before the curtain goes down, of course, Scaramouche, who has been searching frantically for her, enters and the audience has one moment of horrid uncertainty lest the author may perpetrate a banal ending and discover another marriage certificate all along in the possession of Scaramouche. Happily the fear is groundless; Scaramouche, masterful person, merely tears up the document that Scott shakes under his nose, and takes Columbine home.

There are naturally many inconsistencies and glaring improbabilities in such a story—the innocence of Columbine, for instance, passes all belief—but on these we need not insist overmuch. The play must be accepted as an allegorical phantasy, and as such it is full of charm. The same explanation must be extended to cover inconsistencies of costume. The time of the action is given for us on the programme as the latter part of the last century, and it seems a pity that it was thought necessary to define it even by these rather vague limits. The total effect of the costuming is picturesque, and for this we might readily forgive its periodic vagaries, were a more or less definite date not forced on our attention.

The company, as we have noted, is highly efficient and well rehearsed. In the acting and enunciation of both Mr. and Mrs. Hopkins is revealed the supreme value of a Shakespearean training. Mr. Hopkins's Scaramouche is played with virility and admirable restraint. Columbine is a part of considerable difficulty, requiring the lightest and most delicate touch, and the rôle is excellently suited to the graceful personality of Mrs. Hopkins, who plays it with much charm and sympathy. Mrs. Louise Closser Hale gives a clever interpretation of an eccentric character part, that of Mrs. La Bolaro, an aged ex-bareback rider, with a too impressionable past, and Edward Emery is good as an amiably parasitic friend of the Scaramouche family, Mr. George Salamandro. The minor characters are well played, but a totally false note is struck by Miss Eleanor Carey's exaggerated rendering of the part of Mrs. Jollings, the landlady in the last act. The play is excellently staged. S. W.

Music

TROUBADOURS AND OTHER MUSICIANS.

Essentials in Musical History. By Thomas Tapper and Percy Goetschius. New York: Chas. Scribner's Sons. $2 net.

The Growth of Music. Part II. By H. C. Colles. Oxford: Clarendon Press. 3s. 6d.

Trouvères and Troubadours. By Pierre Aubry. New York: G. Schirmer.

The Making of Musicians. By T. H. Yorke Trotter. New York: E. P. Dutton & Co. $1.50 net.

A Guide to the Chassevant Method of Musical Education. By Marian P. Gibb. New York: F. A. Stokes Co. $1 net.

Nearly every year brings a new history of music. Some are translations from the German or French, but most of them are by American writers. The latest is by the two well-known educators, Thomas Tapper and Percy Goetschius. It has one fault, which, however, it shares with virtually all the histories of this art. So much that is of interest is to be said of music in its early stages that the authors are tempted to give this period a disproportionate amount of space, with the result that too little is left

for some of the later stages. Thus, in the present volume, Orlando Lasso gets four pages, Palestrina five, while Grieg, who represents a whole country, is disposed of in seven lines, and Tchaikovsky, admittedly the greatest of the Russians, gets only two lines. Apart from this, the new history deserves the highest praise, especially for lucidity and usefulness. It appeals to music lovers in general who wish to get a bird's-eye view of the evolution of the art which, more than any other, is the absolute creation of the human mind. For students it presents many distinct advantages, one of them being eight pages of examination papers set by nine American schools and colleges, including Harvard, Yale, and Oberlin; another, an admirable chapter of twenty-four pages, giving brief characterizations by Frank Marling, America's leading expert in this branch, of the best books on musical history, biography, singing and singers, instruments, etc. There are chapters on The Present Era, on Music in America, and the volume is made still further attractive by nearly two hundred portraits and other illustrations, besides a large number of musical fragments illustrating various phases in the evolution of the tonal art.

In his second little volume on "The Growth of Music," H. C. Colles considers the age of the sonata. Mozart, Haydn, and Beethoven are its heroes, other eminent men of their time being treated only casually. There is a chapter on the meaning of the word sonata, another on the quartet and symphony. The introductory section aims to make clear the difference in style between Bach's Brandenburg concertos and Mozart's "Jupiter" symphony. The lives of the three composers named are told briefly, and there is also an account of opera in Paris and Vienna in the days of Rameau, Gluck, and Mozart. It is a scholarly book, which makes its appeal to serious students. For illustrations, the author relies chiefly on works which may be played on the piano. He also has a good word for the mechanical contrivances for playing music as a great aid in acquiring familiarity with the sonata literature. "They are only pernicious when they are used as a substitute for personal musical effort." "Most of the artistic insincerity of the present day comes from the ability to talk about things without actually hearing their effect."

The first volume by Mr. Colles on "The Growth of Music" had for its sub-title "From the Troubadours to J. S. Bach." We have now before us an invaluable little book devoted entirely to the Troubadours of Southern France and their colleagues, the Trouvères of the North of France. It is a translation—and a good one—by Claude Aveling of the second edition of the monograph of the French scholar, Pierre Aubry, who died in 1910 as the result of a fencing accident. He lived only thirty-six years, yet so important were his contributions to our knowledge of obscure problems relating to mediæval conditions that Dr. Riemann devotes two volumes of his highly condensed "Musiklexikon" to his writings and collections of early tunes. The general reader need not be afraid of his erudition, for he has the happy Gallic faculty of hiding it completely, and his great enthusiasm for the subject proves contagious. An English writer has happily characterized this study as "mediæval music without tears"—for the subjects are most difficult to discuss. Scholars are still waging a world war over them, and he who can, like Aubry, present them lucidly as details in a graphic picture of life and society seven and eight centuries ago deserves all the honor a reviewer can bestow.

In view of the fact that nearly all his predecessors treated the troubadours and trouvères simply as poets, Aubry devotes his volume largely to showing that in most cases they were also musicians. "We do not grudge the troubadours and trouvères their prominent place in the history of literature, but we do claim for them a position no less distinguished and legitimate in the history of music." They did not take themselves as seriously as Wagner or Vincent d'Indy in being musician and poet both, and they were badly hampered by mediæval rhythm, quite at variance with the elasticity of modern times; but they created tunes which were worth while and had an influence on the evolution of the art of music. Some of them are printed in these pages. How their melodies have come down to us is told in the second chapter. The manners and customs of the men who sang them are described in another chapter, devoted to the jongleurs, who took the place of periodicals in bringing news in those days. The various classes of lyrical poetry are described and there is a valuable bibliography.

Mediæval music is not the only kind that is often learned with tears. The author of "The Making of Musicians," citing the boy in *Punch* who declares, "There is only this horrid music that comes between us, mother," admits that the study of this art is not at the present time a joy to the pupil, but rather, in many cases, a wearisome task. He searches for the reasons why the art is so often disliked, and suggests remedies, the principal one being that "We must learn the 'grammar' of music, not apart from, but *through* music itself," just as a child does not learn his language from rules, but from practice. This is not a new thought, but it is one that needs emphasizing. Unlike others who have written on the subject, the author thinks it a mistake to teach children melody without harmony. He also holds that the study of notation should come after, and not before, the feeling for music has been developed. Educators will find in this little book other hints worth pondering in regard to the first teaching of music, as well as the instruction of advanced pupils.

Marian P. Gibb's "Guide to the Chassevant Method of Musical Education" also holds that children should be taught things rather than names. She writes chiefly for those who train children, and with the methods she advocates the best results are obtainable, she thinks, when children are grouped in small classes, not exceeding six or seven in the earliest stages. Triads are introduced as "families" of notes. In this method the study of time, which is taken up apart from pitch, is invested with a picturesque aspect with a view to fascinating the child's mind. The notes are supposed to be birds, which fly from pavilions to trees, each bird having its own rate of speed in flying. There is a good deal of that sort of thing in this book; it may seem fantastic, but the assertion is made that it brings good results.

HENRY T. FINCK.

The dedicating of the new Mozarteum in Salzburg, which was to have been celebrated last August by operatic performances headed by Lilli Lehmann, was postponed for two months, and there was no opera; but Lilli Lehmann was heard, nevertheless. She sang Mozart's "Hallelujah" with overwhelming effect, and received an ovation. An English version of her fascinating autobiography under the title, "My Path Through Life," has just been published by the Putnams.

Finance

THE DECLINE IN "REICHSMARKS."

The decline in the rate of exchange on Germany, which has been in progress since the beginning of war, has reached proportions which attract every one's attention. The rates at present current for "reichsmarks" express a discount of something like 9 per cent. from the "mint par"—a level quite unparalleled in the experience of any one now engaged with foreign exchange.

When war broke out in August, all the exchanges were violently disturbed. It will be remembered that for a few days there was practically no market at all for "sterling." Transactions were made at above $6 for the pound for demand bills, and "cable transfers" were reported as having been made at over $7. But presently, after the first effects of the shock had passed away, the sterling rate settled down to a level between $5.05 and $5.10, and when the "gold pool" was organized it quickly receded to below $5. Later, under the weight of huge masses of grain bills reflecting large shipments of wheat, it declined to below $4.90, which, in view of the abnormal conditions, may be considered a natural figure. At $5.10 the rate expressed a premium over the mint par of something less than 5 per cent.; at $5 the premium was less than 3 per cent., and at present figures the premium has entirely disappeared.

The movements of "francs," though not quite so violent as those of sterling, expressed after the outbreak of war substantial premiums over mint par. Thus exchange on England and on France moved in the same direction. Both these nations are "creditor countries," and both, at the inception of war, had large balances in this country on current account. The natural attempt to draw home these balances caused

the rise in rates of exchange. In this there is nothing to surprise the observer, for it is precisely what might naturally be expected to happen.

But Germany is also a "creditor country" in the usual acceptation of that term; that is, she has an "income" from capital invested abroad which amounts to a very large sum every year. Why, then, did not "reichsmarks" follow sterling and francs in their violent rise in August? As a matter of fact, not merely was there no rise in "reichsmarks," but a decline at once made itself apparent, and the rate receded below the mint par, which is a figure slightly over 95. In September the rate was below 92, a discount of over 3 per cent., and by the end of October it had fallen to 88, a further decline of over 4 per cent. The present rate is about 87, a total discount on mint par of approximately 9 per cent.

What is the explanation of this remarkable divergence from the tendency shown by exchange on the other two great creditor nations of Europe? One thing is clear, and that is that those who have funds in Germany are apparently willing to accept a very large discount on those funds in order to realize upon them. It may also be inferred with reasonable certainty that Germany had no balances in this country on current account in August. It is possible that the practically complete blockade of Germany's over-sea commerce—not a single German ship cleared from any port in the world during September—may in some measure account for some abnormality in the exchange rate at New York; but with all allowance for this, much remains unexplained. Why did Germany not have some balances on current account with us? And why, with money rates now practically normal in this centre, should holders of credits in Germany be willing to make so enormous a sacrifice to obtain those credits in the shape of New York funds?

It must be remembered that Germany, practically alone among the belligerents, established no formal moratorium in August. Theoretically, it has been "business as usual" with her. But a discount of 10 per cent. in German exchange at New York, with francs and sterling still at par or better, is something which requires a good deal of explanation. Ordinarily, it would reflect suspicion in the minds of somebody that possibly "reichsmarks" might be in process of permanent divorcement from the mint par—in other words, a doubt as to the ultimate certainty of gold payments. It must not be hastily assumed that such is the meaning of the present rate. Germany cannot at the present time, even if she were willing to do so, freely export gold to America. Nevertheless, cable dispatches have in the last few days reported private bids for gold at a substantial premium in Germany, this gold to be shipped out through Holland. This is the natural response to exchange rates such as those now current. In other words, gold is actually at a substantial premium in Germany now, despite the large increase in holdings reported by the Reichsbank every week. It is quite clear that the German Government has put a practical embargo upon gold payments for the present, and probably to this may be attributed the abnormally low rate for "reichsmarks" in this market. Nevertheless, the magnitude of the discount is such as to suggest, at least, that something more than a merely temporary suspension of gold payments is feared by some people.

Trigonometry

By Maxime Bôcher, Professor in Harvard University, and H. D. Gaylord, Mathematical Master in Browne and Nichols School, Cambridge.

ix+142 *pp.* *Narrow* 12*mo.* $1.00

Intended as a text-book for the ordinary course in trigonometry in high schools, technical schools and colleges. Brevity has been secured without sacrifice of clearness, first by omitting unessential subjects, and secondly by avoiding long-winded explanations of simple matters. The book contains an explanation of the use of logarithmic and other tables, and of so much of theory of logarithms as is necessary for this purpose. The exercises, instead of being scattered thru the text, are collected at the end of the book.

Analytic Geometry

By L. W. Dowling, Associate Professor of Mathematics, and F. E. Turneaure, Dean of the College of Engineering in the University of Wisconsin. (*American Mathematical Series.*)

xii+226 *pp.* *Large* 12*mo.* $1.00

This volume is designed for a four-hour or a five-hour course for one semester, but may be shortened to a three-hour course by omitting certain parts of the text. Five chapters on solid analytic geometry have been added for those students who have time only for an outline of the subject matter.

France Herself Again

By Ernest Dimnet

8vo. 400 pp. $2.50

The eminent historian, the Abbe Ernest Dimnet, presents a brilliant study of the regeneration of France, completed by a chapter on France's needs and aspirations in the hour of victory. The chapter headings will indicate the general character of this comparison between the demoralized France of 1870 and the united France of today:
